I urge favorable action on this bill in order to recognize fairly and equitably the loyal, devoted service of the Government's civilian employees by giving them pay more nearly comparable to that enjoyed by their counterparts in private enterprise. Favorable action would further assure the Government's ability to recruit and retain the employees who have the qualifications and abilities to carry out the important responsibilities necessary to the preservation of the Government.

As the CONGRESSIONAL RECORD will show, I was the first Member of the House to join our colleague, Representative THOMPSON, in signing the discharge petition which succeeded in bringing this bill before us, a discharge petition I am glad to say that I persuaded many other Members of the House also to sign. It is unfortunate that we had to take this unusual means of obtaining signatures from a majority of the membership in order to overcome obstructions to the orderly consideration of this bill under normal procedures.

Those of us who favor fair treatment for Uncle Sam's rank-and-file employees have had to wage a constant battle against an unsympathetic administration which flatly opposes pay raises for the average worker. This has been the policy from President Eisenhower on down. Week after week, we sat in committee listening to the pros and cons on this legislation, and throughout the period of the hearings there was a constant drumbeat of administration propaganda against any pay increase whatsoever.

At this moment, we are being told that if we reduce the size of the proposed increase even further—say to 5 percent—and perhaps add higher postal rates to it, there is a possibility, or a remote outside chance, that the President may sign such a bill. It is all very nebulous. Yet, all of the time we were considering this legislation in committee, the administration laid down a flat rule of no raise at all for the rank-and-file of employees.

On the other hand, no administration has ever worked harder at trying to obtain pay increases for the policymakers of the Government—particularly those in politically appointive offices. The top level of civil service, in these recent years of the Eisenhower administration, has been changed almost entirely into a patronage pool for the Republican National Committee. Career Government employees are given to understand that it helps to have Republican ties if they expect to obtain promotion to the top posts in what is supposed to be the career service. I am sure if it could find a way to provide pay increases only for Government employees in so-called policymaking jobs—and under this administration that covers a multitude of employees with political sponsorship—the administration would gladly support such a bill. But this bill—to reward the entire classified and postal services—is bitterly opposed on grounds that the cost of living has not risen enough since the last pay raise to justify the proposed increases so why enable any Government worker to get ahead?

When organized labor was fighting for the principle of wage escalation to meet increases in living costs, many of the same people now deciding policy for this administration bitterly opposed the idea as something right out of Moscow. Actually, of course, collective bargaining as we know it is the farthest thing away from the Russian system, but you would not think so to hear some of the complaints about unions—all unions.

It is now an accepted part of our industrial economic structure, of course, that cost-of-living increases should be reflected in wage settlements. But that is by no means the only measure of justifiable wage settlements in industry. Industry and labor also agree on increases reflecting increased productivity, on increases based on increased complexity of the work, on increases based on higher educational requirements or longer periods of training and so forth.

Now why should none of these things be taken into consideration in determining the wages of our Government employees? According to the administration, the only gage should be living costs. I disagree. I do not believe we must have a static wage structure in Government since we certainly do not have one in any other field. It is not enough, under the American system, that a worker stay even with his earning power of 10 or 20 years ago in terms of real income. Our economy has prospered because most workers steadily, over the years, have been able to improve their standard of living—which requires increase over and beyond living cost increases.

In the postal system, I can say from firsthand knowledge that low wages are a major cause of poor employee morale and much turnover in personnel. We are forcing out good people who had intended to make their careers in the postal service. They cannot afford to remain. Those who take pride in the service, who have long years of seniority, and who grew up in the post office and have developed a dedication to the public service, have suffered real financial hardship in recent years as workers in other fields obtained, through collective bargaining, far better pay scales than the postal employee. Many postal workers are on double duty, taking other off-hour jobs in order to make ends meet. This is not fair to them or to their families, and it is not fair to the taxpayer who wants and expects alert and wide awake and conscientious service from the post office.

This is not the time, perhaps, to go into the other problems of the postal people under the weird operational policies now in effect, but the combination of low pay in comparison to other workers plus the aggravations of trying to keep up with the razzle-dazzle of post office directive and guidelines and ex-

perimentation in mail routing policies—policies which seem to be based on a program of change merely for the sake of change—make the postal service a most unhappy place these days. A wage raise will help, at least, to make it a little pleasanter until we can get rid of bungling and chaos in the Department.

For the career classified employee, the situation has not been quite as unhappy as it has been for the postal employee in recent years. The people brought in by the Eisenhower administration to run the other Government departments nearly all started out on the assumption that Government workers were drones and morons, but gradually changed their opinions after discovering to their surprise the quality of work done by the career employees and their conscientious devotion to duty. So it has not been fashionable lately in most agencies—as it has been during the past 7 years in the Post Office Department—to regard the Government employee as a brainless, slipshod, disinterested worker. Nevertheless, Government employment has not yet been restored to the professional prestige it enjoyed prior to this administration, and pay scales have not kept pace with the rates paid to people with similar skills in industry and the professions. This bill now before us will help to correct some of the inequality.

It is on the whole a good bill. We on the committee worked long and hard on it. It deserves not only the votes it will receive to assure its passage here today but sufficient additional votes to show we can overcome a veto. I hope every Member who sincerely believes in the importance of the work done by our classified and postal employees will make his convictions meaningful by supporting this bill. Regardless of our politics, we all know how devoted our postal employees have been in the past—how careful and conscientious and dedicated to service. That spirit is now unfortunately going out of the postal service—has been going out of the service—because of the way the career people have been treated by their top bosses in Washington. Many postal workers more and more take the attitude of "What's the use?" This trend must be reversed. The place to start is on pay scales—right now. I hope with new leadership in the Department in Washington we can take care of the other side of this problem—the operational chaos and bungling. Congress cannot solve that problem right now—the voters must act first. But we will solve it, I hope, next year.

Thank you.

The CHAIRMAN. All time has expired.

Under the rule the bill is considered as having been read for amendment. No amendments are in order to the bill except amendments offered by direction of the Committee on Post Office and Civil Service and such amendments shall not be subject to amendment.

The Clerk will read the committee amendment.

The Clerk read as follows:

Strike out all after the enacting clause and insert:

"TITLE I—POSTAL FIELD SERVICE EMPLOYEES

"Short title

"SEC. 101. This title may be cited as the 'Postal Employees Salary Increase Act of 1960'.

"Postal field service schedule

"SEC. 102. The Postal Field Service Schedule contained in section 301(a) of the Postal Field Service Compensation Act of 1955, as amended (72 Stat. 145, 215; 39 U.S.C. 971 (a)), is amended to read as follows:

" 'Postal field service schedule

Level	Per annum rates and steps

"Related provisions covering postal field service employees

"SEC. 105. (a) Section 304(c) of such Act, as amended (72 Stat. 146; 39 U.S.C. 974(c)), is hereby repealed.

"(b) Section 401 of such Act, as amended (39 U.S.C. 981), is amended by adding at the end thereof the following subsection:

" '(d) Any increase in basic salary granted by law on or after the effective date of this subsection shall not be deemed to be an

equivalent increase in basic salary within the meaning of subsection (a) of this section.'

"(c) The annual rate of basic salary of any officer or employee whose basic salary, immediately prior to the effective date of this subsection, is at a rate between two scheduled rates, or above the highest scheduled rate, in the Postal Field Service Schedule, the Rural Carrier Schedule, or the Fourth-Class Office Schedule, whichever may be applicable, is hereby increased by an amount equal to the amount of the increase made by this title in the next lower rate of the appropriate level in such schedule. As used in this subsection, the term 'basic salary' has the same meaning as when used in the Postal Field Service Compensation Act of 1955.

"(d) Section 204(b) of the Postal Field Service Compensation Act of 1955, as amended (39 U.S.C. 964(b)), is amended by striking out 'thirty' wherever appearing therein and inserting in lieu thereof 'five'.

"(e) This title shall have the same force and effect within Guam as within other possessions of the United States.

"TITLE II—GOVERNMENT EMPLOYEES GENERALLY

"Short title

"SEC. 201. This title may be cited as the 'Federal Employees Salary Increase Act of 1960'.

"Salary increase for employees subject to Classification Act of 1949

"SEC. 202. (a) Section 603(b) of the Classification Act of 1949, as amended (72 Stat. 203; 5 U.S.C. 1113(b)), is amended to read as follows:

"'(b) The compensation schedule for the General Schedule shall be as follows:

"'Grade	Per annum rates					
GS-1	$3,310	$3,405	$3,500	$3,595	$3,690	$3,785	$3,880

GS-18	19,000	------	------	------	------	------	------

"(b) The rates of basic compensation of officers and employees to whom this section applies shall be initially adjusted as follows:

"(1) If the officer or employee is receiving basic compensation immediately prior to the effective date of this section at one of the scheduled or longevity rates of a grade in the General Schedule of the Classification Act of 1949, as amended, he shall receive a rate of basic compensation at the corresponding scheduled or longevity rate in effect on and after such date.

"(2) If the officer or employee is receiving basic compensation immediately prior to the effective date of this section at a rate between two scheduled or two longevity rates, or between a scheduled and a longevity rate, of a grade in the General Schedule, he shall receive a rate of basic compensation at the higher of the two corresponding rates in effect on and after such date.

"(3) If the officer or employee (other than an officer or employee subject to paragraph (4) of this subsection), immediately prior to the effective date of this section, is receiving basic compensation at a rate in excess of the maximum longevity rate of his grade, or in excess of the maximum scheduled rate of his grade if there is no longevity rate for his grade, he shall receive basic compensation at a rate equal to the rate which he received immediately prior to such effective date, increased by an amount equal to the amount of the increase made by this section in the maximum longevity rate, or the maximum scheduled rate, as the case may be, of his grade until (A) he leaves such position, or (B) he is entitled to receive basic compensation at a higher rate by reason of the operation of the Classification Act of 1949, as amended; but, when his position becomes vacant, the rate of basic compensation of any subsequent appointee thereto shall be fixed in accordance with such Act, as amended.

"(4) If the officer or employee, immediately prior to the effective date of this section, is receiving, pursuant to paragraph (4) of section 2(b) of the Federal Employees Salary Increase Act of 1955, an existing aggregate rate of compensation determined under section 208(b) of the Act of September 1, 1954 (68 Stat. 1111; Public Law 763, Eighty-third Congress), plus the amount of the increase provided by section 2 of the Federal Employees Salary Increase Act of 1955 and by section 2 of the Federal Employees Salary Increase Act of 1958, he shall receive an aggregate rate of compensation equal to the sum of (A) his existing aggregate rate of compensation determined under such section 208(b) of the Act of September 1, 1954, (B) the amount of the increase provided by section 2 of the Federal Employees Salary Increase Act of 1955, (C) the amount of the increase provided by section 2 of the Federal Employees Salary Increase Act of 1958, and (D) the amount of the increase made by this section in the maximum longevity rate of his grade, until (i) he leaves his position, or (ii) he is entitled to receive aggregate compensation at a higher rate by reason of the operation of this title or any other provision of law; but, when such position becomes vacant, the aggregate rate of compensation of any subsequent appointee thereto shall be fixed in accordance with applicable provisions of law. Subject to clauses (i) and (ii) of the immediately preceding sentence of this paragraph, the amount of the increase provided by this section shall be held and considered for the purposes of section 208(b) of such Act of Septembr 1, 1954, to constitute a part of the existing aggregate rate of compensation of such employee.

"Employees subject to the Foreign Service Act of 1946

"SEC. 203. (a) The third sentence of section 412 of the Foreign Service Act of 1946, as amended (22 U.S.C. 867), is amended by striking out '$19,250' and inserting in lieu thereof '$19,800'.

"(b) The fourth sentence of section 412 of such Act is amended to read as follows: 'The per annum salaries of Foreign Service officers within each of the other classes shall be as follows:

"'Class 1	$17,510	$17,990	$18,470	$18,950	$19,430	$19,650	$19,700	------
Class 2	15,110	15,470	15,830	16,190	16,550	16,910	17,270	------
Class 3	12,710	13,070	13,430	13,790	14,150	14,510	14,870	------
Class 4	10,795	11,095	11,395	11,695	11,995	12,295	12,595	------
Class 5	8,875	9,175	9,475	9,775	10,075	10,375	10,675	------
Class 6	7,315	7,555	7,795	8,035	8,275	8,515	8,755	------
Class 7	6,115	6,295	6,475	6,655	6,835	7,015	7,195	------
Class 8	5,160	5,340	5,520	5,700	5,880	6,060	6,240	$6,420'

"(c) The second sentence of section 415 of such Act (22 U.S.C. 870) is amended to read as follows: 'The per annum rates of staff officers and employees within each class shall be as follows:

"'Class 1	$12,830	$13,210	$13,590	$13,970	$14,350	------	------
Class 2	11,905	12,235	12,565	12,895	13,225	------	------
Class 3	10,935	11,245	11,555	11,865	12,175	------	------
Class 4	9,915	10,225	10,535	10,845	11,155	------	------
Class 5	9,155	9,420	9,685	9,950	10,215	$10,480	------
Class 6	8,385	8,620	8,855	9,090	9,325	9,560	------
Class 7	7,620	7,855	8,090	8,325	8,560	8,795	------
Class 8	6,855	7,090	7,325	7,560	7,795	8,030	------
Class 9	6,090	6,325	6,560	6,795	7,030	7,265	------
Class 10	5,580	5,775	5,970	6,165	6,360	6,555	$6,750
Class 11	5,070	5,225	5,380	5,535	5,690	5,845	6,000
Class 12	4,560	4,715	4,870	5,025	5,180	5,335	5,490
Class 13	4,070	4,225	4,380	4,535	4,690	4,845	5,000
Class 14	3,600	3,760	3,920	4,080	4,240	4,400	4,560
Class 15	3,370	3,490	3,610	3,730	3,850	3,970	4,090
Class 16	3,135	3,215	3,295	3,375	3,455	3,535	3,615
Class 17	2,900	2,980	3,060	3,140	3,220	3,300	3,380
Class 18	2,680	2,760	2,840	2,920	3,000	3,080	3,160
Class 19	2,445	2,525	2,605	2,685	2,765	2,845	2,925
Class 20	2,210	2,290	2,370	2,450	2,530	2,610	2,690
Class 21	1,975	2,055	2,135	2,215	2,295	2,375	2,455
Class 22	1,745	1,825	1,905	1,985	2,065	2,145	2,225'

"(d) Foreign Service officers, Reserve officers, and Foreign Service staff officers and employees who are entitled to receive basic compensation immediately prior to the effective date of this section at one of the step rates provided by section 412 or section 415 of the Foreign Service Act of 1946, shall receive basic compensation on or after the effective date of this section at the corresponding step rate as provided by such section 412 or 415 as amended by this section.

"Employees in the Department of Medicine and Surgery in the Veterans' Administration

"SEC. 204. (a) Section 4103(b) of title 38 of the United States Code, prescribing the annual salary of the Chief Medical Director of the Department of Medicine and Surgery of the Veterans' Administration, is amended by striking out '$19,580' and inserting in lieu thereof '$21,345'.

"(b) Section 4103(c) of such title, prescribing the annual salary of the Deputy Chief Medical Director of the Department of Medicine and Surgery of the Veterans' Administration, is amended by striking out '$18,480' and inserting in lieu thereof '$20,145'.

"(c) Section 4103(d) of such title, relating to the annual salaries of the Assistant Chief Medical Directors and the directors of service or chiefs of division of the Department of Medicine and Surgery of the Veterans' Administration, is amended—

"(1) by striking out '$17,380' and inserting in lieu thereof '$18,945'; and

"(2) by striking out '$14,545 minimum to $16,500 maximum' and inserting in lieu thereof '$15,855 minimum to $17,985 maximum'.

"(d) Section 4103(e) of such title, relating to the annual salaries of the Director of

Nursing Service and the Deputy Director of Nursing Service of the Department of Medicine and Surgery of the Veterans' Administration, is amended—

"(1) by striking out '$12,770 minimum to $13,970 maximum' and inserting in lieu thereof '$13,920 minimum to $15,230 maximum'; and

"(2) by striking out '$11,355 minimum to $12,555 maximum' and inserting in lieu thereof '$12,380 minimum to $13,685 maximum'.

"(e) Section 4103(f) of such title, relating to the annual salaries of the chief pharmacist, the chief dietitian, the chief physical therapist, and the chief occupational therapist of the Department of Medicine and Surgery of the Veterans' Administration, is amended to read as follows:

"(f) The Administrator may appoint a chief pharmacist, a chief dietitian, a chief physical therapist, and a chief occupational therapist. During the period of his service as such, the chief pharmacist and the chief dietitian shall be paid a salary of $13,920 minimum to $15,230 maximum a year and the chief physical therapist and the chief occupational therapist shall be paid a salary of $12,380 minimum to $13,685 maximum a year.

"(f) Section 4107 of such title, relating to the maximum and minimum rates of annual salary of certain employees of the Medical Service, the Dental Service, and the Nursing Service of the Department of Medicine and Surgery of the Veterans' Administration, is amended to read as follows:

"'§ 4107. Grades and pay scales

"'(a) The grades and per annum full-pay ranges for positions provided in paragraph (1) of section 4104 of this title shall be as follows:

"'*Medical service*

"'Chief grade, $13,920 minimum to $15,230 maximum.

"'Senior grade, $12,380 minimum to $13,685 maximum.

"'Intermediate grade, $10,785 minimum to $12,090 maximum.

"'Full grade, $9,080 minimum to $10,390 maximum.

"'Associate grade, $7,665 minimum to $8,975 maximum.

"'Junior grade, $7,095 minimum to $8,075 maximum.

"'*Dental service*

"'Chief grade, $13,920 minimum to $15,230 maximum.

"'Senior grade, $12,380 minimum to $13,685 maximum.

"'Intermediate grade, $10,785 minimum to $12,090 maximum.

"'Full grade, $9,080 minimum to $10,390 maximum.

"'Associate grade, $7,665 minimum to $8,975 maximum.

"'Junior grade, $7,095 minimum to $8,075 maximum.

"'*Nursing service*

"'Assistant Director, $9,080 minimum to $10,390 maximum.

"'Senior grade, $7,665 minimum to $8,975 maximum.

"'Full grade, $6,525 minimum to $7,505 maximum.

"'Associate grade, $5,675 minimum to $6,720 maximum.

"'Junior grade, $4,825 minimum to $5,870 maximum.

"'*Administration*

"'(b) Notwithstanding any law, Executive order, or regulation, the Administrator shall prescribe by regulation the hours and conditions of employment and leaves of absence of physicians, dentists, and nurses.'

"(g) Section 4108(d) of such title, prescribing the maximum amount of pay and allowances of medical, surgical, and dental specialists of the Department of Medicine and Surgery of the Veterans' Administration, is amended to read as follows:

"'(d) Any person, rated as a medical, surgical, or dental specialist under the provisions of this section, shall receive, in addition to his basic pay, an allowance equal to 15 per centum of such pay, but in no event shall the pay plus the allowance authorized by this subsection exceed $17,440 per annum.'

"Agricultural stabilization and conservation county committee employees

"SEC. 205. (a) The rates of compensation of persons employed by the county committees established pursuant to section 8(b) of the Soil Conservation and Domestic Allotment Act (16 U.S.C. 590h(b)) shall be increased by amounts equal, as nearly as may be practicable, to the increases provided by this Act for corresponding rates of compensation in the appropriate schedule or scale of pay.

"(b)(1) Section 2 of the Civil Service Retirement Act, as amended (5 U.S.C. 2252), is amended by adding at the end thereof the following new subsection:

"'(h) This Act shall apply to persons employed by the county committees established pursuant to section 8(b) of the Soil Conservation and Domestic Allotment Act (16 U.S.C. 590h(b)), subject to the following requirements:

"'(1) The Secretary of Agriculture is authorized and directed to prescribe and issue such regulations as may be necessary to provide a means of effecting the application and operation of the provisions of this Act with respect to such employees;

"'(2) The Commission is authorized and directed to accept the certification of the Secretary of Agriculture or his designee with respect to service, for purposes of this Act, rendered by such employees prior to the effective date of this amendment; and

"'(3) Service rendered prior to the effective date of this amendment as an employee of a county committee established pursuant to section 8(b) of the Soil Conservation and Domestic Allotment Act (16 U.S.C. 590h(b)) shall be included in computing length of creditable service for the purposes of this Act only (A) if the employee has to his credit a total period of not less than five years of allowable service under this Act (including service allowable under this amendment) and (B) if, within two years after the effective date of this amendment, the employee shall have deposited with interest at 4 per centum per annum to December 31, 1947, and 3 per centum per annum thereafter, compounded on December 31 of each year, to the credit of the fund, a sum equal to the aggregate of the amounts which would have been deducted from his basic salary during the period of service claimed under this paragraph if during such period he had been subject to this Act.'

"(2) Notwithstanding any other provision of law, annuity benefits under the Civil Service Retirement Act resulting from the operation of this subsection shall be paid from the civil service retirement and disability fund.

"(c) Section 2 of the Federal Employees' Group Life Insurance Act of 1954, as amended (5 U.S.C. 2091), is amended by adding at the end thereof the following new subsection:

"'(d) Persons employed by the county committees established pursuant to section 8(b) of the Soil Conservation and Domestic Allotment Act (16 U.S.C. 590h(b)) shall, under such conditions of eligibility as the Commission by regulation may prescribe, come within the purview of this Act. The Secretary of Agriculture is authorized and directed to prescribe and issue such regulations as may be necessary to provide a means of effecting the application and operation of the provisions of this subsection with respect to such persons.'

"(d) Section 3 of the Federal Employees Health Benefits Act of 1959 (5 U.S.C. 3002) is amended by adding at the end thereof the following new subsection:

"'(f) Persons employed by the county committees established pursuant to section 8(b) of the Soil Conservation and Domestic Allotment Act (16 U.S.C. 590h(b)) may, in such manner and under such conditions of eligibility as the Commission by regulation may prescribe, enroll in an approved health benefits plan described in section 4 either as an individual or for self and family, under the same terms and conditions as apply to other employees who are eligible to enroll in such a plan under this Act. The Secretary of Agriculture is authorized and directed to prescribe and issue such regulations as may be necessary to provide a means of effecting the application and operation of the provisions of this subsection with respect to such persons.'

"Employees in the judicial branch

"SEC. 206. (a) The rates of basic compensation of officers and employees in or under the judicial branch of the Government whose rates of compensation are fixed by or pursuant to paragraph (2) of subdivision a of section 62 of the Bankruptcy Act (11 U.S.C. 102(a)(2)), section 3656 of title 18 of the United States Code, the third sentence of section 603, section 604(a)(5), or sections 672 to 675, inclusive, of title 28 of the United States Code, or section 107(a)(6) of the Act of July 31, 1956, as amended (5 U.S.C. 2206(a)(6)), are hereby increased by amounts equal to the increases provided by section 202 of this title in corresponding rates of compensation paid to officers and employees subject to the Classification Act of 1949, as amended.

"(b) The limitations provided by applicable law on the effective date of this section with respect to the aggregate salaries payable to secretaries and law clerks of circuit and district judges are hereby increased by the amounts necessary to pay the additional basic compensation provided by this title.

"(c) Section 753(e) of title 28 of the United States Code (relating to the compensation of court reporters for district courts) is amended by striking out '$7,095' and inserting in lieu thereof '$7,735'.

"Employees in the legislative branch

"SEC. 207. (a) Each officer and employee in or under the legislative branch of the Government whose rate of compensation is increased by section 5 of the Federal Employees Pay Act of 1946 shall be paid additional compensation at the rate of 9 per centum of his gross rate of compensation (basic compensation plus additional compensation authorized by law).

"(b) The basic compensation of each employee in the office of a Senator is hereby adjusted, effective on July 1, 1960, to the lowest multiple of $60 which will provide a gross rate of compensation not less than the gross rate such employee was receiving immediately prior thereto, except that the foregoing provisions of this subsection shall not apply in the case of any employee if on or before the fifteenth day following the date of enactment of this Act the Senator by whom such employee is employed notifies the disbursing office of the Senate in writing that he does not wish such provisions to apply to such employee. In any case in which, at the expiration of the time within which a Senator may give notice under this subsection, such Senator is deceased such notice shall be deemed to have been given.

"(c) Notwithstanding the provision referred to in subsection (d), the rates of gross compensation of each of the elected officers of the Senate (except the Presiding Officer of the Senate), the Parliamentarian of the Senate, the Legislative Counsel of the Senate, the Senior Counsel in the Office of the Legislative Counsel of the Senate, and the Chief

Clerk of the Senate are hereby increased by 9 per centum.

"(d) The paragraph imposing limitations on basic and gross compensation of officers and employees of the Senate appearing under the heading 'SENATE' in the Legislative Appropriation Act, 1956 (69 Stat. 510; Public Law 242, Eighty-fourth Congress), is amended to read as follows:

" 'No officer or employee whose compensation is disbursed by the Secretary of the Senate shall be paid basic compensation at a rate in excess of $8,880 per annum, or gross compensation at a rate in excess of $17,900 per annum, unless expressly authorized by law. This paragraph shall not apply to employees whose rates of compensation are subject to the limitations provided by the amendments made by subsections (g) and (h) of section 207 of the Federal Employees Salary Increase Act of 1960.'

"(e) The limitation on gross rate per hour per person provided by applicable law on the effective date of this section with respect to the folding of speeches and pamphlets for the Senate is hereby increased by 9 per centum. The amount of such increase shall be computed to the nearest cent, counting one-half cent and over as a whole cent. The provisions of subsection (a) of this section shall not apply to employees whose compensation is subject to such limitation.

"(f) The official reporters of proceedings and debates of the Senate and their employees shall be considered to be officers or employees in or under the legislative branch of the Government within the meaning of subsection (a).

"(g) The paragraph relating to rates of compensation of employees of committees of the Senate, contained in the Legislative Appropriation Act, 1956, as amended (69 Stat. 505; Public Law 242, Eighty-fourth Congress), is amended (1) by striking out '$8,040 per annum' and inserting 'any amount which, together with additional compensation authorized by law, will not exceed the maximum rate authorized for grade 16 of the General Schedule of the Classification Act of 1949, as amended', (2) by striking out '$8,460 per annum' and inserting 'any amount which, together with additional compensation authorized by law, will not exceed the maximum rate authorized for grade 17 of the General Schedule of such Act', and (3) by striking out '$8,880 per annum' and inserting 'any amount which, together with additional compensation authorized by law, will not exceed the maximum rate authorized by the General Schedule of such Act'.

"(h)(1) The second proviso in the paragraph relating to the authority of Senators to rearrange the basic salaries of employees in their respective offices which appears in the Legislative Branch Appropriation Act, 1947, as amended (2 U.S.C. 60f), is amended to read as follows: *'Provided*, That no salary shall be fixed under this section at a basic rate of more than $5,100 per annum, except that (1) the salary of one employee may be fixed at a basic rate which, together with additional compensation authorized by law, will not exceed the maximum rate provided by the General Schedule of the Classification Act of 1949, as amended, (2) the salary of one other employee may be fixed at a basic rate which, together with additional compensation authorized by law, will not exceed the maximum rate provided for grade 17 of such schedule, and (3) the salary of one other employee may be fixed at a basic rate which, together with additional compensation authorized by law, will not exceed the maximum rate provided for grade 16 of such schedule'.

"(2) The basic clerk hire allowance of each Senator is increased by $1,020.

"(i) The basic compensation of the Administrative Assistants to the Speaker, Majority Leader, Minority Leader, Majority Whip, and Minority Whip, and of the Administrative Assistant to any Member of the House who has served as Speaker of the House, shall be at a per annum basic rate which, together with additional compensation authorized by law, is equal to the maximum rate authorized by the Classification Act of 1949, as amended.

"(j) Section 202(e) of the Legislative Reorganization Act of 1946, as amended (2 U.S.C. 72a(e)), is amended (1) by striking out '$8,880' where it first appears in such subsection and inserting in lieu thereof 'the highest amount which, together with additional compensation authorized by law, will not exceed the maximum rate authorized by the Classification Act of 1949, as amended,' and (2) by striking out '$8,880' at the second place where it appears in such subsection and inserting in lieu thereof 'the highest amount which, together with additional compensation authorized by law, will not exceed the maximum rate authorized by the Classification Act of 1949, as amended'.

"(k)(1) This subsection is enacted as an exercise of the rulemaking power of the House of Representatives with full recognition of the constitutional right of the House of Representatives to change the rule amended by this subsection at any time, in the same manner, and to the same extent as in the case of any other rule of the House of Representatives.

"(2) Clause 28(c) of rule XI of the Rules of the House of Representatives is amended (A) by striking out '$8,880' where it first appears in such clause and inserting in lieu thereof 'the highest amount which, together with additional compensation authorized by law, will not exceed the maximum rate authorized by the Classification Act of 1949, as amended,' and (B) by striking out '$8,880' at the second place where it appears in such clause and inserting in lieu thereof 'the highest amount which, together with additional compensation authorized by law, will not exceed the maximum rate authorized by the Classification Act of 1949, as amended'.

"(l) Each officer or employee of the House of Representatives, whose compensation is disbursed by the Clerk of the House of Representatives and is not increased automatically, or is not permitted to be increased administratively, by reason of any other provision of this section, shall receive additional compensation at the rate of 9 per centum of the rate of his total annual compensation in effect immediately prior to the effective date of this section.

"(m) The limitations on gross rate per thousand and gross rate per hour per person provided by applicable law on the effective date of this section with respect to the folding of speeches and pamphlets for the House of Representatives are hereby increased by 9 per centum. The amount of each such increase shall be computed to the nearest cent, counting one-half cent and over as a whole cent.

"(n) The additional compensation provided by this section shall be considered a part of basic compensation for the purposes of the Civil Service Retirement Act (5 U.S.C. 2251 and the following).

"TITLE III—GENERAL PROVISIONS

"Authorization of appropriations

"SEC. 301. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

"Effective date

"SEC. 302. The foregoing provisions of this Act shall become effective on the first day of the first pay period which begins on or after July 1, 1960."

Mr. MORRISON (interrupting the reading of the amendment). Mr. Chairman, I ask unanimous consent that further reading of the committee amendment in the reported bill be dispensed with.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

Mr. HALLECK. Mr. Chairman, for the present, I object.

The Clerk resumed the reading of the committee amendment.

Mr. MORRISON (during the reading of the amendment). Mr. Chairman, I ask unanimous consent that further reading of the committee amendment in the reported bill be dispensed with.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. MORRISON. Mr. Chairman, by direction of the Committee on Post Office and Civil Service, I offer a substitute for the committee amendment, which is at the Clerk's desk.

The Clerk read as follows:

Committee amendment offered by Mr. MORRISON as a substitute to the committee amendment: Strike out all after the enacting clause and insert in lieu thereof the following:

"TITLE I—SALARY ADJUSTMENTS FOR GOVERNMENT EMPLOYEES

"Part A—Postal field service employees

"Short Title

"SEC. 101. This part may be cited as the 'Postal Employees Salary Increase Act of 1960'.

"Postal Field Service Schedule

"Related Provisions Covering Postal Field Service Employees

"SEC. 105. (a) Section 304(c) of such Act, as amended (72 Stat. 146; 39 U.S.C. 974(c)), is hereby repealed.

"(b) Section 401 of such Act, as amended (39 U.S.C. 981), is amended by adding at the end thereof the following subsection:

"'(d) Any increase in basic salary granted by law on or after the effective date of this subsection shall not be deemed to be an equivalent increase in basic salary within the meaning of subsection (a) of this section.'

"(c) The annual rate of basic salary of any officer or employee whose basic salary, immediately prior to the effective date of this subsection, is at a rate between two scheduled rates, or above the highest scheduled rate, in the Postal Field Service Schedule, the Rural Carrier Schedule, or the Fourth-Class Office Schedule, whichever may be applicable, is hereby increased by an amount equal to the amount of the increase made by this part in the next lower rate of the appropriate level in such schedule. As used in this subsection, the term 'basic salary' has the same meaning as when used in the Postal Field Service Compensation Act of 1955.

"(d) This part shall have the same force and effect within Guam as within other possessions of the United States.

"Part B—Government employees generally

"Short Title

"SEC. 111. This part may be cited as the 'Federal Employees Salary Increase Act of 1960'.

"Salary Increase for Employees Subject to Classification Act of 1949

"SEC. 112. (a) Section 603(b) of the Classification Act of 1949, as amended (72 Stat. 203; 5 U.S.C. 1113(b)), is amended to read as follows:

"'(b) The compensation schedule for the General Schedule shall be as follows:

"'Grade	Per annum rates							"'Grade	Per anum rates						
GS-1	$3,185	$3,290	$3,395	$3,500	$3,605	$3,710	$3,815	GS-10	$6,995	$7,160	$7,325	$7,490	$7,655	$7,820	$7,985

GS-9	6,435	6,600	6,765	6,930	7,095	7,260	7,425	GS-18	18,500	------	------	------	------	------	------'

"(b) The rates of basic compensation of officers and employees to whom this section applies shall be initially adjusted as follows:

"(1) If the officer or employee is receiving basic compensation immediately prior to the effective date of this section at one of the scheduled or longevity rates of a grade in the General Schedule of the Classification Act of 1949, as amended, he shall receive a rate of basic compensation at the corresponding scheduled or longevity rate in effect on and after such date.

"(2) If the officer or employee is receiving basic compensation immediately prior to the effective date of this section at a rate between two scheduled or two longevity rates, or between a scheduled and a longevity rate, of a grade in the General Schedule, he shall receive a rate of basic compensation at the higher of the two corresponding rates in effect on and after such date.

"(3) If the officer or employee (other than an officer or employee subject to paragraph (4) of this subsection), immediately prior to the effective date of this section, is receiving basic compensation at a rate in excess of the maximum longevity rate of his grade, or in excess of the maximum scheduled rate of his grade if there is no longevity rate for his grade, he shall receive basic compensation at a rate equal to the rate which he received immediately prior to such effective date, increased by an amount equal to the amount of the increase made by this section in the maximum longevity rate, or the maximum scheduled rate, as the case may be, of his grade until (A) he leaves such position, or (B) he is entitled to receive basic compensation at a higher rate by reason of the operation of the Classification Act of 1949, as amended; but, when his position becomes vacant, the rate of basic compensation of any subsequent appointee thereto shall be fixed in accordance with such Act, as amended.

"(4) If the officer or employee, immediately prior to the effective date of this section, is receiving, pursuant to paragraph (4) of section 2(b) of the Federal Employees Salary Increase Act of 1955, an existing aggregate rate of compensation determined under section 208(b) of the Act of September 1, 1954 (68 Stat. 1111; Public Law 763, Eighty-third Congress), plus the amount of the increase provided by section 2 of the Federal Employees Salary Increase Act of

1955 and by section 2 of the Federal Employees Salary Increase Act of 1958, he shall receive an aggregate rate of compensation equal to the sum of (A) his existing aggregate rate of compensation determined under such section 208(b) of the Act of September 1, 1954, (B) the amount of the increase provided by section 2 of the Federal Employees Salary Increase Act of 1955, (C) the amount of the increase provided by section 2 of the Federal Employees Salary Increase Act of 1958, and (D) the amount of the increase made by this section in the maximum longevity rate of his grade, until (i) he leaves his position, or (ii) he is entitled to receive aggregate compensation at a higher rate by reason of the operation of this title or any other provision of law; but, when such position becomes vacant, the aggregate rate of compensation of any subsequent appointee thereto shall be fixed in accordance with applicable provisions of law. Subject to clauses (i) and (ii) of the immediately preceding sentence of this paragraph, the amount of the increase provided by this section shall be held and considered for the purposes of section 208(b) of such Act of September 1, 1954, to constitute a part of the existing aggregate rate of compensation of such employee.

"Employees Subject to the Foreign Service Act of 1946

"SEC. 113. (a) The third sentence of section 412 of the Foreign Service Act of 1946, as amended (22 U.S.C. 867), is amended by striking out '$19,250' and inserting in lieu thereof '$19,800'.

"(b) The fourth sentence of section 412 of such Act is amended to read as follows: 'The per annum salaries of Foreign Service officers within each of the other classes shall be as follows:

"'Class 1	$17,250	$17,650	$18,050	$18,450	$18,850	$19,250	$19,650	-------
Class 2	14,900	15,255	15,610	15,965	16,320	16,675	17,030	-------
Class 3	12,535	12,890	13,245	13,600	13,955	14,310	14,665	-------
Class 4	10,645	10,945	11,245	11,545	11,845	12,145	12,445	-------

Class 5	$8,755	$9,055	$9,355	$9,655	$9,955	$10,255	$10,555	-------
Class 6	7,215	7,455	7,695	7,935	8,175	8,415	8,655	-------
Class 7	6,035	6,215	6,395	6,575	6,755	6,935	7,115	-------
Class 8	5,085	5,265	5,445	5,625	5,805	5,985	6,165	$6,345'

"(c) The second sentence of section 415 of such Act (22 U.S.C. 870) is amended to read as follows: 'The per annum rates of staff officers and employees within each class shall be as follows:

"'Class 1	$12,655	$13,030	$13,405	$13,780	$14,155	----------	----------	----------
Class 2	11,740	12,065	12,390	12,715	13,040	----------	----------	----------
Class 3	10,785	11,095	11,405	11,715	12,025	----------	----------	----------
Class 4	9,780	10,909	10,400	10,710	11,020	----------	----------	----------
Class 5	9,025	9,285	9,545	9,805	10,065	$10,325	----------	----------
Class 6	8,270	8,500	8,730	8,960	9,190	9,420	----------	----------
Class 7	7,515	7,745	7,975	8,205	8,435	8,665	----------	----------
Class 8	6,760	6,990	7,220	7,450	7,680	7,910	----------	----------
Class 9	6,005	6,235	6,465	6,695	6,925	7,155	----------	----------
Class 10	5,500	5,690	5,880	6,070	6,260	6,450	$6,640	----------

Class 12	$4,495	$4,650	$4,805	$4,960	$5,115	$5,270	$5,425	----------
Class 13	4,010	4,165	4,320	4,475	4,630	4,785	4,940	----------
Class 14	3,550	3,705	3,860	4,015	4,170	4,325	4,480	----------
Class 15	3,325	3,440	3,555	3,670	3,785	3,900	4,015	----------
Class 16	3,095	3,175	3,255	3,335	3,415	3,495	3,575	----------
Class 17	2,860	2,940	3,020	3,100	3,180	3,260	3,340	----------
Class 18	2,640	2,720	2,800	2,880	2,960	3,040	3,120	----------
Class 19	2,410	2,490	2,570	2,650	2,730	2,810	2,890	----------
Class 20	2,180	2,260	2,340	2,420	2,500	2,580	2,660	----------
Class 21	1,950	2,030	2,110	2,190	2,270	2,350	2,430	----------
Class 22	1,720	1,800	1,880	1,960	2,040	2,120	2,200	----------

"(d) Foreign Service officers, Reserve officers, and Foreign Service staff officers and employees who are entitled to receive basic compensation immediately prior to the effective date of this section at one of the step rates provided by section 412 or section 415 of the Foreign Service Act of 1946, shall receive basic compensation on or after the effective date of this section at the corresponding step rate as provided by such section 412 or 415 as amended by this section.

"Employees in the Department of Medicine and Surgery in the Veterans' Administration

"SEC. 114. (a) Section 4103(b) of title 38 of the United States Code relating to the annual salary of the Chief Medical Director of the Department of Medicine and Surgery of the Veterans' Administration, is amended by striking out '$19,580' and inserting in lieu thereof '$21,050'.

"(b) Section 4103(c) of such title, relating to the annual salary of the Deputy Chief Medical Director of the Department of Medicine and Surgery of the Veterans' Administration, is amended by striking out '$18,480' and inserting in lieu thereof '$19,870'.

"(c) Section 4103(d) of such title, relating to the annual salaries of the Assistant Chief Medical Directors and the directors of service or chiefs of division of the Department of Medicine and Surgery of the Veterans' Administration, is amended—

"(1) by striking out '$17,380' and inserting in lieu thereof '$18,685'; and

"(2) by striking out '$14,545 minimum to $16,500 maximum' and inserting in lieu thereof '$15,640 minimum to $17,740 maximum'.

"(d) Section 4103(e) of such title, relating to the annual salaries of the Director of Nursing Service and the Deputy Director of Nursing Service of the Department of Medicine and Surgery of the Veterans' Administration, is amended—

"(1) by striking out '$12,770 minimum to $13,970 maximum' and inserting in lieu thereof '$13,730 minimum to $15,030 maximum'; and

"(2) by striking out '$11,355 minimum to $12,555 maximum' and inserting in lieu thereof '$12,210 minimum to $13,510 maximum'.

"(e) Section 4103(f) of such title, relating to the annual salaries of the chief pharmacist, the chief dietitian, the chief physical therapist, and the chief occupational therapist of the Department of Medicine and Surgery of the Veterans' Administration, is amended to read as follows:

"'(f) The Administrator may appoint a chief pharmacist, a chief dietitian, a chief physical therapist, and a chief occupational therapist. During the period of his service as such, the chief pharmacist and the chief dietitian shall be paid a salary of $13,730 minimum to $15,030 maximum a year and the chief physical therapist and the chief occupational therapist shall be paid a salary of $12,210 minimum to $13,510 maximum a year.'

"(f) Section 4107(a) of such title, relating to the maximum and minimum rates of annual salary of certain employees of the Medical Service, the Dental Service, and the Nursing Service of the Department of Medicine and Surgery of the Veterans' Administration, is amended to read as follows:

"'§ 4107. Grades and pay scales

"'(a) The grades and per annum full-pay ranges for positions provided in paragraph (1) of section 4104 of this title shall be as follows:

"'Medical Service

"'Chief grade, $13,730 minimum to $15,030 maximum.

"'Senior grade, $12,210 minimum to $13,510 maximum.

"'Intermediate grade, $10,635 minimum to $11,935 maximum.

"'Full grade, $8,955 minimum to $10,255 maximum.

"'Associate grade, $7,560 minimum to $8,860 maximum.

"'Junior grade, $6,995 minimum to $7,985 maximum.

"'Dental Service

"'Chief grade, $13,730 minimum to $15,030 maximum.

"'Senior grade, $12,210 minimum to $13,510 maximum.

"'Intermediate grade, $10,635 minimum to $11,935 maximum.

"'Full grade, $8,955 minimum to $10,255 maximum.

"'Associate grade, $7,560 minimum to $8,860 maximum.

"'Junior grade, $6,995 minimum to $7,985 maximum.

"'Nursing Service

"'Assistant Director, $8,955 minimum to $10,255 maximum.

"'Senior grade, $7,560 minimum to $8,860 maximum.

"'Full grade, $6,435 minimum to $7,425 maximum.

"'Associate grade, $5,600 minimum to $6,630 maximum.

"'Junior grade, $4,760 minimum to $5,790 maximum.

"'Administration

"'(b) Notwithstanding any law, Executive order, or regulation, the Administrator shall prescribe by regulation the hours and conditions of employment and leaves of absence of physicians, dentists, and nurses.'

"(g) Section 4108(d) of such title, prescribing the maximum amount of pay and allowances of medical, surgical, and dental specialists of the Department of Medicine and Surgery of the Veterans' Administration, is amended to read as follows:

"'(d) Any person, rated as a medical, surgical, or dental specialist under the provisions of this section, shall receive, in addition to his basic pay, an allowance equal to 15 per centum of such pay, but in no event shall the pay plus the allowance authorized by this subsection exceed $17,200 per annum.'

"Agricultural Stabilization and Conservation County Committee Employees

"SEC. 115. (a) The rates of compensation of persons employed by the county committees established pursuant to section 8(b) of the Soil Conservation and Domestic Allotment Act (16 U.S.C. 590h(b)) shall be increased by amounts equal, as nearly as may be practicable, to the increases provided by this title for corresponding rates of compensation in the appropriate schedule or scale of pay.

"(b)(1) Section 2 of the Civil Service Retirement Act, as amended (5 U.S.C. 2252), is amended by adding at the end thereof the following new subsection:

"'(h) This Act shall apply to persons employed by the county committees established pursuant to section 8(b) of the Soil Conservation and Domestic Allotment Act (16 U.S.C. 590h(b)), subject to the following requirements:

"'(1) The Secretary of Agriculture is authorized and directed to prescribe and issue such regulations as may be necessary to provide a means of effecting the application and operation of the provisions of this Act with respect to such employees;

"'(2) The Commission is authorized and directed to accept the certification of the Secretary of Agriculture or his designee with respect to service, for purposes of this Act, rendered by such employees prior to the effective date of this amendment; and

"'(3) Service rendered prior to the effective date of this amendment as an employee of a county committee established pursuant to section 8(b) of the Soil Conservation and Domestic Allotment Act (16 U.S.C. 590h(b)) shall be included in computing length of creditable service for the purposes of this Act only (A) if the employee has to his credit a total period of not less than five years of allowable service under this Act (including service allowable under this amendment) and (B) if, within two years after the effective date of this amendment, the employee shall have deposited with interest at 4 per centum per annum to December 31, 1947, and 3 per centum per annum thereafter, compounded on December 31 of each year, to the credit of the fund, a sum equal to the aggregate of the amounts which would have been deducted from his basic salary during the period of service claimed under this paragraph if during such period he had been subject to this Act.'

"(2) Notwithstanding any other provision of law, annuity benefits under the Civil Service Retirement Act resulting from the operation of this subsection shall be paid from the civil service retirement and disability fund.

"(c) Section 2 of the Federal Employees' Group Life Insurance Act of 1954, as amended (5 U.S.C. 2091), is amended by adding at the end thereof the following new subsection:

"'(d) Persons employed by the county committees established pursuant to section 8(b) of the Soil Conservation and Domestic Allotment Act (16 U.S.C. 590h(b) shall, under such conditions of eligibility as the Commission by regulation may prescribe, come within the purview of this Act. The Secretary of Agriculture is authorized and directed to prescribe and issue such regulations as may be necessary to provide a means of effecting the application and operation of the provisions of this subsection with respect to such persons.'

"(d) Section 3 of the Federal Employees Health Benefits Act of 1959 (5 U.S.C. 3002) is amended by adding at the end thereof the following new subsection:

"'(f) Persons employed by the county committees established pursuant to section 8(b) of the Soil Conservation and Domestic Allotment Act (16 U.S.C. 590h(b)) may, in such manner and under such conditions of eligibility as the Commission by regulation may prescribe, enroll in an approved health benefits plan described in section 4 either as an individual or for self and family, under the same terms and conditions as apply to other employees who are eligible to enroll in such a plan under this Act. The Secretary of Agriculture is authorized and directed to prescribe and issue such regulations as may be necessary to provide a means of effecting the application and operation of the provisions of this subsection with respect to such persons.'

"Employees in the Judicial Branch

"SEC. 116. (a) The rates of basic compensation of officers and employees in or under the judicial branch of the Government whose rates of compensation are fixed by or pursuant to paragraph (2) of subdivision a of section 62 of the Bankruptcy Act (11 U.S.C. 102(a)(2)), section 3656 of title 18 of the United States Code, the third sentence of section 603, section 604(a)(5), or sections 672 to 675, inclusive, of title 28 of the United States Code, or section 107(a)(6) of the Act of July 31, 1956, as amended (5 U.S.C. 2206(a)(6)), are hereby increased by amounts equal to the increases provided by section 612 of this part in corresponding rates of compensation paid to officers and employees subject to the Classification Act of 1949, as amended.

"(b) The limitations provided by applicable law on the effective date of this section with respect to the aggregate salaries payable to secretaries and law clerks of circuit and district judges are hereby increased by the amounts necessary to pay the additional basic compensation provided by this part.

"(c) Section 753(e) of title 28 of the United States Code (relating to the compensation of court reporters for district courts) is amended by striking out '$7,095' and inserting in lieu thereof '$7,630'.

"Employees in the Legislative Branch

"SEC. 117. (a) Each officer and employee in or under the legislative branch of the Government whose rate of compensation is increased by section 5 of the Federal Employees Pay Act of 1946 shall be paid additional compensation at the rate of 7.5 per centum of his gross rate of compensation (basic compensation plus additional compensation authorized by law).

"(b) The basic compensation of each employee in the office of a Senator is hereby adjusted, effective on July 1, 1960, to the lowest multiple of $60 which will provide a gross rate of compensation not less than the gross rate such employee was receiving immediately prior thereto, except that the foregoing provisions of this subsection shall not apply in the case of any employee if on or before the fifteenth day following the date of enactment of this Act the Senator by whom such employee is employed notifies the disbursing office of the Senate in writing that he does not wish such provisions to apply to such employee. In any case in which, at the expiration of the time within which a Senator may give notice under this subsection, such Senator is deceased such notice shall be deemed to have been given.

"(c) Notwithstanding the provision referred to in subsection (d), the rates of gross compensation of each of the elected officers of the Senate (except the Presiding Officer of the Senate), the Parliamentarian of the Senate, the Legislative Counsel of the Senate, the Senior Counsel in the Office of the Legislative Counsel of the Senate, and the Chief Clerk of the Senate are hereby increased by 7.5 per centum.

"(d) The paragraph imposing limitations on basic and gross compensation of officers and employees of the Senate appearing under the heading 'SENATE' in the Legislative Appropriation Act, 1956 (69 Stat. 510; Public Law 242, Eighty-fourth Congress), is amended to read as follows:

"'No officer or employee whose compensation is disbursed by the Secretary of the Senate shall be paid basic compensation at a rate in excess of $8,800 per annum, or gross compensation at a rate in excess of $17,525 per annum, unless expressly authorized by law.'

"(e) The limitation on gross rate per hour per person provided by applicable law on the effective date of this section with respect to the folding of speeches and pamphlets for the Senate is hereby increased by 7.5 per centum. The amount of such increase shall be computed to the nearest cent, counting one-half cent and over as a whole cent. The provisions of subsection (a) of this section shall not apply to employees whose compensation is subject to such limitation.

"(f) The official reporters of proceedings and debates of the Senate and their employees shall be considered to be officers or employers in or under the legislative branch of the Government within the meaning of subsection (a).

"(g) Each officer or employee of the House of Representatives, whose compensation is disbursed by the Clerk of the House of Representatives and it is not increased automatically, or is not permitted to be increased administratively, by reason of any other provision of this section, shall receive additional compensation at the rate of 7.5 per centum of the rate of his total annual compensation in effect immediately prior to the effective date of this section.

"(h) The limitations on gross rate per thousand and gross rate per hour per person provided by applicable law on the effective date of this section with respect to the folding of speeches and pamphlets for the House of Representatives are hereby increased by 7.5 per centum. The amount of each such increase shall be computed to the nearest cent, counting one-half cent and over as a whole cent.

"(i) The additional compensation provided by this section shall be considered a part of basic compensation for the purposes of the Civil Service Retirement Act (5 U.S.C. 2251 and the following).

"Part C—General Provisions

"Authorization of Appropriations

"SEC. 121. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this title and title II.

"Effective Date

"SEC. 122. The foregoing provisions of this title and the provisions of section 201 shall become effective on the first day of the first pay period which begins on or after July 1, 1960.

"TITLE II—EXECUTIVE AND SUPERGRADE POSITIONS

"SEC. 201. The Federal Executive Pay Act of 1956 be amended as follows:

"(1) Section 106(a) is amended by adding the following new subparagraph after subparagraph (45):

"'(46) Legal adviser, solicitor, or general counsel of an executive department (excluding the Department of Justice)'.

"(2) Section 106(b) is amended by deleting the present subparagraph (9) and by inserting in lieu thereof the following:

"'(9) General counsel of a military department'.

"SEC. 202. There shall be in the Department of Health, Education, and Welfare an Administrative Assistant Secretary of Health, Education, and Welfare who shall be appointed, with the approval of the President, by the Secretary of Health, Education, and Welfare under the classified civil service, who shall perform such duties as the Secretary shall prescribe, and whose annual rate of basic compensation shall be $19,000.

"SEC. 203. (a) Subsection (b) of section 505 of the Classification Act of 1949, as amended, is amended (1) by striking out 'fourteen hundred and twenty-nine' and inserting 'fourteen hundred and nine', (2) by striking out 'three hundred and seventy-one' and inserting 'three hundred and sixty-three', and (3) by striking out 'one hundred and fifty-three' and inserting 'one hundred and fifty-two'.

"(b) Such section is further amended by adding at the end thereof a new subsection as follows:

"'(l) The Interstate Commerce Commission is authorized, subject to the standards and procedures prescribed by this Act, to place a total of two positions in grade 18, ten positions in grade 17, and thirteen positions in grade 16 of the General Schedule. Such positions shall be in addition to the number of positions authorized to be placed in such grades by subsection (b).'"

Mr. MORRISON (during the reading of the amendment). Mr. Chairman, I ask unanimous consent that further reading of the substitute amendment be dispensed with and that it be printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

Mr. HOFFMAN of Michigan. Mr. Chairman, reserving the right to object, will the gentleman tell us what the rest of it is, just briefly?

Mr. MORRISON. If the gentleman had remained here during general debate he would have heard it. It was debated for 2 hours, and we told exactly what was in it.

Mr. HOFFMAN of Michigan. I heard it all right, but it was kind of difficult to understand the way you put it.

Mr. MORRISON. I will try to do better next time.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. MORRISON. Mr. Chairman, I will not take up the Committee's time. I am sure they have heard everything contained in this substitute amendment. It in effect changes the amount of the pay raise from 9 percent across the board to 7.5 percent across the board salary raise for all Federal employees.

Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Louisiana [Mr. MORRISON] as a substitute to the committee amendment.

The substitute amendment was agreed to.

The CHAIRMAN. The question is on the committee amendment as amended by the substitute.

The committee amendment was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Mr. HOFFMAN of Michigan. Mr. Chairman, I have a preferential motion.

The CHAIRMAN. The motion comes too late.

The Committee will rise.

Mr. HOFFMAN of Michigan. I wonder if the Chairman could explain that, why it is too late, under the rule?

The CHAIRMAN. Such a motion is in order only when amendments are in order, and under the rule amendments are not now in order.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. BOGGS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H.R. 9883) to adjust the rates of basic compensation of certain officers and employees of the Federal Government, and for other purposes, pursuant to House Resolution 537, he reported the bill back to the House with an amendment adopted in the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on agreeing to the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. REES of Kansas. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. REES of Kansas. I am.

The SPEAKER. The gentleman qualifies. The Clerk will report the motion.

The Clerk read as follows:

Mr. REES of Kansas moves to recommit the bill, H.R. 9883, to the House Committee on Post Office and Civil Service, with instructions to report it back forthwith with a salary increase for those covered under the bill of 5 percent in lieu of the increase provided in the amendment.

Mr. MORRISON. Mr. Speaker, I make the point of order that there can be only a straight motion to recommit on this bill.

The SPEAKER. The rule specifically provided otherwise. The rule provides for a motion to recommit with or without instructions.

Mr. MORRISON. Mr. Speaker, I withdraw my point of order and move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

Mr. HALLECK. Mr. Speaker, on that I ask for the yeas and nays.

The yeas and nays were ordered.

The question was taken and there were—yeas 94, nays 324, not voting 14, as follows:

NOT VOTING—14

Barden	Durham	Moulder
Bentley	Green, Oreg.	Patman
Buckley	Green, Pa.	Rivers, S.C.
Burdick	Loser	Taylor
Carnahan	Morris, Okla.	

So the motion to recommit was rejected.

The Clerk announced the following pairs:

Mr. Rivers of South Carolina with Mr. Bentley.

Mr. Green of Pennsylvania with Mr. Taylor.

Mr. Buckley with Mr. Burdick.

Mr. JENNINGS changed his vote from "yea" to "nay."

The result of the vote was announced as above recorded.

The SPEAKER. The question is on the passage of the bill.

Mr. MORRISON. Mr. Speaker, on this I ask for the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 378, nays 40, not voting 14, as follows:

[Roll No. 134]

NOT VOTING—14

Barden	Durham	Moulder
Bentley	Green, Oreg.	Patman
Buckley	Green, Pa.	Rivers, S.C.
Burdick	Loser	Taylor
Carnahan	Morris, Okla.	

So the bill was passed.

The Clerk announced the following pairs:

Mr. Buckley with Mr. Bentley.

Mr. Green of Pennsylvania with Mr. Barden.

Mr. Rivers of South Carolina with Mr. Taylor.

Mr. THOMSON of Wyoming changed his vote from "nay" to "yea."

The vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. MORRISON. Mr. Speaker, I ask unanimous consent that all Members have 5 legislative days to revise and extend their remarks, just prior to the vote on this bill.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

DEPARTMENT OF AGRICULTURE AND FARM CREDIT ADMINISTRATION APPROPRIATION BILL, 1961

Mr. WHITTEN. Mr. Speaker, I call up the conference report on the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

The Clerk read the statement.

The conference report and statement are as follows:

CONFERENCE REPORT (H. REPT. NO. 1863)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 5 and 21.

That the House recede from its disagreement to the amendments of the Senate numbered 2, 3, 11, 12, 15, 17, 18, 19, 20, 24, 31, and 32, and agree to the same.

Amendment numbered 1: That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$68,827,200"; and the Senate agree to the same.

Amendment numbered 7: That the House recede from its disagreement to the amendment of the Senate numbered 7, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$32,053,000"; and the Senate agree to the same.

Amendment numbered 8: That the House recede from its disagreement to the amendment of the Senate numbered 8, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$32,553,000"; and the Senate agree to the same.

Amendment numbered 9: That the House recede from its disagreement to the amendment of the Senate numbered 9, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$55,220,000"; and the Senate agree to the same.

Amendment numbered 10: That the House recede from its disagreement to the amendment of the Senate numbered 10, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$56,715,000"; and the Senate agree to the same.

Amendment numbered 13: That the House recede from its disagreement to the amendment of the Senate numbered 13, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$2,265,000"; and the Senate agree to the same.

Amendment numbered 14: That the House recede from its disagreement to the amendment of the Senate numbered 14, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$35,000,000"; and the Senate agree to the same.

Amendment numbered 16: That the House recede from its disagreement to the amendment of the Senate numbered 16, and agree

to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$16,515,000"; and the Senate agree to the same.

Amendment numbered 22: That the House recede from its disagreement to the amendment of the Senate numbered 22, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$940,000"; and the Senate agree to the same.

Amendment numbered 23: That the House recede from its disagreement to the amendment of the Senate numbered 23, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$330,000,000"; and the Senate agree to the same.

Amendment numbered 25: That the House recede from its disagreement to the amendment of the Senate numbered 25, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$31,050,000"; and the Senate agree to the same.

Amendment numbered 26: That the House recede from its disagreement to the amendment of the Senate numbered 26, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$1,050,000"; and the Senate agree to the same.

Amendment numbered 27: That the House recede from its disagreement to the amendment of the Senate numbered 27, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$1,488,000"; and the Senate agree to the same.

Amendment numbered 28: That the House recede from its disagreement to the amendment of the Senate numbered 28, and agree to the same with an amendment as follows: In lieu of the matter proposed by said amendment insert "one hundred seventy four thousand and seven hundred and thirty six"; and the Senate agree to the same.

Amendment numbered 29: That the House recede from its disagreement to the amendment of the Senate numbered 29, and agree to the same with an amendment as follows: In lieu of the matter proposed by said amendment insert "eighty-seven thousand and three hundred and sixty-eight"; and the Senate agree to the same.

Amendment numbered 30: That the House recede from its disagreement to the amendment of the Senate numbered 30, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$67,300"; and the Senate agree to the same.

The committee of conference report in disagreement amendments numbered 4 and 6.

JAMIE L. WHITTEN,
FRED MARSHALL,
CLARENCE CANNON,
H. CARL ANDERSEN,
JOHN TABER,
Managers on the Part of the House.

RICHARD B. RUSSELL,
CARL HAYDEN,
LISTER HILL,
A. WILLIS ROBERTSON,
ALLEN J. ELLENDER,
MILTON R. YOUNG,
KARL E. MUNDT,
HENRY C. DWORSHAK,
Managers on the Part of the Senate.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report as to each of such amendments, namely:

DEPARTMENT OF AGRICULTURE

Agricultural Research Service

Amendments Nos. 1 and 2—Research: Appropriate $68,827,200 instead of $67,934,000 as proposed by the House and $70,247,600 as proposed by the Senate. The amount agreed to includes the following increases above the funds approved by the House:

(1) $500,000 for research on spray residues, making a total of $750,000 additional for this purpose;

(2) $250,000 for utilization research, making a total increase of $950,000 for this purpose;

(3) A total of $272,500 for advance staffing of the cotton insect research laboratory and for additional research at three branch stations;

(4) $60,000 for initial staffing of two corn insect laboratories authorized last year;

(5) $350,000 for increased vegetable crops research;

(6) $75,000 for the Newell, S. Dak., research station;

(7) $20,000 for research on weeds of sugarcane at Houma, La.;

(8) $25,000 for pecan insect research at Albany, Ga.;

(9) $25,000 for research studies on salt cedars and other phreatophytes;

(10) $60,000 to increase poultry disease research at Athens, Ga.;

(11) $455,700 for staffing soil and water laboratories, which provides a total of $40,000 for the Humboldt River watershed in Nevada and $200,000 to expand research on hydrology problems in Oklahoma.

Amendment No. 3—Plant and animal disease and pest control: Appropriates $52,236,000 as proposed by the Senate instead of $52,011,000 as proposed by the House.

Amendment No. 4—Plant and animal disease and pest control: Reported in disagreement.

Amendment No. 5—Special fund: Restores House language stricken by the Senate.

Amendment No. 6—Construction of facilities: Reported in disagreement. The managers on the part of the House intend to offer a motion to recede and agree to the sum of $2,550,000 instead of $3,700,000 as proposed by the Senate. The amount agreed to provides funds for various research facilities as follows:

(1) $300,000 for initiating construction of the main laboratory and headquarters at the National Arboretum at a total cost of not to exceed $1,500,000;

(2) $250,000 for tobacco research facilities as provided in the House bill;

(3) $300,000 for planning and initiating construction of a facility at Athens, Ga., at not to exceed a total cost of $950,000 to conduct research on diseases and related problems affecting poultry;

(4) $200,000 for planning and initiating construction of a laboratory at not to exceed a total cost of $400,000 at Mississippi State University to conduct research in management and structures in relation to the prevention and control of disease and related methods of improving poultry quality in the Southeast;

(5) $300,000 for planning and initiating construction of a laboratory at not to exceed a total cost of $2,000,000 at or near the North Dakota Agricultural Experiment Station at Fargo, N. Dak., for research on metabolism of agricultural chemicals in insects, plants, and livestock, and to develop sterility techniques for control of insects;

(6) $250,000 for research facilities on improved practices for conservation farming and ranching at Bushland, Tex., as provided in the House bill;

(7) $200,000 for planning and initiating construction of a laboratory at not to exceed a total cost of $400,000 to conduct basic research on tillage, traction, and transport equipment and its effect on soil conservation at Auburn, Ala.;

(8) $250,000 for planning and initiating construction of a laboratory at not to exceed a total cost of $850,000 to develop technology for sound conservation practices in the Snake River Valley;

(9) $350,000 for planning and initiating construction of a laboratory at not to exceed a total cost of $500,000 to conduct research on plants, soil, and nutrition at Ithaca, N.Y.;

(10) $150,000 for construction of a laboratory to study soil and water management practices of the Northwest at Pullman, Wash.

Amendments Nos. 7 and 8—State experiment stations: Appropriate $32,553,000 instead of $31,553,000 as proposed by the House and $32,553,708 as proposed by the Senate.

Extension service

Amendments Nos. 9, 10, and 11—Payments to States and Puerto Rico: Appropriate $56,715,000 instead of $55,715,000 as proposed by the House and $57,715,000 as proposed by the Senate. The conferees have eliminated from the bill the requirement that the use of the additional funds be limited to the county level. The conferees are in accord, however, that such increase should be used in accordance with such provision. A number of States have used the substantial increases made in this item in recent years for additional personnel at the State and county levels. Many of these States have failed to maintain the salaries of county agents at a level comparable with agents in other States. In such States the funds in this bill should be used for the present number of employees at the county level to place salaries at a level comparable with other States. Testimony before the House committee indicates that salary increases are needed in 22 States to maintain comparable levels.

Amendment No. 12—Retirement costs for extension agents: Appropriates $5,961,000 as proposed by the Senate instead of $5,875,000 as proposed by the House.

Amendment No. 13—Federal Extension Service: Appropriates $2,265,000 instead of $2,255,000 as proposed by the House and $2,275,000 as proposed by the Senate. The extra $10,000 is provided for the employment of an additional auditor.

Soil Conservation Service

Amendment No. 14—Watershed protection: Appropriates $35,000,000 instead of $32,000,000 as proposed by the House and $37,000,000 as proposed by the Senate. The conferees are in agreement that $4,900,000 shall be used for investigations and planning.

Amendment No. 15—Flood prevention: Inserts statutory reference.

Agricultural Marketing Service

Amendment No. 16—Marketing research and agricultural estimates: Appropriates $16,515,000 instead of $16,315,000 as proposed by the House and $16,605,000 as proposed by the Senate. The amount agreed to includes funds to initiate lamb-on-feed reports, research on vegetables in the Southeast, and a pilot operation on estimates for tomatoes and celery. The conferees agree that the full $750,000 allowed by the House should be used to initiate the long-range program designed to modernize and improve the entire system of agricultural estimates.

Amendment No. 17: Changes punctuation.

Amendment No. 18—Marketing services: Appropriates $26,579,900 as proposed by the Senate. The conferees have allowed the full budget estimate for poultry inspection. The funds so approved are for poultry inspection as proposed by the budget.

The conferees have agreed to an increase for administration of the Packers and Stockyards Act in view of the Department's in-

creased regulatory responsibilities over livestock transactions at country points. However, concern has been expressed by livestock producers, country buyers, and local sales operators regarding the possible imposition of administrative regulations on selling and buying practices at the farm or local level which perhaps are appropriate for the larger markets but which are completely contrary to long-established and accepted customs, arrangements, and practices by parties at interest. It is the consensus of the conferees that vast differences have prevailed and will continue to prevail between sales by private treaty or at local community sales and transactions at the organized public and terminal markets. For this reason care should be exercised in the development of applicable regulations governing livestock transactions to provide for meeting these different situations in order that the right and freedom of producers to negotiate, bargain, and decide in their best interests shall be protected.

Foreign Agricultural Service

Amendments Nos. 19 and 20—Salaries and expenses: Appropriate $4,487,000 as proposed by the Senate instead of $4,447,000 as proposed by the House, and authorize the transfer of $2,539,000 from section 32 funds as proposed by the Senate instead of $2,493,000 as proposed by the House.

Amendment No. 21—Special foreign currency program: Eliminates language inserted by the Senate relative to the purchase of foreign currencies.

Commodity Exchange Authority

Amendment No. 22—Salaries and expenses: Appropriates $940,000 instead of $930,000 as proposed by the House and $941,325 as proposed by the Senate.

Commodity Stabilization Service

Amendment No. 23—Conservation reserve program: Appropriates $330,000,000 instead of $310,000,000 as proposed by the House and $335,000,000 as proposed by the Senate. Of the funds included for administrative expenses, not less than $10,000,000 shall be used for county expenses. Reductions required under the balance of the administrative funds shall be made primarily at the Washington level.

Rural Electrification Administration

Amendment No. 24—Loan authorizations: Authorizes $60,000,000 for the contingency fund for each program as proposed by the Senate instead of $50,000,000 as proposed by the House.

Farmers Home Administration

Amendments Nos. 25 and 26—Salaries and expenses: Appropriate $31,050,000 instead of $30,500,000 as proposed by the House and $31,467,650 as proposed by the Senate and authorize the transfer of $1,050,000 from the farm tenant mortgage insurance fund instead of $1,000,000 as proposed by the House and $1,100,000 as proposed by the Senate.

Office of Information

Amendments Nos. 27, 28, 29, and 30—Salaries and expenses: Appropriate $1,488,000 instead of $1,478,000 as proposed by the House and $1,523,000 as proposed by the Senate and provide for the printing of 174,736 copies of the 1961 yearbook "Seeds" and the reprinting of 87,368 copies of the 1959 yearbook "Food."

Commodity Credit Corporation

Amendment No. 31—Limitation on administrative expenses: Authorizes $45,726,000 as proposed by the Senate instead of $44,726,000 as proposed by the House, which provides an additional $1,000,000 for the contingency fund. The conferees are in agreement that cotton-quality evaluation and other research to be performed under CCC contracts should not be charged to this limitation. They further agree that all such research undertaken in fiscal year 1961 should be reported to the Committees on Appropriations of the House and Senate when initiated and should be provided for in the budget for fiscal year 1962.

Amendment No. 32—Limitation on administrative expenses: Eliminates language inserted by the House. The conferees have eliminated the following language from the bill: *Provided further,* That none of the funds herein appropriated shall be used to formulate or administer any program which does not provide for maximum use of Government-owned facilities for storing surplus commodities, consistent with the economical operation of the Corporation.

The charter of the Commodity Credit Corporation states: "That nothing contained in this subsection (b) shall limit the duty of the Corporation, to the maximum extent practical consistent with the fulfillment of the Corporation's purposes and the effective and efficient conduct of its business, to utilize the usual and customary channels, facilities and arrangements of the trade and commerce in warehousing commodities * * *." The conferees agree that commercial warehouse space for storing commodities be given preference, other things being equal; however, when existing Government storage is available and can be effectively used at less cost, taking into consideration all cost factors involved, including risk incurred, such space should be used in the interest of protecting the Treasury. Such practices as moving commodities from existing Government storage into commercial warehouse space is certainly not in the interests of protecting the assets of the Commodity Credit Corporation and is a waste of tax dollars. The conferees do not favor construction of further Government-owned storage facilities.

JAMIE L. WHITTEN,
FRED MARSHALL,
CLARENCE CANNON,
H. CARL ANDERSEN,
JOHN TABER,
Managers on the Part of the House.

Mr. WHITTEN (interrupting the reading of the statement). Mr. Speaker, I ask unanimous consent that further reading of the statement be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. SMITH of Iowa. Mr. Speaker, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Iowa.

Mr. SMITH of Iowa. Mr. Speaker, I would like to say to the gentleman from Mississippi that I am a little concerned about one sentence in the report, the very last sentence which says that the conferees do not favor construction of further Government-owned storage facilities.

I would like to cite as the background for my question the fact that last year, the first year of the Benson corn program, we produced 4.4 billion bushels of corn. We consumed 3.8 billion bushels. Obviously the CCC is obligated under these circumstances to take over a considerable amount of corn. There is some doubt there is sufficient properly located storage in existence today, even when you add the commercial together with the Government-owned storage. This means that the Commodity Credit Corporation must secure some additional storage somewhere. If they cannot secure the storage at a reasonable price from the trade, obviously they are going to have to or should provide it with some Government-owned facilities.

In order to make the language in the report more clear, did the gentleman intend to discourage the construction of more Government-owned storage under these circumstances, or where it is necessary?

Mr. WHITTEN. May I say to the gentleman that the gentleman from Illinois [Mr. YATES] offered the amendment commonly known as the Yates amendment. I think he rendered a real service in offering that amendment. I think it was beneficial to the conferees in writing the conference report. Generally we have tried to carry out the intent of that amendment in our report, as I understand the intent, though the conference language speaks for itself.

As to the language to which the gentleman refers, I call attention again to the fact that we did not say government storage could not be built. We said only that we did not favor the construction of further Government-owned storage facilities. The intent, as I understand it, was that where commercial facilities can be made available or where the Government can promote the construction by commercial enterprise, on a reasonable cost basis, in those cases it should be done. But I do agree with the gentleman that under the price-support laws storage space must be made available in order to provide for the price-support program. In those cases where storage is not otherwise available the CCC would be duty bound to use this means of providing the price support benefits. Thus we come back to the fact that if commercial enterprises do not meet this need on a reasonable basis, there would be an obligation on the part of the Government to meet it. We do not favor doing that unless it should be necessary either because commercial warehousing was unavailable or because exhorbitant rates were demanded.

Mr. YATES. Mr. Speaker, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Illinois.

Mr. YATES. Let me first thank the gentleman for his gracious comments on my amendment. I am still not clear as to what the meaning of the language used by the conferees is. I read from the conference report:

> The conferees agree that commercial warehouse space for storing commodities be given preference, other things being equal.

Suppose you have two facilities in an area. You have a Government-owned facility and you have a commercial facility, both of which are empty. It would be cheaper to store the surplus commodity in the Government facility. Is it the intent of your amendment that the Commodity Credit Corporation should store such grain as requires storage in the Government facility under those conditions?

Mr. WHITTEN. If we presume that it would be more economical to use the Government storage, it is our intent that it be used. We do point out in the language we use that there are certain cost

factors that should be taken into consideration in making the decision as to "most economical." The commercial warehouse agrees to deliver the same quality grain without deterioration. On the other hand, the Government under some circumstances might have no provision for loading and unloading and no provision for turnover. That in itself would not preclude Government-owned storage, but in determining which is most economical those different factors should be taken into account. Primarily what we say in the report is what I think the gentleman really intended in his amendment. We spell out some of the factors which are involved in the word "economical."

Mr. YATES. That was the intent of the amendment, to make the program be operated in the most economical way possible, and that is still the intent of the conference report, that the program be operated on the most economical basis possible, and that if the corporation has a choice between commercial and Government facilities and it would be more economical to use the Government facilities, the corporation is to use the Government facilities.

Mr. WHITTEN. It is my belief that would be required under the words of the charter, "Consistent with the efficient operation of the corporation." May I say the gentleman's efforts, I believe, will lead to considerable savings to the Government.

Mr. YATES. I thank the gentleman.

Mr. MAHON. Mr. Speaker, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Texas.

Mr. MAHON. Has the action of the conferees been discussed with the officials of the Department of Agriculture having to do with the storage of grain, and do they think that this compromise arrangement is reasonably satisfactory from the standpoint of the farmer, the warehouse man, and others involved?

Mr. WHITTEN. We have not discussed this with the Department officials. We had quite lengthy hearings with the departmental officials earlier. This in my judgment is in line with the sound operation of the corporation. I do not believe anybody in the Department could differ with the language. After all, the Department's handling of the matter led to the adoption first of the amendment and now of the report. I think it is in line with what sound-thinking people in the Department believe, and I think it is thoroughly workable.

Mr. JOHNSON of Maryland. Mr. Speaker, will the gentleman yield?

Mr. WHITTEN. I yield.

Mr. JOHNSON of Maryland. Mr. Speaker, I wish to commend the conference committee on their splendid report and to say that I appreciate their cooperation in having the funds for marketing services restored in the bill. As I told the House on May 11, the elimination of the appropriations for Federal compulsory poultry inspection would have a serious impact on the important poultry industry of the First Congressional District of Maryland. Members of the committee assured me that efforts would be made to restore these funds amounting to some $26 million, and I am happy that this has been accomplished.

We are proud of our Eastern Shore poultry industry. Our producers have remarkably increased their efficiency in the use of inputs in feed, labor, capital, and management, which have resulted in lower production costs. Our breeders and hatcheries have provided improved meat-type strains, and our processors have adopted modern methods and techniques. Collectively, the industry has promoted its products in the Nation's marketplace. In spite of these economies and good market practices, the margin of profit to the poultry industry has been reduced to the point where further investments in capital assets have been questioned.

For the past year, I have been pressing for more favorable freight rates on feed ingredients shipped from midwestern grain terminals to our district. Freight rates to other geographic areas of the same distance or more which produce poultry are for the most part considerably lower than those prevailing in my district. This inequity and discrimination is definitely unfair to the poultrymen on the Delmarva Peninsula. As an example, the Memphis area was at a $1.97 a ton advantage over our poultry district. A study is now under way on freight price differential in the northeast area and I see some hope that our great poultry industry will obtain this needed relief.

Another problem confronting the great Delmarva poultry-producing area is the need to deepen channels and improve harbor facilities in order to take advantage of cheaper water freight rates.

The Eastern Shore is one of the largest broiler-producing areas in the United States. Despite higher feed ingredient costs, higher freight rates, and higher operation costs generally, our poultry industry has held a respectable position because of its high degree of efficiency, good management, and quality birds. This great industry is and will continue as an important segment of the general economy of the district.

Mr. YATES. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. YATES. Mr. Speaker, on May 11, when the Department of Agriculture appropriations bill was on the floor, I offered an amendment to require the Commodity Credit Corporation to use Government storage facilities to the maximum extent possible, consistent with economical operation of the Corporation, for the storage of surplus agricultural commodities. The reason for the amendment was obvious. As the committee pointed out, the storage charges for fiscal year 1959 totaled almost $482 million. For 1960, the storage charges for surplus commodities were estimated to be $612 million. For the next fiscal year, storage charges were expected to exceed $700 million. The Government itself owns facilities in which 985 million bushels of surplus commodities can be stored. According to the committee's hearings, these facilities are being used only to the extent of 65 percent.

Why is this important? Because of the great disparity between the costs of storage in Government facilities and commercial facilities. According to the hearings, the cost of using Government facilities is 5.1 cents per bushel as opposed to a cost of 16.3 cents per bushel in commercial facilities. And even with this tremendous difference in cost, it is the policy of the Department of Agriculture to require storage in commercial bins, even though empty Government storage space is available. It is clear that millions of dollars in storage charges can be saved if Government facilities are used to a greater extent.

Now the conferees have returned with their conference report which has stricken the amendment I offered in the House and which the House accepted. I know that the conferees had a most difficult task in trying to reconcile their support for the Yates amendment with the views in opposition of the Senate. However, after speaking to several of them earlier today on the intent of the language in the conference report which was substituted for my amendment, I believe its intent is the same. The language may be different, but the purpose is the same.

The purpose of the Yates amendment was to save money for the taxpayers through the efficient and economical operation of the Corporation's storage program. It had been shown that the Corporation was not making adequate use of Government facilities. On the contrary, it was utilizing much more expensive commercial facilities, when Government storage facilities were available. As I indicated before, the hearings of this subcommittee and of the Fountain Subcommittee of the House Committee on Government Operations show that the cost of storage was 5.1 cents for Government facilities, as opposed to 16.3 cents for commercial storage. No one on this subcommittee—not even those who objected to the Yates amendment when it was proposed, took issue with these costs when they were considered in committee.

In view of the statements just made by the chairman of the subcommittee that it is the intention of the conferees that the storage program be operated on the most economical basis, it would seem to me that the new language in the conference report must be construed to require practices which encourage economy. If Government facilities and commercial facilities are both available, and it is more economical to store the surplus commodities in Government facilities, I understand it to be the intention of the conferees that the commodities should be stored in Government warehouses. If in fact it can be shown that it is more economical to store the commodities in commercial facilities, the commodities should be stored in commercial facilities.

I have been assured by the chairman that the subcommittee intends to review the storage practices of the Commodity Credit Corporation during the next fiscal

year to see whether it will abstain from the extravagant practices of which it has been guilty in the past. I have been assured further that the committee intends to make sure that Government facilities are utilized in a manner which will permit the storage program to be operated as efficiently and economically as possible.

Mr. Speaker, the Yates amendment is a common sense amendment. The taxpayers are entitled to the protection it contains. I am sure the farmers themselves want the taxpayers to have such protection so that the entire farm program is not jeopardized by unnecessary and unwarranted expenditures. I am sure that they do not intend that the farm price-support program be a storage price-support program, as well. Common sense dictates that such costs be kept to a minimum. Common sense should be used in administering the surplus commodity storage program.

Mr. WHITTEN. Mr. Speaker, I yield 6 minutes to the gentleman from Minnesota [Mr. ANDERSEN] for the purpose of making a statement.

Mr. ANDERSEN of Minnesota. Mr. Speaker, I am taking advantage of this opportunity to commend and compliment the leadership and those advocating the measure for the speed with which the pay-raise legislation for Government employees was brought to the floor and approved.

Just a few days ago a discharge petition was filed, and the Members stood in line in the well of the House to sign, and in 2 days the required number of signatures was obtained.

The pay-raise measure that we have approved has merit, and in addition it has popular appeal for more than 2 million Government employees. But what about the farmers, Mr. Speaker? Are American farmers any less deserving of their day in court?

It should be noted that the lowest entrance salary for civil service employees is now $2,960. That is a rather low salary today with the high cost of living and industrial wages averaging more than $90 per week. So we have just agreed to give all Government employees with salaries ranging from $2,960 to $17,500 a year a substantial raise. I believe they deserve it or I assure you I would not have voted for the bill.

But what about our farmers whose average net income per family is only $2,380 per year? The average farm operator and family today earns for labor, investment, and management ability a total amount $580 a year less than the lowest paid civil service employee to whom we have just voted a raise.

Two-thirds of the American farms, about 3 million of them, had incomes from farming last year amounting to $3,000 or less, according to the U.S. Department of Agriculture.

The average return to the dairy-farm operators and their families in the Central Northeast is below the present minimum civil service salary. The average return to cotton-farm operators in the southern Piedmont is only a fraction of that, and the average return to wheat-farm operators is also below the minimum civil service salary. They, too, must live off their dollar income like anybody else.

Are farm families any less deserving of consideration at our hands than the families of Government employees?

An income-reducing wheat bill was approved in the other body just the other day by a vote of 44 to 36 after an amendment sponsored by the majority to reduce price supports another 5 percent below the committee bill had been approved by a record vote of 48 to 34. Wheat farmers were shocked last week by the action in the other body and all farmers are appalled by the lack of any action here in the House of Representatives.

I am told that the Committee on Rules, with an 8 to 4 membership dominated by Democrats, has still not acted on the pending bill. I repeat, I am told that the Committee on Rules, with an 8 to 4 membership, dominated by Democrats, has still not acted on the pending farm bill. But I do not see the advocates of farm legislation, of that particular bill, filing a discharge petition, nor do I see the majority in control of the Congress by virtually a 2-to-1 margin doing anything about the farm-income problem.

On the one hand we see this quick and decisive action on behalf of 2 million Government employees, with salaries ranging from $2,960 to $17,500 a year, and on the other hand we see nothing being done—nothing being done for the 3 million farm families with incomes at or below the minimum civil service salary.

When I plead for action on a worthwhile farm measure, the leaders in control of legislation alibi that it might be vetoed. But the threat of a possible veto did not dismay a great majority of our colleagues here today when they signed the discharge petition earlier and now have cast their votes for a civil service pay raise.

Mr. HOFFMAN of Michigan. Mr. Speaker, I make a point of order that a quorum is not present.

Mr. Speaker, I withdraw that motion and make a point of order that the House is not in order.

The SPEAKER. The House will be in order.

Mr. ANDERSEN of Minnesota. I may say to the gentleman from Michigan that if the gentlemen on the other side of the aisle are not interested in farm legislation, that is their business. If their lack of order indicates their lack of interest in farm problems, let the record speak for itself. I am merely expressing my opinion here today in behalf of the farmers of the Nation. If some Members are not concerned, that is their business. That is about what the Democratic majority has done this year; they have not listened and they have not acted. They have that bill bottled up in the Rules Committee. They are waiting until the wheat bill comes over from the Senate and then they will say that our corn and feed grain green acres proposal is not germane because the bill would be wholly limited to wheat. That will be their strategy.

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield to the gentleman.

Mr. HOFFMAN of Michigan. The gentleman is talking about the Rules Committee and our friends on the right over here. I was not thinking of them; I would like to hear what the gentleman says.

Mr. ANDERSEN of Minnesota. Thank you, sir.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield.

Mr. GROSS. The gentleman is talking about the Rules Committee.

Mr. ANDERSEN of Minnesota. I am just criticizing the Rules Committee, eight Democrats and four Republicans, for lack of action. We have been here more than 5 months, adjournment is staring us in the face with the turn of the page of our calendar, and campaign promises to the farmer apparently have been forgotten. The time for action on farm legislation is long overdue, Mr. Speaker. The House has just shown the Nation how fast it can act when the majority decides to do so, with little or no concern for a threatened veto.

Mr. Speaker, there is no alibi left for the dismal failure of this Congress in the field of farm legislation. The last, lame excuse of a possible veto was swept aside by the action of the House today in passing the pay raise bill.

Mr. WHITTEN. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The conference report was agreed to.

The SPEAKER. The Clerk will report the first amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 4: Page 4, line 5, insert ": *Provided*, That no funds shall be used to formulate or administer a brucellosis eradication program for fiscal year 1962 that does not require minimum matching by any State of at least 40 per centum;".

Mr. WHITTEN. Mr. Speaker, I move that the House recede and concur in the Senate amendment with an amendment.

The Clerk read as follows:

Mr. WHITTEN moves that the House recede from its disagreement to the amendment of the Senate No. 4, and concur therein with an amendment, as follows: In lieu of the figure 1962 in said amendment insert "1963".

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 6: Page 6, line 1, insert:

"CONSTRUCTION OF FACILITIES

"For construction of facilities and acquisition of the necessary land therefor by donation or exchange, $3,700,000, to remain available until expended: *Provided*, That $300,000 of the amount appropriated herein shall be available for payment of expenses for construction of a headquarters-laboratory building at the National Arboretum, which is hereby authorized to be constructed under contract authorization in an amount not to exceed $1,500,000."

Mr. WHITTEN. Mr. Speaker, I move that the House recede and concur in the Senate amendment with an amendment.

The Clerk read as follows:

Mr. WHITTEN moves that the House recede from its disagreement to the amendment of the Senate No. 6, and concur therein with an amendment, as follows: In lieu of the matter proposed by said amendment insert:

"CONSTRUCTION OF FACILITIES

"For construction of facilities and acquisition of the necessary land therefor by donation or exchange, $2,550,000, to remain available until expended."

Mr. WHITTEN. Mr. Speaker, I yield to the gentleman from Illinois [Mr. YATES].

Mr. ANDERSEN of Minnesota. Mr. Speaker, will the gentleman yield?

Mr. WHITTEN. I yield.

Mr. ANDERSEN of Minnesota. Mr. Speaker, I ask unanimous consent that the gentlewoman from Washington [Mrs. MAY] may extend her remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mrs. MAY. Mr. Speaker, I am extremely gratified that, in accepting the conference report on the agriculture appropriations bill, the House of Representatives today included the sum of $150,000 for the establishment of a soil and water conservation research laboratory facility at Washington State University at Pullman.

This facility, one of five authorized for construction in fiscal year 1961, will enable scientists to cope with an acute erosion problem which is causing the loss of soil at an alarming rate, particularly in the rolling Palouse hills near Pullman where much of our Northwest wheat is grown.

As I pointed out in testimony before the Agriculture Appropriations Subcommittee, I have heard from a great number of individuals and interested farm organizations who believe, as I do, that a special laboratory for soil and water conservation research should be established within the State of Washington, and that it should be in harmony with the comprehensive report on "Facilities Needs—Soil and Water Conservation Research," the report of findings by the working group appointed by the Secretary of Agriculture. Within the State of Washington, our most urgent need is to expand materially Federal efforts in soil and water research.

I wish to commend the House and Senate for its action in approving this facility.

The SPEAKER. The question is on the motion of the gentleman from Mississippi.

The motion was agreed to.

A motion to reconsider the votes by which action was taken on the several motions was laid on the table.

JUDICIARY AND JUDICIAL PROCEDURE

Mr. LANE. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 12620) to amend title 28, entitled "Judiciary and Judicial Procedure," of the United States Code to provide for the defense of suits against Federal employees arising out of their operation of motor vehicles in the scope of their employment, and for other purposes.

The Clerk read the title of the bill.

Mr. LANE. Mr. Speaker, on July 9, 1959, the House passed H.R. 7577, a bill to amend title 28, entitled "Judiciary and Judicial Procedure," of the United States Code to provide for the defense of suits against Federal employees arising out of their operation of motor vehicles in the scope of their employment, and for other purposes. This bill was the culmination of much thought and serious consideration after full and complete hearings were held by the Judiciary Committee and all interested governmental departments were heard. All departments were generally in harmony in approving the nature and purpose of such legislation.

That bill was then passed by the Senate with an amendment in which the House concurred so that legislation, long sought and much needed, would not be deferred and on the further premise that the amendment by the other body is applicable only to the procedural aspects of the bill and not to the essence of the proposed legislation.

On June 11, 1960, H.R. 7577, as amended by the Senate, was vetoed by the President who in his veto message stated, among other things:

This amendment is unfortunate.

And:

Although unwilling, therefore, to approve this bill, I would gladly sign new legislation corresponding to H.R. 7577 as first passed by the House of Representatives.

H.R. 12620 is identical in every respect with H.R. 7577 which, before amendment, was pleasing and acceptable, in the main, by all interested parties who are concerned with the matters covered thereby, pondered the problems and considered their solutions and, as indicated in the veto message, was also acceptable to the President. I wish to express my appreciation to the Members of this House who, I hope, will give unanimous consent to its passage as it indicates that the Members are alert to speedy action when the need is evident and the merit of legislation is apparent.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts [Mr. LANE]?

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2679 of title 28, United States Code, is amended (1) by inserting the subsection symbol "(a)" at the beginning thereof and (2) by adding immediately following such subsection (a) as hereby so designated, four new subsections as follows:

"(b) The remedy by suit against the United States as provided by section 1346(b) of this title for damage to property or for personal injury, including death, resulting from the operation by any employee of the Government of any motor vehicle while acting within the scope of his office or employment, shall hereafter be exclusive of any other civil action or proceeding by reason of the same subject matter against the employee or his estate whose act or omission gave rise to the claim.

"(c) The Attorney General shall defend any civil action or proceeding brought in any court against any employee of the Government or his estate for any such damage or injury. The employee against whom such civil action or proceeding is brought shall deliver within such time after date of service or knowledge of service as determined by the Attorney General, all process served upon him or an attested true copy thereof to his immediate superior or to whomever was designated by the head of his department to receive such papers and such person shall promptly furnish copies of the pleadings and process therein to the United States attorney for the district embracing the place wherein the proceeding is brought, to the Attorney General, and to the head of his employing Federal agency.

"(d) Any such civil action or proceeding commenced in a State court shall be removed without bond at any time before trial by the Attorney General to the district court of the United States for the district and division embracing the place wherein it is pending and the proceedings deemed a tort action brought against the United States under the provisions of this title and all references thereto. Should a United States district court determine on a hearing on a motion to remand held before a trial on the merits that the case so removed is one in which a remedy by suit within the meaning of subsection (b) of this section is not available against the United States, the case shall be remanded to the State court.

"(e) The Attorney General may compromise or settle any claim asserted in such civil action or proceeding in the manner provided in section 2677, and with the same effect."

SEC. 2. The amendments made by this Act shall be deemed to be in effect six months after the enactment hereof but any rights or liabilities then existing shall not be affected.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DISPENSING WITH CALENDAR WEDNESDAY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the business in order on Calendar Wednesday of next week be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

Mr. GROSS. Mr. Speaker, reserving the right to object, it has been reported that we might come in early tomorrow to consider the foreign handout bill and an effort will be made to rush it through in 1 day. Will the gentleman enlighten me as to whether there will be any attempt made to come in early tomorrow?

Mr. McCORMACK. I was going to follow this request with another one that when the House adjourns today it adjourn to meet on tomorrow at 11 o'clock. Whether we get through in 1 day or not is something I cannot foretell. I want to frankly advise the gentleman in response to his inquiry what my intentions are.

Mr. GROSS. I might say that if we do come in early tomorrow it would seem to me that would be an invitation to ram the bill through in 1 day. I am opposed

to that, and I would be constrained to object to any request to come in early.

Mr. McCORMACK. I appreciate the gentleman's statement.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts [Mr. McCORMACK]?

There was no objection.

ANNOUNCEMENT

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, may I say in response to the gentleman from Iowa that I appreciate his frankness. The gentleman says if I make the unanimous-consent request to meet at 11 o'clock on tomorrow he will object, is that correct?

Mr. GROSS. That is correct.

Mr. McCORMACK. I shall not make the request in view of the fact that my friend has so frankly advised me.

TREASURY AND POST OFFICE APPROPRIATION

Mr. GARY. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. GARY. Mr. Speaker, I have called special executive sessions of the House Subcommittee on Treasury and Post Office Appropriations to begin next Tuesday, June 21, to take testimony regarding contracts let by the Post Office Department.

Information which the Department provided to the House Committee on Post Office and Civil Service indicates that the Department may be circumventing the law regarding consultant services. The law sets a maximum limit of $100 per day which can be paid to individual consultants by the Department; however, by making contracts with consulting firms, the Department has been able to pay at much higher rates.

For instance, the Department has paid one firm $400 per day, for 71 days, for the services of a survey director; and from $125 to $250 a day for associates. They were supposed to be studying "the effect of postal services and the impact of postal rates and fees on the users of the mail."

It is obvious, from such outlandish rates of pay for management consultant surveys, that the whole Post Office Department contract system must be thoroughly investigated by the Congress.

Mr. CANFIELD. Mr. Speaker, will the gentleman yield?

Mr. GARY. I yield to the gentleman from New Jersey.

Mr. CANFIELD. Mr. Speaker, I may say to the gentleman from Virginia, chairman of the Subcommittee on Appropriations handling funds for the Treasury and Post Office Departments, that if the facts are as stated by him the meeting of our subcommittee scheduled for next Tuesday is very much in order.

Mr. GARY. I thank the gentleman, and I will say that so far as the facts are concerned they are recorded. If there is any reasonable explanation the Post Office Department will have an opportunity to make it. Personally, I cannot see how there can be any.

D.C. TRANSIT SYSTEM CHARTER AND SIGHTSEEING OPERATIONS

Mr. SMITH of Virginia. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 525 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4815) to insure effective regulation of D.C. Transit System, Inc., and fair and equal competition between D.C. Transit System, Inc., and its competitors. After general debate, which shall be confined to the bill, and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. SMITH of Virginia. Mr. Speaker, I yield 30 minutes to the gentleman from Illinois [Mr. ALLEN] and myself such time as I may consume.

Mr. Speaker, this resolution makes in order, with 2 hours of general debate, the bill entitled "To insure effective regulation of D.C. Transit System, Inc., and fair and equal competition between D.C. Transit System, Inc., and its competitors."

Now, Mr. Speaker, the situation here is that some years ago, several years ago, in fact, Congress granted a monopoly of mass transportation to the Capital Transit System. Some time ago my attention was called to the situation which prevailed with respect to sightseeing transit where it appears that the Capital Transit Corp., not satisfied with the monopoly on mass transportation, is now seeking through the use of its facilities, to also engage in a situation with respect to sightseeing buses, and to run out of business these numerous little corporations that operate sightseeing facilities here in the District. They are doing it because of the fact that under their charter they are granted certain privileges and immunities by reason of their charter on mass transportation. They are using those privileges and immunities in order to drive the little sightseeing people out of business. I do not think that ought to be permitted. For instance, they have a certain provision in their charter which relieves them of the gasoline tax, which is quite a considerable item in the matter of the expense of operation of both mass operation and sightseeing transportation. Now, the sightseeing corporation, the little fellow, does not have that tax exemption of their gasoline. The transit system is using its mass transportation facilities, such as buses, help, and so forth, in the operation of this effort to drive the little people out of business.

I think the situation should be corrected. The committee having jurisdiction of this matter is the Committee on Interstate and Foreign Commerce. They went into the matter at considerable length with the Public Utility Commission and with others interested, including the mass transportation company itself. They came up with the proposal that the mass transportation company, which is the Capital Transit Co., should be prohibited from exercising this right to use its mass transportation facilities with the objective of destroying the small business people who are engaged in the sightseeing business. That is the sole object of the bill. It is very brief.

Mr. WIER. Mr. Speaker, will the gentleman yield?

Mr. SMITH of Virginia. I yield to the gentleman.

Mr. WIER. Under the strike settlement of some years ago the Capital Transit Co. was given certain privileges in operating its buses and streetcars, privileges having to do with the gasoline tax, among other things.

Mr. SMITH of Virginia. Yes.

Mr. WIER. I am told that the company has no intention of exercising those privileges of using untaxed gasoline in its chartered buses. They have two kinds of buses, sightseeing buses and buses which are chartered for these large groups that come to Washington and want certain bus service. I am told that they do not enjoy that privilege as to those buses.

Mr. SMITH of Virginia. I am informed that they not only enjoy them but exercise them to the fullest. I may have been misinformed, but the gentleman who held the hearings on the Interstate and Foreign Commerce Committee can advise the gentleman better than I can on that subject.

Mr. ALLEN. Mr. Speaker, although I understand there is some opposition to the bill itself, I know of no opposition to the rule. I have no requests for time. I reserve the balance of my time.

Mr. SMITH of Virginia. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

Mr. HARRIS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for consideration of the bill (H.R. 4815) to insure effective regulation of D.C. Transit System, Inc., and fair and equal competition between D.C. Transit System, Inc., and its competitors.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House

on the State of the Union for the consideration of the bill H.R. 4815, with Mr. BOLLING in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. HARRIS. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, the Committee on Interstate and Foreign Commerce reported the bill H.R. 4815 with the recommendation that it be approved. This bill, as was stated by the gentleman from Virginia [Mr. SMITH] in his statement on the rule, provides that all assets and personnel of the D.C. Transit System of the District of Columbia used in providing mass transportation service shall be so used exclusively and shall not be used in any other service in competition with the service of any other company.

This bill, Mr. Chairman, was introduced and sponsored by our colleague, a member of the committee, the gentleman from Texas [Mr. ROGERS]. He has given a great deal of study to it and will amplify the statement and explain further the costs. However, I should like to give you a little of the background from my own experience with the problem.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from West Virginia.

Mr. BAILEY. How extensive were the hearings before the gentleman's committee on this legislation, and were the organized operators and workers on the D.C. Transit System permitted to testify, and did they testify?

Mr. HARRIS. The hearings were quite extensive and, as the gentleman will see by observing the printed hearings, the organization referred to by the gentleman from West Virginia did have ample opportunity and did testify at some length.

Mr. BAILEY. I thank the gentleman.

Mr. HARRIS. The subcommittee under the direction of the subcommittee chairman, the gentleman from Mississippi [Mr. WILLIAMS], held extensive hearings on this subject. The subcommittee did a good job in developing the record. The full committee considered the bill at some length in executive session. I will get back to the bill after I give you the background of this problem.

I would not want by what I am about to say to have anyone think I am not going to vote for the bill. The committee voted this bill out of committee and reported it to the House by an overwhelming vote. I feel somewhat obligated to support the committee in its action in view of the fact that as chairman at that time I did not take an adverse position under the circumstances. So regardless of what I am about to say, I am going to support the bill.

I think probably there is some merit in the contention of the sponsors and those who are interested in it.

This is a fight primarily and principally between the D.C. Transit Co. sightseeing and charter operation and the Gray Lines sightseeing and charter operation. It goes back to 1956 and prior to that time, when we had over a period of at least 2 or 3 years a terrific argument in this Congress over the D.C. Transit operation.

If you will recall back to 1953 or 1954 along in there, there was a request and urgency that we in the Congress approve a $20 million operation of a Federal Government transit operation for the District of Columbia. I was one of those who were opposed to that program. A majority of the District Committee, of which I was a member at that time, were likewise opposed to it. Under the leadership and direction of the then chairman, the gentleman from South Carolina [Mr. MCMILLAN], we adopted what I believe could be referred to as stopgap legislation for a period of a year or 2 years until we could have time to resolve the question.

Then the District Commissioners came up with their proposal to take over the D.C. Transit business and operate it with funds appropriated out of the Federal Treasury, the sum of about $20 million, and that went to the Committee on Interstate and Foreign Commerce. I, of course, was at that time a member of this committee also, and our late beloved friend Percy Priest at that time was chairman of the committee. We had quite a lengthy controversy and consideration. Finally, we came up with a plan to give a franchise to the present management, as they had offered to buy or purchase from the former management the transit system for the District of Columbia. Under that contract they had to purchase the D.C. Transit operation. We gave to the present D.C. Transit Co. a franchise. That franchise has a provision in it, I think it is section 6, whereby the transit company could continue or have the privilege to engage in sightseeing and charter operations. That is part of the franchise. The former company, Capital Transit Co., operated a limited service of charter and sightseeing operation. The old company did not engage to any extent in sightseeing and charter business.

Mr. ROGERS of Texas. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield.

Mr. ROGERS of Texas. What I want to do is keep the record completely straight on this. The gentleman said the sightseeing and charter provision was a privilege in the previous franchise that was held by the Capital Transit Co.

Mr. HARRIS. That is correct.

Mr. ROGERS of Texas. I have never seen that franchise, and if my recollection serves me correctly it was never found out that there was any specific provision granting that to the former transit company. No one has ever produced it for me to see, even at the time that we were having the meeting in committee. I would like to see that provision if it is available.

Mr. HARRIS. I understand it is part of the old franchise or so interpreted. That is the reason this was included in the new franchise in 1956 as it was considered to be in the old franchise. The gentleman can get that. It is a matter of record.

Mr. ROGERS of Texas. If the gentleman would tell me where it is, I would love to see it, because I have hunted for it and have been unable to find it, and the staff has been unable to find it for me. I have requested it in the last 3 weeks and I have not found it. If the gentleman will recall, the matter was discussed in the joint committee that handled this situation of which both you and I were members. If I could see it, I would like to see it.

Mr. HARRIS. The gentleman will recall that during the course of the hearings on this bill it was discussed. They had this privilege before, and they had engaged only to the extent of about $40,000 a year in such business.

Mr. ROGERS of Texas. That is correct.

Will the gentleman yield further?

Mr. HARRIS. I yield.

Mr. ROGERS of Texas. It was determined at that time, so far as the record shows, that it was a matter of sufferance and was not a specific grant of a franchise. If there is any difference in that I would like to see the record on it, but I have not seen it yet.

Mr. HARRIS. The gentleman is as familiar with the record of the hearings as I am, and I am trying to relate the facts as they happened. If there is any question about the present franchise, I refer you to section 6 of the franchise itself which specifically authorizes it in the act of 1956. The gentleman has that and he is familiar with it.

Mr. ROGERS of Texas. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield.

Mr. ROGERS of Texas. That is the provision that was placed in this present franchise which is in existence today. What I am referring to is the previous franchise held by the Capital Transit Co., which was a Wolfson enterprise.

Mr. HARRIS. The hearings developed that the Wolfson group operated sightseeing and charter business to the extent of only about $40,000 a year.

Mr. ROGERS of Texas. That is true.

Mr. HARRIS. Now that is the fact—they were not engaged to any extensive degree, but when the present management, under the franchise of 1956, took over, they started to increase the operation of sightseeing and charter business. In doing so they became competitive with the other smaller sightseeing operators in the metropolitan area. What they have done in doing this is to use their equipment in competition with the regular sightseeing and charter business.

In other words, they would take the personnel and equipment and put them on during the rush hours of the day, that is, the early morning and the late afternoon, and then during the other part of the day they would use the same equipment and the same personnel in their sightseeing and charter business.

In this kind of operation, and I emphasize it, the present D.C. Transit operation now is engaged to the extent of some $600,000 a year. Similar lines, the Gray Line and others around here, in their competitive situation claim that it is an unfair advantage and by their using personnel which they have to pay for anyway and equipment which they have to maintain anyway they virtually

operate it without additional cost and therefore can competitively put them out of business.

That is simply the argument that we have, that is the whole question.

We asked the Commissioners to deal with this problem, and I think under present law they can. The Commissioners failed to assume the responsibility that we thought they had and deal with the problem.

We reported this bill out last year. At the same time we adopted the resolution requiring that the Commissioners give us a report on the problem with the understanding that we would not file the report with the House until we had received this interim report. We were unable to get an interim report until the first part of this year, sometime about January February, or even later, I am not sure just when. But at that time they submitted a voluminous report and about all it said was that they were not in position to do anything about it, that they were not taking a tax advantage, that they had looked over their method of competition as it is explained in the report, how they arrived at the tax base, and so forth. Consequently they said that under the circumstances they were not going to do anything about it. Therefore, the question still remains unsolved.

Then we held up the report trying to work it out an even longer period of time, but nothing could be done. Therefore, I had no alternative except to file this report with the House and to consider it; and that is the sole question we have here today: Whether or not D.C. Transit System under the franchise of 1956 may now continue to operate a sightseeing and charter business with the same equipment and same personnel it uses in its regular D.C. Transit operations. This bill says they cannot do so.

Mr. SPRINGER. Mr. Chairman, I yield 5 minutes to the gentleman from New York [Mr. DEROUNIAN].

Mr. DEROUNIAN. Mr. Chairman, the gentleman from Virginia [Mr. SMITH] was asked a question about exemptions. I would like to set the record straight. I quote from the testimony of Mr. James H. Flanagan, vice president, comptroller, and treasurer of the D.C. Transit System, Inc. He said at page 207 of the hearings:

> The allegation so often made that D.C. Transit System, Inc., is tax-exempt deserves some attention.
>
> Congress did relieve the company from liability for the antiquated gross receipts tax which formerly existed. Other bus companies in this area paid a 1-cent tax per mile of operation within the District in lieu of the gross-receipts tax. Congress has now relieved these other companies from liability for this 1-cent tax. Therefore, we are all even in this respect, so far as exemption from taxation is concerned.

He further states:

> The Commission found that the fuel tax payable by the company for July and August 1958 was $827.04, and so certified to the District Commissioners. This amount was paid immediately upon presentation of a bill by the District tax collector early in this month of May.
>
> I do not know of any other tax benefit enjoyed by D.C. Transit System, Inc., which gives it an unfair advantage in its charter and sightseeing operations over any other bus company similarly engaged.

There is indicated here the taxes which they pay, totaling some $1 million.

Mr. MULTER. Mr. Chairman, will the gentleman yield?

Mr. DEROUNIAN. I yield to the gentleman from New York.

Mr. MULTER. As a matter of fact, Mr. Chairman, the interim report to the Interstate and Foreign Commerce Committee on page 11 says:

> As hereinbefore indicated, the question of tax advantage under section 8 is of no substantial significance.

During the course of the hearings the attorney for Gray Line, Mr. Arnold, also testified that the tax exemption and the tax question was of no significance in connection with this bill, am I right?

Mr. DEROUNIAN. That is correct. This is a fight principally between Gray Line and D.C. Transit. It is a fight between business organizations. What this bill does is to try to tell the head of a business how he can use his equipment and his personnel to his economic advantage or disadvantage. Being one who is interested in maintaining private enterprise I am against the bill.

Mr. Chairman, I do not believe this bill is constitutional. I think it is special legislation; it is in the form of a private bill for the benefit of Gray Line and the other companies who agree with Gray Line.

To show you how discriminatory this bill is, may I quote from the testimony of Walter J. Bierwagen, president, National Capital Local Division 689, Amalgamated Association of Street, Electric Railway, and Motor Coach Employees of America, appearing on page 180 as follows:

> It should be noted that several competitors of D.C. Transit System for sightseeing and charter work in this area use their mass transportation equipment, assets, and personnel in sightseeing and charter service in the District of Columbia.
>
> These include the Washington, Virginia & Maryland Coach Co., which furnishes mass transportation service in Arlington and Fairfax Counties, Va., and between these points and the District of Columbia. Another competitor for sightseeing and charter work is the Alexandria, Barcroft & Washington Transit Co., which furnishes mass transportation in Alexandria, Va., and between Alexandria and downtown Washington. Another is Washington, Marlboro & Annapolis Transit Co., which furnishes mass transportation service in parts of Prince Georges County, and between points in Prince Georges County and downtown Washington. Still another is Suburban Transit Co., now being operated by Inter-County Transit Corp., which furnishes mass transportation service in parts of Montgomery County, Md., and between points in that county and downtown Washington.

A simple and logical question to be asked is, Why should there be different rules for the use of a company's equipment and personnel?

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. SPRINGER. Mr. Chairman, I yield the gentleman 5 additional minutes.

Mr. ROOSEVELT. Mr. Chairman, will the gentleman yield?

Mr. DEROUNIAN. I yield to the gentleman from California.

Mr. ROOSEVELT. Is it not true, as is my understanding, in the 1956 franchise this was specifically spelled out as being something that the D.C. Transit Co. should be allowed to do while under the proposal and under this legislation that right would be removed which was granted upon which the present interests in control of D.C. Transit went into the business?

Mr. DEROUNIAN. My recollection of the record is that the gentleman is correct. In fact, the head of D.C. Transit, Mr. Chalk, testified this was a very vital part of his consideration in purchasing D.C. Transit; that is, the fact they would have sightseeing and charter privileges.

Mr. WILLIAMS. Mr. Chairman, will the gentleman yield?

Mr. DEROUNIAN. I yield to the gentleman from Mississippi.

Mr. WILLIAMS. The gentleman is not correct. This does not put the D.C. Transit Co. out of the sightseeing business. It prevents the use of the District of Columbia franchise for the purpose of promoting the sightseeing business. It provides they will have to separate their sightseeing business from their other franchise business.

Mr. DEROUNIAN. If that is the case, this is the first time in mass transportation history that this is being done in the United States, because from available information all charter companies and sightseeing companies that are engaged in mass transportation use their equipment in the manner D.C. Transit is using theirs.

Mr. Chairman, this is an unfair way to legislate. This is a bad bill.

Let us give the Public Utilities Commission of the District the authority and let us jog them into doing the right thing. If the D.C. Transit is not accounting for its revenues properly, that is one thing, but let us not take corrective action which is unconstitutional and discriminatory. The Gray Line is the greatest monopoly there is in the United States so far as sightseeing and charter is concerned. They control about 12,000 hotel rooms in the District of Columbia alone.

Mr. ROOSEVELT. Mr. Chairman, if the gentleman will yield further, all I know is what I read. On page 6 of the hearings the gentleman from Mississippi stated:

> It is apparent that the purpose of the bills is to restrain the transit system from engaging in sightseeing or charter operations.

Now, that is the plain fact. It is there.

Mr. DEROUNIAN. I think the effect of this bill would be exactly that.

Mr. ROOSEVELT. Therefore, if they were knocked out at this time, at least a profitable part of this system would be knocked out, and it would almost, of necessity, raise the fares which, it seems to me, are already high enough.

Mr. DEROUNIAN. The gentleman's point is well taken, because the chairman of the Committee on Legislation of the Interstate Commerce Commission, Hon. Kenneth H. Tuggle, said this on

page 5, of the hearings, talking about getting separate equipment for sightseeing:

Such duplication of facilities and restrictions against the interchange of personnel and equipment as between the types of services rendered would of course result in increased costs and possibly have an overall effect of giving rise to a need for increased fares for transit, or "mass transportation," services. The competitive advantage of D.C. Transit's tax exemptions would, however, appear to remain unaffected.

We shall not forget that we have to consider the people of the District of Columbia, their mass transportation system and the effect upon them. I am not worried about the Gray Line, D.C. Transit, or anybody else, but I do not want to pass any pointless legislation.

Mr. ROGERS of Texas. Mr. Chairman, will the gentleman yield?

Mr. DEROUNIAN. I yield to the gentleman from Texas.

Mr. ROGERS of Texas. The gentleman stated that this was operated like all other mass transportation systems throughout the country engaging in charter and sightseeing.

Mr. DEROUNIAN. I said that this is the modus operandi of mass transportation systems throughout this country.

Mr. ROGERS of Texas. Does the gentleman have any documentation to support that statement of fact in regard to other cities?

Mr. DEROUNIAN. I think you will find it in the record. I think our late departed colleague, Mr. Bush, who used to be in the bus business, asked searching questions about this, and I think the replies brought forth the situation as it exists.

Mr. ROGERS of Texas. Mr. Chairman, if the gentleman will yield further, I think you will find that this is a very unique situation and that there are only one or two companies in the United States that have any tax exemption coupled with a monopoly. This is a very unique situation.

Mr. HOFFMAN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. DEROUNIAN. I yield to the gentleman from Michigan.

Mr. HOFFMAN of Michigan. I would like to know whether we are going to finish this legislation tonight or what the program is. That is what I want to find out. Will somebody on the majority side tell us? Some of your Members have been coming over here asking us to make a point of no quorum. I know you know how to do that. Are you going to finish tonight or what?

Mr. HARRIS. I have not had an opportunity to confer with the leadership, and at this moment I do not know just what this plan is. I will be glad to try to find out, I will say to the gentleman.

Mr. MEADER. Mr. Chairman, will the gentleman yield?

Mr. DEROUNIAN. I yield to the gentleman from Michigan.

Mr. MEADER. Do I understand the gentleman to be saying that this legislation would compel the D.C. Transit Co., if it is to engage in sightseeing and charter operations, to operate in an uneconomical fashion?

Mr. DEROUNIAN. It would do exactly that. It would have to buy new buses if it wanted to transport children from Alexandria to Washington. It could not use the same driver, not the same bus, not use the same man to paint the different signs. It is ridiculous. It certainly does not militate in favor of efficient operation.

Mr. MEADER. May I ask the gentleman if the record shows anywhere what proportion of the sightseeing and charter business is now enjoyed by D.C. Transit and how much by Gray Lines? How much do the other operators in the District enjoy?

Is there evidence that D.C. Transit is using some favored position to drive others out of business?

Mr. DEROUNIAN. For the last available period Gray Lines showed twice the amount of charter and sightseeing business as did D.C. Transit. But, talking about a monopoly, here are some interesting statistics. Let us look at the wages that these various companies pay. D.C. Transit pays its employees in its sightseeing business $2.82½ an hour; W.B. & M. pays $2.65; A.B. & W. $2.56 an hour; Gray Lines, the main protagonist for this bill $2.27 an hour; W.M. & A. pays $1.87 and Suburban Transit pays $1.74. So that D.C. Transit pays the highest wages.

Mr. HARRIS. Mr. Chairman, the gentleman from Michigan [Mr. HOFFMAN] asked a question a few moments ago about how long we planned to run. I thought under the circumstances we could go until about 5:30. We could get that much of the debate behind us.

Mr. SPRINGER. Mr. Chairman, if the gentleman will yield for a moment, may I say for the edification of the chairman of the committee that I have only one more request for time; this is an indication of how long we will take on this side.

Mr. HARRIS. Mr. Chairman, I yield 10 minutes to the gentleman from New York [Mr. MULTER].

Mr. MULTER. Mr. Chairman, the distinguished chairman of the Committee on Interstate and Foreign Commerce, in his usual fair and forthright manner, has presented to you precisely the issue that this legislation brings before the House. During the course of the remarks of the distinguished gentleman from Virginia [Mr. SMITH], in his presentation under the rule, he was asked about the facts underlying this legislation and he very properly said that he was stating the facts as they were submitted to him. Without in any way attempting to criticize the gentleman for his statement—and I am sure he presented the facts as they were submitted to him—I say that his presentation is not in accordance with the record. When I talk about the record, I want you to bear in mind that this matter was first presented to the Committee on the District of Columbia. And that is where it belonged. The Committee on the District of Columbia saw fit to take no action. Then it was presented to the Small Business Committee. The Small Business Committee conducted rather lengthy hearings, on May 12, 16, and 19, 1958. They were printed in two parts, aggregating 208 pages. The Small Business Committee rendered a report on the matter which was subsequently submitted to the House by the gentleman from Texas [Mr. PATMAN], as chairman of the Select Committee on Small Business. In his letter of transmittal of August 20, 1958, he said, "I am glad to transmit the report as the report of this committee."

There was no dissent to that report. The report confirmed the fact precisely as stated to you by the distinguished gentleman from Arkansas [Mr. HARRIS], that this legislation is the result of the fight waged by the Gray Lines, the biggest sightseeing company in the country, against D.C. Transit Co., a mass transportation company which also engages in sightseeing operations. Those operations are on a much smaller scale than that of Gray Lines.

The Small Business Committee indicated in its report that the law and the regulations vested with the Public Utilities Commission of the District of Columbia and with the Commissioners of the District of Columbia ample power to do anything and everything that might need to be done in order to prevent any unfair competition. They can regulate rates, if necessary, and do whatever might be called for in connection with that business to promote and protect the public interest.

There was an effort made throughout those hearings before the Small Business Committee—as there was before the Committee on Interstate and Foreign Commerce—when the gentleman from Texas [Mr. PATMAN] submitted his bill, H.R. 2316, identical with the Rogers bill which is before us here as H.R. 4815—the effort was made to show that there is some tax exemption or advantage given the D.C. Transit Co. that gives it an unfair competitive advantage over all of its competitors. When the facts were adduced at both sets of hearings, at which appeared representatives of the Gray Lines, their lawyers, and others, all concerned—and you will find this in the report of the Committee on Interstate and Foreign Commerce which is before you—that there is no tax consequence here that gives any unfair advantage to anybody.

As a matter of fact, everybody agreed that if D.C. Transit were losing money and therefore would get some tax exemption that might be an advantage to it but that would hurt no competitor. On the other hand if it were making money and paying taxes again no disadvantage accrued against a competitor. All affected had to agree that if there were tax benefits, then the solution was not try to change the D.C. franchise, or to change the law that gave them the franchise. The way to correct the unfairness to the other fellows, small or large, was either to give them the same tax exemptions or to take them away from D.C. Transit Co. We did enact legislation to give such tax exemption to the other sightseeing companies competing with D.C. Transit Co. But there are no taxes and no tax exemptions in this bill.

Mr. DEROUNIAN. Mr. Chairman, will the gentleman yield?

Mr. MULTER. I yield to the gentleman from New York.

Mr. DEROUNIAN. The gentleman mentions the Small Business Committee report on this matter. That committee in its report at page 3 stated:

Gray Lines, Inc., is the largest of the sightseeing and bus chartering services in the District of Columbia when measured by volume of business derived from those services. No other operator has as farflung associations and affiliations throughout the country. No other has as many hotels in or out of the District tied up by exclusive contracts. Gray Lines, Inc., alone controls almost 12,000 hotel rooms in the District. Its nearest competitor, the D.C. Transit System, Inc., controls less than 1,500.

Mr. MULTER. Those are the facts that existed then, they are the facts that exist today, and they are the facts as they existed during the course of the hearings before the Committee on Interstate and Foreign Commerce. If you want to compare size, the Gray Lines in 1957 had a gross income of almost $1,300,000 and paid taxes and license fees of only $48,054. Compare that with taxes and fees of $364,270 paid by D.C. Transit Co. for the same period. During that period the sightseeing service of the D.C. Transit Co. was less than $500,000.

What is behind this? The facts and the documents before the various committees established beyond any peradventure of a doubt that Gray Lines is trying to use this legislation—and I cast no aspersion on any Member of the House who favors this legislation—to force D.C. Transit Co. to buy them out at an exorbitant price. That is the only reason for this legislation.

Permit me to direct your attention to these facts: The Small Business Committee has recommended against this legislation, the Public Utilities Commission has recommended against it, the District Commissioners have recommended against it, the District of Columbia Committees of both Houses have refused to take any action on it, and the Interstate Commerce Commission, while taking no position on the bill, says that to enact this bill, and I quote from page 5 of the hearings, "would of course result in increased costs and possibly have the overall effect of giving rise to a need for increased fares for transit or mass transportation services."

If you want to see the fares for the District of Columbia populace go up, then enact this bill. I hope you will not do so.

This bill is in fact a private bill which takes from D.C. Transit System, Inc., its charter and sightseeing operations. It does so at the instance of Gray Line, which is the largest sightseeing operator in the District of Columbia metropolitan area. It deprives D.C. Transit System of its property without due process of law and without compensation.

The technique employed by the bill is bad; the precedent dangerous. The public interest is best served by integrated mass transit and charter and sightseeing service. This is the longtime custom not only here but in practically every comparable community. Under this bill, other local transit companies may continue in the future, as they have in the past, to perform both operations. Only D.C. Transit and its employees—who will lose work opportunities—are discriminated against.

Mr. ROGERS of Texas. Mr. Chairman, will the gentleman yield?

Mr. MULTER. I yield.

Mr. ROGERS of Texas. Did I correctly understand the gentleman to say something about the Gray Line trying to force D.C. Transit to buy them out?

Mr. MULTER. Yes.

Mr. ROGERS of Texas. I should like to read a telegram I have received, because that statement was made to me several times and I made an investigation of it. This is a telegram that was addressed to me. It reads:

This is to inform you that the undersigned and Col. Harry J. Dooley, president, and Miss Jewel Burton, secretary, were approached at least four separate occasions by D.C. Transit officials who sought to obtain the Gray Line franchise in Washington, D.C. The initial request for an appointment came from Morris Fox, first vice president of D.C. Transit, in May 1957. Mr. Fox sent representatives Leonard Wolf and Clayton S. Wells to our Chicago office following the May request. Messrs. Wolf and Wells stated that D.C. Transit had advantages in the sightseeing industry in Washington with which other operators could not compete. They also stated that these advantages were driving the Gray Line in Washington to failure and that D.C. Transit was therefore the logical representative in Washington. Messrs. Wolf and Wells sought to persuade Gray Line Sightseeing Cos., Associated, to transfer the franchise from the present member in the District of Columbia to D.C. Transit. D.C. Transit's proposal was rejected out of hand but subsequent requests were made by D.C. Transit in 1958 and in 1959.

GRAY LINE SIGHTSEEING COS.,
ASSOCIATED,
JOHN A. CHAPIN, *Vice President.*
CHICAGO, ILL.

Mr. MULTER. What is the date of that telegram?

Mr. ROGERS of Texas. It is dated June 6, 1960.

Mr. MULTER. May I say to my colleague I have no doubt the telegram was received by him and of course the gentleman quoted it accurately. But I would say to you, sir, and I say to this House that that is a belated effort by them to cover up their real purpose in sponsoring this legislation. I repeat that the testimony adduced before the Small Business Committee on which I then served and still serve established that Gray Lines sought to force D.C. Transit Co., Inc., to buy it out. Those efforts by a representative of the Gray Lines (of Washington—not of Chicago) continued after the filing of the Small Business Committee report on August 20, 1958, and I can personally attest to that fact.

Now, Mr. Chairman, let us see where the pressures are coming from with reference to this particular matter. As part of the printed record, we find this memorandum made by the gentleman who was in attendance at a meeting between Mr. Chalk and the distinguished chairman of the Small Business Committee, the gentleman from Texas [Mr. PATMAN], on July 10, 1958. This is an official memorandum of the conversations had at that time which are printed as part of the record. This is what the memorandum says, and I quote:

The chairman mentioned that he had hoped some arrangement could be reached whereby the sightseeing business could be surrendered by Mr. Chalk (that is the D.C. Transit Co.), it being understood that he would be compensated therefor in some fashion which was appropriate.

It hardly comes with good grace to follow that with a bill, H.R. 2316, to strip D.C. Transit Co. of its sightseeing business and that without compensation and without due process of law.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. SPRINGER. Mr. Chairman, I yield the gentleman 3 additional minutes.

Mr. MULTER. I thank the gentleman.

Mr. Chairman, I would like to refer in a moment to the unconstitutionality of this bill. But, first, I want to call your attention to some further testimony, in addition to what the distinguished gentleman from California [Mr. ROOSEVELT] read from the opening statement of the chairman of the subcommittee, the gentleman from Mississippi [Mr. WILLIAMS], when the hearings got on the way.

The first witness in support of the bill was the gentleman from Texas [Mr. PATMAN]. He was asked by the distinguished subcommittee chairman, the gentleman from Mississippi [Mr. WILLIAMS]:

In looking over these bills, it appears to me that the bills would provide that the transit system be restricted entirely to the transit operations, and not permitted, or not be permitted to engage in any other activity.

Is that the purpose?

The gentleman from Texas [Mr. PATMAN] responded:

The bills provide that the corporation shall not use its mass transportation facilities in competitive business. That is what is intended, Mr. Chairman.

In other words, competitive business will be competitive. It will not put them out of business. It will not put the D.C. Transit out of business in any of these businesses, but it will place them on the same plane, with no special advantages.

Mr. WILLIAMS. In other words, if these bills should become law, the D.C. Transit System would enjoy its special statutory tax privileges, insofar as mass transit is concerned, or public transit is concerned. However, in regard to its sightseeing operations and these other operations which you mentioned, it would not receive these tax benefits, but would be placed on exactly the same plane as competing systems.

Mr. Chairman, I have already indicated to you that all the parties involved must agree that there is no tax involvement in this bill. If you read the bill you will see there is not a word mentioned about taxes nor even any reference thereto.

All the bill seeks to do is to take from the D.C. Transit Co. its right to operate its sightseeing services.

As to the unconstitutionality of the bill, you will find on pages 368 and 369 of the printed record an opinion from the Library of Congress. It is fairly

long, but I will quote but one short excerpt from it and will omit the citations to the court decisions. The opinion concludes and I quote:

As property is the sum of all the rights and powers incident to ownership, including the right to control its use, and as confiscation may result from a denial of the "use of property" as well as from a taking of the "title to property," I believe S. 304 is unconstitutional.

Mr. Chairman, the bill S. 304 is the Senate counterpart of the bills H.R. 2316 and H.R. 4815, which is before you now.

There can be no doubt that this is not an attempt to help small business as against big business. This is not an attempt to create tax equality.

This is an attempt to take by so many words and by mention of the company—a right given by the Congress in its franchise to D.C. Transit, Inc. It is an attempt to take out of that franchise without compensation, without due process of law, by, if you please, a bill of attainder, to take from it, a very valuable property right, which it has acquired at the invitation of the Congress and which with its own money it has built up.

Mr. Chairman, we all remember that the transit situation in the District of Columbia was in one awful mess when Mr. Chalk was asked to come in, and he did come in. He took over a company that was inoperative, it was strike bound, it had old obsolete equipment. The service had been the worst in the country. He is now giving us good, clean transit facilities in the District of Columbia; we are getting good service at reasonable fares.

Mr. Chairman, I urge the defeat of this bill.

Mr. SPRINGER. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, I only want to dwell on one point as to why I believe this legislation is not generally in the public interest as far as the District of Columbia is concerned. There are several hundred pages of testimony in book form. In other words, the hearings were quite complete. The testimony that struck me most forcefully was that which dealt with why it was important for D.C. Transit to engage in the sightseeing business, and that may occur to you also. Why was that necessary? Why is it necessary today?

In the very nature of the transit business you have peaks and valleys in the use of your personnel and in the use of equipment. I think this will be admitted by both sides, that beginning at about 6:30 to 7 o'clock in the morning the peak starts from down at a low level, and it reaches this peak, according to my recollection, between 9 and 10 o'clock in the morning; then it goes down into the valley, which is quite sharp, between the hours of 10 and about 3:30. Now, here is an area, here is a time when there is almost no use of either personnel or equipment. It is this equipment and this personnel that D.C. Transit uses during these valley periods when there is little if any transit business.

Mr. COLLIER. Mr. Chairman, will the gentleman yield?

Mr. SPRINGER. I will yield; yes.

Mr. COLLIER. Is it not true that there are many different mass transit companies across the country who are faced with the same problem of peaks and valleys, that do not engage in extra curricular activities? And is it not also true that the D.C. Transit Co.'s fare of 25 cents is about the second highest of any mass transportation system in this country?

Mr. SPRINGER. I think the gentleman will find if he goes into the thing deeply enough, that there are many transit systems that do engage in it. On the other hand, I will say there is probably an equal number that do not. So to that extent the gentleman is correct.

I remember testimony and the gentleman probably will remember having received telegrams from transit companies over the country who do engage in the sightseeing business during the daytime and who have vested interests, they say, in the retention of the sightseeing business.

Mr. COLLIER. Mr. Chairman, will the gentleman yield further for a further observation?

Mr. SPRINGER. I yield.

Mr. COLLIER. The point I was trying to make is that there are other mass transportation systems in the country which do not engage in sightseeing or chartered transportation, who are rendering service at fares less than those charged by D.C. Transit and who are still in operation notwithstanding the fact they, too, have problems of peaks and valleys.

Mr. SPRINGER. The problem of peaks and valleys is in any system, I will say to the distinguished gentleman from Illinois. I merely bring it up today as a problem in discussing the cost. This is a very substantial amount. The gross revenue from this, according to my recollection of 2 years ago was about $520,000 a year.

That is a half million dollars. When you think of a gross revenue of the D.C. Transit System being probably in the neighborhood of $25 million a year, you can see that this is approximately 3 percent which would be taken away in the form of gross revenue. I believe this is an important property right they have. It is necessary for them to have it if you are to take the best advantage of the equipment and personnel that the company has.

There is just one other thing. There has been one rate increase last year. The D.C. Transit has given notice that if this right is taken away there will be no other alternative except to bring this to the attention of the Public Utilities Commission. I take it that means in case this right is taken from them in the form provided in this bill they intend to come in and ask for another fare increase.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. SPRINGER. Mr. Chairman, I yield myself 4 additional minutes.

Mr. Chairman, this is a practical matter which the people of the District of Columbia, in my estimation, are immediately faced with and which the Public Utilities Commission of the District of Columbia will be faced with if this right is taken away in the bill.

Mr. ROGERS of Texas. Mr. Chairman, will the gentleman yield?

Mr. SPRINGER. I yield to the gentleman from Texas.

Mr. ROGERS of Texas. I know the gentleman from Illinois has always been a great champion of small business, as is the gentleman from California [Mr. ROOSEVELT], who brought that same matter up a few minutes ago about the need for a mass transportation system to have these fringe benefits, so to speak, in order to operate at a profit.

Here is what you are doing when you take that position: You are saying that in order to provide a mass transportation system you have to furnish a corporation with the right to put a bunch of little independent businessmen out of business by undercutting them in every way in order to take over their business as a supplement to the mass transit system. If a subsidy is needed to provide a mass transit system it ought to be paid by all of the people and not by the people who are engaged in sightseeing and in the charter business and in the limousine business which the D.C. Transit Co. is moving into. That is exactly what is being done in this particular situation. They are using the tax exemption, they are using their equipment to undercut these smaller people in the business, including the little fellows at the foot of Capitol Hill and in front of the White House, they are practically putting them out of business. I have some letters I am going to read when my time comes which will show you what is happening to the little people.

Mr. SPRINGER. Here is my answer to the gentleman from Texas: If this sort of thing exists today, as the gentleman contends, then this right should not have been given to them in the first place. It is my belief, and I am not a great constitutional lawyer, in spite of what has been written in here on page 5 with reference to constitutionality, it would appear to me as a former judge, for whatever that title is worth, that there is a serious question of constitutionality when you take away from a company a right which they had at the inception and was vested in them. Now you seek to come along 3, 4, or 5 years later and take the right away without reimbursement. I think it is a question probably of what he is legally entitled to. If he is legally entitled to engage in it, it should have been enforced. That is a question for the future. But I think there is a serious question. This taking away, of course, is going to wind up in the courts anyway.

Mr. ROGERS of Colorado. The matter was brought up about this right by the joint committee when Mr. Wolfson went out of business and the D.C. Transit took over. Mr. Chalk at that time stated in answer to queries by me as to why he wanted to go into the business and he said he wanted to do about what the Capital Transit is doing, which was about $40,000 a year.

He has taken this situation and he has abused a privilege and a right that was given him in good faith by the Con-

gress. He is putting people out of business. The gentleman spoke about the constitutionality of it. If the Congress granted the right under section 6 of the franchise this is not taken away from him. He still has the right to operate any kind of a charter or sightseeing business he wants to, but he does not have the right to have an unfair advantage over his competitors. This bill would stop that.

Mr. HARRIS. Mr. Chairman, I yield 2 minutes to the gentleman from West Virginia [Mr. BAILEY].

Mr. BAILEY. Mr. Chairman, I asked for this time in order to express my vigorous opposition to this piece of legislation which, on the face of it, shows it is a violation of the franchise granted by the Congress to the D.C. Transit Co. only 4 years ago. It also brings in the question that it interferes with the bargaining agreement existing now between the D.C. Transit Co. and its several hundred employees here. The hearings disclose that the D.C. Transit Co. is paying as high as 80 cents an hour more than some of these other companies that desire to take over the business or take this business away from the D.C. Transit Co. I am speaking on behalf of the union members of the Amalgamated Association of Street Electric Railway and Bus Operators and their contract with the D.C. Transit Co. Even if it is only 5 percent, as the gentleman who just preceded me said, that it is going to cost, overall, the D.C. Transit System, it will affect scores of the present employees of the D.C. Transit Co., who will lose their jobs.

Mr. ROGERS of Texas. Mr. Chairman, will the gentleman yield?

Mr. BAILEY. I yield to the gentleman from Texas.

Mr. ROGERS of Texas. The fact of the matter is this, that the people I want to protect by this bill are the people who are small independent business people and who want to work, and they want to work for whomever they choose. But, as this matter turns out, it will not be long that they will not be able to work for anybody except the D.C. Transit people. I have had letters from people that had to give up stands on the corner because of the manner in which this thing has been operating, cutting underneath their prices, increasing the granting of these places for the use of their leads to where these people had to go to work for the D.C. Transit Co.

The CHAIRMAN. The time of the gentleman from West Virginia has expired.

Mr. HARRIS. Mr. Chairman, I yield 2 minutes to the gentleman from Minnesota [Mr. WIER].

Mr. WIER. Mr. Chairman, I have a deep concern over this piece of legislation. I am opposed to it and I shall vote against it. My reasons primarily are because—and God forbid that we have another streetcar strike in this community that we had to wrestle with for about 8 months a few years ago—this action on this bill could be a lead in that direction. As most of you know, I come from the city of Minneapolis. Minneapolis has a population of pretty close to 600,000. We have the Twin Cities Rapid Transit Co. in Minneapolis which serves both Minneapolis and St. Paul, intercity. We also have the independent bus companies there. And the fare for our riding public is 25 cents. I want to say, too, that we would be in a bad way because of the many events we have in the city of Minneapolis if we did not have the facilities of the Twin Cities Rapid Transit Co. in this very charter and sightseeing bus business. That applies also to the conventions that we have. These little bus lines are not able to take care of the conventions that come to Minneapolis, neither are the taxicabs nor any other mode of transportation able to take care of the Saturday afternoon crowds at big events. The Twin Cities Rapid Transit Co. is available to all who want to use the service on any occasion.

Mr. DEROUNIAN. Mr. Chairman, will the gentleman yield?

Mr. WIER. I yield to the gentleman from New York.

Mr. DEROUNIAN. Do they separate their physical facilities and their workmen for these two operations?

Mr. WIER. No. The very buses that carry the passengers to work in the morning go out to the baseball game in the afternoon. Our baseball park is quite a little distance outside the limits of Minneapolis; the same with our university football crowds. So, I hope that this bill is defeated.

Mr. HARRIS. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. BOLLING, Chairman of the Committee of the Whole House on the State of the Union, reported that the Committee, having had under consideration the bill (H.R. 4815) to insure effective regulation of D.C. Transit System, Inc., and fair and equal competition between D.C. Transit System, Inc., and its competitors, had come to no resolution thereon.

THE ITEM VETO IN THE STATES

The SPEAKER. Under previous order of the House, the gentleman from Iowa [Mr. SCHWENGEL] is recognized for 30 minutes.

Mr. SCHWENGEL. Mr. Speaker, in further support of my efforts to convince the Congress that approval of the item veto authority for the President is an important step forward in achieving fiscal stability at the Federal level, I wish to review the history of the item veto as it has been used in the various States.

As you know, I have had my legislative research team at the State University of Iowa studying the item veto issue for over a year, and as a result of this study, I have introduced three joint resolutions as approaches the Congress might use in authorizing its use by the President.

On June 8 I addressed this body on the history of the item veto from the very inception of our Government. Today, I wish to dwell upon the wide use the item veto has had in most of the States. In doing this, I again want to call attention to the research which has made these remarks possible. The young men working for me at the State University of Iowa, under the direction of Dr. Russell Ross, have done a thorough and noteworthy study. I have had their findings checked by authorities in this field, and have been gratified with the praise which has been directed to the members of the team.

The veto of specific items in appropriation bills is very predominate in State constitutions. At the present time 42 of the 50 States have provisions for the item veto in their State constitutions. These States are Alabama, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, Florida, Georgia, Idaho, Illinois, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, New Jersey, New Mexico, New York, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, South Dakota, Texas, Tennessee, Utah, Virginia, Washington, West Virginia, Wisconsin, Wyoming, Alaska, and Hawaii.

The item veto was first adopted in the United States in the Provisional Constitution of the Confederacy. Article I, section 5 of that document states that—

> The President may veto any appropriation or appropriations and approve any other appropriation or appropriations in the same bill.

This was continued in the Permanent Constitution of the Confederacy, which states in article I, section 7, that—

> The President may approve any appropriation and disapprove any other appropriation in the same bill. In such case he shall, in signing the bill, designate the appropriations disapproved, and shall return a copy of such appropriations with his objections to the House in which the bill originated and the same proceedings shall then be had as in case of other bills disapproved by the President.

Only North Carolina of the Confederate States does not now have the item veto in its State constitution.

The first two States to adopt the item veto were also in the Confederacy. These were Georgia and Texas, both of which adopted it in 1868. Other early States to adopt it were West Virginia in 1872, Pennsylvania in 1873, Arkansas and New York in 1874, Alabama, Missouri, Nebraska, and New Jersey in 1875, Colorado and Minnesota in 1876, California in 1879, and Illinois in 1884.

State constitutions vary on the majority necessary to override the Governor's veto of an item in an appropriation bill. Thirty of the 42 States require two-thirds majority for overriding. Some require two-thirds of the total membership, some require two-thirds of members present and voting, and others make no definite provision for either. Those requiring two-thirds majorities are Arizona, California, Colorado, Florida, Georgia, Idaho, Illinois, Kansas, Louisiana, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, New Jersey, New Mexico, New York, North Dakota, Oklahoma, Oregon, Pennsylvania, South Carolina, South Dakota, Texas, Utah, Washington, Wisconsin, and Wyoming. Those specifying two-thirds of the members present

are Idaho, Montana, New Mexico, Oregon, South Dakota, Texas, Washington, and Wisconsin. Those with provisions for two-thirds of the total membership are Hawaii, Illinois, Louisiana, Michigan, Minnesota, Missouri, New Jersey, New York, North Dakota, Pennsylvania, Utah, and Wyoming. In Alaska vetoed appropriation items become law by affirmative vote of three-fourths of the membership of the legislature.

Six States, Alabama, Arkansas, Connecticut, Kentucky, Virginia, and West Virginia, have item vetoes which can be overridden by a majority of each house. Alabama, Arkansas, and West Virginia provide for a majority of total membership being necessary, while the others do not further define a majority.

Five States provide for a three-fifths majority. A three-fifths vote of the members present is sufficient in Rhode Island; a three-fifths vote of the members elected, in Delaware, Maryland, Nebraska, and Ohio.

Only one State, Virginia, provides for a different majority for overriding appropriations items than is necessary for overriding vetoes of other bills. A majority is required to override item vetoes, while two-thirds of members present is necessary to override vetoes of bills other than appropriations items. No State allows the veto of items in nonappropriation bills, which are generally required to be limited to one subject which must be expressed in the title of the bill. This provision in many cases gives the Governor and the people some protection, since it makes it impossible for the legislative body to lump two or more subjects together in a given bill. That is why there is less need in the States for an item veto for a nonappropriation bill.

Two States on which a considerable amount of study has been given to the workings and history of the item veto are Illinois and Pennsylvania.

Illinois adopted the item veto in 1883, under Gov. Shelby M. Cullom. Illinois mayors had been given this power in 1875, and an item veto bill narrowly missed being enacted in the 1881 session of the Illinois General Assembly. Governor Cullom advocated it to the assembly in 1883, and it was adopted, 35 to 7, in the State senate and, 107 to 2, in the house of representatives. It was approved by the people by a vote of 428,831 to 60,244 and, therefore, was formally placed as an amendment to the Illinois constitution in 1884.

The amendment stated:

> Bills making appropriations of money out of the treasury shall specify the objects and purposes for which the same are made, and appropriate to them, respectively, their several amounts in distinct items and sections; and if the Governor shall not approve any one or more of the items or sections contained in any bill, but shall approve the residue thereof, it shall become law as to the residue in like manner as if he had signed it. The Governor shall then return the bill with his objections to the items or sections of the same not approved by him to the house in which the bill shall have originated, which house shall enter the objections at large upon its journal and proceed to reconsider so much of said bill as is not approved by the Governor. The same proceedings shall be had in both houses in reconsidering the same as is hereinbefore provided in case of an entire bill returned by the Governor with his objections; and if any item or section of said bill not approved by the Governor shall be passed by two-thirds of the numbers of those elected to each of the two houses of the general assembly, it shall become part of said law, notwithstanding the objections of the Governor.

At first this provision was used very little in Illinois. Between 1884 and 1903, 19 years and nine sessions of the general assembly, the item veto was used only once. In 1899, Governor Turner rejected a $99,166.61 appropriation for the University of Illinois. Since then, however, there has been a close relationship between the increase in size of State budgets and the more extensive use of the item veto.

Illinois Governors have interpreted liberally the authorization to veto distinct items in appropriation bills. There are two ways in which this was liberally interpreted: Governors have stricken the phrase "per annum" in biennial appropriation bills, and in the reducing of items.

In December 1915, the Illinois Supreme Court in the case Fergus against Russel held that these two liberalizations were unconstitutional. The court also ruled that, since these reductions were unconstitutional and that no outright veto had been made, the entire appropriation should be permitted to stand.

The item veto in Pennsylvania is probably stronger than that of any other State. There the veto power includes the power to reduce any item. No other State has a constitutional provision that will permit this. The Governor may veto a bill within 10 days of passage. If he does not do so, the bill is approved automatically and becomes law unless this 10-day period falls, within 10 days of adjournment of the legislature. Bills passed less than 10 days before the end of the session become law 30 days follow-in adjournment unless they are vetoed. Even though the item veto in Pennsylvania includes the power to reduce items, it does not include the power to veto certain items of nonappropriaiton bills.

From 1939 to 1946 the Pennsylvania Legislature passed 2,174 bills, of which 229 were vetoed, 330 appropriations were reduced, and 23 appropriations struck out. During all but 2 years of that time both the legislature and the governorship were in the hands of the Republican Party. From 1941 to 1942 the Democratic Party controlled the house of representatives.

Because of the item veto and the reduction power the Governor's budget is enacted into law in much the same form as it is proposed:

[In thousands of dollars]

Session	Governor's budget	Amount passed by legislature	Amount vetoed	Total
1939	377,171	386,290	10,225	376,065
1941	361,944	408,102	50,990	357,112
1943	345,335	383,399	1,695	381,704
1945	479,688	538,651	21,808	516,842

Governors of Pennsylvania customarily do not give detailed reasons for vetoes of specific items or reduction in items. Only once has the legislature overridden a veto even though many items have initially passed the legislature by more than the required two-thirds majority. One reason for this is that few bills, and particularly appropriation bills, are passed until the last 10 days of the session. In 1924, 98 percent of all appropriation items of bills vetoed or reduced occurred in the 30-day period following adjournment. In 1945 only 14 of the 224 vetoes and 17 of the 337 item vetoes or reductions reached the legislature before adjournment.

The item veto has been used as a means for breaking deadlocks between the two houses of the legislature. In 1941 the Democratic-controlled house of representatives and the Republican-dominated senate were deadlocked on appropriations. The Republican senate passed an appropriations bill in the same form as the house of representatives "objectionable as some provisions are" and "left it to the Governor's constitutional power to correct such conditions as it can."

The growth of the item veto has been quite spectacular considering that in 92 years 42 States have adopted it. Most States writing new constitutions include it, as did our two newest additions to the Union, Alaska and Hawaii.

Next Wednesday, June 22, I have been granted permission to take the floor again so that I can review the arguments pro and con on the item veto. After the presentation of all of these facts, it is hoped that other colleagues will join me to press for action on this legislation.

DR. THOMAS DOOLEY, A MAN OF GOD, A SPLENDID AMERICAN, A DEDICATED DOCTOR

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, the unselfish expression of love for our fellow man occurs with varying frequency in most of our lives. Few of us, however, can boast the daily devotion to humanity of Dr. Thomas A. Dooley. His dedication to the task of helping those in need knows no limit and the sacrifice of his personal safety to the cause of helping others to know a better and safer life is an example of human greatness which fills us with awe. I can think of no more fitting recipient of the Lay Churchman Award, and it gives me great pleasure to see the recognition given this great humanitarian by the Religious Heritage of America, Inc.

Dr. Dooley's recent personal tragedy has highlighted for the entire world his tremendous achievements in wiping out disease and sickness in Laos and other countries. Needless to say, Dr. Dooley's courage and devotion to humanity did not originate with his operation for cancer in August of last year. Since 1954, he has struggled against disease in Indochina—first as a Navy physician after

the fall of Dienbienphu and, after his discharge from the Navy in 1956, under the auspices of Medico in setting up his first hospital in Laos.

The magnitude of the challenge which faced Dr. Dooley in Indochina defies our imagination. As he describes it:

These people have always thought that having something wrong with them is natural. Malaria is endemic here, and they don't think anything at all of some fever. We are changing that.

I find Dr. Dooley's description of his Navy experience in Indochina especially moving. He states:

We saw simple, tender, loving care, and the crudest kind of medicine, inexpertly practiced by mere boys, change a people's fear and hatred into friendship. We saw it transform the brotherhood of man from an ideal into a reality. To me, that experience was like the white light of revelation. It made me proud to be a doctor—an American doctor who had been privileged to witness the enormous possibilities of medical aid in all its Christlike power and simplicity.

Instead of being discouraged by the enormity of the task before him, Dr. Dooley was fired up with hope and with practical energy. He founded a nonprofit, nonsectarian organization, Medico, to gather money, equipment, and personnel to enable him to do the work he saw must be done. He opened hospitals first in Laos and later six others in Asia, Africa, and South America.

Dr. Dooley's love for humanity, and his great vision of human needs is combined with a down to earth sense of what is possible. He says:

I believe that those of us who attempt to aid in a foreign land must be content with small achievements.

He makes use of local residents as practical nurses, midwives, and orderlies whenever he can. He keeps the cost of the medical care he practices to a bare minimum—last year he treated more than 36,000 persons at a little less than $1 a year for each patient. But in a sense his very great realism in viewing his tremendous goals make his successes all the greater.

Dr. Howard Rusk writing on two different occasions in the New York Times has pointed up the tremendous potential of Dr. Dooley's contribution for the entire world. On August 23 he wrote of Dooley's work:

His own fight against cancer he considers just a skirmish, when the tools of health and healing can combat the international cancer of communism.

One week later, Dr. Rusk stated:

Tom Dooley has awakened anew our realization that healing is a priceless tool in the winning of men's minds for freedom. He has been not only a great emissary for healing, but for peace.

For Dr. Dooley, the fruits of his work are in themselves a sufficient reward. He describes his attitude with these words:

All our Medico doctors are happy men. They have the happiness that comes to people who have found the path, the path that leads out of themselves and into involvement with mankind. They will be able to look back at the end of their lives and feel they've accomplished something important.

I wish to add my congratulations and admiration to those of many others who feel as I do that this award is richly deserved by a splendid American, Dr. Thomas Dooley. He has heard and truly followed the lesson of the two great commandments—love of God and love of neighbor.

In my remarks, I include a news item appearing in a recent issue of a Washington newspaper:

DR. DOOLEY, LAOS HOSPITAL FOUNDER, TO RECEIVE HERITAGE AWARD HERE

Dr. Thomas A. Dooley, the founder of jungle hospitals in Laos, will come to Washington June 16 to receive the annual Lay Churchman Award of Religious Heritage of America, Inc., the organization announced yesterday.

Others who will receive awards are: Ruth Youngdahl Nelson, churchwoman of the year; D. Elton Trueblood, clergy churchman of the year; and George W. Cornell, faith and freedom award in religious journalism.

The awards will be presented at a dinner in the Statler-Hilton Hotel. Paul Wooton, Washington correspondent of the New Orleans Times-Picayune, will be toastmaster.

Dr. Dooley, a graduate of the University of Notre Dame and the St. Louis School of Medicine, gained fame when his book "Deliver Us From Evil," describing his fight against disease in Haiphong, North Vietnam, became a best seller. He founded his first hospital in Laos with proceeds from the book and help from U.S. drug firms.

He returned to the United States last summer for a cancer operation and again this spring for a checkup. He is going back to Laos at the end of the month.

Mrs. Nelson is a writer of inspirational religious books. She was District of Columbia Mother of the Year in 1953, and Scandinavian Woman of the Year in 1954. She is a member of the National Board of Christian Higher Education of the Augustana Lutheran Church. Her husband, the Reverend Dr. Clarence T. Nelson, is president of the Council of Churches, National Capital area. She is a sister of Federal Judge Luther W. Youngdahl.

Dr. Trueblood interrupted a career as religious author and professor of philosophy at Earlham College, Richmond, Ind., in 1954, to serve 2 years as chief of religious information for the U.S. Information Agency. He is a former executive secretary of the Baltimore Yearly Meeting of Friends. His latest book, a religious best seller, is "Confronting Christ."

Cornell, a religious writer for the Associated Press since 1951, writes a weekly column called "Religion Today." His book, "They Knew Jesus," was published 2 years ago.

Announcement of the awards was made by Lisle M. Ramsey, president of Religious Heritage.

The awards dinner is a highlight of the Heritage's annual 3-day Washington pilgrimage. Previous award winners include President Eisenhower, Evangelist Billy Graham, and the late Cecil B. de Mille.

THE INTER-AMERICAN PEACE COMMITTEE'S HISTORIC REPORT ON TRUJILLO; IS CASTRO NEXT?

The SPEAKER pro tempore (Mr. ALBERT). Under previous order of the House, the gentleman from Oregon [Mr. PORTER] is recognized for 60 minutes.

Mr. PORTER. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. PORTER. Mr. Speaker, a week ago today the Inter-American Peace Committee transmitted its report of its investigation into "the flagrant violations of human rights by the Government of the Dominican Republic," to use the words of the charge made by Ambassador Marcos Falcon-Briceno for the Government of Venezuela.

While very important, the condemnation of Trujillo's barbaric tyranny by this distinguished Committee acting for the Organization of American States is secondary to the precedent established. If we are to have peace with freedom in the world, we will attain it only through this kind of collective intervention on behalf of the principles of freedom and democracy.

This historic report stands as a proud achievement for the OAS as it seeks to fulfill its purpose, the promotion of representative democracy and human rights in a peaceful, thriving hemisphere.

The United Nations can profit by this example. A world shocked by the abortive summit conference can properly take comfort from this action by the Inter-American Peace Committee.

This report, of course, is not the end in any sense. It is the basis and the beginning of further action with respect to Trujillo's foul government and others resembling it in the hemisphere. This collective intervention is only by words—strong, authoritative words, the power of which should not be underestimated. Steps should be taken now to publicize this report throughout Latin America and particularly in the Dominican Republic.

PUBLICIZE THE CHARGES

Let radio stations in Puerto Rico, Florida, Honduras, Cuba, Costa Rica, Venezuela, and elsewhere be the Joshua's trumpets to blast down the crumbling walls of Trujillo's doomed government. This clarion call comes, not from one individual or from one or two nations, but from virtually the entire hemisphere.

Trujillo refused to allow the Peace Committee to enter the Dominican Republic. He was, understandably, afraid. The committee heard testimony from many exiles and from others. It was my privilege to have a small part in helping some of these witnesses come before the committee.

The conclusion was no surprise:

That international tensions in the Caribbean region have been aggravated by flagrant and widespread violations of human rights which have been committed and continue to be committed in the Dominican Republic.

What were some of these violations by Trujillo and his gang? They include denial of free assembly and of free speech, arbitrary arrests, cruel and inhuman treatment of political prisoners, and the use of intimidation and terror as political weapons.

These acts—

Said the report—

constitute the denial of fundamental rights set forth in the American Declaration of the

Rights and Duties of Man, as well as of principles of the Charter of the Organization of American States.

TRUJILLO'S CRIMES ABROAD

The Committee found that these systematic violations by the Trujillo government increased the tensions existing in the Caribbean region. Reference was made to the illegal activities of agents of the Dominican Government abroad. I can cite, among others, the case of Jesus de Galindez, in which my own constituent, Gerald Lester Murphy, was unwittingly and fatally involved.

Trujillo gave the United States an insultingly false explanation of Murphy's death, an explanation which we formally rejected. No other was ever submitted.

The entire text of this epoch-making "Report of the Inter-American Peace Committee on the Case Presented by the Government of Venezuela" is set forth at the conclusion of these remarks. It is a document worth the close attention of every Member of Congress.

The Inter-American Peace Committee members, all outstanding men, were Ambassador John C. Dreier, representative of the United States, Chairman of the Committee; Ambassador Hector David Castro, representative of El Salvador; Ambassador Vicente Sanchez Gavito, representative of Mexico; Ambassador Carlos A. Clulow, representative of Uruguay; Minister Santiago Salazar Santos, representative of Colombia.

Hemispheric opinion, when expressed by these men in their roles as official investigators for the Organization of American States, can and should be very powerful. Wide and repeated publicity may be sufficient to finish the Trujillo government.

If more action is necessary to gain respect for human rights, the means are at hand. Once, not long ago, such a report could not have been made. Even to propose such a committee would have been to call down emphatic objections of intervention, followed by the express or implied statement that the United States was again interfering in the affairs of its sister states.

The United States has changed its ways in this respect. The OAS is not a facade for U.S. imperialism. It is a sovereign body of which the United States is one member. We can and we do lead on occasion but we have learned not to push or to try to dominate.

TRUJILLO SOON TO FALL

Other measures against the Trujillo Government can take the form of diplomatic and commercial sanctions, but these need not be considered at this time because it appears that they will not be necessary. Trujillo has his bags packed.

There are other nations in the hemisphere where systematic violations of human rights are being perpetrated and thus increasing tensions. Nicaragua and Paraguay both have governments which should be investigated by the Inter-American Peace Committee, but first its attention should be turned toward Castro's Government of Cuba. It is different but, in terms of tensions affecting the peace of the hemisphere, no less important.

Castro's promises of elections in 18 months have been laid aside in favor of mob approval. His one-time respect for a free press has vanished along with all the free newspapers. Anyone who disagrees out loud goes to jail.

Castro promised to carry out land reform under his law providing for inventories and payment, but many takings are confiscations from law-abiding citizens, or foreigners who have good records of productivity in the use of their lands and who did not support Batista.

Castro often said that he would protect the 26th of July revolution from being taken over by any other faction, including the Communists. Serious questions for investigation are whether Castro is allowing the transshipping of Communist arms to Communist-directed revolutionaries elsewhere in Latin America, and whether he is allowing Cuban anti-Americanism, in part understandable, to be exaggerated and used by the international Communists.

CASTRO IS NOT TRUJILLO

Would Castro allow an OAS Peace Committee to carry on an investigation in Cuba? I have heard that he would not. I hope I have heard wrong. Cuba today is not the Dominican Republic, and Castro with all his shortcomings as a chief executive, is no Trujillo.

Not long after I returned from a visit to Cuba in January 1959, shortly after Batista's overthrow, I said on the floor of the House that many Cubans who hated Batista were "sickened by the thought that Fidel Castro, perhaps in spite of himself, may end up just another Latin American strong man ruling for an interval by terror and tribute. This is by no means impossible."

Castro does not, as yet anyway, rule by terror in the way Batista ruled and Trujillo rules. He does use a lot of intimidation and this can all too easily and quickly edge into terror. Nearly everyone concedes that Castro is personally honest and that his government is incredibly uncorrupt. He is not "just another Latin American strong man."

Cuba was overdue for a social and economic revolution. The question is whether Castro's headlong and headstrong leadership can lead to anything but disaster. For the asking he could have had the strong and invaluable help of Gov. Luis Muñoz-Marín, of Puerto Rico, former President Jose Figueres of Costa Rica, and Romulo Betancourt, President of Venezuela. They hated Batista and they favored a social revolution in Cuba, but they like most Americans believe in free elections and individual rights.

Castro could have had friendly, generous help from a United States whose policies about dictators were, at the very moment when Castro came to power, changing drastically. Cuba would have profited by our improved policies and by our embarrassment for past shameful support of Batista. But public opinion in the hemisphere has turned against Castro. Unless he changes his attitude about free elections and individual rights, Cuban public opinion also will turn against him.

We have to face the situation as it is. An accurate, authoritative assessment can be made by the OAS Inter-American Peace Committee, preferably by an investigation within the boundaries of Cuba but, if necessary, right here in Washington by interviewing exiles and others with firsthand information about the state of human rights in Cuba today.

THE ROLL OF THE OAS

The historic precedent has been set by the report issued a week ago. The OAS must now continue to fulfill its great obligations to the peoples of this hemisphere in accordance with the principles set forth in its charter.

The hemisphere needs a definitive report about the tensions apparently emanating from Castro's government of Cuba. I wish I could be as calm and undisturbed about Cuba's immediate future as some seemingly well-qualified observers appear to be. Too many democratic friends of mine have been forced out of the Government or have withdrawn their support. Castro's repeated irrational rantings against the United States and his tolerance of Communists makes me shudder, not for our dignity but for what must soon be the sorry consequences in Cuba. There is much trouble ahead for the people of Cuba under a government led by a man who misrepresents and distorts facts, ignores his own laws, and fails to recognize that communism is a tyranny.

I have asked him many times, personally, by mail and by cablegram, about setting a date for elections, about permitting freedom of the press, about opposing Communist tyranny as he opposed Batista tyranny, about enforcing the terms of his own agrarian reform law, and about many other measures which I along with others felt in the best interests of the Cuban people. My suggestions and criticisms have largely been ignored.

No doubt there is much I do not know, perhaps much I cannot understand, about Cuba's deep, broad, and intense revolution. That is why I hope that the OAS Inter-American Peace Committee will go forward to carry on its historic mission and to proceed to investigate the status of human rights in Cuba.

The following, in addition to the complete text of the report by the Inter-American Peace Committee, are one editorial and several articles about Cuba. To some extent they only add to my mystification about Castro's government and the Cuban revolution, but the authors appear to be qualified, sincere witnesses whose testimony should be heard and evaluated along with testimony of those who hold different opinions.

REPORT OF THE INTER-AMERICAN PEACE COMMITTEE ON THE CASE PRESENTED BY THE GOVERNMENT OF VENEZUELA

The Government of Venezuela, in a note of February 17, 1960, signed by its representative on the Council of the Organization of American States, requested the Inter-American Peace Committee to investigate "the flagrant violations of human rights by the Government of the Dominican Republic, which are aggravating tensions in the Caribbean."

The Committee decided, first, that in view of the powers and functions which were

given it in resolution IV of the Fifth Meeting of Consultation of Ministers of Foreign Affairs, it was within its competence to consider the request of the Government of Venezuela. As will be recalled, that resolution, in entrusting to the Committee the study of the questions that were the subject of the convocation of the meeting of consultation, provides in article 1, paragraph (b), that the Inter-American Peace Committee shall examine—

"The relationship between violations of human rights or the nonexercise of representative democracy, on the one hand, and the political tensions that affect the peace of the hemisphere, on the other."

In this determination regarding its competence the representative of Venezuela, who had withdrawn from active participation as a committee member at the time when he presented his Government's request, did not take part. Colombia was designated as a substitute by the Council of the Organization, on March 1, 1960, in accordance with article 11 of the statutes of the Committee.

In order to gather as much reliable information as possible with respect to this case, the Committee requested information from the member states in a circular note of February 25, 1960, sent to all the representatives on the Council except those of the Dominican Republic and Venezuela, with whom the Committee has remained in contact.

The Committee considered that it would be desirable to visit the Dominican Republic in order to investigate on the scene the situation exising in that country. For that purpose the Committee decided to exchange points of view with the representative of the Dominican Republic on the Council. The corresponding invitation was extended by means of a note dated February 19, 1960, with which the Dominican representative received a copy of the note from the representative of Venezuela. The resultant conversations were initiated on February 24, 1960.

In the course of these conversations with the Dominican representative, the Committee requested and obtained from him information regarding the case under study and, in accordance with the provisions of article 2 of resolution IV of the Fifth Meeting of Consultation of Ministers of Foreign Affairs, asked him if his Government would be prepared to give its consent for the Committee to visit the Dominican Republic in order to carry out the investigations that it considered necessary.

During the session held on March 8, 1960, the representative of the Dominican Republic stated that his Government, in the exercise of its option provided for in article 2 of the above-mentioned resolution IV, did not give its consent for the Committee to visit the Dominican Republic. The reasons given by the representative of the Dominican Republic, on informing the Committee of the decision of his Government, were reiterated in a note which he sent to the chairman of the Committee on March 24, 1960.

In view of the interest which existed regarding its actions in this case, the Committee decided to issue a press release on March 18, 1960, making public the negative reply of the Dominican Government.

In its conversations held with the representative of the Dominican Republic, the Committee expressed its natural and particular interest in obtaining information regarding the arrests in his country of persons involved in the subversive movement put down by the Dominican authorities in January 1960. The Committee had received reports on this matter to the effect that there had been more than a thousand such arrests. In this regard, the representative of the Dominican Republic said that, in accordance with official reports of his Government, the number of persons who had recently been arrested in his country for activities directed against the security of the state amounted to 222; he referred to the acts of clemency of the Dominican Government in favor of these persons, such as the release of the women who had participated in the movement and the reduction of some of the sentences imposed by the lower courts; he gave the Committee a memorandum containing a chronological account of the cases of amnesty and pardon of persons condemned in the course of the last 25 years for acts against the security of the Dominican State; and he suggested the desirability of the Committee's studying the question of violations of human rights in the Caribbean region in its general aspects and not in relation to only one of the countries comprising that region.

In view of these statements of the Dominican representative and taking into account various reports and documents which by then had been received by the Committee—for example, the second pastoral letter of the Dominican bishops, dated February 28, 1960—the Committee believed that there was reason to hope that the Dominican Government would decree an amnesty for the political prisoners or would adopt some other measure of clemency in their favor, on the occasion of Easter, April 17, 1960. Desirous of avoiding any step which might adversely affect the fate of the political prisoners, the Committee deemed it desirable not to make any pronouncements on the case under study during the first days of April and decided in favor of issuing a report of a general nature, dated April 14, entitled "Special Report on the Relationship Between Violations of Human Rights or the Non-Exercise of Representative Democracy and the Political Tensions that Affect the Peace of the Hemisphere," in which, among other matters, questions related to the existence of political prisoners in the American Republics are considered.

The Committee's hopes regarding an amnesty turned out to be unfounded. In fact, it was not until May 31 that the Committee received a note from the Dominican representative, dated May 30, in which the Committee was informed that "within the Dominican Government's process of carrying out acts of clemency in behalf of persons involved in the subversive plots discovered at the beginning of the year, another group of 63 of the persons sentenced was set free on Saturday, May 28, 1960."

Despite the Dominican Government's having declined to give its consent for the Committee to visit its territory, the Committee decided to obtain, through means available to it, reliable information regarding the subject of the request presented by the Venezuelan representative.

The Committee received testimony from Dominican exiles who had recently left that country, as well as from nationals of other American countries who had been in the Dominican Republic during, or just after, the events which gave rise to the arrests that occurred beginning in the month of January 1960. Among the Dominican exiles interviewed by the Committee were representatives of different social and economic spheres of the country, such as educators, workers, former members of the armed forces, industrialists and businessmen. These interviews were held in closed sessions and the Committee does not consider it desirable to make public the names of the witnesses or the text of their statements.

In addition to the testimony of actual witnesses of the situation existing in the Dominican Republic, the Committee examined extensive and reliable press material and also made use of valuable information provided it by certain representatives of member states.

On the basis of the evidence which it has been able to gather, the Committee has reached the conclusion that international tensions in the Caribbean region have been aggravated by flagrant and widespread violations of human rights which have been committed and continue to be committed in the Dominican Republic. Among these violations, mention must be made of the denial of free assembly and of free speech, arbitrary arrests, cruel and inhuman treatment of political prisoners, and the use of intimidation and terror as political weapons. Some of the victims of these grave acts appeared before the Committee and made statements. These acts constitute the denial of fundamental rights set forth in the American Declaration of the Rights and Duties of Man, as well as of principles of the charter of the Organization of American States.

The relationship between the systematic violation of human rights and international political tensions that affect the peace of the hemisphere was analyzed by the Committee in its above-mentioned special report of April 14, 1960—Document CIP–2–60. The case which is the subject of the present report confirms, in the judgment of the Committee, the conclusions which it reached as a result of the above-mentioned analysis since it is evident that the violations of human rights in the Dominican Republic, just alluded to, have increased the tensions existing in the Caribbean region.

In the above-mentioned special report some observations were also made regarding the problems confronting the governments which give territorial asylum to the citizens of the countries governed by dictatorial regimes that do not respect the fundamental rights of the human individual. Those observations are particularly applicable to the situation created by the presence, at the current time, of many Dominican exiles in the countries of the Caribbean region, by the circumstance that in recent months there has been an increase in the number of Dominican nationals seeking refuge in foreign countries, and by the appreciable intensification of the activities of the exiles directed toward effecting a change in the government of their native country. Likewise, it should be mentioned that these groups of Dominicans, as well as numerous persons and organizations of different nationalities, are requesting, through the press and in public demonstrations, the adoption of international measures against the present Government of the Dominican Republic. This situation is the cause of serious concern, and has created difficult problems, for the governments of the countries receiving the refugees, where public opinion has for some time been aroused over the state of affairs in the Dominican Republic.

Regarding the foregoing, the committee must also refer to the repercussions resulting from the circumstance that public opinion has linked certain violent acts which have occurred in different American countries with illegal activities of agents of the Dominican Government abroad. The Committee has received and continues to receive reports concerning these cases, but, independently of any conclusions which it may reach on the matter, it considers it to be its duty to point out that existing tensions in the Caribbean have been heightened in an exceptional manner by this public reaction.

The Dominican Government has reacted very adversely to these developments. Among the manifestations of the foregoing are the attacks in the press, by radio and other means of propaganda of the Dominican Republic against those governments and chiefs of state who have shown sympathy for the cause of the Dominican exiles. As this subject exceeds the limited scope of the present report, the Committee will not analyze it at present. It must, however, express its opinion that this course of action, in turn, constitutes an additional element of disturbance in international relations in the hemisphere.

In view of all that which has been stated above, the Committee stresses the fact that international tensions in the Caribbean area, far from diminishing, have been increased and that, in its view, these tensions will continue to increase so long as the flagrant violations of human rights in the Dominican Republic persist.

CUBA: RESTRAINT BUT NOT INACTION

Cuba's Premier Castro is in much the same position as a little boy who knows that grownups aren't supposed to strike children who play pranks.

His recent announcement that Soviet Premier Khrushchev will visit Cuba—plus broad hints that Chinese Premier Chou En-lai may follow—constitutes a sort of diplomatic hotfoot for Uncle Sam.

The question is how serious a hotfoot is it? And how do Latin American onlookers interpret it?

Many persons in the United States have jumped to the conclusion that the danger from a major Cuban-Soviet or Cuban-Chinese tie lies mainly in the field of mysterious submarine or missile bases.

Such speculation tends to divert attention from more likely dangers: (1) that Dr. Castro can be persuaded by his Marxist allies to act as a transshipper of arms to Communist-directed revolutionaries elsewhere in Latin America; and (2) that his newly established network of Cuban propaganda offices and radio stations may sow anti-Americanism there.

It is easy to see that these two areas might tempt the Cuban revolutionary hero. Since his rise to power he has gradually moved away from strictly internal reform and begun dabbling in big-power politics—first as a declared neutralist, currently as a man determined to give Moscow the benefit of the doubt and Washington doubt for every benefit.

In the process, he has shown an increasing faith in the exportability of his revolution, which has meanwhile moved away from moderate socialist reforms toward arbitrary extremism.

This is a harsh assessment of a revolution that started out to be a new deal for Cuba, and has, in fact, made much desirable progress against illiteracy and an underdiversified economy. But it is an assessment that is becoming more widely recognized among leaders in the hemisphere. And the Khrushchev visit tends to confirm it.

But if this hotfoot is a symptom of something serious—and it is recognized as such by many Latin democratic leaders—what can be done?

Certainly economic or military retaliation against Havana is not the answer. Dr. Castro still maintains wide support at home. His reform successes, loudly trumpeted, are still magnetically popular with many constituents of the very democratic leftist reformers in Latin America who have themselves become disenchanted with Castro. U.S. intervention would martyrize Dr. Castro and reverse the eye-opening now going on.

But there are several other fields for positive action:

1. The United States can present more undistorted information about its support for reform and human rights, both by radio and in print in local languages of the landless and downtrodden. (It should not continue to let Moscow broadcast in Latin-American Indian dialects without competition.)

2. Working through the Organization of American States, Washington can support a tightened arms limitation agreement (limitation, not prohibition). It can help organize joint patrolling against sea- or air-borne arms smuggling.

3. Congress can give the President discretionary power to adjust sugar quotas should the hotfoot get too hot.

4. Washington can do much more through coordinated economic aid to help new democratic reform governments gain support from the underprivileged and discontented.

[From Social Order magazine, March 1960]

CASTRO AND CUBA—THE POLITICS OF ECONOMIC DEVELOPMENT

(By William P. Glade, Jr.)

Only a year ago cheers and applause greeted Castro's appearance in our movie newsreels. They have now, reports Miss Dorothy Kilgallen, changed to boos and hisses, the popular expression of a disenchantment daily more widespread.

Journalists who praised the barbudo's early successes have become vocal in opposition.[1] Congressional affirmations of sympathetic interest gradually diminished to a whisper, to be submerged altogether in recent weeks by mounting criticism and none-too-subtle references to sugar import quotas. After months of what appeared to be a studiously patient and conciliatory policy, toward the end of this past October, the State Department's attitude stiffened markedly and the first of a number of official protests was made.

The events underlying this growing apprehensiveness are, in their externals at least, too well known to require more than the briefest recapitulation.

After the first shock of the trials and executions, Castro's reckless call for an $80 billion Western Hemisphere "Marshall plan" seemed to epitomize the general disorganization of Cuban government. Promises of free elections grew increasingly vague and the suppression of dissent took on a harsher tone. A further ominous note was added by reports of a new secret police and neighborhood spy network. Censorship and bullying of the Cuban press together with mistreatment of U.S. correspondents virtually assured a bad press abroad.

Charges of Red influence came to seem plausible as the Cuban labor movement, crying American imperialism, pulled out of the ICFTU, as new laws expanded the scope of government intervention in the economy, and as expropriation of agricultural and mineral properties began. All the while, anti-U.S. feeling was being whipped up at mass rallies by a strident demagoguery reminiscent of Peron in his heyday.

In short, the bewhiskered youthful heroes of December 1958 came by December 1959 to seem to many rather more like aging juvenile delinquents, attired in jungle costumes and beatnik beards and with a strong bent for histrionics and violence.

The simplest interpretation of these events is that put forward by newsmen such as Dubois and Novins and by defecting revolutionaries aided by the publicity of congressional hearings: the Cuban revolution is being taken over by Communists and fellow travelers.

It would be foolish to deny the presence of Communists in Cuba.[2] They have been there for years and the deteriorating political and social conditions of the past decade were ready made for their agitation. Doubtless, too, many of the Communists are now wearing beards. Yet to call the Cuban developments communistic is, because of the emotion-arousing quality of that term, dangerously misleading as a guide to policy, for there is nothing in the changes effected so far which is distinctively or even primarily Marxist.

The potential menace of Communist infiltration which has been outlined in recent CIA reports is one thing; "leftist" policies which are not in and of themselves Marxist are quite another. To construe them as evidence of Red influence is to obfuscate important aspects of contemporary Cuban developments and to play into Communist hands by identifying communism with all important social change.

In part, this Marxist-in-the-sugarcane-field view probably stems from a failure to appreciate the singular differences between the Anglo-American approach and the Byzantine-Hispanic approach to economic matters. The wide latitude for intervention in economic affairs, for example, seems no more than a contemporary expression of the historic Iberian propensity to rely heavily upon state action to promote the public good. While state-operated enterprises have been set up to sell goods (largely foodstuffs) at prices designed to force drastic reductions in high retail markups, this sale of goods from public stores is an anti-inflation technique with repeated precedents throughout the long era of Spanish colonial rule. As such, it reflects not so much an ideological antipathy to private enterprise as a healthy and well-founded skepticism about the degree of competition prevailing in the market.

Similarly, the laws on expropriation and agrarian reform reflect essentially the contingent (rather than absolute) nature of property rights in the Hispanic legal tradition, a functional concept of property which stems from Byzantine law and medieval Catholic teaching.[3] Certain key sections of the agrarian reform law are, in fact, hardly more than restatements of land reform instructions issued two centuries ago by the

---

[1] Jules Dubois, a veteran correspondent who was one of Castro's stanchest supporters and who authored a highly complimentary biography of the Cuban leader, "Freedom Is My Beat" (Bobbs-Merrill, Indianapolis, 1959), published a series of articles in late November 1959 (Chicago Tribune Press Service) entitled "Cuba's Tragedy"—a bitter denunciation of allegedly "totalitarian" and "communistic" aspects of the revolution.

[2] "Reds Stealing Cuba's Revolution, Editor Reports," is a headline in the Jan. 15, 1960, Catholic diocesan press. The story is written by Jaime Fonseca, editor of Notiticias Catolicas, Spanish and Portuguese language service of NCWC News Service. Based on three visits to Cuba since Castro came to power, Mr. Fonseca reports that "there is a formal understanding between the Castro regime's leaders and the agents of international communism, according to keymen close to the Castro brothers during the underground days."—Ed.

[3] Readers unfamiliar with 19th and 20th century developments in Latin America should bear in mind, too, that, in the first place, the validity of most land titles to the larger estates is extremely questionable and that, in the second place, over against the present day expropriation of the landowner's property must be set the generations of landowner expropriation of the suprasubsistence production of rural labor.

Spanish crown to the intendants (high officials of the imperial bureaucracy). They are about as communistic as those notorious old Marxists, the Bourbon kings.

Even anti-U.S. sentiment can be discounted as evidence of Marxism, for it too has roots deep in the neo-Iberian culture of Latin America, reinforced in Cuba's case by the natural resentment a small and poorer country feels for its rich and dominating neighbor.[4]

Since at least the Moorish occupation and possibly during the anterior Visigothic invasions, a certain cultural arrogance and xenophobia have been characteristic of the Hispanic world. In modern times Latin Americans of a wide diversity of views on other subjects have united in seeing the Western Hemisphere in terms of civilized, Catholic Latin society of the south versus the barbarian, Protestant commercialism of the "Colossus of the North."[5] Nowhere has this view been better expressed than in the Uruguayan José Enrique Rodo's unforgettable portrayal of the Latin "Ariel" confronting the materialistic U.S. "Caliban."

Here again geography functions to reinforce a cultural bias, for the green shores of the Antillean pearl are only a U.S. rocket's range away from the neon-lit hedonism of Miami, while yanqui tourism, a basic prop of Havana's economy, and the main contact of many Cubans with U.S. life, has been notable for its focus on bordellos and gaming tables. These, in turn, have constituted in large part the foreign investment activities of U.S. gangster elements. Both the sugar and spice of Cuban life have been, therefore, ever-present reminders of yanqui control.

THE BASIS OF ANTI-AMERICANISM

Lastly, at least a part of the popular anti-Americanism in Cuba today can be explained by the simple expedient of placing our reiterated statements regarding the "traditionally cordial relations between the Governments of the United States and Cuba" against the historical record of the corrupt and dictatorial Cuban regimes with which, by self-admission, we have maintained such warm relations. The Cuban masses may well be excused for a certain skepticism about the keen interest of the United States in democracy and social justice. It is worth noting in this context that if the United States should persist in unrealistic and unreasonable demands for compensation for expropriated properties, as it has lately given evidence of doing, the situation could worsen materially. The plain fact is that there exists a real basis for Castro's charges that the United States has attempted to interfere with the internal affairs of Cuba, an accusation to be appraised later.

An alternative explanation of the events rests on historical precedent. What are involved, according to this view, are just the "normal" Jacobin excesses prior to the Thermidorean reaction, for as the historians of revolution have noted, the enthusiasm of the fighting spirit not infrequently carries over under its own momentum into the period of triumph. The positive, constructive tasks of political direction, of course, suffer distortion by subordination to the negative logic of combat.

In such cases, nationalistic leaders, imbued with plans to rebuild society, are quite apt to pull down the old abode before working out plans for building the new. Latin America, with its tradition of youthful radicalism among university students and its caudillo tradition, in which leaders are prone to succumb to the old Hispanic weakness of seeing themselves as actors in a drama, would seem to be especially susceptible to this sort of revolutionary excess.

So chaotic may be the consequences of this situation that one writer has aptly made reference to a "Samson complex" whereby nationalist leaders flex their muscles, lean against the economic pillars, and bring the house down on those whom they regard as the source of their troubles—and on their own heads at the same time.[6]

A closely related interpretation is the scapegoat theory which has been expounded, among other places, in the pages of the Wall Street Journal.[7] According to this view, antiforeign sentiment has been whipped up to conceal either a poverty of constructive ideas or of failures of domestic policy.[8]

The difficulty with the first variation, however, is that even if the Cuban leaders had no ideas of their own, by now the world is surfeited with proposals for reform and change. There exists, as it were, a vast inventory of social engineering projects, a common pool or stockpile upon which the would-be reformer is free to draw. In any case, moreover, the current objection to the Cuban revolution would seem pretty clearly to be not that it is directionless but that its direction is unacceptable (to the United States and to upperclass Cubans).[9]

As for the second variation—that anti-U.S. feeling is, along with repressive rule, a device for covering up failure—evidence of any really substantial failure is simply lacking.

It is perfectly true that various Havana business indicators are down—reflecting mainly a massive turnover in the civil service, high unemployment in the construction industry, and the slump in the tourist industry and auxiliary services—and that examples of economic gaucheries are not lacking in the agricultural field. But none of this is sufficient to indict the present Cuban Government as a failure. All are attributable to rather special circumstances.

REGIME IS HONEST

Because the old civil service was composed almost entirely of notoriously corrupt political appointees of the Batista regime, it was imperative to "clean house" and provide public functionaries loyal to the objectives of the new government. In recording the achievements of the Castro government, it is indicative of its high moral tone that even its bitterest critics have not accused it of the most glaring defect of previous regimes: a scandalously pervasive dishonesty in all branches of government. Efficient bureaucratic teamwork, however, is largely a matter of accumulated experience and ought not, therefore, to be expected while the new government is still in its infancy.

Construction, in prerevolutionary Cuba as elsewhere in Latin America, consisted primarily of urban work of an essentially nonproductive nature—the erection of palatial homes, luxury apartment houses, and overly elaborate office buildings—the cessation of which reflects no consequential loss in productive output to the national economy. Already some of the urban construction labor force (along with underemployed rural labor) have been directed into activities of a socially more constructive character. There is no real economic reason why the rest of the unemployed should not be similarly reabsorbed over the month ahead.[10]

Taking a long view, one is probably safe in assuming that the decline in tourism is only a temporary phenomenon. As domestic conditions become more stable and as the U.S. press turns its search for sensationalism to other areas of the globe, the food of dollar-toting travelers will in all likelihood resume, for the substantial natural advantages of the island have, of course, remained intact and the Government has slashed prices to add to their attractiveness. Insofar as a certain sedateness repels the tourist, the revival of this key sector of the economy may be somewhat delayed; but who would wish to quarrel with the Cubans on this score? Some of the auxiliary tourist services of the past, such as prostitution and wide-open gambling, rested on such a dubious moral basis that a return to the status quo ante is unthinkable.

Finally, it must be noted that neither is there to be detected evidence of any significant failure in agriculture. Some dislocations and maladjustments are inevitable during a period of sweeping change, but various reports would seem to indicate that while land redistribution is taking place quite quickly and, in some cases rather informally, all things considered, the transition seems on the whole remarkably smooth. Wages in agriculture have risen somewhat above their previously meager level (an essential step in creating a stronger internal market and providing more effective incentives for the rural labor force) and some of the new agricultural cooperatives appear to be receiving expert technical assistance.

In all of this the role of government has bulked large. Substantial governmental tutelage is likely to be a basic ingredient of agricultural reform for some time to come, and this for reasons which have little to do with ideology. Generations of peonage have

---

[4] Cuba gained its independence from Spain only to fall promptly under the influence of the United States. U.S. investments in sugar, minerals, tobacco, and public utilities came rapidly to control the Cuban economy and on several occasions provided the excuse for American military occupation of the island—all this, it must be remembered, in the 20th century. Today some 75 percent of Cuba's imports comes from its powerful neighbor and around 65 percent of its exports goes to the U.S. market.

[5] According to Tad Szulc, New York Times, Nov. 5, 1959, most of the current anti-U.S. feeling throughout Latin America is found among non-Communist groups.

[6] Indonesia might well provide the neatest "fit" to this concept. After first pulling down the Dutch pillar and finding that the house neither collapsed nor became noticeably roomier, the nationalist Samson has turned his attention recently to pulling down another major prop—the Chinese business community.

[7] See p. 1 of the issue of Oct. 27, 1959. The fairly extensive Cuban coverage in Time and U.S. News & World Report also plays heavily on this theme.

[8] Similar, for example, to the scapegoat use of Israel by the backward regimes of Jordan and Saudi Arabia.

[9] As Harold Lavine has pointed out in a noteworthy article in Commentary ("Social Revolution in Cuba," October 1959, pp. 324–328), the upperclass supporters of the Castro movement in its early days were aiming for the establishment of a conventional liberal democracy rather than the basic social revolution which has emerged increasingly as the paramount objective of the new regime.

[10] Some observers have charged, rather unconvincingly, that the Government's public works outlays are unproductive. It is difficult to see why the construction of rural roads and bridges does not represent important investments in social overhead capital and why even the provision of better worker housing should not be considered as directly conducive to higher levels of economic welfare and, very probably, indirectly productive because of the effect on worker morale. Such criticism stems in part from the old confusion between money costs and real costs and in part from a failure to contrast this type of expenditure with the prerevolutionary alternatives noted above. Is public expenditure on worker housing necessarily a less productive use of resources than private expenditure on fancy apartments?

scarcely prepared the impoverished and uneducated Cuban rustic [11] to assume forthwith the role of an independent rural entrepreneur; stern economic necessity therefore dictates the use of state controls to gear the output of new agricultural entities to overall objectives as well as to prevent the peasantry from consuming too much of its output. That mistakes will be made in this governmental guidance is a certainty, a fact which demonstrates merely the unavoidably experimental nature of initial planning efforts rather than the futility of such intervention.[12]

It should be observed in passing that a future decline in sugar output cannot be taken ipso facto as evidence of failure, though it is certain that a sizeable portion of the U.S. press will so interpret it in order to discredit the land reform program. Because of world market conditions, sugar sales were already sluggish in 1957 and 1958 while domestic stockpiles were growing. It is entirely conceivable, then, that sound economics might call for reductions in sugar output and increases in other crops, particularly since the premium price paid for Cuban sugar may no longer be forthcoming when the U.S. sugar interests are replaced by Cuban ownership.

ECONOMY FOUNDERING DOUBTED

In short, it is hard to find conclusive evidence that the revolutionary government is foundering on economic difficulties of its own making, though it is necessarily tackling sizeable economic problems inherited from the previous era and is up against some extraordinary difficult tasks in effecting the changes it has as its goals. Fundamental reorganization of a national economy is obviously not an overnight transformation.

All this is not to deny the possibility that the revolutionary program may eventually fall amidst general economic chaos, in which case either a Communist takeover or a reactionary coup would be a strong probability. It is, however, far too premature to pass such a judgment at present. To do so is to misread the record—or to betray either undue pessimism or wishful thinking.

It is the main contention of this article that the growing anti-United States feeling and the intensity of opinion formation by the Cuban Government reflect the successes of the revolution rather than its failures and are, moreover, well-nigh indispensible instruments in that success.

The present government stands publicly dedicated to two main projects: 1. effecting basic social reforms and 2. undertaking a reorientation of the economy by a development program of industrialization and diversification. Neither task is easy under the most favorable circumstances; both are of a sort to generate, even as they are successful or perhaps to the extent that they are successful, substantial stresses and strains within the socioeconomic structure. A somewhat leftist and highly regimented state is, in all probability, the most effective instrumentality for this simultaneous restructuring of both the economy and Cuban society.

Seen in this light, anti-Americanism and calls for continued revolutionary discipline may well be interpreted as means of masking, not failures in dealing with problems, but rather the necessarily painful nature of the solution of those problems. They are techniques, that is, for creating a popular rationale for the inevitable austerity period and the requirements of heightened effort and sacrifice during the difficult transition phase in agricultural reform and industrialization.

What has been largely obscured by the headline-winning flamboyance of the barbudos is the fact that side-by-side with the events noted at the outset of this article the Government has been making a serious and fairly consistent effort to move toward its chosen goals.[13]

In its monetary stabilization program, for example, the Government has succeeded, by means of strict controls over its dollar exchange reserves and other policies, in reversing the serious drain on gold and dollar reserves which developed during the Batista days—and this despite a sizeable capital flight as the moneyed classes voted, in effect, no confidence in the program of social reform.

RADICAL REFORM

In a related move, to carry through its economic programs in the face of a severe dollar shortage, the Government has imposed strict controls and high duties on various items to discourage the squandering of foreign exchange reserves on imports of consumer superfluities and to save funds for necessary investment in imports related to the development program.

Rent controls appear to have been used to halt the characteristically Latin American propensity to pour funds into luxury real estate construction and to free resources thereby for the public works program noted above.

Impending reforms in the banking system are likely to result in a more satisfactory distribution of credit to the rural sector than hitherto, formerly, as well as to the new industrial undertakings. The whole matter of savings, in fact, is apt to come up for review shortly, for with workers and peasants investing their limited capacity to save in "industrialization bonds," it will not be possible for the wealthy and middle classes to continue to drag their feet.

FORCED INDUSTRIALIZATION

An important move has been made in the industrialization program with the passage of the new mining law which, by levying a 5-percent tax on minerals extracted for sale in Cuba and a 25-percent tax on raw minerals extracted for export, seems designed to force the construction in Cuba of smelting and refining facilities. Mineral exports, it should be recalled, rank after sugar and tobacco as the third biggest dollar earner, though the nickel and cobalt exports have almost entirely been exported in raw form for processing in the United States. Where feasible, of course, the logical place for industrialization to begin is in the processing of a nation's raw materials.

Though land reform has moved swiftly (to prevent opposition to it from consolidating and retarding or halting it) and agricultural cooperatives have been established (to give the peasantry a "stake" in the new system), agrarian reform has been geared to development plans by the provision of technical advice and the establishment, for the time being, of delivery quotas at fixed prices for various crops.

FEVER VERSUS DISEASE

The objection has sometimes been raised that land reform per se merely treats the fever (agrarian discontent) without touching the disease (social and economic backwardness).[14] Apart from the fact that in Cuba the "disease" is also being treated, it is perhaps relevant to note that it is not unsound medical practice in many cases to bring down the fever as soon as possible, even independently of the treatment of the disease itself. The analogy would seem to apply in economics, for the social costs of continuing peasant unrest—the absence of what John R. Commons called "industrial goodwill"—can result in a sizable though hidden charge (in lackadaisical productive efforts and rural strife with its attendant damage to capital and output and lost man-hours of labor power) against the output of the economy. And it is only after the rural populace has been "won over" that further constructive changes stand much chance of success.

Obviously, the foregoing and other measures for accelerating socially beneficial economic growth entail both a considerable sacrifice on the part of the hitherto privileged groups and a greatly increased productive effort on the part of all. As Ruby H. Phillips recently observed:

"The launching of Castro's austerity program has jolted the free spending, free-wheeling Cubans, and they are already beginning to grumble. The people of this island have often known poverty but they are not conditioned to planned austerity." [15]

Against this background, three discernible functions emerge for the anti-United States and anticounterrevolutionary campaign.

PLANNED AUSTERITY

First, it serves as a sort of catalyst in effecting a revolution in cultural attitudes, a means of rousing the masses from their past apathy and limited mental horizons and emphasizing cooperative effort for new social goals.

Secondly, these campaigns are merely an application in the Cuban context of what other nations, including our own, have learned and employed before with respect to the psychology of production; namely, that there is nothing like the threat of an enemy from without (whether real or imaginary is beside the point) and his allies from within to create an esprit de corps and mobilize popular support behind a crash program to lift production to higher levels, and this either to win a war or to break through to sustained economic development.

Such a personification of the threat posed by the backwardness of inherited institutional arrangements is probably essential when dealing with an unsophisticated population little conditioned to self-discipline for abstract long-term goals. Without a concrete and continuing menace, it is likely

---

[11] It is significant that in his radio message to Cuba's first national Catholic convention, attended by more than 500,000 (including Fidel Castro), Pope John XXIII felt compelled to emphasize: "The face of the world could change if true charity were to reign. * * * It is the charity of the Christian man convinced that his wealth has a social function, and that it is his duty * * * to give what is above his own needs to those deprived of the bare necessities of life."

[12] Father E. K. Culhane, S.J., writing in America ("'Big Brother' Comes to Cuba," Jan. 23, 1960, pp. 502–503), deals vigorously but exclusively with these transitory difficulties, attempting thereby to build a case against the Cuban land reform program.

[13] Business Week is outstanding for having discerned this behind-the-scenes progress at an early date. See "Castro: Political Fireworks but Clear Economic Goals," August 1, 1959, pp. 70–74, for a sympathetic account of the constructive aspects of the economic recovery program: Labor peace, appointment of competent experts to key positions, the work of the Banco de Fomento Agricola y Industrial de Cuba.

[14] Archbishop Antonio José Plaza of La Plata, Argentina, told a national conference on agrarian reform sponsored by the Association of Professionals of Catholic Action last fall: "Lands that have been abandoned or virtually so, and lands which because of their owners' neglect have low yields, can legitimately be expropriated by the state—provided a just indemnity is given—and the ownership transferred to capable, enterprising families."—Ed.

[15] "Castro Gets the Bill," the Reporter, Oct. 29, 1959, pp. 23–24.

that such a population, holding the mistaken notion that the solution for its predicament is easy, might become impatient with the necessarily slow progress of the development program and overthrow the whole plan before it could begin to demonstrate its value. While it is certain that Cuba cannot in the long run sever its close economic ties with the United States, it may well be that in the attempt to reduce U.S. influence, the population can achieve a substantially higher level of productivity and economic welfare.

Moreover, as suggested earlier, the external threat is not altogether fictitious. Despite the nominal stand of the United States that Cuba has a clear right to undertake internal social and economic reforms, the official American position on the compensation issue must be viewed as inimical to the democratization of the Cuban economy.

The Cuban Government has already offered compensation for expropriated properties in 20-year Government bonds based upon valuations arrived at by mutual consent between U.S. interests and the Batista government. Unless, therefore, U.S. concerns wish to concede that they conspired with the Batista government to defraud the Cuban economy (which is very likely the case), the present quarrel must perforce focus upon the manner of payment rather than the amount of payment.

To press, as the U.S. Government has done, for immediate cash-on-the-barrelhead payment is manifestly so far out of the question in a country embarking upon a development program that it is tantamount to opposing redistribution of the land in the first place.[16] Such a policy of nominal neutrality but practical opposition is likely to fool no one—least of all in Cuba—and only confirms the impression abroad that the U.S. State Department is the political arm of U.S. corporations.[17]

Finally, it must not be forgotten that even if the threat of yanqui imperialism is partially fabricated, the threat of internal counterrevolution is undoubtedly real.

An abiding threat to Latin American movements such as Castro's has been the opposition to change on the part of the oligarchy (a Latin American expression for the entrenched elite of landowners, merchants, high military brass, and foreign capitalists). More than one Latin American social revolution has foundered as a consequence of delay in taking immediate steps to eliminate the power base of this opposition. Most often the delay proved fatal as it gave the oligarchy the opportunity to gather forces and, through the machinations of military cliques and palace revolts, to annul the revolution.

Psychological reconditioning and tight discipline become, therefore, indispensable instruments for consolidating the social gains of the revolution by holding in check the hostility of the privileged classes. In this transitional period, a free press and free elections, in both of which oligarchic influence would be paramount, are impractical until such time as the revolution is stabilized.

NO PRACTICAL ALTERNATIVES

U.S. readers who, from the comfort of their affluent society, cavil at the seeming harshness of Cuban policies for keeping down the opposition might well ponder the practical alternative of liquidation of the opposition through a resumption of internecine strife. Dislocations and stresses are bound to take place as reorganization of the socio-economic structure proceeds apace. To allow defectors and reactionary dissidents to prey upon them to undermine the basic goals of the revolution would appear unreasonable. The struggle has been too long and bitter and has cost too many lives already.

[From the Nation, May 28, 1960]

DIALOGS IN CUBA

(By Barbara Deming)

"In all my 38 years on the New York Times, I have never seen a big story so misunderstood, misinterpreted, and badly handled as the Cuban revolution."—Herbert Matthews.

Before my recent 3-week stay in Cuba, I had never played the role of journalist, and I had certainly never tried to play the role of amateur ambassador; but after a few days there, I found that I was exerting myself in both roles. The fact that I did so tells something about Cuba at this present moment. Nothing is more possible than to engage a Cuban these days in earnest conversation about the new regime, and about the misunderstandings between his country and ours. You have only to ask one question of a stranger sitting next to you in a bus, and before a minute is out, the bus will be a hubbub of discussion—every passenger eager to add his word. The only obstacle to communication that I encountered (aside from the fact that I speak a minimum of Spanish, and not all Cubans speak English) was that they are so eager to talk to Americans about what is happening, that I sometimes found myself trying to listen to two or three people at once. No one was indifferent. What is happening there is not something to which they passively submit, but something in which the great majority of Cubans feel actively engaged.

There is no blind following of Castro. Those who are most enthusiastic freely describe him as "loco" about some particular project, or term him "Superman" for wanting to think about everything himself. "We make jokes about everything, in Cuba," a young volunteer government worker told me. "Our joke about Castro is, we call him our kid. 'That kid, he's working too hard,' we say. It's very, very strange; we feel responsible for him." That attitude is also strangely contagious—so much so that, at the end of a week, having by then strong feelings about Cuba's relations with the United States, I found myself stepping into a taxicab and telling the driver that I would like, please, to talk with Fidel Castro.

When I admitted that I had no idea where Castro might be found, the driver pulled up to the curb and consulted some men who were chatting together. They advised me to ask directions at the main police station. There the matter was discussed again in an astonishingly informal fashion. I was advised to apply for an interview at the INRA building where, after explaining something of my purpose before a casual jumble of reception desks, I was suddenly taken in tow by a stranger who turned out to be an engineer, there this day to submit a rural electrification project to the government. Overhearing my explanations, he had decided that I had "good feelings" and so took it upon himself to steer me to the appropriate officials. It was not, of course, as easy as all that. The men in question were naturally busy. But I was asked to come back again; and the difficulty of getting to see Castro was explained to me in the simplest human terms: he'd been up working, the night before, until 5 a.m. Meanwhile the engineer led me off to meet some other people, of the press and radio, who might be able to arrange the interview for me.

It should be apparent to the reader by now that one widespread impression among us is mistaken: Cubans may be loudly critical of the present policy of our government, but they are not hostile toward the American people. Nor is their friendliness simply the friendliness of a people who want tourists. It is quite unstrained. No Cuban with whom I spoke treated with scorn my determination to try to see Castro. And when I finally did manage an interview in the manner that a number of people had begun to suggest—by catching his eye in a public place and asking whether I could talk with him—the attitude of the small crowd that soon surrounded us was curiously protective. After Castro left, many of them stayed round me for an hour more—asking me about myself and elaborating upon the words he had spoken.

The specific event that had caused me to prolong my stay in Cuba was the speech Castro made on March 6 at the funeral for the men killed in the explosion of the munitions ship, *La Coubre*. He had declared that he couldn't help suspecting that those who had tried to halt all shipments of arms to Cuba (which is to say, U.S. officials) were somehow responsible. His words had filled me with confusion. Back home, I had seen him described in public print as a little dictator in the making. But the vision of him in this role had been dissolved for me by then—confronted as I was by a population enthusiastic, yet without fanaticism. From one person after another I had heard, in effect, the same words: "For the first time we are full of hopes, we feel that life is possible." Even those few people with whom I had talked who were critical of Castro acknowledged that he was helping the great majority and that his regime was absolutely honest. A taxi driver who was furious at him, because he, the driver, depended on tourists for a living—"And they're not coming, they're not coming!" and Castro was to blame—described him, in his wrath, in these terms: "This island has always been called a paradise. Now he wants to actually make it one. He wants to make it a gol-den saucer. a gol-den saucer." (I told the cabbie I had never heard that expression. "It's my own," he said proudly.) The day of the funeral speech, however, revived in me the old doubts. Why should Castro mouth such suspicions—even while he admitted that he had no proof?

I had not been staying in Havana itself up to now, but now I moved in, and my second night there I suddenly had a chance to voice the objections of an American to Castro's charges. I wandered by chance into a crowd of people on the Prado who were being solicited for contributions for arms for Cuba. Everyone who donated something was allowed to speak a few words into a microphone, and a TV camera mounted on a truck would catch his picture for watchers throughout Cuba. Still troubled by my doubts, I hesitated to make my own contribution, but the eager faces of the girls asking for donations made my hesitation seem foolish, and I gave a few pesos. Instantly a number of people standing in line to take

---

[16] As most readers probably know, under the best of circumstances a program of rapid economic development is apt to create severe strains on a nation's balance of payments. Earnings of foreign exchange must by and large be earmarked for financing imports of capital goods and similar items needed to accelerate growth of domestic output. To divert a sizable portion of vital foreign exchange earnings into compensation payments means simply that capital is being repatriated at just the time when the need is greatest for more capital. Cash compensation would therefore be detrimental to Cuba's economic program while additional capital aid at this time would go far toward insuring the ability of Cuba to make good on bond redemptions later on.

[17] The expropriation-compensation issue also explains the above-noted forebearance of the State Department in the early days of the revolution: it was patient while the reform program was still in the talking stage but protested when the revolution began to make good its promises for economic and social reform.

their turns at the microphone, waved and smiled at me. "You are an American? That's wonderful. Thank you, thank you!" —and all beckoned to me to say something too. One after another of these people was crying a little speech into the microphone. Even little children squeaked out something with no shyness. (Fiery oratory, I noticed, is a national habit here.) I instinctively shook my head as they invited me to say my word. Then I decided that if I had a protest to make, I should make it here. So I asked the man who was passing the microphone whether he could translate for me, and I said: "Here's to Fidel Castro, and here's to your revolution. But may Castro come to speak less violently against the United States, and it may yet change its heart toward him." I rather expected my words to be disliked, but when I looked about me, people waved at me and cried again "Thank you!" and the next day, when I went to the Western Union office to send a cable, the head of the office hurried toward me, beaming, hand outstretched: "I want to thank you for your cooperation with the Cuban people. If I am not mistaken, I saw you on television last night."

That night, too, I began methodically to ask everyone I found who could speak English: Why did Castro make such violent charges? I had started asking this question on the day he made the speech, and the first answer I had been given had seemed strange to me. "Don't you see? He was so hurt," a young woman had explained to me. It had seemed strange to hear the statements of a head of state explained in such personal terms. And, I told her, most Americans felt that, in the face of Castro's abuse of us, our Government had behaved with astonishing restraint. In the coming days, however, I was to hear repeatedly the same expression, "You must understand, he was hurt," and to mark a look of wonder that I could not appreciate that human fact. Over these next 2 weeks—while I persisted, too, in my attempt to manage a conversation with Castro himself—I had long conversations about the relations between our two countries with scores of Cubans from all walks of life.

They would usually speak first of the refusal of our Government to sell Cuba arms, and of the strong pressure we had put on other governments to refuse them also. "Why are we not to be allowed to defend ourselves?" they would ask. Then they would bring up the raids over Cuba by planes flying from airfields in Florida. There was not a day, I was told, when at least one plane did not come over. Many acres of sugarcane had been destroyed by fire bombs "and sugar is our livelihood"; sugar mills had been attacked; even 100-pound bombs had been dropped; and a raid on Havana on October 21 had caused the death of 2 people, the wounding of almost 50. The United States did little to prevent these flights. I assured them: Our Government naturally deplored the raids, but it wasn't easy to prevent them. How was one to keep a pilot from lying about his destination? Again the response was a look at me and a smile—as though I were a child. If planes had been making similar raids into Canada, they said, they couldn't help feeling that the U.S. Government would have managed by now to stop them.

Everyone with whom I spoke would bring up the subject of the Batista henchmen to whom we allow asylum: Ventura, Laurente, Masferrer, Pedraza, others. These are not political refugees, they would say; they are known mass killers and sadists. There is a gesture in Cuba where the speaker touches the corner of his eye, meaning: I have seen it. This gesture was repeated for me many times. There is scarcely a person to whom one speaks whose family has been untouched by Batista's torturers. About 19,000 Cubans were murdered by them. In Havana alone, they castrated 300 men and boys, so people said. Some of the tortures they perfected are almost unspeakable. One woman told me with emotion of the treatment dealt out to her cousin. A Batista henchman had had a man jump up and down on the boy's stomach until everything inside him was broken. The fellow responsible "is now a leader of the anti-Communists in Miami," the woman told me. "There is your anti-Communist man. You must try to understand why we are so hurt."

When the Batista men were mentioned, I would urge the difficulties of forbidding asylum. And it was through a mistake, I would point out, that Pedraza had been allowed to enter the country. No such mistakes seemed to occur, they pointed out, when anyone tried to enter whom the United States had named a Communist. And the United States knew, they all said, that Batista's men were not idle there. Men known to be plotting against, say, the Government of England, would never be given such freedom.

It seemed unreal to all these people that we should be indifferent to the nature of these men now in our midst; and it seemed unreal, too, that we should be indifferent to the contrast between the Batista regime and the regime now. That contrast is for them a cause, still, of happy wonder. Person after person would remark to me how amazing it was to be able to look at a soldier or a policeman without fear. And in their eyes the youth I saw drilling in the streets have a very different significance than for the casual visitor. As one of the Catholic priests with whom I talked explained to me with feeling: Army barracks are being converted into schools all over the island. (This is one of the changes people talk most about.) And the militia that one sees everywhere is voluntary—"the first completely voluntary army in history," the priest boasted. "The army can no longer threaten the people of Cuba. The people of Cuba are the army."

It is not only the disappearance of terrorism that they speak of with wonder. Terrorism under Batista was matched by corruption. The facts of this, too, are vivid in every mind. Over and over someone would name for me the exact figures of some monstrous example of graft. Under Batista, a social worker told me, it used to be that a man would go into the government and within 6 months you could count on his being a millionaire. It was something strange, she said, if this didn't happen. One of the first things the heads of the present government did was to reduce their own salaries. Pride in this new honesty is one of the most conspicuous elements in the revolutionary movement. A man pointed out to me the little boxes being passed about for contributions for arms. "And nobody touches a penny," he cried; "this is holy." A girl opened one of the boxes to show me a diamond ring among the pesos contributed.

And so they look about with pride and relief at the difference between the two regimes, and cannot understand why we are suddenly full of protests about this one. They all conclude that the United States does not want Cuba to be independent; that it wants her to remain in the position of a colony.

By now I knew to what they referred when they explained Castro's words about the United States in terms of "hurt." It still seemed to me a strange explanation. Did they not expect diplomacy of their Prime Minister? When I finally did, by chance, late one afternoon, catch sight of him standing on the sidewalk outside the Sevilla Biltmore Hotel, I stepped up to him and asked my questions directly of him.

I introduced myself as an American distressed at the poor relations existing between our two countries. I did understand, I told him, that he had cause for bitterness; but, I said, his angry words were losing him friends in the United States—even those who might well be his friends. For several minutes his answers to me were a prolonged echo of all I had been hearing from other Cubans. "How would you feel—?" he asked me, and again: "How would you feel—?" naming again for me all the damaging acts, or omission of acts, that had been named for me by one person after another. "How would you feel?" His hand touched my arm. His appeal to me was personal—quite as though I had been trying, say, to reconcile him to a mutual friend who had disappointed him.

I reiterated: I understood why he was bitter. But wasn't he letting bitterness confuse his own actions now—when he went so far as to accuse the United States of complicity in the munitions-ship explosion, of actual crime? He was quick to deny this: he had not accused them. "The people around me, advising me, would never have let me say such a thing. I said that I had no proof. But," he added, "I have a right to wonder." A right to wonder out loud? I asked. The point was, he tried to explain, that if the United States had not attempted so persistently to block all sale of arms to Cuba, such a thing could never have happened. U.S. hostility had created an atmosphere in which the crime was possible.

I told him that I had recently read the speech he had made in October 1953, before the court which tried him for his early rebellion against Batista. (This speech, published under the title "History Will Absolve Me," I recommend to anyone wishing to make a considered judgment of Castro.) He said that I had often heard Americans worry that the might be a potential Mussolini or Hitler; I had decided that one who spoke as he did in that speech never could become another such figure. But listening to his words at the funeral, I had not been sure. Again, he looked at me hard.

The crowd had pressed us close together by now, and someone behind me was holding onto my waist, with warm hands, as though I were a child she or he were helping to speak up. It seemed to me, I said, that in his fight against Batista, his genius had been to win new adherents to his cause from the ranks of the opposition. That is how his army had grown. And in a recent talk to schoolchildren, I reminded him, he had urged the children, in their dealings with the children of those who spoke against the revolution, to "win them over with friendliness, not with contempt." Was he not forgetting that principle in his dealings with the United States?

In the beginning, he answered me now with emphasis, he had done just this—had tried to ask for understanding. But how was he to hope to reach the people of the United States, he asked, when between him and the American people was the American press? He spoke with a hopelessness conspicuously sincere. I persisted: it was not impossible to communicate with the American people. Must he not continue to try to make himself clear—thinking always, when he spoke, of those Americans who could understand him? He had gone on trying for a long time, he said. I asked, must he not keep on trying still? He looked at me then and shrugged his shoulders forward eloquently, "You would like me to be like Christ," he said. I answered: "I would like you to be like Gandhi in his conversations

with the British." "The people of Cuba are like Gandhi," he answered quickly.

I had referred once more to his funeral speech, when he suddenly put his hand on my arm again: "Don't you see? It is not to the United States that I am talking. I am talking to the people of Cuba." He spoke now at length and with feeling: "Don't you understand? I have to build up in the Cuban people a national conscience. I have to teach them what their true situation is. I have to make them aware of what lies before them, to be done and to be suffered. How did George Washington have to speak to his soldiers at Valley Forge?"

He was elaborating upon this theme when two NBC men, who had found their way through the crowd, asked him if he would grant them a televised interview the next day. He tried at first to decline; he was terribly busy; also, he spoke awkward English, and he might not say things well. I asked whether there couldn't be a chance for him to see the interview played back first, before approving it. Impossible, the reporter said, shortly. Castro turned to me suddenly now and patted me on the shoulder: "She's a good girl. She advises me not to get angry."

The newsmen then, pencils in hand, began to ask some of their own questions. The revolution, Castro tried to explain, was not really against the interests of the American people. It was true that a very small group of them would lose something. "We can't help this," he said. "You had a revolution once. There were changes, weren't there? And didn't the British lose something?" "We're reporters," said the NBC man. "We're here to ask you questions." Castro looked surprised. But he went on: The revolution was hurting the interests of a small group of monopolists. "Are you against monopolists?" asked the newsman quickly. "I'm not against!" Castro cried, with a helpless emphatic gesture; "I am for the Cuban people." (I noted that this outcry was omitted from the account of the interview in next morning's Havana Post, an English-speaking publication there.) "We are in favor of the Cuban people. We are against those who are not," he was simply reported as saying. Nor was there any account of what had been, for me, the heart of his self-explanation: His comparison of his own role to that of Washington at Valley Forge.

I came to believe that afternoon that Castro's words are not really weighed in terms of a reaction to them in the United States. I came to realize also that his very lack of diplomacy in speech, so disastrous where the relations between our two countries were concerned, had for his Cuban audience a special value. "Would you want him to be a hypocrite?" people had been asking me all these days. Batista had indeed been a "good politician," quite able to keep his mouth shut when it was diplomatic to do so. With Castro, Cubans feel secure in the knowledge that whatever comes into his head, he will say. When this leads to some exaggeration, they make allowances: "Remember, he is young." The point is: He is not trying to keep anything back from them. They feel that they share, for the first time, in what is going on. An edge of pride is no doubt involved, too. As the French wife of an exiled Haitian newsman said, with delight: "They have had to speak carefully for so long. This is an important moment for them."

THE PRESIDENT'S TRIP TO THE FAR EAST

The SPEAKER pro tempore. Under previous order of the House, the gentlewoman from Massachusetts [Mrs. ROGERS] is recognized for 30 minutes.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I have in my hand a picture that appeared in the Washington Post of President Eisenhower saying goodby to his little grandson at a Washington airport. In the picture are Secretary of State Christian A. Herter, Homer Gruenther, assistant to the President, Mary Jean and Barbara Ann Eisenhower, granddaughters of the President, Vice President Richard M. Nixon, and Mrs. Herter, wife of the Secretary of State.

You see it is a very moving picture. You can just see him saying goodby and telling his grandson to be a good soldier. That, of course, is what the President was when he started off on his extremely dangerous trip to foreign countries where there are inhospitable groups with vicious threats against him awaiting him. I know he was telling David to be brave and a good soldier, because that is what he has been always. He told his little grandson he would then be acting as the head of the family, since his mother and father, Colonel Eisenhower, the President's son, were going with the President.

Mr. Speaker, I should like to read a letter addressed to the President by the American Legion Auxiliary, department of Massachusetts. It reads as follows:

AMERICAN LEGION AUXILIARY,
DEPARTMENT OF MASSACHUSETTS, INC.,
Boston, Mass, June 7, 1960.

HON. DWIGHT D. EISENHOWER,
President of the United States,
The White House,
Washington, D.C.

MY DEAR MR. PRESIDENT: At the 41st annual department convention of the Massachusetts American Legion Auxiliary held at New Ocean House, Swampscott, on June 3, it was unanimously voted to adopt the following resolution:

"Whereas the dignity, patience, and understanding of President Dwight D. Eisenhower, during and subsequent to the ill-fated summit conference, has impressed us with his sincere desire for a just and lasting peace; and

"Whereas he has been subjected to indignity uncalled for in his position as President of the United States of America: Be it

"Resolved, That we express to the President our faith in his efforts and our admiration of his report to the Nation."

May we assure you of the love and devotion of 25,000 members of the Massachusetts department during the trying days you spent in Paris and may you be given the health and strength under God's guidance to meet the grave responsibilities which lie ahead.

Cordially yours,
ADELAIDE L. FITZGERALD,
Secretary-Treasurer.

Mr. Speaker, this is a very fine resolution. It is entirely nonpartisan, and there are probably more Democrats than Republicans. I rejoice in this resolution, Mr. Speaker, but I deplore that there are those today in this country who criticize the President of the United States. It is terribly belittling of them, instead of resenting with all their being the attacks by Khrushchev on the President of the United States, Gen. Dwight D. Eisenhower. He is our symbol of our country—he is our President. And in insulting him they insult the United States. No red-blooded, strong, loyal American, I think, can criticize the President or find excuses for Khrushchev. There is no redblooded, strong, loyal American who should not stand up for the integrity and honor and respect due to the United States of America.

REPORTING EXPENSES BY HOUSE MEMBERS

Mr. CURTIN. Mr. Speaker, I ask unanimous consent that the gentleman from Missouri [Mr. CURTIS] may extend his remarks in the body of the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. CURTIS of Missouri. Mr. Speaker, yesterday my colleague, the gentleman from California [Mr. LIPSCOMB], a member of the House Administration Committee, and a public accountant, introduced a bill relating to the reporting by Members of the House of Representatives of expenditures from the contingent fund of the House of Representatives, and of expenditures of counterpart funds by Members of Congress.

The bill deals with an area where we have long needed reform. I am today introducing an identical bill to that of the gentleman from California [Mr. LIPSCOMB], and I trust the House will move rapidly ahead to tighten up in this area.

LITHUANIANS AND THEIR FATE IN 1940

Mrs. PFOST. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. DINGELL] may extend his remarks at this point in the body of the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentlewoman from Idaho?

There was no objection.

Mr. DINGELL. Mr. Speaker, the Lithuanian people have had more than their share of misfortune and misery in their modern history, but the fate that was theirs in June of 1940 proved to be truly tragic. These robust and stout-hearted fighters for freedom had suffered under the oppressive Czarist regime of Russia for more than 100 years, and had regained their independence at the end of the First World War. Thenceforth, for about two decades, they were happy in their homeland, and in that relatively short time they had made Lithuania a model democracy in northeastern Europe. On the eve of the last war helpless Lithuanians were in a precarious position; they were not strong enough to defend themselves against their arch enemy, the Soviet regime. Soon after the outbreak of the war, Lithuania was attacked, overrun, and occupied by the Red army, and then the country became part of the Soviet Union. In attaining their goal, Soviet authorities resorted to some outrageous and inhuman methods. They deported all

able-bodied men whom they suspected of opposing Communist dictatorship and enslaved the rest of the population.

Even now it is impossible to say how many hundreds of thousands were uprooted from their native Lithuania and, in a mass deportation unprecedented in modern history, were driven to distant parts of the Soviet Union. On this day, 20 years after their deportation, we commemorate that day as one of misfortune and pray for those who died in some desolate part of the Soviet Union.

THE HONORABLE MRS. GRACIE PFOST

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER pro tempore. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I would like to congratulate the gentlewoman from Idaho [Mrs. PFOST] on her overwhelming renomination to the Congress of the United States. She is a great and able Member of the Congress and a very loyal friend and loyal American. She is always very fair to Members on the Republican side as well as Members on the Democratic side. She sincerely wants to be helpful and just.

I know we in Massachusetts are deeply grateful to her. She has aided us in the passage of meritorious legislation in Massachusetts and in my own congressional district. She does this for both sides of the aisle, regardless of party, because she is dedicated to the proper development of this great country of ours. She is a great stateswoman and a great American. The Democrats can be extremely proud of her; I know I am, as a Republican. She is fortunate to have a fine husband who has great pride in her achievements and is constantly by her side, helping her in every possible way. I hope the citizens of Idaho appreciate her many talents, and her fairness in the great legislative job she is doing in the Congress.

Mrs. PFOST. I certainly thank the gentlewoman from Massachusetts [Mrs. ROGERS]. Those kind words coming from our dean of the women in the House of Representatives mean much to me. She has been a Member of this distinguished body for more than 35 years. She has served the people of her district faithfully and well. We, who know her, love her. I am gratified to be the recipient of her generous remarks.

LEAVE OF ABSENCE

By unanimous consent leave of absence was granted to Mrs. GREEN of Oregon (at the request of Mr. ULLMAN) for today, June 15, 1960, on account of illness.

SPECIAL ORDER GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to Mr. MULTER, for 10 minutes, on tomorrow.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

(At the request of Mr. CURTIN the following Members were granted permission to extend their remarks and include extraneous matter in the RECORD:)

Mr. CANFIELD.

Mr. DOOLEY.

(At the request of Mrs. PFOST and to include extraneous matter the following:)

Mr. ALFORD.

ENROLLED BILLS SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker.

H.R. 10000. An act to amend further certain provisions of the District of Columbia tax laws relating to overpayments and refunds of taxes erroneously collected;

H.R. 10183. An act to amend the Fire and Casualty Act regulating the business of fire, marine, and casualty insurance in the District of Columbia;

H.R. 10684. An act to amend sections 1 and 5b of the Life Insurance Act for the District of Columbia; and

H.R. 10761. An act to provide for the representation of indigents in judicial proceedings in the District of Columbia.

SENATE ENROLLED BILLS AND JOINT RESOLUTION SIGNED

The SPEAKER announced his signature to enrolled bills and a joint resolution of the Senate of the following titles:

S. 1185. An act to provide for the preservation of historical and archeological data (including relics and specimens) which might otherwise be lost as the result of the construction of a dam;

S. 1358. An act to authorize the Secretary of the Interior to provide a headquarters site for Mount Rainier National Park in the general vicinity of Ashford, Washington, and for other purposes;

S. 1892. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Norman project, Oklahoma, and for other purposes;

S. 2327. An act to amend the act entitled "An act to provide for the better registration of births in the District of Columbia, and for other purposes";

S. 2954. An act to exempt from the District of Columbia income tax compensation paid to alien employees by certain international organization;

S. 2439. An act to authorize certain teachers in the public schools of the District of Columbia to count as creditable service for retirement purposes certain periods of authorized leave without pay taken by such teachers for educational purposes; and

S.J. Res. 42. Joint resolution to establish an objective for coordinating the development of the District of Columbia with the development of other areas in the Washington metropolitan region and the policy to be followed in the attainment thereof, and for other purposes.

ADJOURNMENT

Mrs. PFOST. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

Accordingly (at 5 o'clock and 41 minutes p.m.) the House adjourned until tomorrow, Thursday, June 16, 1960, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2266. A letter from the Comptroller General of the United States, transmitting a report on the review of Atomic Energy Commission (AEC) negotiated fixed-price contract AT(05-1)-36 with the Union Carbide Nuclear Co. (Carbide), Uravan, Colo., for the procurement of uranium concentrates, December 1959; to the Committee on Government Operations.

2267. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, relative to furnishing reports of additional facts in numerous cases involving the provisions of section 13 of the act of September 11, 1957; to the Committee on the Judiciary.

2268. A letter from the President of the Board of Commissioners of the District of Columbia, transmitting a draft of proposed legislation entitled "A bill to authorize the Board of Parole of the District of Columbia to discharge a parolee from supervision prior to the expiration of the maximum term or terms for which he was sentenced"; to the Committee on the District of Columbia.

2269. A letter from the President of the Board of Commissioners of the District of Columbia, transmitting a draft of proposed legislation entitled "A bill to provide for the establishment of a juvenile division within or in connection with the District of Columbia Youth Correctional Center, and to authorize the judge of the juvenile court of the District of Columbia to commit to such juvenile division, subject to the provisions of the Juvenile Court Act, children 15 years of age or older"; to the Committee on the District of Columbia.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. McMILLAN: Committee on the District of Columbia. H.R. 12483. A bill to amend section 801 of the act entitled "An act to establish a code of law for the District of Columbia," approved March 3, 1901; without amendment (Rept. No. 1874). Referred to the House Calendar.

Mr. ROGERS of Colorado: Committee on the Judiciary. H.R. 12552. A bill to provide for the appointment of additional circuit and district judges, and for other purposes; without amendment (Rept. No. 1875). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAWSON: Committee on Government Operations. H.R. 9600. A bill to authorize

and direct the transfer of certain personal property to State and county agencies engaged in cooperative agricultural extension work; without amendment (Rept. No. 1876). Referred to the Committee of the Whole House on the State of the Union.

Mr. WILLIAMS: Committee on Interstate and Foreign Commerce. H.R. 7593. A bill to amend sections 101 and 401(e) of the Federal Aviation Act of 1958 so as to authorize the Civil Aeronautics Board to include in certificates of public convenience and necessity limitations on the type and extent of service authorized, and for other purposes; with amendment (Rept. No. 1877). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAWSON: Committee on Government Operations. H.R. 11499. A bill to amend the Federal Property and Administrative Services Act of 1949, as amended, so as to authorize the use of surplus personal property by State distribution agencies, and for other purposes; without amendment (Rept. No. 1878). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAWSON: Committee on Government Operations. H.R. 12273. A bill to amend section 7 of the Administrative Expenses Act of 1946, as amended, to provide for the payment of travel and transportation cost for persons selected for appointment to certain positions in the United States, and for other purposes; with amendment (Rept. No. 1879). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAWSON: Committee on Government Operations. H.R. 12604. A bill to amend the "antikickback statute" to extend it to all negotiated contracts; without amendment (Rept. No. 1880). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. LANE: Committee on the Judiciary. H.R. 9079. A bill for the relief of William Radkovich Co., Inc.; with amendment (Rept. No. 1869). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 11486. A bill for the relief of Richard J. Power; without amendment (Rept. No. 1870). Referred to the Committee of the Whole House.

Mr. MOORE: Committee on the Judiciary. H.R. 4981. A bill for the relief of Mina and Henek Sznaider; with amendment (Rept. No. 1871). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. H.R. 9960. A bill for the relief of Dr. Tze I. Chiang; with amendment (Rept. No. 1872). Referred to the Committee of the Whole House.

Mr. SMITH of California: Committee on the Judiciary. H.R. 10376. A bill for the relief of Adolf B. Jochnick; without amendment (Rept. No. 1873). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. Senate Concurrent Resolution 103. Concurrent resolution favoring the suspension of deportation in the cases of certain aliens; with amendment (Rept. No. 1881). Referred to the Committee of the Whole House.

Mr. SMITH of California: Committee on the Judiciary. H.R. 9042. A bill for the relief of Anna Semechole Marcolina; without amendment (Rept. No. 1882). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. TEAGUE of Texas:

H.R. 12653. A bill to amend title 38, United States Code, to establish a Court of Veterans' Appeals and to prescribe its jurisdiction and functions; to the Committee on Veterans' Affairs.

By Mr. ALGER:

H.R. 12654. A bill relating to the reporting by Members of the House of Representatives of expenditures from the contingent fund of the House of Representatives and of expenditures of counterpart funds by Members of Congress; to the Committee on House Administration.

By Mr. BRADEMAS:

H.R. 12655. A bill to amend the Internal Revenue Code of 1954 to repeal the manufacturers excise tax on musical instruments; to the Committee on Ways and Means.

By Mr. CURTIS of Missouri:

H.R. 12656. A bill relating to the reporting by Members of the House of Representatives of expenditures from the contingent fund of the House of Representatives and of expenditures of counterpart funds by Members of Congress; to the Committee on House Administration.

By Mr. DEVINE:

H.R. 12657. A bill to amend title 38, United States Code, to establish a Court of Veterans' Appeals and to prescribe its jurisdiction and functions; to the Committee on Veterans' Affairs.

By Mr. FLYNN:

H.R. 12658. A bill to amend the Federal Trade Commission Act to strengthen independent competitive enterprise by providing for fair competitive acts, practices, and methods of competition, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. IKARD:

H.R. 12659. A bill to suspend for a temporary period the import duty on heptanoic acid; to the Committee on Ways and Means.

H.R. 12660. A bill relating to the application of the excise tax on club dues to amounts paid for certain capital improvements; to the Committee on Ways and Means.

H.R. 12661. A bill to provide for judicial review of administrative findings of the Secretary of Labor under title III of the Social Security Act, as amended, and chapter 23 (Federal Unemployment Tax Act) of the Internal Revenue Code of 1954, as amended, and for other purposes; to the Committee on Ways and Means.

By Mr. KARTH:

H.R. 12662. A bill to amend the Federal Trade Commission Act so as to prohibit any person, partnership, or corporation from disseminating advertisements falsely representing the prices at which commodities are offered for sale to be the wholesale prices of such commodities; to the Committee on Interstate and Foreign Commerce.

By Mr. LESINSKI:

H.R. 12663. A bill to preserve the rates of basic salary of postal field service employees in certain cases involving reductions in salary standing, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. MORRIS of Oklahoma:

H.R. 12664. A bill to authorize the Secretary of the Interior to construct, operate, and maintain the Waurika reclamation project, Oklahoma; to the Committee on Interior and Insular Affairs.

By Mr. QUIGLEY:

H.R. 12665. A bill to amend title 38, United States Code, to establish a Court of Veterans' Appeals and to prescribe its jurisdiction and functions; to the Committee on Veterans' Affairs.

By Mr. SAYLOR:

H.R. 12666. A bill to amend title 38, United States Code, to establish a Court of Veterans' Appeals and to prescribe its jurisdiction and functions; to the Committee on Veterans' Affairs.

By Mr. WOLF:

H.R. 12667. A bill to amend the Federal Trade Commission Act to strengthen independent competitive enterprise by providing for fair competitive acts, practices, and methods of competition, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. BENNETT of Florida:

H.R. 12668. A bill to amend the District of Columbia Alley Dwelling Act by adding certain requirements with respect to low-rent housing projects in the southeast quadrant of the District of Columbia; to the Committee on the District of Columbia.

By Mr. FLYNN:

H.R. 12669. A bill to amend title 38, United States Code, to establish a Court of Veterans' Appeals and to prescribe its jurisdiction and functions; to the Committee on Veterans' Affairs.

By Mr. GUBSER:

H.R. 12670. A bill to authorize the Secretary of Health, Education, and Welfare to enter into agreements with each of the States, Commonwealths, territories, and the District of Columbia to provide for a private, voluntary medical care insurance program for certain persons over the age of 65, and to authorize payments by the Secretary to States to cover part of the costs of such insurance; to the Committee on Interstate and Foreign Commerce.

By Mr. HERLONG:

H.R. 12671. A bill to change the definition of a nonqualified corporation, with respect to the allowance of 8-year carryovers of operations losses in computing the income taxes of new life insurance companies; to the Committee on Ways and Means.

By Mr. LAIRD:

H.R. 12672. A bill relating to the reporting by Members of the House of Representatives of expenditures from the contingent fund of the House of Representatives and of expenditures of counterpart funds by Members of Congress; to the Committee on House Administration.

By Mr. CLEM MILLER:

H.R. 12673. A bill to amend section 8(e) of the Agricultural Adjustment Act of 1933, as amended, and as reenacted and amended by the Agricultural Marketing Agreement Act of 1937, as amended, so as to provide for the extension of the restrictions on imported commodities imposed by such section to imported wines; to the Committee on Agriculture.

By Mr. HAGEN:

H.R. 12674. A bill to require full disclosure of expenditures of Government and counterpart funds by Members of Congress traveling in oversea areas, and for other purposes; to the Committee on House Administration.

By Mr. MITCHELL:

H.R. 12675. A bill to amend title 38, United States Code, to establish a Court of Veterans' Appeals and to prescribe its jurisdiction and functions; to the Committee on Veterans' Affairs.

By Mr. RANDALL:

H.R. 12676. A bill to amend the Federal Trade Commission Act to strengthen independent competitive enterprise by providing for fair competitive acts, practices, and methods of competition, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. ROOSEVELT:

H.R. 12677. A bill to amend the Fair Labor Standards Act of 1938, as amended, to provide

coverage for employees of large enterprises engaged in retail trade or service and of other employers engaged in activities affecting commerce, to increase the minimum wage under the Act of $1.25 an hour, and for other purposes; to the Committee on Education and Labor.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. COLLIER:

H.R. 12678. A bill for the relief of Kazimiera Marek; to the Committee on the Judiciary.

By Mr. DEVINE:

H.R. 12679. A bill for the relief of George Sauter also known as Georgois Makkas; to the Committee on the Judiciary.

By Mr. FOGARTY:

H.R. 12680. A bill for the relief of Arthur N. Baril; to the Committee on the Judiciary.

By Mr. HIESTAND:

H.R. 12681. A bill for the relief of Manfull Dairy Farm, Inc.; to the Committee on Ways and Means.

By Mr. HOLTZMAN:

H.R. 12682. A bill for the relief of Mr. and Mrs. Stavros N. Nicolopoulos; to the Committee on the Judiciary.

By Mr. TEAGUE of Texas:

H.R. 12683. A bill for the relief of Mr. Earl H. Pendell; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

494. By Mr. MONAGAN: Petition of Connecticut Chiefs of Police Association in support of the Keating-Celler bill with regard to admissible wiretap evidence; to the Committee on the Judiciary.

495. By Mr. STRATTON: Petition of 203 citizens of the 32d Congressional District of New York urging speedy enactment of H.R. 4700, the so-called Forand bill, providing health insurance and other benefits for persons eligible under the old age and survivors insurance benefit program; to the Committee on Ways and Means.

EXTENSIONS OF REMARKS

Federal Employees' Pay Increase Legislation

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. DOOLEY. Mr. Speaker, I manifested my support of the Federal employees' pay increase legislation by signing the discharge petition some time ago. While I do not favor the discharge petition method of operation in the Congress, I think the situation was urgent enough in this case to warrant this procedure.

My interest in the legislation was motivated largely by reason of the fact that the postal workers in my area, at all levels, are receiving inadequate compensation for the job they do, particularly in the light of today's high cost of living and the depreciated value of the dollar.

The postal workers are among the most loyal of our Government employees. They perform arduous and trying tasks with great patience and skill. They are devoted to their jobs and to the Government which they serve. It is incumbent upon that Government, our Government, to see to it that they are properly compensated so that their families can live in reasonable comfort and not have to be harassed by the vexations of penury.

I know of cases where postal workers are working at two jobs in order to keep their households together, feed their families, and educate their children.

Fine men though they are, they are limited in their opportunities for financial growth because of the peculiar nature of their field of activity. The postal workers' one source of relief is in the hands of the Congress.

I am delighted that the motion to recommit was overwhelmingly defeated by a vote of 324 to 94 and that the motion to pass the measure finally was carried by such a convincing margin.

I would have voted for a 9-percent increase, but the Post Office committee thought it more equitable to reduce the amount to 7½ percent across the board.

Not only postal workers but all Federal employees will benefit by this measure if it becomes a law, and my feeling is that that is as it should be. Federal workers should be compensated at a rate comparable to that in private industry.

Mr. Jozsef Kovago

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. CANFIELD. Mr. Speaker, I had the privilege and pleasure of meeting Mr. Jozsef Kovago when he came to my district to speak under the auspices of Crusade for Freedom last month. Twice the freely elected mayor of Budapest, Mr. Kovago deeply impressed me and all those who were privileged to see and hear him.

I understand that this longtime fighter for democracy, who now resides in Wilmington, Del., will address the Federation of Women's Clubs tomorrow in the Sheraton Park Hotel here.

From my experience at Camp Kilmer in 1957 when the Hungarian refugees came to our shores, I know and will never forget the suffering they endured and the depth of their dedication to democracy. Mr. Kovago was a leader of these people. Last year he wrote a moving book about his struggles called "You Are All Alone."

That book recounts the story of Hungary from 1950 through the noble revolution of 1956, and it is at the same time the personal biography of Mr. Kovago. For more than 6 years this patriot suffered the agonies of imprisonment by the Communists—and he did not break. Released just before the outbreak of the revolution, he again placed himself in danger by working for the establishment of a multiparty system. On November 1, 1956, he was elected mayor of Budapest—the second time he had held the office—and 4 days later Soviet tanks rolled into Budapest and the revolution was crushed. With his wife and daughter, Mr. Kovago escaped to Austria.

In the years that have followed Mr. Kovago has become a leading spokesman for Hungary's case. He has told an eloquent story of his shackled, freedom-loving country in his book, in the United States and Europe, and before the United Nations.

One Hundred and Twenty-fourth Anniversary of the Admission of Arkansas Into the Union

EXTENSION OF REMARKS
OF
HON. DALE ALFORD
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. ALFORD. Mr. Speaker, today marks the 124th anniversary of the admission of Arkansas into the Union. On June 15, 1836, Arkansas became the 25th State. It is fitting indeed that we should pause and recognize this anniversary, for Arkansas has indeed been hailed as one of the outstanding States of this country.

Rich in heritage, Arkansas was first visited by the early European explorers in 1541 when Hernando de Soto crossed the Mississippi River and entered the Arkansas country. This early expedition occurred appoximately a half century after America was first visited by Columbus.

Other explorers who followed de Soto were Jacques Marquette and Louis Joliet. Then on April 9, 1682, Robert Caveleir, Sieur de la Salle claimed all the land drained by the Mississippi River for France. Henri de Tonti established Arkansas Post in 1686 and this became the oldest permanent white settlement west of the Mississippi. De Tonti has often been called the Father of Arkansas.

After Arkansas was admitted to the Union 124 years ago today, the State government was housed in the Old State House which now stands as one of the outstanding examples of Old South antebellum architecture. In the Old State House one finds one of the finest existing State museums, with a record of the var-

ious roles played by Arkansas in the history of America.

Arkansas today is rapidly gaining stature in many fields—industry, agriculture, education, recreation, and so forth. The State's official nickname, "The Land of Opportunity," was adopted in 1953 in recognition of the vast potential in Arkansas and the citizens of Arkansas have not been disappointed in this selection, as evidenced by a rapid and steady economic growth.

Arkansas rivers and springs provide one of the State's major resources. The primary rivers of the State are the Mississippi, St. Francis, White, Arkansas, Red, and Ouachita Rivers and their tributaries. All of these offer ample surface water for industrial and recreational use.

The variety of Arkansas' minerals is almost unlimited. The State is blessed with rich deposits of bauxite, coal, chalk, manganese, natural gas, petroleum, clay, gypsum, glass sand, novaculite, nepheline, and syenite. These minerals are now being produced on a commercial scale and several others are awaiting development. Arkansas is the only State in the Union with a diamond mine.

There are numerous other resources with which Arkansas is more than amply endowed and I think that most of us readily realize that Arkansas stands as a true land of opportunity in America. Arkansas looks to the future full of confidence and optimism, and I am most proud to call this anniversary to the attention of this great body.

The Fullness of Life

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15, 1960

Mr. SALTONSTALL. Mr. President, last Sunday the senior Senator from Hawaii [Mr. FONG] was awarded an honorary doctor of laws degree by Tufts University, in recognition of his notable achievements as lawyer, businessman, and legislator. I wish to take this opportunity to extend my heartiest congratulations to my distinguished colleague on being selected for this honor.

I also wish to commend Tufts University for strengthening the ties that bind Hawaii to New England. It is not well enough known that from 1820 to 1835 groups of Congregational missionaries from New England journeyed to Hawaii, where they settled permanently, teaching Christianity and contributing to the development and stability of Hawaii in education, government, and social responsibility.

In his address to Tufts graduates at the 104th commencement exercises, Senator FONG paid tribute to those New England missionaries who helped to create in the Pacific, "out of diverse tongues and cultures," a homogeneous American community. He urged college men and women to serve "in the noblest tradition of America as 20th century missionaries sowing the seed of neighborly love and freedom in other lands, bringing hope of a better life to a needy world, and laboring in the vineyard for peace on earth, good will to men."

Mr. President, I ask unanimous consent that the entire text of this stirring address be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FULLNESS OF LIFE

(Address by U.S. Senator HIRAM L. FONG at Tufts University commencement exercises, Medford, Mass., June 12, 1960)

President Wessell, distinguished guests, members of the faculty, candidates for degrees, students, ladies, and gentlemen, I am very happy to be here with you on this joyous occasion of your 104th commencement. I am grateful and thankful for the honorary doctor of laws degree you are bestowing upon me. To be associated with you as an honorary alumnus of Tufts University with its 107 years of glorious history is for me a high privilege and a great honor.

Having been advised that I will receive from you a diploma, without attending classes, study, examinations, and anxiety leaves me with a mixed feeling of guilt, delinquency, and immorality, especially when I know how hard you have worked for your diploma and how hard I worked as a Harvard Law School student. Your bestowing upon me this honor will continue what has been for me a happy and most rewarding association with New England.

Since early childhood, long before I attended Harvard, New England has been a part of me, for the influence of New England has been felt in my native Hawaii for 140 years. From 1820 to 1835, 12 groups of Christian Congregational missionaries left their homes in New England by sailing ships to bring the Christian Gospel to Hawaii. Their voyages by way of the Cape of Good Hope covered a distance of over 12,000 miles and took 5½ months to complete. Their journeys were fraught with much seasickness and hardship. The contributions of these sturdy New England missionaries you sent us have been enduring and many. They and their descendants have contributed greatly to our development and stability and their Puritan philosophy has deeply influenced our outlook and life.

Through their influence, the Hawaiian language was reduced to writing, the Bible was translated, and schools were established. Through their influence, the first written constitution was approved in 1840, creating a supreme court and a representative body of legislators elected by the people.

Through their influence, prohibition was placed on immorality, gambling, drunkenness, theft, and violation of the Sabbath. These prohibitions were strongly resisted by the sailing men. They demonstrated on several occasions against these Christian influences by armed riots, not against the natives, but against the missionaries and on one occasion they fired several cannon shots into the home of one of them.

Architecturally, too, New England has left its visible mark on Hawaii. Even today, it is not unusual to see a Cape Cod cottage on any one of the seven inhabited islands.

New England's influences on me have been quite personal. Besides being a graduate of the Harvard Law School, I am a graduate of the public school system which the Congregational missionaries helped to inaugurate. My name of Hiram is taken from the Reverend Hiram Bingham, leader of the first group of missionaries. By now you have surmised my religion is Congregational.

So, it is indeed a distinct honor and a great privilege for me to be speaking here today in New England, for to me it is in a sense in more ways than one, like returning home.

To me, it is opportune and seemly for you at this commencement occasion, to pause and thank with gratitude this school, its faculty, its benefactors, and all those who have contributed to its facilities to enable you to receive the learning and the knowledge you now possess.

It is opportune and seemly for you also to pause here and pay homage to parents, family, and friends who have labored and sacrificed for you to receive this day your degrees.

Today, you are, as college graduates and as men and women, the possessors of a great fortune. You are the inheritors of the accumulation over centuries of man's vast wealth of knowledge and culture, the beneficiaries of the civilizations which have preceded you.

The rights and privileges of freedom of speech, press, worship, and assembly and all of the freedoms and rights that your forefathers shed blood and died for—are yours full-blown, not by sufferance or whim, but by long-established law.

Educationally comprising the upper 5 percent of our population, you, as college graduates will have a decided advantage in potential earning power and in regularity of employment over noncollege workers. The job outlook this June for college graduates is excellent, with starting salaries higher by some 4 to 8 percent over a year ago. Long-range prospects are likewise auspicious. It is anticipated that within a few years if we do not have new methods and new machinery, there will be a shortage of manpower to produce the goods and services needed to sustain the American standard of living. Your talents will be in greater demand than ever.

The startling and provocative economic indicators of the next 15 years show that we will be a Nation of 240 million people, 60 million more than today, with a labor force of about 95 million producing goods and services totaling $900 billion.

Translated into other tangibles, these vital statistics mean that we will build millions of dwelling units, thousands of miles of roads, and many, many bridges, dams, and flood control projects. We will need some 77,000 more doctors, 34,000 more dentists, and a third of a million more nurses than we have today.

To educate 15 million more children, we will need 600,000 new schoolrooms in public schools alone and 500,000 additional teachers. We will have to triple the capacity of our present colleges and universities.

We will need a greater output of foodstuffs and of most basic raw materials, nearly three times our present production of electric power, and double the supply of our fresh water.

Not only are there jobs for everyone, but there is also a wide choice of careers. A few years ago, there were no electronics industries, no atomic energy projects, no missiles or rockets or space vehicles. New vocations created in the past 10 or 15 years run the full spectrum of man's pursuits and offer careers undreamed of only a few decades ago.

Sitting here today, as graduates, you are on the threshold of a very interesting, fascinating, and rewarding era, witnessing what promises to be the birth of a new golden age.

All around you life's pace has quickened. From sails to steamboats and from pushcarts to motor vehicles embraced thousands of years. Today, speed and power change within decades or less. In the first six decades of this century in America, changes have been greater than in all the thousands of years of mankind's history. It was only 18

years ago in 1942 that Enrico Fermi discovered the principle of atomic chain reaction that launched us into the atomic age. Scarcely had this era dawned when 15 years later in 1957, we found ourselves in the space age with the first sputnik.

Fifteen years from now, supersonic airplanes will bring Paris within 2 hours from New York and Geneva about 3 hours from Los Angeles. Space travel will approach reality. In 1961 we hope to launch our first man into space with safe return; about 1970, to transport an American astronaut to the moon; and perhaps by 1975, to other places.

Life's expectancy now has approached the seventies and will be longer once we conquer cancer and diseases of the circulatory system as we soon may do. Social security, unemployment compensation, and promised old-age health insurance have materially lessened the anxieties of unemployment and old age.

With minimal efforts, 5 days of work and 2 days of leisure per week, you can expect to meet the material needs of yourself and your family, home, food, car, vacation, and the upbringing and education of your children. Never before in the history of mankind have college graduates been more richly endowed than you nor more likely to succeed.

By now our 5-day workweek is typical of our contemporary American life, but, as educated men and women from whose ranks will be chosen many of our future leaders, you ought to be willing to devote to whatever you may choose to do longer hours and greater dedication. These extra efforts on your part, accompanied by further technological progress which we expect, will help to increase our Nation's productivity resulting in more leisure time for future generations.

Men of wisdom and learning throughout the ages have cautioned that the use of leisure time wholly for fun, pleasure, and comfort renders life narrow and empty. Gratifying only material wants does not satisfy the soul. Lasting satisfaction contributing to the fullness of life comes from cultivating in one's heart a spirit of charity and service toward all men and from devoting a portion of one's life to benefit mankind. Look to the lives of our great moral teachers, Jesus Christ, Buddha, Confucius, Mohammed, and others.

Therefore each of you ought to ponder how, with your particular talents and in your particular circumstances, you can serve family, friends, community, Nation, and mankind.

As long as millions of people in the world still suffer from the ravages of disease, from malnutrition, from undernourishment, and illiteracy, you, as favored men and women, owe a duty to extend a helping hand to those less fortunate than yourself. More than 90 percent of the world is less fortunate than you.

Last October and November, I made a 45-day tour of 14 countries of the Far East. The trip was most enlightening—it was fascinating—and yet somewhat disturbing. The Far East is a fantastic area. Here is situated more than one-half of the entire world's population—the new throbbing core of our continuing global struggle for peace. It is vast beyond our imagination. It is diverse to the extremes of ultramodern and utter primitive. We know it too little; we understand it far less.

With rare exception, I found mass poverty, illiteracy, economic and political instability, inadequate capital and technical know-how.

Prospects for improving the well-being of fellow men such as I found in the Far East fundamentally rest upon a world at peace, for war would further impoverish them. Indeed, the well-being of all of us likewise depends upon a world at peace. Each of you, therefore, has an abiding stake in preserving world peace.

Of paramount necessity to the preservation of peace are substantive actions to nourish, to clothe, to shelter, to heal, and to educate those in want. Men released from the grinding struggle for mere existence are more likely to possess the will to be free and to join other free men determined to strengthen the deterrent to war. Thus as we raise the standard of living of the less fortunate so will the prospects of peace be raised.

Similarly essential to lasting peace with justice are the easing of international tensions, the devising of enforcible bans on nuclear weapons tests, and the accepting of valid steps leading to disarmament.

In every conceivable way consistent with our national honor you should explore the possibilities not only of avoiding war but also of diminishing the threat of war.

Simultaneously as you work for peace maintain a watchful eye on your Government, insist on honesty and integrity in public and private matters, give loyalty and respect to government and keep on being a student.

By cultivating in your heart the spirit of charity and by contributing generously of your time and effort in the service of mankind to alleviate suffering, want, and disease, you will do your share for the molding of a peaceful, homogeneous world community, although diverse in nationality and culture but firmly unified with the love of freedom and liberty.

Thus, in some measure, you will be treading in the worthy footsteps of your illustrious forebears, those hardy, self-sacrificing New England missionaries who journeyed 5½ months—one-half way around the world, by sailing ships, to bring to Hawaii the concept of universal love, brotherhood of man, and fatherhood of God and who helped so substantially to create in the middle of the Pacific, out of diverse tongues and cultures, a happy, homogeneous American community living in understanding, amity, and concord.

You, as college men and women and as the elite of our country, even without leaving home, will be serving in the noblest tradition of America as 20th century missionaries sowing the seed of neighborly love and freedom in other lands, bringing hope of a better life to a needy world, and laboring in the vineyard for peace on earth, good will to men. A life thus spent will indeed be a full life.

SENATE

THURSDAY, JUNE 16, 1960

The Senate met at 9:30 o'clock a.m., and was called to order by the President pro tempore.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Eternal God, who across the ages hath put down the mighty from their seat and hath exalted the humble and the meek. In times heavy with crises Thou hast called us to play our part in this creative hour in human history, as testing problems seek out our every weakness.

We beseech Thee give understanding, humility, and charity to those who in Thy name and for the Nation's sake are entrusted in this Chamber with the power to act and speak for the Republic.

As stewards of the world's future, give them, O Lord, a steadfast faith, a firm hope, and a will to labor valiantly for the things for which we pray. In the dear Redeemer's name. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Wednesday, June 15, 1960, was dispensed with.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed a bill (H.R. 12620) to amend title 28, entitled "Judiciary and Judicial Procedure," of the United States Code to provide for the defense of suits against Federal employees arising out of their operation of motor vehicles in the scope of their employment, and for other purposes, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes, and it was signed by the President pro tempore.

HOUSE BILL REFERRED

The bill (H.R. 12620) to amend title 28, entitled "Judiciary and Judicial Procedure," of the United States Code to provide for the defense of suits against Federal employees arising out of their operation of motor vehicles in the scope of their employment, and for other purposes, was read twice by its title and referred to the Committee on the Judiciary.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule there will be the usual morning hour. I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Public Lands Subcommittee of the Committee on Interior and Insular Affairs be authorized to meet during the session of the Senate today.

Mr. DIRKSEN. I object.

Mr. JOHNSON of Texas. I ask unanimous consent that the Interstate and Foreign Commerce Committee be au-

thorized to meet during the session of the Senate today.

Mr. DIRKSEN. I object.

Mr. JOHNSON of Texas. I ask unanimous consent that the Public Health, Education, Welfare, and Safety Subcommittee of the Committee on the District of Columbia be authorized to meet during the session of the Senate today.

Mr. DIRKSEN. I object.

Mr. JOHNSON of Texas. I ask unanimous consent that the Insurance Subcommittee of the Antitrust and Monopoly Subcommittee of the Committee on the Judiciary be authorized to meet during the session of the Senate today.

Mr. DIRKSEN. I object.

The PRESIDING OFFICER. Objection is heard.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

AUTHORIZATION FOR BOARD OF PAROLE OF DISTRICT OF COLUMBIA TO DISCHARGE CERTAIN PAROLEES FROM SUPERVISION

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to authorize the Board of Parole of the District of Columbia to discharge a parolee from supervision prior to the expiration of the maximum term or terms for which he was sentenced (with an accompanying paper); to the Committee on the District of Columbia.

ESTABLISHMENT OF A JUVENILE DIVISION IN CONNECTION WITH DISTRICT OF COLUMBIA YOUTH CORRECTIONAL CENTER

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to provide for the establishment of a Juvenile Division within or in connection with the District of Columbia Youth Correctional Center, and to authorize the judge of the Juvenile Court of the District of Columbia to commit to such Juvenile Division, subject to the provisions of the Juvenile Court Act, children 15 years of age or older (with an accompanying paper); to the Committee on the District of Columbia.

ADDITIONAL ASSISTANT SECRETARY OF COMMERCE

A letter from the Under Secretary of Commerce, transmitting a draft of proposed legislation to authorize an additional Assistant Secretary of Commerce (with an accompanying paper); to the Committee on Interstate and Foreign Commerce.

REPORT ON TORT CLAIMS PAID BY DEPARTMENT OF THE INTERIOR

A letter from the Secretary of the Interior, transmitting, pursuant to law, a report on tort claims paid by that Department, in the fiscal year 1959 (with an accompanying report); to the Committee on the Judiciary.

REPORTS OF ADDITIONAL FACTS RELATING TO ADJUSTMENT OF IMMIGRATION STATUS OF CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, reports of additional facts relating to the adjustment of immigration status of certain aliens previously transmitted to the Senate (with accompanying papers); to the Committee on the Judiciary.

RESOLUTION OF OREGON STATE BAR ASSOCIATION

Mr. LUSK. Mr. President, I present, for appropriate reference, and ask unanimous consent to be printed in the RECORD, a resolution adopted by the board of governors of the Oregon State Bar at its regular meeting on May 20–22, 1960, endorsing H.R. 10089 which permits a civil action against an officer or agency of the United States to be brought in the judicial district wherein the plaintiff resides.

There being no objection, the resolution was referred to the Committee on the Judiciary and ordered to be printed in the RECORD, as follows:

"RESOLUTION

"Whereas under the laws of the United States, in an action for judicial review of an action of an agency of the United States, the superior officer of the agency is an indispensable party if the decree granting the relief sought will require the officer to take action, either by exercising directly the power lodged in him or by having a subordinate officer exercise it for him; and

"Whereas the venue for such action is in the judicial district of the United States in which the official residence of the superior officer of the agency is situated; and

"Whereas the official residence of the superior officer of each of the several agencies of the United States is situated, with few exceptions, in the District of Columbia; and

"Whereas the expense of maintaining such an action in the District of Columbia makes the remedy impractical to persons residing distant therefrom; and

"Whereas for the most part, facts in an action for judicial review are more conveniently, and less expensively, susceptible of proof in the judicial district in which the controversy arises; and

"Whereas H.R. 10089, introduced and now pending in the House of Representatives of the 86th Congress, 2d session, provides that a civil action in which each defendant is an officer of the United States in his official capacity, a person acting under him, or an agency of the United States, may be brought in the judicial district in which a plaintiff in the action resides, and further provides for services of process in such an action; and

"Whereas it appears to the board of governors of the Oregon State Bar that the enactment of such bill into law will eliminate the inequities hereinabove related, will serve the ends of justice and will benefit the United States and the people thereof: Now, therefore, be it

"Resolved:

"The board of governors of the Oregon State Bar, by this resolution, voices its approval of such proposed legislation; and

"Such board of governors actively urges the enactment of such proposed legislation; and

"A certified copy of this resolution shall be sent by the Secretary of the Oregon State Bar to each member of the Oregon legislative delegation to the 86th Congress, to the president of the American Bar Association, to the Washington, D.C., office of the American Bar Association and to the organized bars of the States of Arizona, California, Colorado, Idaho, Kansas, Montana, Nevada, New Mexico, Oklahoma, Utah, Washington, Wyoming, Alaska, and Hawaii."

CERTIFICATE

I, John H. Holloway, secretary of the Oregon State Bar, do hereby certify that the within and foregoing resolution is a true and correct copy of a resolution duly adopted by the board of governors of the Oregon State Bar at a regular meeting of said board duly called and held pursuant to law on May 20–22, 1960.

Dated this 22d day of May 1960.

JOHN H. HOLLOWAY,
Secretary, Oregon State Bar.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. BEALL, from the Committee on Armed Services, without amendment:

H.R. 11952. An act to repeal the act of May 29, 1958, which authorized and directed the Administrator of General Services to provide for the release of restrictions and reservations contained in an instrument conveying certain land by the United States to the State of Wisconsin (Rept. No. 1594).

By Mr. CANNON, from the Committee on Armed Services, with an amendment:

H.R. 6479. An act to provide for the conveyance of certain real property of the United States to the village of Highland Falls, N.Y. (Rept. No. 1600).

By Mr. EASTLAND, from the Committee on Agriculture and Forestry, with an amendment:

H.R. 11646. An act to amend the act authorizing the Secretary of Agriculture to collect and publish statistics of the grade and staple length of cotton, as amended, by defining certain offenses in connection with the sampling of cotton for classification and providing a penalty provision, and for other purposes (Rept. No. 1595).

By Mr. ELLENDER, from the Committee on Agriculture and Forestry, without amendment:

S. 3450. A bill to amend section 22 (relating to the endowment and support of colleges of agriculture and the mechanic arts) of the act of June 29, 1935, to increase the authorized appropriation for resident teaching grants to land-grant institutions (Rept. No. 1596);

S. 3665. A bill to authorize the Secretary of Agriculture to grant an easement over certain lands to the trustees of the Cincinnati Southern Railway, their successors and assigns (Rept. No. 1597); and

H.R. 12115. An act to extend the minimum national marketing quota for extra long staple cotton to the 1961 crop (Rept. No. 1599).

By Mr. ELLENDER, from the Committee on Agriculture and Forestry, with an amendment:

S. 3117. A bill to treat all basic agricultural commodities alike with respect to the cost of remeasuring acreage (Rept. No. 1598).

By Mr. MAGNUSON, from the Committee on Interstate and Foreign Commerce, with amendments:

S. 3473. A bill to provide for advance consultation with the Fish and Wildlife Service and with State wildlife agencies before the beginning of any Federal program involving the use of pesticides or other chemicals designed for mass biological controls (Rept. No. 1601).

By Mr. BYRD of Virginia, from the Committee on Finance, with amendments:

H.R. 12381. An act to increase for a 1-year period the public debt limit set forth in section 21 of the Second Liberty Bond Act and to extend for 1 year the existing corporate normal-tax rate and certain excise-tax rates (Rept. No. 1602).

By Mr. CHURCH, from the Committee on Interior and Insular Affairs, with an amendment:

S. 2711. A bill to quiet title to certain lands within the Nez Perce Indian Reservation, Idaho, and for other purposes (Rept. No. 1603); and

H.R. 4786. An act declaring certain lands to be held in trust for the Cheyenne River Sioux Tribe of Indians of South Dakota (Rept. No. 1604).

By Mr. CHURCH, from the Committee on Interior and Insular Affairs, with amendments:

H.R. 7990. An act to convey certain lands of the United States in trust to the Citizen Band of Potawatomi Indians of Oklahoma (Rept. No. 1605).

By Mr. STENNIS, from the Committee on Appropriations, with amendments:

H.R. 12232. An act making appropriations for the legislative branch for the fiscal year ending June 30, 1961, and for other purposes (Rept. No. 1606).

By Mr. CLARK, from the Committee on Banking and Currency, with an amendment:

S. 3292. A bill to provide for the establishment of a Department of Housing and Metropolitan Affairs, and for other purposes (Rept. No. 1607).

EXECUTIVE REPORTS OF COMMITTEE ON ARMED SERVICES

Mr. THURMOND. Mr. President, as in executive session, from the Committee on Armed Services, I report favorably the nominations of 31 flag and general officers in the Army and Navy. I ask that these names be placed on the Executive Calendar.

The PRESIDING OFFICER (Mr. LUSK in the chair). The nominations will be placed on the calendar, as requested by the Senator from South Carolina.

The nominations placed on the calendar are as follows:

Maj. Gen. Edwin Hugh John Carns, Army of the United States (brigadier general, U.S. Army), and sundry other officers, for appointment in the Regular Army of the United States;

Adm. Herbert G. Hopwood, U.S. Navy, to have the grade of admiral on the retired list;

Vice Adm. Ralph E. Wilson, U.S. Navy, and Vice Adm. William L. Rees, U.S. Navy, to have the grade of vice admiral on the retired list;

Vice Adm. John H. Sides, U.S. Navy, for commands and other duties determined by the President, in the grade of admiral;

Rear. Adm. Frank O'Beirne, U.S. Navy, Rear Adm. Laurence H. Frost, U.S. Navy, and Rear Adm. Howard A. Yeager, U.S. Navy, for commands and other duties determined by the President, in the grade of vice admiral; and

Maj. Gen. Lionel Charles McGarr, U.S. Army, to be assigned to a position of importance and responsibility designated by the President, in the rank of lieutenant general.

Mr. THURMOND. Mr. President, in addition, I report favorably the names of 1,917 officers in the grade of lieutenant colonel and below in the Army and Air Force. All of these names have already appeared in the CONGRESSIONAL RECORD. In order to save the expense of printing on the Executive Calendar, I ask unanimous consent that they be ordered to lie on the Vice President's desk, for the information of any Senator.

The PRESIDING OFFICER. Without objection, the nominations will lie on the desk, as requested by the Senator from South Carolina.

The nominations, ordered to lie on the desk, are as follows:

Lester W. Abrams, and sundry other officers, for appointment and promotion in the Regular Army of the United States;

Johnny M. Barton, and sundry other persons, for appointment in the Regular Air Force; and

Sarah Evelyn Perkins, for appointment in the Regular Army of the United States, to be captain, Army Nurse Corps.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. BENNETT:

S. 3678. A bill conferring jurisdiction on the Court of Claims to make findings with respect to the amount of compensation to which certain individuals are entitled as reimbursement for damages sustained by them as a result of the cancellation of their grazing permits by the U.S. Air Force, and to provide for payments of amounts so determined to such individuals; to the Committee on the Judiciary.

By Mr. JAVITS:

S. 3679. A bill to provide for grants-in-aid to the States for the treatment of narcotic drug addicts in closed institutions; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. JAVITS when he introduced the above bill, which appear under a separate heading.)

By Mr. JAVITS (for himself and Mr. CASE of New Jersey):

S. 3680. A bill to improve the public health through revising, consolidating, and improving the hospital and other medical facilities provisions of the Public Health Service Act, authorizing grants for construction of medical, dental, osteopathic, and public health teaching facilities, providing special project grants for postgraduate public health training, providing for Federal guaranty of loans for construction of group practice medical or dental care facilities, and for other purposes; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. JAVITS when he introduced the above bill, which appear under a separate heading.)

By Mr. GREEN (for himself and Mr. PASTORE) (by request):

S. 3681. A bill authorizing the Rhode Island Turnpike and Bridge Authority to combine for financing purposes the bridge across the West passage of Narragansett Bay with the Newport Bridge and any other project acquired or constructed by said authority; to the Committee on Public Works.

By Mr. BIBLE:

S. 3682. A bill for the relief of Orlando Gonfiantini; to the Committee on the Judiciary.

By Mr. MAGNUSON (by request):

S. 3683. A bill to amend section 302(i) of the Federal Aviation Act of 1958 to extend the period of time for which individuals may serve as members of Advisory Committees appointed by the Administrator; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the above bill, which appear under a separate heading.)

By Mr. McNAMARA (for himself, Mr. CLARK, and Mr. RANDOLPH):

S. 3684. A bill to assist individuals to obtain retirement benefits protected against increases in the cost of living by providing for the issuance by the Treasury of a new series of bonds containing adjustments, under certain conditions, in maturity and redemption values to compensate for increases in the cost of living which may be purchased by individuals and eligible institutions; to the Committee on Finance.

(See the remarks of Mr. McNAMARA when he introduced the above bill, which appear under a separate heading.)

By Mr. FREAR:

S. 3685. A bill for the relief of John G. Tiedemann; to the Committee on the Judiciary.

By Mr. BIBLE (by request):

S. 3686. A bill to provide for the administration of unclaimed funds held and owing by life insurance companies in the District of Columbia;

S. 3687. A bill to promote safe driving and eliminate the reckless and irresponsible driver from the streets and highways of the District of Columbia by providing that any person operating a motor vehicle on such streets and highways while apparently under the influence of intoxicating liquor shall be deemed to have given his consent to a chemical test of certain of his body substances to determine the alcoholic content of his blood, and for other purposes; and

S. 3688. A bill to amend the District of Columbia Redevelopment Act of 1945, as amended, and the act approved December 20, 1944, as amended, and for other purposes; to the Committee on the District of Columbia.

RESOLUTION

RECESS APPOINTMENTS TO THE SUPREME COURT

Mr. HART submitted a resolution (S. Res. 334) opposing the making of recess appointments to the Supreme Court, which was referred to the Committee on the Judiciary.

(See the above resolution printed in full when submitted by Mr. HART, which appears under a separate heading.)

HOSPITAL CARE FOR NARCOTICS ADDICTS

Mr. JAVITS. Mr. President, I introduce, for appropriate reference, a bill which would make Federal aid available to help States meet the cost of caring for drug addicts based on compulsory commitment to a hospital. Similar legislation has been introduced in the House of Representatives by Representative VICTOR ANFUSO.

The curse of narcotics addiction is the inability to effect cures. So often narcotics addiction is a life sentence to torment and crime. To have any real progress in helping narcotic addicts effect permanent cures, the Federal Government must assume a greater share of responsibility in helping the States provide adequate medical care in proper hospital facilities. This proposed legislation would call for a $2 million appropriation the first year to be used as grants-in-aid for the payment of half the cost per bed patient in the case of drug addicts in closed institutions. Thereafter Congress would determine the funds required.

It is no secret that the "repeater" rate on addicts is fantastically high, according to the records of the Federal narcotics hospital in Lexington, Ky., with patients returning three, four, and more times for treatment. But the addicts who would receive medical help under the bill I am introducing today would have a far better chance of making a long-term recovery for these reasons:

First. The Federal funds will help pay for the hospital treatment of those addicts who have been committed through a State civil action which requires them to undergo treatment until released "as

having attained maximum medical benefits." Since last April, New York State, which has nearly half of the country's over 40,000 known addicts, has had a new law on its books providing for the compulsory detention of drug addicts for periods of up to 12 months in any State hospital equipped to give them care and treatment, and in addition, New York's legislature appropriated $300,000 for a new program to operate facilities for the care, treatment, cure, and rehabilitation of these patients. Addicts will not be able to leave voluntarily before being cured.

Second. The hospitals where addicts can be treated will be accessible to them—there will be no need to travel hundreds of miles to Lexington, Ky., and the Federal hospital there where commitment is voluntary. Some States like New York have noted a decline in the number of patients in mental hospitals and are now able to devote more of their resources to finding an effective and permanent place of treatment for narcotic addiction.

For decades, the emphasis has been placed on the stringent enforcement of laws to wipe out the illegal trade in drugs and cut off the addicts' source of supply. Despite the efforts of Federal, State, and local officials, the number of the Nation's addicts continues to increase. Therefore, without further delay all levels of government should combine forces to tackle the broadscale medical aspects of drug addiction. Thousands of addicts, now outcasts of society, may be rescued from the scourge of addiction and become useful, responsible citizens again if the right kind of hospital treatment is made available.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 3679) to provide for grants-in-aid to the States for the treatment of narcotic drug addicts in closed institutions, introduced by Mr. JAVITS, was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

HEALTH FACILITIES AND TRAINING ACT OF 1960

Mr. JAVITS. Mr. President, on behalf of myself and the Senator from New Jersey [Mr. CASE], I introduce, for appropriate reference, a bill entitled "Health Facilities and Training Act of 1960."

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 3680) to improve the public health through revising, consolidating, and improving the hospital and other medical facilities provisions of the Public Health Service Act, authorizing grants for construction of medical, dental, osteopathic, and public health teaching facilities, providing special project grants for postgraduate public health training, providing for Federal guarantee of loans for construction of group practice medical or dental care facilities, and for other purposes, introduced by Mr. JAVITS (for himself and Mr. CASE of New Jersey), was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

Mr. JAVITS. Mr. President, this bill was sent to the Congress by the administration through the Secretary of the Department of Health, Education, and Welfare. The object of this bill, as stated, is "to improve the public health through revising, consolidating, and improving the hospital and other medical facilities provisions of the Public Health Service Act, authorizing grants for construction of medical, dental, osteopathic, and public health teaching facilities, providing special project grants for postgraduate public health training, providing for Federal guarantee of loans for construction of group practice medical or dental care facilities, and for other purposes."

There is an urgent need for strengthening and improving the programs designed to expand the Nation's professional health personnel and facilities for the care of our citizens. We need more researchers, more doctors, more nurses, more construction of medical facilities of all kind. There is also need for continuing study of construction design, use of facilities, and costs of medical facilities.

Help toward meeting the health and welfare needs of the general public has long been recognized as a responsibility of the Federal Government, and through the Public Health Service, this administration has pioneered in many fields of research, hospital construction, and other areas where major needs could not have been met without such assistance.

Mr. President, I ask unanimous consent that there be printed in the RECORD the transmittal letter of Secretary Arthur S. Flemming to the Speaker of the House, the Honorable SAM RAYBURN, describing in detail the provisions and objectives of this proposed legislation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
Washington, D.C. June 2, 1960.

Hon. SAM RAYBURN,
Speaker of the House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: I am enclosing for your consideration a draft of a bill to strengthen and augment Federal and Federal-State programs directed toward improvement of the Nation's health resources in two critical fields—facilities for the provision of patient care and professional health manpower.

The proposed "Health Facilities and Training Act of 1960" comprises four titles, as follows:

Title I: Revision of title VI of the Public Health Service Act.

Title II: Grants for Medical, Dental, Osteopathic and Public Health Teaching Facilities Construction.

Title III: Project Grants for Graduate Training in Public Health.

Title IV: Guaranty of Loans for Construction of Group Practice Medical or Dental Facilities.

As explained more fully below, these four titles would (1) revise, consolidate, and improve the hospital and medical facilities construction grant programs now authorized by title VI of the Public Health Service Act; (2) amend title VII of that act to authorize a 5-year program of construction grants for teaching facilities which would expand the training capacity of our schools of medicine, dentistry, osteopathy and public health; (3) authorize a 5-year program of project grants to schools of public health, and to those schools of nursing or engineering which provide postbaccalaureate training of public health nurses or engineers, for the purpose of strengthening or expanding graduate public health training in such schools; and (4) authorize a 5-year program of Federal credit assistance in the construction of group practice facilities, with the Federal Government guaranteeing payment of the debt service on obligations issued to finance such construction.

Collectively, these proposals have been designed to further sound public and institutional planning for the facilities, the personnel, and the organization of services that will be needed to meet present and future requirements for health and medical services and programs. Such factors as the growing population, continued economic growth, the higher levels of education attained, greater industrialization and urbanization, and the increasing proportions of younger and older persons in the population, coupled with changing patterns of medical care and of family living, all point to the necessity for giving greater emphasis to planned expansion and better organization of medical and health resources.

In addition to these legislative recommendations (which will be explained in more detail in following sections of this letter) the President has recently submitted to the Congress an amended budget request to increase by $2 million our 1961 appropriation for "Assistance to States, General." These funds—which would be administered by the Bureau of State Services of the Public Health Service, in this Department—would be used to increase the amounts of grants made to States for support of basic State and local health services. The increase has been sought for the purpose of stimulating and assisting States and communities to initiate and expand programs to improve patient care and related services in nursing homes. Many of the nursing home beds in this country are in converted residences that are seriously below desirable standards; many provide only domiciliary care, rather than skilled nursing care. High quality nursing home care is a particularly important community resource in the case of the aged and other chronically ill persons. Moreover, to the extent that we can bring nursing homes up to standards that will qualify them for classification as skilled nursing homes, we will be providing a type of long-term care facility that could substantially relieve our requirements for more costly hospital beds.

REVISION OF TITLE VI OF THE PUBLIC HEALTH SERVICE ACT

Title I of the draft bill would substantially revise title VI of the Public Health Service Act (Hill-Burton program) which provides for assistance to States in the construction of hospitals and other medical facilities.

Since 1950, the Federal portion of the annual total dollar volume of civilian hospital construction has ranged from 5 to 11 percent. Except for the period 1954 through 1956, Federal funds constituted about 10 percent of the total. Since 1948, federally aided health facility construction has averaged about 30 percent of the dollar volume of all non-Federal health facility construction. With respect to that construction aided under title VI of the Public Health Service Act, every Federal dollar has, on the average, been matched by two non-Federal dollars.

Yet, even with this relatively modest Federal investment, this program has produced significant gains in quality as well as in

quantity. It has introduced systematic statewide planning of health facilities. It has helped smaller towns and rural areas to acquire hospitals and doctors where none, or few, were previously available. It has produced minimum standards of health facility construction which have become world recognized. It has bolstered State supervision of medical facility operation. The return on the Federal investment is an excellent one.

Despite these accomplishments, however, there remains a great unmet need. Contributing to the need for adjustments in the direction and emphasis of the program are:

1. The growing population of the Nation, with increasing numbers of aged persons and shifts from urban centers to suburban areas;

2. The increasing demand for hospital and related facilities as health insurance covers a growing percentage of our population;

3. Changes occurring in the practice of medicine because of scientific and technological advances;

4. The need for more precise planning and coordination of health facilities in communities, regions and States; and

5. The alarming rate of obsolescence of our health facilities, particularly in metropolitan areas.

The proposed amendments would not change the basic philosophy or administrative structure of the program. The only new program authorized would be one for special project grants to assist States and localities in planning coordinated hospital systems. The other major amendments would improve the existing program by (1) permitting and encouraging the States to give more attention and, in exceptional cases, higher priority, to projects for the modernization of hospital and public health center facilities; (2) authorizing increased Federal participation in research and experimentation for more effective use of the services and resources of hospitals and other medical care facilities; (3) placing greater emphasis on the construction of special facilities for the care of long-term patients by consolidating the two present categories of chronic disease hospitals and nursing homes and increasing the combined authorization by $10 million; and (4) liberalizing the conditions under which the construction of a mental health clinic or, in certain rural areas, a general medical-care clinic may be eligible for aid under the program.

Special project planning grants

The new grant program to be authorized by this title of the bill would make available, for fiscal year 1961 and the next 3 years, special project grants to regional, area, and local planning groups to coordinate the planning of hospitals and other medical facilities and services. Grants could also be made to State Hill-Burton agencies for projects of technical assistance and provision of basic data to these regional, area, and local groups in developing their plans for hospital coordination.

Grants would be made by the Surgeon General to cover part of the costs of projects, after approval of specific project plans submitted by the State agency, or submitted by the planning group with the approval of the State agency.

The effectiveness of the Hill-Burton program is becoming increasingly dependent on precise planning as each year brings a larger number and a greater variety of health facilities and services to the community. The present network of health facilities in most of our more populated areas has, for the most part, evolved without the benefit of any plan or design. Many facilities were erected to meet an immediate, localized need with little or no consideration of their relationship to each other or to the overall needs of the area. Development of a system of coordinated health facilities and services, therefore, represents one of the most challenging problems facing our States and communities today. The rising cost of hospital care dramatizes the necessity for cooperative planning to reduce unnecessary duplication of health facilities and services in some areas as well as to ensure the future provision of comprehensive balanced medical services.

While isolated attempts have been made in some cities to establish a system for efficient and economical planning of medical facility construction and the coordination of health services, the effect of these efforts has been limited since no financial incentive has existed to spur the widespread establishment of comprehensive planning units in our principal urban areas. The proposed special project grants would enable community leaders to organize and staff local planning bodies to study community needs, develop plans for coordinated health services, and prepare construction programs based on their findings designed to meet the present and future requirements of the population. Such planning reduces conflicting pressures within communities for scarce building funds and permits the development of a balanced program of construction ensuring full utilization of facilities.

Modernization of hospitals and public health centers

Health facilities throughout the country are fast becoming functionally or structurally obsolete. This is of particular importance in the large facilities in densely populated areas providing highly specialized services which cannot feasibly be offered in smaller communities. To help the States counter this trend toward increasing obsolescence of many of our health facilities, the bill would, effective after the first fiscal year, require each State to set forth in its State plan the relative need for modernization (defined as including alteration, major repair, remodeling, replacement and renovation) of existing facilities along with the relative need for construction of new hospital beds and public health centers. After the first year each State could also, if it so elected, divide its annual allotment for hospitals and public heath centers between projects for new beds and new centers, on the one hand, and projects for modernization of existing facilities for which an exceptional need exists, on the other, with a separate priority (based for each part of its allotment on the relative need for each type of project).

While modernization projects are now theoretically possible under the Hill-Burton program, the priority given such projects in most State plans is so low and the demand of competing projects for funds is so great that needed aid seldom reaches them. The channeling of these funds so largely into new construction has produced in many instances a pattern of modern and efficient small hospitals in regions surrounding metropolitan areas. On the other hand, the metropolitan areas themselves are often served by hospitals which are housed in structures 50 years old or more, and are otherwise so obsolete as to suffer a major loss of efficiency. This is particularly true in the case of some of the great urban hospitals to which we must look not only for a large volume of service, but also for the highest quality of care and for leadership in the hospital and health fields. Although the need for modernization of hospitals is concentrated mainly in the metropolitan centers, obsolescence is not merely a matter of age, for the rapid advances in medical techniques have rendered many institutions inefficient despite their relatively recent construction. The proposed amendments, consequently, would require all States to ascertain their modernization needs, and would permit them to give special priority to situations where the need is exceptional.

Increased research support

To strengthen the Federal role in the development of new and improved methods of care in the various types of medical facilities, the bill would remove the existing $1.2 million ceiling on annual expenditures for grants for hospital facilities research. Also, the research authority would be extended to include direct Federal grants from the Public Health Service for the construction of experimental or demonstration facilities designed to implement new principles of patient care. Finally, the bill would permit the Surgeon General to approve a project grant for periods beyond the fiscal year in which the project was submitted. This provision will make it possible for the recipients to plan and undertake their research and experimental projects with confidence that the projects will have the continuity of financing necessary to a realization of their full potential.

Despite the tremendous annual expenditure for hospital patient care in this country, little research is being conducted to determine methods for improving the design and use of medical facilities which would result in more effective and economical care. New patterns of hospital service have reached a stage of development which warrants Federal stimulus in research and experimentation in the construction of specially designed facilities. Many communities are reluctant by themselves to construct new and experimentally designed facilities. Thus, there is a need for Federal support of experimentation with newer and more functional designs.

Greater emphasis on special facilities

The bill would place a greater emphasis on long-term care facilities for chronically ill and disabled persons. This need has become urgent in view of the increasing number of aged in our population, the rising costs of general hospital care, and the growing recognition of the benefits of rehabilitation of the chronically ill and disabled. Greater Federal stimulus is required because of the difficulties of programing in this area in which the patterns of service and of payments for service are still evolving.

Two amendments are proposed which would give additional emphasis to and would increase the flexibility of provisions for facilities for chronically ill patients. The first would consolidate the chronic disease hospital and nursing home categories into a single long-term care facilities category with a combined construction authorization, bed ratio, and State allotment. The second proposed amendment would increase the consolidated construction authorization for long-term care facilities to $40 million annually ($10 million more than the total for the present two categories) and correspondingly decrease the annual authorization for diagnostic or treatment centers. Even with the proposed liberalization of sponsorship for diagnostic or treatment centers (which is described later), we believe this decrease in appropriation would not have an unduly adverse effect on the construction of needed diagnostic or treatment centers. The functions of chronic disease hospitals and nursing homes are still in an evolutionary process and attempts to plan separately for these two categories have not proved too satisfactory. Combining them would give the States more freedom in developing programs for long-term care adapted to their particular needs.

Tuberculosis hospitals

Another amendment would delete the present eligibility of tuberculosis hospitals for construction aid. For the country as a whole, the need for new tuberculosis hos-

pital beds has generally been met. In some areas, tuberculosis hospitals are being converted to other uses.

Transfer of funds

The bill would also permit transfer within a State of a portion of its allotment for one type of facility to that of another type of facility, with two exceptions. Funds could not be transferred (1) out of the rehabilitation category, or (2) into the allotment for hospitals and public health centers. The amendment would enable additional funds to be channeled into the construction of long-term care facilities, rehabilitation facilities, and diagnostic or treatment centers.

Diagnostic or treatment centers

The bill would create two exceptions to the present requirement that the sponsor of a diagnostic or treatment center, if a nonpublic agency, own and operate a nonprofit hospital. This requirement has disqualified a number of otherwise desirable sponsors.

One exception would permit sponsorship of diagnostic or treatment centers by nonprofit groups not connected with a hospital if the service area for the center has no hospital (and none is proposed in that area under the State's program). Also, the center must be for the provision of general diagnostic, or diagnostic and treatment, services and the ownership and control must be such as to assure communitywide interest in the operation of the center. This liberalization should help to overcome a basic problem in some rural areas by providing them with modern diagnostic and treatment facilities as a means of attracting and retaining qualified medical and dental personnel in the community.

A second exception would permit nonprofit voluntary associations, which do not own or operate a hospital but which are so broadly owned or controlled as to assure communitywide interest in their operations, to sponsor the construction of diagnostic or treatment centers for use as mental health, outpatient facilities. With the chances for recovery from mental illness being greater today than at any previous time in our history, the role of the community in providing early diagnosis and treatment and in offering followup care for patients released from mental hospitals is becoming increasingly important. The proposed amendment would enable community groups more easily to assume these responsibilities.

Rehabilitation centers

For further flexibility in the special facility field, another amendment would liberalize the eligibility requirements for rehabilitation centers. Grants could be made for facilities which would provide medical services in combination with either psychological, social, or vocational services. Unlike the present law, it would not be necessary that all four services be provided before a project could qualify for a grant. Provisions of the present law have prevented many worthwhile projects from receiving aid because the community was unable to support operation on such a broad scale—at least in the early years. The pattern of rehabilitation services is still in the process of development and many facilities are needed. We believe it is sounder policy to permit the development of centers under medical supervision in combination with only one or more of the other professional elements, while giving preference to fully integrated facilities operated in connection with university teaching hospitals.

Other changes

In addition to those described above, the draft bill also proposes to eliminate from the law the "separate but equal" alternative to the requirement of assurance that the facility receiving Federal aid under title VI provide service without discrimination because of race, creed, or color. Only a small number of "separate but equal" facilities have been approved for Federal aid under title VI. Of the 4,674 projects of all types approved for construction assistance under this law from the beginning of the program through September 30, 1959, only 66 projects, or 1.41 percent, were for separate facilities. Further, the percentage of projects approved for separate facilities has been diminishing in recent years.

The bill, in addition to technical or drafting changes, also makes a few other substantive changes of lesser significance than those discussed above. These changes are described in the enclosed detailed analysis of the bill.

The provisions of the bill would become effective on July 1, 1960. Applications approved by the Surgeon General prior to July 1, 1960, would be governed by the present law.

We believe that enactment of title I of this bill would greatly enhance the effectiveness of the hospital and medical facility construction program in stimulating the amount and kinds of health facility construction that are urgently needed

GRANTS FOR MEDICAL, DENTAL, OSTEOPATHIC, AND PUBLIC HEALTH TEACHING FACILITIES CONSTRUCTION

Title II of the enclosed draft bill would amend title VII of the Public Health Service Act to designate as "part A" the present provisions of the title authorizing a program of construction grants for research facilities, and to add a new part. The new part B would authorize a 5-year program of construction grants to accredited public and private nonprofit schools of medicine, dentistry, osteopathy and public health to assist in the construction of teaching facilities which would expand capacity for training in those professions.

Under procedure similar to those now in effect for the existing reseach construction grant program, Federal funds would be available (under the new part B) for up to 50 percent of necessary costs for construction of new schools and for that portion of the costs of expansion of teaching facilities at existing schools attributable to increases in their training capacity. Grant funds could not be used for costs of land acquisition or off-site improvements, or for projects eligible for aid under the hospital and medical facility survey and construction program.

The research construction grant program authorized by the Health Research Facilities Act of 1956 (P.L. 835, 84th Cong.) and later extended until June 30, 1962 (P.L. 85–777) provides Federal assistance for the construction of facilities for the conduct of research in the sciences related to health. While schools of medicine, dentistry, osteopathy, and public health participate in this program, along with nonschool, research institutions, and the science departments of universities, these grants are premised upon additions to, or improvements in, research capacity without regard to whether the proposed construction will also effect an increase in the applicant school's capacity to train physicians, dentists, osteopaths, or professional public health workers.

By contrast, the new program we are proposing in the draft bill would limit construction aid to new schools, or to existing schools for teaching facilities which increase the applicant's training capacity, and would establish priorities for grant approval based on relative effectiveness for such expansion. Unlike the existing authority for research construction grants, the proposed new part B of title VII of the PHS Act would not employ the concept of "proportionate use" of a multipurpose facility for the determination of construction costs to be included in calculating the amount of the grant. Costs of construction to be aided under this part would in all cases be determined solely on the basis of teaching requirements. The fact that a facility needed for teaching will have a collateral or incidental use for a related purpose, such as research, would not impair the eligibility of an application or reduce the amount of the grant; any additional space or equipment to be constructed or installed primarily because of its intended use for research would be eligible for aid only under the research construction grant authority in the newly designated part A.

Grant applications coming from schools in States that had established State agencies—or participated in regional or other interstate bodies—for such purposes as surveying training requirements and needs for construction of teaching facilities in these fields, or developing programs for meeting construction needs, for increasing training opportunities in these health fields for the youth in the State, or for promoting more effective use and seeking ways to assure adequate support of these training institutions, would be reviewed in the light of such State programs and plans and, of course, any comments submitted by the planning agency concerned. In addition, the Surgeon General would be authorized to provide assistance to such planning agencies in the form of technical advice and consultant services. In the case of regional or other interstate bodies, the Surgeon General would also be authorized to provide financial assistance for projects for the planning of such programs.

Sums authorized to be appropriated each year for grants under part B would be limited by aggregate ceilings for the 5-year period July 1, 1960, to June 30, 1965, of $75 million for grants to schools of medicine, osteopathy, and public health, and $25 million for grants to schools of dentistry.

The proposed Advisory Council on Medical Teaching Facilities would be separate from the existing Advisory Council on Health Research Facilities, which would continue to exercise its present functions in relation to grant applications for research construction made under part A. The new Council would exercise advisory duties with respect to grant applications for aid in the construction of teaching facilities, the preparation of regulations, and other policy matters arising in the administration of part B. It would include persons selected from among leading authorities in higher education generally, and at least four of them would have to be particularly concerned with training in medicine, dentistry, osteopathy, or the public health professions.

Experience with the Hill-Burton program, and over 3 years of experience under the research construction grant program, have clearly indicated the value of a Federal construction grant as a stimulus for badly needed construction. We can, therefore, confidently expect that a temporary grant program to assist in the construction and expansion of teaching facilities at schools of medicine, dentistry, osteopathy, and public health will be equally effective in encouraging the construction required to meet the essential needs for physical plant adequate to the training responsibilities of these institutions. Our requirements for additional numbers of physicians, dentists, medical scientists, and professional public health workers have been repeatedly documented. They are needed as practitioners, research workers, and teachers, and to staff public and voluntary programs in health fields. Maintenance of present physician-population ratios can be accepted as a minimum goal for training in medicine. The most recent estimate of the number of additional graduates required to accomplish this purpose was made by a group of consultants called together by the Surgeon General of

the Public Health Service. This consultant group concluded that to maintain this ratio we will need an expansion of medical school capacity to some 11,000 graduates a year by 1975, an increase of 3,600 over the present output.

The availability of assistance for the construction of teaching facilities will not only increase the schools' capacity to train the additional numbers of professional health personnel that we need. It will also, we are convinced, permit greater flexibility in institutional planning—a flexibility needed by the schools in order to achieve a desirable balance between their research and teaching functions.

The proposal we are recommending would, moreover, have the additional advantage of encouraging State (and interstate) participation in a cooperative effort to plan for and provide the necessary expansion of training capacity. State participation in the planning processes should stimulate greater recognition of responsibility for sharing in construction costs and for continued operation of these schools at an effective level. It would also increase general awareness of the need for more student places and of the construction and support problems of the schools, and thus stimulate further private efforts.

PROJECT GRANTS FOR GRADUATE TRAINING IN PUBLIC HEALTH

Title III of the enclosed draft bill would amend part A of title III of the PHS Act to add a new section 308 to provide a 5-year program of Federal project grants to strengthen and expand graduate public health training in schools of public health and in those schools of nursing and engineering that provide postbaccalaureate training for public health nurses and engineers.

The proposed new section 308 would authorize appropriation of such sums as the Congress may determine for each fiscal year, for the 5-year period beginning July 1, 1960, and ending June 30, 1965, and would delete, effective July 1, 1960, the provisions of section 314(c)(2) authorizing grants to schools of public health, which under the terms of current legislation, will expire June 30, 1960. The new project grant authority we are recommending would permit the Surgeon General to approve a project grant for periods beyond the fiscal year in which the project was submitted, thus assuring full Federal financing during the life of the project. This provision will make it possible for the recipient schools to plan and undertake projects to strengthen their programs of basic training and improve and enrich their curriculums, with confidence that the project will have the continuity necessary to a realization of its full potential for upgrading training program content, methods, and procedures.

There is an urgent need for strengthening, increasing, and improving the teaching programs providing graduate public health training in this country. A recent survey disclosed that more than 20,000 professional personnel now employed in public health agencies do not have the public health training they need to provide the public health protection for people which is possible in the context of today's technological developments. In addition, it was found that there were more than 2,500 vacancies in professional positions due to lack of trained personnel to fill them. Furthermore, it was estimated that, because of program expansion and population growth, an additional 6,000 trained personnel will be needed by 1964 to fill new positions.

These numerical findings of training needs clearly indicate that the graduate public health training programs must be expanded and improved to prepare personnel more adequately, and in greater numbers, if we are to meet the staffing needs of new and emerging public health programs. These new and expanded public health activities include such programs as those for chronic disease and aging, radiological health, accident prevention, rehabilitation, cancer, heart, and mental health. Successful inauguration, expansion, and operation of these and other programs of the future will depend on large measure on the availability of graduate public health training programs to prepare personnel for optimum effective service.

We believe that this problem is one that warrants Federal financial assistance and that such assistance can be most appropriately provided through a program of project grants. The project grant technique has proved successful in a variety of other training programs, as well as in our research grant operations. It is the technique which most nearly assures that funds will be directed toward growth and improvement.

As pointed out above, the current authorization for assistance to schools of public health will expire on June 30 of this year. Early enactment of the authorizing legislation for the new program proposed in title III of the enclosed draft bill is therefore of great importance.

GUARANTEE OF LOANS FOR CONSTRUCTION OF GROUP PRACTICE MEDICAL OR DENTAL FACILITIES

Title IV of the draft bill proposes a new program activity to encourage the development of group practice. There is increasing recognition of the value of physicians working together as a group in bringing more comprehensive services to the patient. By sharing common facilities, equipment, and records on a partnership basis, there are greater opportunities for medical specialists and general practitioners to combine their diverse skills in treating the medical needs of the whole patient rather than any one specialized category of illness. While recognizing the continuing, predominant role of the solo medical practitioner in providing medical care, the Department wishes to reduce the financial barriers experienced by many physicians who are interested in initiating group practice. Also, since groups offering prepayment plans would be eligible for assistance under this title, the program would stimulate the growth of private, voluntary systems providing comprehensive coverage of the costs of medical care.

Title IV therefore provides the statutory framework for a debt-service guarantee program to aid in financing the cost of construction of group practice medical or dental care facilities. The Surgeon General would be authorized during the 5 fiscal year period from July 1, 1960, to June 30, 1965, to guarantee, under certain circumstances, payment of principal and interest on debts incurred in the construction of such facilities whenever the borrower is unable to meet his obligations. By placing the credit of the Federal Government behind groups planning to build such facilities, the risk to the institution making the construction loan is reduced. The lenders, therefore, should be able to offer reasonable terms with regard to the amount of the loan, the interest rate charged, and the duration of the loan. Since a fee collected by the Federal Government for guaranteeing each loan would be used to cover costs of administration and to meet payments in the event of default, the program would be self-financing and involve no Federal subsidy.

The aggregate amount of guaranteed indebtedness outstanding at any one time would be limited to $30 million, or such lesser amount as may be specified in annual appropriation acts, and loans with maturities of more than 30 years would not qualify for guarantees. A revolving fund would be established, to be used by the Surgeon General to finance the costs, including administrative expenses, involved in carrying out the debt service guarantee program. The Surgeon General would prepare an annual budget in accordance with the Government Corporation Control Act, and maintain accounts for auditing by the General Accounting Office as in the case of commercial transactions, also in accordance with the Government Corporation Control Act. (Other technical details of this proposal are explained more fully in the enclosed analysis of title IV of the draft bill.)

We believe this proposal will provide a financially sound and desirable way of stimulating the formation of more group practice units. That there is growing recognition of values of this type of organization for the provision of medical and dental care is apparent from the numbers of such groups that have been established in recent years.

Together, the four titles of the enclosed draft bill present a proposal that would greatly facilitate and encourage the development of the physical plant, the expanded supplies of professionally trained personnel, and the improved planning and organization, for both facilities and services, that are greatly needed if we are to make available to the people in this country the public health protective services and the individual health and medical care that our contemporary ways of living call for.

Separate analyses of titles I, II, and IV of the draft bill are enclosed.

In compliance with Public Law 801, 84th Congress, there is enclosed a statement of cost estimates and personnel requirements (identified separately by titles of the bill) that would be entailed by enactment of this proposed legislation.

We would appreciate your referral of the enclosed draft bill to the appropriate committee for consideration.

The Bureau of the Budget advises that enactment of this proposed legislation would be in accord with the program of the President.

Sincerely yours,

ARTHUR S. FLEMMING,
Secretary.

AMENDMENT OF FEDERAL AVIATION ACT, RELATING TO EXTENSION OF TIME FOR SERVICE ON ADVISORY COMMITTEES

Mr. MAGNUSON. Mr. President, by request, I introduce, for appropriate reference, a bill to amend section 302(i) of the Federal Aviation Act of 1958 to extend the period of time for which individuals may serve as members of advisory committees appointed by the Administrator. I ask unanimous consent that a letter from the Administrator of the Federal Aviation Agency, requesting the proposed legislation, be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 3683) to amend section 302(i) of the Federal Aviation Act of 1958 to extend the period of time for which individuals may serve as members of advisory committees appointed by the Administrator, introduced by Mr. MAGNUSON, by request, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The letter presented by Mr. MAGNUSON is as follows:

FEDERAL AVIATION AGENCY,
Washington, D.C., June 9, 1960.

Hon. RICHARD M. NIXON,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: It is requested that the attached proposed bill be introduced in the Senate at your earliest convenience.

"To amend section 302(i) of the Federal Aviation Act of 1958 to extend the period of time for which individuals may serve as members of advisory committees appointed by the Administrator."

The purpose of this bill is to provide the Administrator of the Federal Aviation Agency with greater flexibility in the use of experts and consultants. In particular, this bill, if enacted, would enable the employment of consultants at the rate of $100 per diem for a maximum 1-year period. Under existing law the Agency is handicapped by section 302(i) of the Federal Aviation Act (Public Law 85-726, sec. 302(i), 49 U.S.C. 1343 (g)), which limits the Agency's use of experts and consultants to a period less than 100 days in any calendar year.

While this section (302(i) of the Federal Aviation Act) endeavors to confer the benefits of section 15 of the Administrative Expenses Act of 1946 (5 U.S.C. 55a), which authorizes the employment of experts and consultants, and which permits compensation of such individuals at a statutory rate, it also limits their employment to 100 days in derogation of the same basic authority (5 U.S.C. 55a), which permits temporary or intermittent employment for a 1-year period.

The work program of the Agency, by its very nature, embraces projects requiring temporary and intermittent services for periods totaling more than 100 days and perhaps as long as 1 year. For this reason, we strongly urge enactment of this legislation.

The Bureau of the Budget has advised that there would be no objection to the submission of this draft bill to the Congress.

Sincerely,

E. R. QUESADA,
Administrator.

PURCHASING-POWER BONDS TO PROTECT AGAINST INFLATION

Mr. McNAMARA. Mr. President, on behalf of myself, the Senator from Pennsylvania [Mr. CLARK], and the Senator from West Virginia [Mr. RANDOLPH], I introduce, for appropriate reference, a bill to assist individuals to obtain retirement benefits protected against increases in the cost of living. I ask unanimous consent to have printed in the RECORD a statement, prepared by me, relating to the bill, together with an analysis of the bill.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the statement and analysis will be printed in the RECORD.

The bill (S. 3684) to assist individuals to obtain retirement benefits protected against increases in the cost of living by providing for the issuance by the Treasury of a new series of bonds containing adjustments, under certain conditions, in maturity and redemption values to compensate for increases in the cost of living which may be purchased by individuals and eligible institutions, introduced by Mr. MCNAMARA (for himself, Mr. CLARK, and Mr. RANDOLPH), was received, read twice by its title, and referred to the Committee on Finance.

The statement and analysis presented by Mr. MCNAMARA are as follows:

STATEMENT BY SENATOR MCNAMARA

In accordance with one of the basic recommendations of the majority membership of the Subcommittee on Problems of the Aged and Aging, I wish to introduce today a bill that attempts to meet—in large measure—the problem of retirement income of the increasing numbers of aged citizens in our country. It is a bill that would authorize the U.S. Treasury to issue, for retirement purposes only, a constant purchasing power bond.

While references to the idea have been made many times before, over the past 50 years or more, and in various congressional studies and reports, this is the first time—I believe—that a serious proposal along these lines has ever been actually introduced as a piece of legislation. I will not repeat the statistics on the pitifully low incomes of the vast majority of our retired men and women.

In its report of February 1960, the subcommittee majority said as follows:

"While wage increases provide protection against cost-of-living rises during the work life of men and women, pension plans ordinarily do not. It has been proposed that such protection could be provided through Government action by issuing Government bonds, redeemable at an amount adjusted to account for increases in the cost of living. By investing in such bonds, pension funds and retirement annuity companies would be able to adjust pension benefits to increases in living costs. Further, individuals could purchase such bonds for retirement purposes."

This bill is designed to remedy certain shortcomings of our present financial structure in its effects upon the retirement income of aged citizens.

Neither social security nor private pension plans automatically provide adequate protection against cost-of-living increases.

The bill would authorize the Secretary of the Treasury to issue bonds with a purchasing power guarantee—that is, bonds whose face value would be adjusted to keep pace with the increases in the cost of living. These bonds would be issued to individuals and eligible institutions in such a manner as to insure that the benefits derived from their cost-of-living clause could accrue only if used for retirement purposes, either by individual retirees or by administrators of pension funds. Bonds redeemed before a stipulated time or age would carry only a given interest rate, and not the purchasing power protection.

As a secondary, but equally important result, the issuance of such purchasing power bonds would have the much desired effect of increasing the sales and/or the holding of Treasury savings bonds. Redemptions of savings bonds before maturity have been a source of major concern which deserves governmental action.

Price fluctuations have an important bearing on the economic well-being of every citizen, but particularly for retired persons. Traditionally, people save—and are expected to save—to assure themselves a decent, comfortable old age. When people save for their retirement, their primary concern is the security of their savings. They want to have their money available when they need it—at the time, and for the purpose of their retirement. Consequently, for retirement purposes, people want savings instruments that are free from risk.

Bonds, particularly Government bonds, have long been looked upon as one of the best means of saving for retirement purposes, since they have a fixed monetary value which is not influenced by economic trends, by speculation, or by other sources of instability in our economic world. Unfortunately, at times when inflation is a matter of public concern, people shy away from investing in bonds, as the danger of inflation removes that most important characteristic of all bonds—their risklessness.

With the weakening of bonds as a form of riskless investment in times of inflationary expectations, a great segment of the saving public, especially the small, unsophisticated investor saving for his old age, is deprived of the only form of investment which he can understand, and with which he can cope in terms of his daily life and future expectations. The result is a reduced inclination to save for old age, and increased economic insecurity in old age.

In modern industrial society, the burden of providing for retirement does not, of course, rest solely on the availability of avenues for private individual saving. We do have governmental and private pension plans designed to assure a decent standard of living to an increasing number of our retired citizens. But in an age of inflationary fears, and fluctuating prices, a guarantee of a fixed monetary income upon retirement is not sufficient.

There is legitimate fear that, however promising a given retirement plan may look on paper, in reality it may be less than adequate, if the inflation of the intervening years eats away the purchasing power of the promised annuity.

This fear is the basis for the repeated attempts to write into pension contracts clauses that would tie the amount of annuities to the fluctuating price level. The reason for a lack of any appreciable success in this direction is the contention of management that no actuarially sound pension plan could provide a cost-of-living adjustment in pensions in the absence of proven ways of guaranteeing cost-of-living protection to the pension funds themselves.

Undoubtedly, management would take a much more favorable view of cost-of-living provisions in pension contracts, if pension funds could be invested in a way that would protect them from the erosion of inflation. The traditional practice of investing these funds in fixed-return investments—bonds—provides no such security any more; in fact, with the inflationary psychology during recent years, pension-fund portfolio managers have deserted the bond market to a considerable extent and entered the stock market—not for the purpose of trying to find means to provide cost-of-living protection to their beneficiaries, but simply to enable the funds to keep paying their fixed pension obligations.

There are definite limits to the investing of pension fund moneys in stocks. In fact, it is questionable whether the whole practice is at all sound, except to the extent that the investing takes place in really blue chip stocks. Consequently, it is not only the individual saver who has been deprived by inflationary expectations of his major avenue for saving, but also the employee who has placed his faith in the industrial organization for which he has worked for many years, if not a lifetime. He is denied the prospect of maintaining a decent standard of living in his retirement years by the inability of pension funds to protect him from the erosion of his pension's purchasing power.

An inflation-proof pension bond issued by the Treasury would increase the incentive of individuals to save for old age, either on his own part or through a labor-management pension plan.

Even though the idea of a purchasing-power bond is an old one, no serious effort has ever been made in this country to introduce it. One of the major reasons for this is the oft-repeated fear that the Government could not issue a purchasing-power bond without publicly admitting its inability to cope with inflation and, consequently, without undermining the confidence of the public in the currency.

No one denies that psychology—confidence—plays a very important role in economic, and especially in monetary, matters. But the lessons of the past several years should be sufficient proof that psychology alone is not enough to account for the presence, or absence, of inflation. Official attempts to exercise inflation by repeated and ceremonial professions of abhorrence have failed completely, and it is now time to realize what has really been obvious all along—that inflation is caused, above all, by fundamental factors operating in our complex economy.

There is, therefore, no reason to believe that the introduction of purchasing power bonds, if done on a relatively modest scale and with appropriate prudence, would have any adverse effect on public confidence. On the contrary, to the extent that they would induce individuals to save more, they might even have a dampening effect on inflationary tendencies underlying the economy. Even if we were to have further inflation in the future, the extra cost incurred by the Treasury through adjustments in the face value of these bonds would be more than compensated for by the real benefits to the economy derived from the ability of pensioners to maintain their purchasing power in times of inflation. This, in turn, would reduce the burden on public assistance agencies.

As the staff report on employment, growth, and price level, of the Joint Economic Committee, said recently:

"On balance, there is much to be said for the view that it is a proper function of the Government to provide the small, unsophisticated investor with a form of investment which contains protection against the erosion of his wealth through inflation."

The same can be said, no doubt, about providing the same protection for institutions that take care of the retirement years of the same honest, unsophisticated small man—the pensioner of our industrial and commercial corporations.

In the subcommittee report of last February, we pointed out that the emergence of an aged population on the scale we now have and will have in the future calls for new ideas and preparation today for the even greater scope of the issue in generations to come—even in this century. While most of the subcommittee's recommendations bear on the well-being of today's senior citizens, this particular bill has far-reaching potential beneficial provisions for the retirees of the next generation and beyond.

FAVORABLE COMMENTS BY ECONOMISTS AND ACTUARIES ON PRINCIPLE OF CONSTANT PURCHASING POWER BONDS

Milton Friedman, University of Chicago: "I strongly favor the issuance of a purchasing-power bond on two grounds: (a) It would provide a means for lower and middle-income groups to protect their capital against the ravages of inflation; (b) it would permit the Treasury to sell bonds without engaging in advertising and promotion that at best is highly misleading, at worst, close to being downright immoral. The issuance of purchasing-power bonds might increase voluntary savings because they would be more attractive than existing means of investing savings open to the general public. An additional minor advantage is that it might make the Treasury place greater emphasis on the important problem of preventing inflation."

Daniel K. Andrews, College of Commerce, University of Illinois, Navy Pier Campus: "Pension funds and other institutional investors would be attracted to such bonds. Insurance companies might use them as a basis for offering annuities more reliable in protecting purchasing power to the holder than present-day 'variable annuities' which fluctuate in dollar amount only with the ups and downs of the stock market, not necessarily with the cost of living, savings, and retirement plans could be protected with far greater certainty."

Ralph H. Blodgett, University of Florida: "The issuance of bonds, the value of which would be guaranteed in terms of purchasing power, is one thing about which I am enthusiastic. Interest rates on Government bonds would not have to be raised. People would buy bonds even at low interest rates if they were given security as to the purchasing power of their principal."

Earl R. Rolph, University of California, Berkeley: "I am a strong advocate of the issuance of Government securities which are guaranteed as to purchasing power. There is a great need in this country for a security which the average investor could buy and use to protect himself from losses in real terms. A beginning could be made by the issuance of annuities redeemable only upon the owner reaching a certain age."

Richard Goode, Brookings Institution: "A constant-purchasing-power bond would have an important social function in allowing savers to protect themselves against the risk of inflation and would be an especially attractive form in which to hold long-term savings for old age. At the present time, individual savers, pensions funds, and other investors can obtain a measure of protection against inflation by buying equities, but these investments are subject to other risks which many savers may not wish to assume."

ANALYSIS OF THE MCNAMARA PURCHASING-POWER-BOND BILL

Section 1 of the bill adds a new section, section 26, to the Second Liberty Bond Act.

Subsection (a) of the new section authorizes and directs the Secretary of the Treasury to issue purchasing power bonds subject, unless otherwise provided for in the bill, to the provisions of existing law.

Subsection (b) defines the pension and profit-sharing plans, and the institutions which are eligible to purchase the bonds, and requires that, in case of profit-sharing and pension plans, periodical adjustments be made in the paid-out benefits for the purpose of compensating for increases in the cost of living.

Subsection (c) states that the bonds to be issued—

1. May be interest-bearing (coupon) or discount type, or a combination of the two.
2. Shall mature in 20 years.
3. May be redeemed before maturity.
4. Shall bear interest rates identical with the going rate of interest on ordinary savings bonds.
5. Their denominations shall be geared to the needs of the purchasing individuals and institutions.
6. May be retained after maturity.
7. Shall be nontransferable.
8. May be purchased only by or for individuals and eligible institutions.

Subsection (d) limits the amount of purchasing power bonds that may be purchased by individuals to $10,000 annually, and the total holdings of individuals to $60,000 (both figures computed on the basis of purchase price); it also limits the purchase by, and holdings of, eligible institutions to amounts required to back their obligations under the pension and profit-sharing plans under their management.

Subsection (e) provides for the calculation of the cost-of-living adjustments in the face value of the bonds; it also specifies that such adjustments are to be made in case of individual holders only if the holders have either reached the age of 60 or have become permanently disabled, and in case of institutions only if the bonds are held to maturity or, if redeemed before maturity, if such redemption is necessary to enable the institutions to meet their obligations under the plans under their management.

Section 2 of the bill states that, for purposes of calculating the statutory debit limit, the face amount of the bonds—before cost-of-living adjustments—shall be considered the amount outstanding.

RECESS APPOINTMENTS TO THE SUPREME COURT

Mr. HART. Mr. President, on May 5, 1959, the Senate debated and consented to the nomination of Mr. Justice Potter Stewart to be an Associate Justice of the Supreme Court of the United States. Mr. Justice Stewart had taken his seat on the Court under an appointment by the President on October 14, 1958. He had participated in decisions of the Court from that date, was acting as an Associate Justice of the Court when he testified April 9 and April 14, 1959, before the Committee on the Judiciary, and was sitting as an Associate Justice when the Senate advised and consented on May 5, 1959.

When the Senate debated this nomination, I described the concern and problem of a member of the Committee on the Judiciary, and a Member of the Senate, who must pass on the nomination of a Justice of the Supreme Court when the nominee is sitting on that Court.

It is difficult to criticize or comment on problems of this nature at the time there is an actual nomination pending before the Senate because the general proposition then becomes inseparable from the individual, no matter how worthy. So in the year since that debate I have given thought to what course the Senate could follow to avoid, as far as is constitutionally possible, the difficulties faced when it must act on the nomination of a Justice who, under a recess appointment, has been and is participating in the work of the Supreme Court.

The history of recess or interim appointments to the High Bench is interesting. Fifteen Justices of the Supreme Court have been given recess appointments and were subsequently confirmed by the Senate. But for more than 100 years prior to the recess appointment of Chief Justice Warren in 1953, no recess appointee ever took his seat on the Court befores he had been confirmed by the Senate. And only twice prior to that did an interim appointee take his seat on the Court before confirmation. For 52 years, no recess appointments were made at all. Since the breaking of a century's precedent in the case of Chief Justice Warren, there have been two

more instances, Justice Brennan and Justice Stewart, where an interim appointee has taken his seat on the Court before confirmation.

Many of my colleagues, Mr. President, who have far more service than I in the Senate and on the Committee on the Judiciary, have expressed the very real difficulties of fulfilling the constitutional responsibilities placed on Members of the Senate when they must interrogate and consider the qualifications of the nominees to the Supreme Court at the time they are sitting on the bench.

The 86th Congress approaches its close. Whatever the outcome of the presidential election in November, a new administration will take office. None of us knows which political party will direct that administration. I suggest this is a most appropriate time for the Senate to record its extreme reluctance to see recess appointments made to the Supreme Court and its opposition to a recess appointee taking his seat on the Court until confirmed by the Senate.

The resolution I submit today would record this to be the sense of the Senate. In the confirmation proceedings of Justice Potter Stewart, I felt a considerable handicap in questioning the nominee when before the Committee on the Judiciary and a restraint in the debate during the consideration of his appointment by the Senate. I believe others suffered this same limitation as we sought to discharge our constitutional duty. This in no way should be taken to indicate that I believed Justice Stewart other than completely qualified, and he has fulfilled his responsibilities subsequently with great ability.

In summary, Mr. President, there would seem to be three very serious questions which argue against recess appointments:

First, there is the knowledge by the Justice that his decisions made prior to Senate scrutiny of his appointment could—indeed, almost must—come under study and be factors in the Senate's consideration. This in turn may suggest pressures on the nominee surely not in accord with objective justice for all involved.

Second, the Justice serving under recess appointment is not exempt from the possibility that he would be removed by the President from his recess post and replaced by another nominee, and thus necessarily lacks the independence with which we seek to invest our Federal judges.

Finally, the very opposite of the first and second points is possible: not wanting to appear to decide a case in a manner that might be misinterpreted as resulting from the timing of the situation, the Justice bends over backward to prove independence of both the Senate and the President and a litigant may suffer.

It is for these reasons that the Senate resolution I submit seems to be a direct and proper action. Hopefully, the next President, in all but the most exceptional circumstances, will refrain from making such recess appointments. I believe adoption by the Senate of this resolution would clearly advise the President, whoever he is, that this is the sense of the Senate. My regret is that I did not submit the resolution earlier. But a few weeks of the session remain, with much of importance and priority to be considered. I will understand if time for action on this matter should not be found. However, especially since it affects the whole country and not one State or region, the leadership may be able to bring it to decision.

I ask unanimous consent that the text of the Senate resolution be printed at this point in my remarks, together with an article by Mr. Arthur Krock, appearing in the New York Times of May 7, 1959.

The PRESIDING OFFICER. The resolution will be received and appropriately referred, and, under the rule, will be printed in the RECORD; and, without objection, the article will be printed in the RECORD.

The resolution (S. Res. 334) opposing the making of recess appointments to the Supreme Court was referred to the Committee on the Judiciary, as follows:

SENATE RESOLUTION 334

Whereas the governmental power of the United States has been entrusted by the Constitution to three coequal branches, the legislative, the executive, and the judicial; and

Whereas the judicial power of the United States is vested primarily in one United States Supreme Court; and

Whereas a Justice of that Court may serve for life after he has been nominated by the President and, by and with the advice and consent of the Senate, appointed to his office; and

Whereas the duties and responsibilities of the Senate with respect to giving or withholding its advice and consent to such appointments are most serious and most solemn and should be exercised in an atmosphere free from any pressures which are inimical to due deliberation; and

Whereas the nomination of a person to the office of Justice of the Supreme Court of the United States should be considered only in the light of the qualifications the person brings to the threshold of the office; and,

Whereas our Constitution recognizes and all the lessons of history teach us that justice is best served and most likely to be achieved when cases are heard by Judges whose tenure is in nowise dependent upon their decisions in particular cases; and

Whereas there has from time to time been public speculation on the independence of a Justice who sits in judgment upon cases prior to his confirmation by this body, which speculation, however ill founded, is distressing to the Court, to the Justice, to the litigants and to the Senate of the United States: Now, therefore, be it

Resolved, That it is the sense of the Senate that the making of recess appointments to the Supreme Court, though authorized by the Constitution, is not wholly consistent with the best interests of the Supreme Court, the nominee who may be involved, the litigants before the Court, nor indeed the people of the United States, and that such appointments, therefore, should be avoided except under most unusual and urgent circumstances. And, in all cases, such appointee should not take his seat on the Court until the Senate has advised and consented to the nomination.

The article presented by Mr. HART is as follows:

[From the New York Times, May 7, 1959]

JUDICIAL APPOINTMENTS IN THE ABSENCE OF THE SENATE

(By Arthur Krock)

WASHINGTON, May 6.—In the Senate debate that preceded the vote which confirmed the President's recess appointment last fall of Potter Stewart to the Supreme Court, in whose decisions, however, he has been participating as an unconfirmed judge, this administration's practice of creating such a dubious situation was critically reviewed. The prevailing judgment was expressed as follows by Senator HART, of Michigan:

"Interim appointments to the Court are most unfortunate and should be avoided except in the most extreme cases. Certainly the participation of such an appointee in Court work prior to Senate confirmation is unwise."

The unwisdom, of course, is implicit in the fact that the Senate may terminate a recess appointment by rejection, or simply by not acting on it before adjournment. As the event demonstrated, there was never any probability the Senate would reject Justice Stewart or the other two members of the Court to whom the President gave recess appointments: Chief Justice Warren and Justice Brennan. But there is always a possibility of rejection by either the positive or negative method. And if an unconfirmed judge has been participating in the work of the Court, the mental shadow of this possibility could impair the sense of total emancipation from worry over the effects of his decisions in the political community that life tenure for judges was intended to bestow.

And if ultimately he was rejected, his part in controversial decisions, particularly when he had been one of the five that made the opinions binding, would revive the public and legal controversy such rulings evoke.

A 5-TO-4 RULING

This week there was such a decision by a majority that included Justice Stewart and would have been a minority without him. It was the 5-to-4 holding, by Justice Frankfurter for the Court, that health inspectors may enter a private home without a warrant to search for sanitation conditions (suspected in this instance of violating a Baltimore City ordinance). The central issue was the fourth amendment, which forbids "unreasonable searches and seizures" by Federal officials and has been established by the Court as applicable to State and local officials as well.

The deep nature of the controversy among the Justices was revealed in this comment by Justice Douglas, writing for himself and three others: "The decision * * * greatly dilutes the right of privacy which every homeowner had the right to believe was part of our American heritage." And this protest was strengthened by the facts that a search warrant was readily available to the health officer, and that the householder lives in a community where, like others in the United States, there are police records that would justify the fear of admitting strangers into private houses, even in daylight, the time this inspector demanded admittance.

PROPOSED SOLUTION

Justice Stewart's confirmation removed from this particular decision the liability of its having been made possible by a member of the Court whose brief tenure, and by recess appointment, the Senate had constitutionally terminated. But this liability is always present in decisions by unconfirmed judges. And that properly was concerning Senator HART and others in a debate on a level worthy of the issue.

HART realized, he said, that abstention by an unconfirmed Supreme Court appointee may cause difficulties when the Court is evenly divided on many crucial cases, or undermanned for a crushing workload. He conceded this as a comprehensible reason for the President's recess appointments in the three instances. But he argued for a sounder practice in which this consideration would be obviated. So far as the Supreme Court is concerned several excellent suggestions to this purpose have been made to Chairman CELLER of the House Judiciary Committee by Cyril F. Brickfield of his staff and Louis Loeb of the Library of Congress.

Among these suggestions are: special Senate sessions; Senate rules revisions to provide for committee action during recess, committee disapproval being tantamount to rejection; and a subsequent time limit for Senate action if the committee has approved the recess appointment. Meanwhile the recess appointee would be barred from participation in the work of the Court.

CHANGE OF METHOD OF PAYMENT OF FEDERAL AID TO CERTAIN HOMES—INSERTION OF LETTER IN REPORT NO. 1547

Mr. MANSFIELD. Mr. President, on Friday last the Senator from Texas [Mr. YARBOROUGH] reported, from the Committee on Labor and Public Welfare, with amendments, the bill—H.R. 10596—to change the method of payment of Federal aid to State or territorial homes for the support of soldiers, sailors, airmen, or marines of the United States, and submitted a report thereon.

The report has not been printed, but, under an order of the Senate, is being held in the Secretary's Office awaiting the presentation of minority views.

By inadvertence, a letter from the Veterans' Administration, giving its views on the matter, was omitted from the report. On behalf of the Senator from Texas, I ask unanimous consent that the letter may be inserted in the report at the appropriate place.

The PRESIDING OFFICER. Without objection, it is so ordered.

NOTICE OF HEARING ON H.J. RES. 402 GRANTING THE CONSENT AND APPROVAL OF CONGRESS FOR THE STATES OF VIRGINIA AND MARYLAND AND THE DISTRICT OF COLUMBIA TO ENTER INTO A COMPACT RELATED TO THE REGULATION OF MASS TRANSIT IN THE WASHINGTON, D.C., AREA

Mr. HART. Mr. President, on behalf of a subcommittee of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for 9:30 a.m., Friday, June 24, 1960, in the District of Columbia Committee room, 6226 New Senate Office Building, on House Joint Resolution 402, granting the consent and approval of Congress for the States of Virginia and Maryland and the District of Columbia to enter into a compact related to the regulation of mass transit in the Washington, D.C., metropolitan area, and for other purposes.

At the indicated time and place all persons interested in the proposed legislation may make such representations as may be pertinent. The subcommittee consists of the Senator from Colorado [Mr. CARROLL], the Senator from New York [Mr. KEATING], and myself, as chairman.

NOTICE OF HEARING ON S. 2075 AND RELATED BILL, S. 2852, TO ENCOURAGE THE CREATION OF ORIGINAL ORNAMENTAL DESIGNS FOR A LIMITED TIME AGAINST UNAUTHORIZED COPYING AND TO PRESERVE COPYRIGHT PROTECTION FOR CREATORS OF ARTISTIC WORKS IN WHICH COPYRIGHT SUBSISTS

Mr. HART. Mr. President, on behalf of and as acting chairman, for the purposes of this hearing, of the Subcommittee on Patents, Trademarks, and Copyrights of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for 9:30 a.m., Wednesday, June 29, 1960, in room 2228, New Senate Office Building, on S. 2075, a bill to encourage the creation of original ornamental designs of useful articles by protecting the authors of such designs for a limited time against unauthorized copying, and S. 2852, a bill to encourage the creation of original ornamental designs of useful articles by protecting the authors of such designs for a limited time against unauthorized copying and to preserve copyright protection for creators of artistic works in which copyright subsists.

The subcommittee consists of the Senator from Wyoming [Mr. O'MAHONEY], chairman, the Senator from South Carolina [Mr. JOHNSTON], the Senator from Wisconsin [Mr. WILEY], and myself, as acting chairman.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. WILEY:

Partial text of President Eisenhower's Manila address and editorial entitled "Nationalism in Asia," published in the Washington Post June 16, 1960.

By Mr. JACKSON:

Address delivered by Senator MANSFIELD at the 58th Annual Session of the Inland Empire Education Association held in Spokane, Wash., on April 8, 1960.

By Mr. COOPER:

Transcript of questions submitted to Vice President NIXON, and his answers, on the television program "Open End," telecast on May 15, 1960, published in the U.S. News & World Report of May 30, 1960.

POSTPONEMENT OF PRESIDENT'S VISIT TO JAPAN

Mr. JOHNSON of Texas. Mr. President, we all noted with deep regret this morning the decision of the Japanese Government to postpone President Eisenhower's trip to Japan.

Under all the circumstances, we must assume that the decision was a wise one. The Japanese Government felt that it could not guarantee the security of the President against a mob which, though it is a minority, is well organized and determined to riot.

Nevertheless, the action has some grave implications which we must consider carefully. And we should not come to any hasty conclusions or premature reactions.

In the view of competent observers, the great majority of the Japanese people are pro-Western. They have no desire to come under Communist domination. But history has demonstrated that the Communists do not look for majorities to make decisions. To them, the decision is made and enforced by brute strength.

Thus, to the Communists the fact that the Japanese Government was unwilling to risk the security of the President of the United States will be considered a victory. The fact that it was pure blackmail in its most outrageous sense will not dim the luster of their achievement in Communist eyes.

In a world in which the great majority of the people still cling to principles of morality, however, the lesson will be plain. The Communist objective is to divide the world and to prevent people from knowing each other and understanding each other. The Communists did not want the Japanese people to see an American President, representing a Nation whose basic desires are for peace.

The Communists were willing to go to any lengths to prevent that from happening. There is nothing in their code which bars violence as a means of conducting political and international relations.

As we are all aware, there have been some serious reservations expressed about this trip from the beginning. But that is now past history.

It is evident that this is a time to reexamine our policies and to determine whether they are effective in penetrating the walls which the Communists seek to build between men. It becomes more and more apparent that communism can succeed only by digging deep gulfs of misunderstanding between peoples, and this we must not allow them to do.

Mr. DIRKSEN. Mr. President, when the Japanese delegation was here some weeks ago in connection with the signing of the new Japanese-American Security Treaty, I had occasion to visit at considerable length with a member of the Foreign Affairs Committee of the Japanese House of Representatives. At that time the member assured me of the warm and deep regard of the vast majority of the Japanese people for this country, and insofar as it was within my power, I sought to assure him on that point with respect to our own people. But he did say on that occasion that there was a hard, monolithic, pro-Communist core in Japan which repudiated every effort to operate the government on a parliamentary basis. When I quizzed him about matters within their own parliamentary body, he told me about the violence that occurred there on the part of this pro-Communist group.

Notwithstanding all of that information, however, I am still glad that the President of the United States not only accepted the invitation but actually undertook the journey. I applaud him for doing so, because when the great leader of a free people has a deep conviction on the subject of peace and the development of good will among people everywhere, under no circumstances should he let surface and momentary fears dissipate that conviction. So I applaud our President now as I did when he announced that the journey was to be undertaken.

But the circumstances that have compelled the withdrawal of the invitation and the postponement of the President's visit certainly ought to be a flaming example to free people everywhere, and particularly to our own country, of what Communist tactics, Communist penetration, and Communist ruthlessness and brutality can really do when Communists undertake to subvert a people and to bore from within.

The lesson ought not be lost on us, because it must be crystal clear by now that the free American system, the American people, the American leadership, and our whole concept of freedom, is the top target of the Communist freedom-destroying ideology. If there is anything in the reports that have been sent out by the TASS News Agency, this incitement of mob violence is the first step. The second step would be to block the ratification of the treaty which is before the Japanese Diet at the present time. The third step would be to bring about the expulsion of Mr. Kishi as the Prime Minister. The next step, of course, would be to compel the expulsion of American troops from Japan.

All of this now seems to be crystal clear as a part of the pattern.

Though I do not particularly like to add this afterthought, there are some who recently thought perhaps it was an appropriate idea for the President of the United States to apologize to Khrushchev. There are some whose views have appeared in the various newspapers who believe that we should have made concessions to Khrushchev. If this lesson now is lost on them, then frankly I am about to give up.

I have one other thought to offer, and I do not apologize for it because it is definitely political. Two-thirds of one page of the Washington Post this morning was occupied by a statement over the signature of Eleanor Roosevelt. In that statement she said that if Vice President NIXON is the Republican nominee, we shall be in for a tough campaign. The time has come for some tough talking in America and for a tough campaign.

The whole concept of freedom is at stake; I do not intend to mince any words about it. Sometime later in the day I trust I shall find the time to make a few observations about the remarks made by the distinguished Senator from Massachusetts [Mr. KENNEDY] this week in the Senate. He may be out of town. I trust I will not be considered discourteous or impolite if I do make these observations while he is out of town. I could add one thought, that the Senator from Massachusetts made his remarks while the President was out of the country. Therefore, I trust I shall not be deemed to be discourteous if I make my remarks today.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. JOHNSON of Texas. I do not question the right of the Senator from Illinois to say anything he desires at any time. I would express the hope and try to signal caution that we not involve the President's trip to Japan with any presidential race in this country.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. SYMINGTON. The able minority leader once again has referred to a statement presumably made by the titular head of the Democratic Party, Gov. Adlai Stevenson. I remind the minority leader that Governor Stevenson has denied making that statement. I mentioned that fact previously when the accusation, unjustified, was made on the floor. I reemphasize that I do not believe it is in the best interest of the country to continue to assert that able and dedicated public servants have made statements which they have completely denied.

Mr. DIRKSEN. Mr. President, the record has been very carefully explored, and I think by now it speaks for itself, notwithstanding the denial that was made.

Mr. SYMINGTON. Mr. President, that is an unjust and unfair accusation against Governor Stevenson. I do not think it is worthy of the minority leader.

Mr. DIRKSEN. I cannot alter facts.

Mr. MANSFIELD. Mr. President, I am disturbed this morning that politics has entered into our discussions at this particular moment when the country in effect faces a crisis of sorts, and a possible reassessment and reevaluation of its policies.

I do not like the word "apology" applied to any Democrat with respect to the President's relations with Mr. Khrushchev at Paris. I repeat what I said previously. To the best of my knowledge, no Democrat has ever said that we should apologize to Khrushchev.

I do not like the idea, either, of the reference which has been made to concessions appearing in a newspaper article in a Paris newspaper.

I think that charge, despite the fact that the minority leader says the facts speak for themselves, has been answered on the floor, and it has been answered by the individual concerned.

It seems odd to me that a correspondent of a French newspaper should be able to visit a farm in the Midwest, not take any notes, and a month later be able to write in detail on what was said.

President Eisenhower has been compelled to cancel his visit to Japan at the request of Premier Kishi. The cancellation has nothing to do with the President's willingness to take risks for peace, to do whatever properly can be done to cement friendly relations with other nations. It most certainly has nothing to do with the United States putting its "tail between its legs" and running, as only recenly someone or other suggested that a cancellation might indicate.

There is a matter before the Japanese and American Governments which is far more significant than the visit and its cancellation. That is the signed treaty between the United States and Japan which is awaiting ratification by both nations. It ought not to be confused with what has now transpired.

The President was not on a journey of ratification. He was on a goodwill tour which, before the U–2 incident, was planned so as to take him through the Soviet Union on his way to Japan. One phase of that trip had already had to be changed. Now another phase of it, regrettably, has had to be changed.

The treaty, however, is another matter. It is an improvement over existing arrangements with Japan from the Japanese point of view, I believe, as well as from ours. The Committee on Foreign Relations has recommended unanimously that the treaty should be ratified. I see no reason, therefore, why the Senate should not proceed with due deliberation this session to consider the treaty and to approve or to withhold ratification as it sees fit. For my part, I believe the treaty is a proper one at this time and I have every intention of supporting its ratification.

As for ratification by Japan, that is for the Japanese to decide. If the Japanese Government moves to complete the process as we do that will bring the treaty into effect. If, in the light of their circumstances, they decide to postpone or to move more slowly on ratification, there is no reason for us to feel affronted. They have their internal problems and difficulties with which they know best how to deal. If ever there has been a time when patience and understanding on our part has been necessary, it is now.

The less said about what the Japanese should or should not do would be the best policy, I believe, for us to follow.

Our consideration of the treaty at this time had nothing to do with the internal situation in Japan or the President's trip, but only because of two factors:

First. The Japanese wanted to consider and debate the treaty first.

Second. We waited, deliberately, and approved it because we thought it was good for the United States and would better United States-Japanese relations.

Third. It is better than the treaty now in effect.

I repeat, if ever there has been a time when patience and understanding on our part has been necessary, it is now.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. DIRKSEN. I concur fully with the distinguished Senator from Montana, and I hope that the Senate will proceed as speedily as possible with the ratification of the treaty which is before the Senate.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. JAVITS. I, too, would like to express my agreement with the Senator's statement. I had intended to say much the same thing. I believe we ought to

ratify the treaty. We have a deep sympathy and friendship for the Japanese people. I do not believe we should be disheartened. All of us should welcome the words just uttered by the Senator from Montana.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. CLARK. I wish to associate myself with the remarks made on the floor a few moments ago by the distinguished Senator from Missouri [Mr. SYMINGTON] and also by the distinguished Senator from Montana [Mr. MANSFIELD]. It is incredible to me that Members of the opposition would stand on the floor and make attacks on patriotic Americans like Governor Stevenson and Senator KENNEDY and talk about the desirability of a great deal of tough talk in the present international situation. If this is not a time when we should speak softly and carry a big stick, I do not know when it will be. If my Republican friends expect to go into the coming campaign with the idea that they will elect a President because he can talk tough, I think that candidate will be defeated, because I believe the American people are far too mature to permit that kind of adolescent, childish approach to the serious problems which confront the world today to govern them in the choice of our next Chief Executive.

I hope the principles set forth to the American people by former Governor Stevenson, Senator KENNEDY, and Senator SYMINGTON, will become the majority views of the American people as they approach soberly the great political crisis which confronts us.

I congratulate both the Senator from Montana [Mr. MANSFIELD] and the Senator from Missouri [Mr. SYMINGTON] for the part they have taken in this colloquy.

Of course, the entire Senate will ratify the Japanese treaty. This is not a matter of controversy, but the conduct of public officials, including Members of this body, is a matter of controversy, and I deplore it.

Mr. SYMINGTON. Mr. President, I express appreciation to the distinguished Senator from Pennsylvania for his kind remarks.

Mr. MANSFIELD. I thank the Senator from Pennsylvania for his remarks; but I want it understood that I fully concur in what the distinguished majority leader has said relative to politics in the presidential campaign and politics as it affects presidential candidates. I want him to know that he has my gratitude for speaking up on this subject at this time.

Mr. MANSFIELD subsequently said:

Mr. President, I ask unanimous consent to have inserted in the remarks I made this morning relative to the withdrawal of the invitation of the President of the United States to visit Japan a letter received from Mike M. Masaoka, executive secretary, of the American Committee on Japan; a letter written by Mike Masaoka to the chairman of the Foreign Relations Committee; and also various other articles, statements, and newspaper editorials on this situation.

There being no objection, the letters and articles were ordered to be printed in the RECORD, as follows:

AMERICAN COMMITTEE ON JAPAN,
WASHINGTON OFFICE,
Washington, D.C., June 15, 1960.

Hon. MIKE MANSFIELD,
U.S. Senator from Montana,
U.S. Senate, Senate Office Building,
Washington, D.C.

DEAR SENATOR MANSFIELD: The recently organized American Committee on Japan, most of whose members are American citizens of Japanese ancestry with a special concern in keeping Japan within the free world alliance and as a friendly, cooperative ally of the United States, respectfully writes you this afternoon as a ranking member of the Foreign Relations Committee that unanimously reported yesterday the ratification of the Treaty of Mutual Cooperation and Security with Japan as the acting Senate majority leader, and as the Senator who has spoken out most frequently and positively on the merits of this bilateral agreement. We urge, once again, that you propose to your colleagues tomorrow overwhelming approval of this undertaking as clearly in the national and international interests of not only the United States but also Japan.

We know that you are familiar with the many and compelling arguments that commend Senate ratification of this treaty.

At the same time, as Americans who probably know better than most the real implications of ratification for both our country and that of our ancestry, may we simply enumerate a few that readily come to mind.

The United States is benefited in that we are allowed to continue to help in the defense of Japan, which is one of our westernmost bulwarks of our free world, against Sino-Soviet aggression, and, therefore, in our own defense. We are benefited too that Japan is encouraged to continue in military and economic alliance with us, instead of moving toward neutralism and even into the Communist camp, to our mutual advantage. Though it is difficult to express in words, it, nevertheless, remains of incalculable importance to us that Japan remain as an integral part of our main security line in the Far East.

As far as Japan is concerned, the benefits to her people and government are so obvious that it is most difficult for us to understand the objections raised to this new treaty, except that they are inspired by the fearmongers of Peiping and Moscow and those who ignore the harsh realities of the troubled world of today.

Japan, not the United States, requested that the present unilateral arrangement under which American troops are maintained in Japan, promulgated a year before the coming into force of the Peace Treaty in 1952, be revised and "liberalized" as far as Japanese interests are involved to reflect new Japan's sovereignty and the drastically changed world situation. Therefore, it is clear that this treaty was drafted to assure recognition of Japan's current status and to include concessions, as it were, on the part of this country regarding our Armed Forces in that nation. It is not a unilateral and arbitrary measure being forced upon a defeated or powerless state. Japan is specifically granted the right to be consulted on our military activities in the area of her greatest concerns. Japan is not obliged, because of her constitutional limitations, to come to the aid of the United States in case of attack, but the United States is committed to the defense of Japan against aggression from any external power. Japan or the United States may, after the prescribed 10-year life of the treaty, abrogate its provisions after 1 year's notice, instead of the indefinite period that is implicit in the present interim arrangements concluded in 1951.

We are convinced that on sober reflection the thinking people of Japan will continue to call for ratification of this treaty, for few Japanese would actually prefer to live under Sino-Soviet domination than in mutually advantageous alliance with the United States which, through all the post-World War II years, has given generously and contributed mightily in so many ways to Japan's current prosperous economy and individual freedom.

As for immediate Senate action, instead of postponing consideration until possibly the Japanese Diet has completed formal ratification procedures, may we express our judgment that the United States should conduct its own diplomatic and legislative affairs without improper reference to the parliamentary activities of another nation. We believe that Senate ratification now will serve notice that the United States will not be intimidated or coerced by mobs and demonstrations, that we will fulfill our commitments to friendly governments, without regard to threats and violence, in an orderly and lawful manner. In this way, we demonstrate our faith in representative and democratic government.

It may also be of moment to ratify this treaty without relating it to the actions of the Japanese Parliament, and thereby emphasize the independence of Senate consideration from the President's forthcoming good-will visit to Tokyo this Sunday.

You may recall that on May 31 we addressed a letter to Chairman W. J. FULBRIGHT of your Foreign Relations Committee; another copy is enclosed for your information. You may be interested to learn that we have received many letters commenting on our action as Americans of Japanese ancestry in urging early ratification of the Mutual Cooperation and Security Treaty. Most of them, including those from Japan, are laudatory, though a few quite expectedly were not. Most, however, confirmed our opinion that the overwhelming majority of the Japanese people are opposed to the current anti-American demonstrations and in favor of the new treaty. As United States Ambassador Douglas MacArthur II wrote us, for example, "There is no question in my mind but that the great majority of the Japanese people have a friendly feeling regarding the United States and support a continuation of the close ties with America which have served so well the enlightened self-interest of both Japan and the United States during the past 15 years."

As for those Japanese who believe that Japan can and should become a neutral, may we quote the perceptive observation of William Hosokawa, acting managing editor of the Denver Post who last visited Japan in the fall of 1958, who wrote as follows in the Pacific Citizen, weekly publication of the Japanese American Citizens League, for June 10: "I remember coming away from that interview (with the chief of the international affairs committee of the Socialist Party) wondering at the naivete of political leaders who believe that Japan could remain neutral in the struggle between East and West. Japan is far too valuable a prize—strategically and industrially—to be ignored for long by either side. If by unhappy choice the United States should drop Japan from its overall plans, it stands to reason the Communists would move swiftly into the political vacuum before the Socialists could shout Banzai.

"The trouble, I think, is that the Japanese Socialists are underrating the importance of their country. Japan today is a prize plum necessary to the West and coveted by the Red world. Of the two, there is no doubt that the masses of Japan would choose the

West as friends, mentors, and allies in the struggle for peace with honor and freedom."

His entire column, which explains why the Socialists are against the treaty, is enclosed for your information. So too is a thermofax copy of the testimony of Shintaro Fukushima, president of the influential Japan Times at the public hearings of this treaty at the Japanese House of Representatives last month, which explains in detail just how advantageous this treaty is to Japan and why it should be ratified by their elected representatives in the Diet.

Please excuse the length of this letter, but we felt it important that you, and through you, if you are so inclined, your colleagues in the Senate may understand the sincere concern of Americans of Japanese ancestry in the early ratification of the Treaty of Mutual Cooperation and Security with Japan. We believe that it is vital to our country and to Japan and we want both the American people and the Japanese people to know of our unequivocal endorsement of this treaty as essential to the peace and the prosperity of the Pacific.

With kindest personal regards.

Respectfully,

MIKE M. MASAOKA,
Executive Secretary.

AMERICAN COMMITTEE ON JAPAN,
WASHINGTON OFFICE,
Washington, D.C., May 31, 1960.

Hon. J. W. FULBRIGHT,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR SENATOR FULBRIGHT: May we, the members of the newly organized American Committee on Japan, urge your committee and the Senate to ratify on behalf of the United States the Treaty of Mutual Cooperation and Security with Japan which was signed here in Washington on January 19 by the Secretary of State Herter and Prime Minister Kishi and which was transmitted to the Senate on March 10 by the President.

Although we are laymen and not conversant with the technicalities of the treaty we agree with the President's analysis in this letter of transmittal that "The treaty constitutes the foundation for cooperation, a partnership with Japan, based on mutual confidence and sovereign equality, not only in the security field but in the political and economic fields. It reflects the broad area of mutual interest between the United States and Japan. The treaty is entirely defensive in character and intent and represents a threat to no country or people. It is in full conformity with the purposes and principles of the United Nations and reflects the dedication of both parties to strengthen the efforts of the United Nations to maintain international peace and security."

We believe that the present time is most appropriate for favorable action by your committee and the Senate of the United States.

The President has just issued a proclamation (May 18) designating "the year 1960 to be the United States of America-Japan Centennial Year" and urging "all agencies and officers of the Federal Government, upon the Governors of the States, and upon the American people to observe this year * * * through celebrations, visits, and other observances and activities, to emphasize both the historical event of a century ago and the inauguration of a new area in the relations between the two countries, founded on amity, common interest, mutual trust, and cooperation, with the view that intelligence, imagination, and wisdom among our respective peoples may be brought into full play to achieve a world at peace with freedom and justice."

At this very moment, a special mission from Japan, led by former Prime Minister Yoshida who helped forge Japanese-American relations into a vital link of free world security, who signed the treaty of peace in 1951 that restored Japan to the community of nations, and who was Japan's chief executive during the final period of the occupation and the early days of sovereignty, is in the United States participating in commemorative affairs marking a hundred years since the first Japanese Embassy was established in this country. Similarly, in Japan at this moment, a number of distinguished Americans are being feted as they too participate in events celebrating a century of diplomatic relations.

The President of the United States is scheduled to visit Japan beginning June 19 and the Crown Prince and Princess are slated to reciprocate that good will gesture this coming September by visiting the United States, both features of this centennial year that initiates the beginning of a new era in Japanese-American cooperation that is essential to the peace and the prosperity of the Pacific and of the world.

The long-deserving territory of Hawaii was admitted into statehood last summer, serving as a living demonstration of democracy in action to the peoples and nations of Asia, who see in Hawaii's population and achievements their ultimate destiny within the framework of liberty and free enterprise. Senator FONG and Congressman INOUYE, the elected representatives to the National Legislature of our newest State, are symbols of our acceptance of those of Asian ancestry as worthy partners in the democratic system.

Some 10 days ago (May 20), the Japanese house of representatives ratified the Treaty of Mutual Cooperation and Security after some 50 days of deliberate and irresponsible obstruction and even violence by leftist and "anti-American" elements both within and without the National Diet. The House of Councilors, the upper chamber, is expected to either ratify the treaty or allow its automatic ratification by June 19, the date of the President's scheduled arrival in Tokyo.

For the past several weeks, mobs have demonstrated against Prime Minister Kishi, against the Diet, against the treaty, and against the forthcoming visit of the President. We are of the opinion that these violent demonstrations do not reflect the sentiment of the overwhelming majority of the Japanese people. We believe, as expresesd by Chief Justice Tanaka of the Japanese supreme court, that the agitation was "influenced by foreign powers" which have in recent months not only warned but threatened Japan against ratifying the treaty with the United States. We are convinced that most of the people of Japan are firmly of the mind that her destiny lies in close cooperation and mutually beneficial ties with this country.

We know that the treaty pending before the Congress gives equality to Japan in the defense of her homeland which does not exist in the current security pact signed in San Francisco in 1951, prior to the coming into force of the Treaty of Peace in 1952. We also know that the present San Francisco treaty continues indefinitely at the will of the United States, whereas this new version may be abrogated by either side after 1 year's notice after the basic 10-year period for the instrument expires. In the light of these and other facts, all calculated to recognize and to put into effect Japan's current status as one of the leading powers of earth, it is difficult to understand the turmoil in Japan except for "foreign" intervention by the unfriendly partners of the Sino-Soviet bloc.

The American Committee on Japan was activated by a group of leading American citizens of Japanese ancestry and other Americans who have a special concern in promoting cordial relations and better understanding between Japan and the United States. Our membership is restricted to American citizens, native-born and naturalized.

Our Japanese American membership is a cross-section of Americans of Japanese ancestry in all sections of the Nation. Our honorary chairman is the honorable DANIEL K. INOUYE, Representative from Hawaii. Our national chairman is Saburo Kido, attorney of Los Angeles and one of the most respected Japanese Americans in our country. He was the World War II president of the National Japanese American Citizens League. A regional chairman is Hiroshi Miyamura of Gallup, N. Mex., the only living Japanese-American winner of the Congressional Medal of Honor. One of our non-Japanese-American members is George P. Griffith, of Atlanta, Ga., a former Navy officer who served in Japan and a descendant of Commadore Perry who, in 1853, "opened" Japan to the West, and to the United States in particular.

During the past several years, especially since the treaty of peace came into force 8 years ago, we have noted that the mutually beneficial commercial and trade interests of both nations have been promoted by trade and business associations. We have also noticed that cultural and goodwill activities have been encouraged by Japan-American societies and other similar groups.

But, we have been greatly disturbed that in the vital most important arena of all, the legislative and political, there has been no responsible, organized representation of the public national and international interest and concern.

We of Japanese ancestry have been embarrassed from time to time that we had no formal or informal organization to study the issues and problems as they arose and to suggest, as Americans, the most appropriate course of action. Perhaps of all Americans, because of our ancestry, we should be most cognizant of the necessity and the desirability of maintaining cordial relations between the United States and Japan. Certainly, because of our ancestry, most other Americans expect, and rightly so, that we have opinions and recommendations to offer on the major subjects of concern to both the United States and Japan. Most assuredly, to help retain Japan as a cooperative and able partner in our system of mutual and collective security can be a substantial contribution which we, as Americans of Japanese ancestry, can make to our country in these tension-filled, troubled times. And, at the same time, we can explain and demonstrate from our own experiences the workings of democracy and the American way in order that the Japanese people may be able to better understand our motives and our objectives.

The Japanese American Citizens League, the only national organization up to this time to represent Americans of Japanese ancestry in this country, is committed to concentrate its activities on the welfare of those of Japanese ancestry in this country. Up to this tragic hour in mankind's history, Americans of Japanese ancestry have defaulted in trying to express their feelings in the most vital of all areas today—the international field. Accordingly, an independent committee, many of whose officers and members are also members of the Japanese American Citizens League, was organized in the belief that it was our duty and our obligation as citizens of the United States to enunciate the sentiments and the conscience of Americans with a special concern for Japanese-American good relations on matters calling for legislative and executive judgment and discretion.

We are a nonprofit educational unit, bipartisan in our character, and composed of not only Christians and Jews but also of Buddhists and perhaps Shintoists. Many have friends and even relatives in Japan.

Many have business and other interests there. Many have served with honor in the U.S. Armed Forces in the Pacific. All are joined in the belief that the harsh realities of the world demand that the United States and Japan remain steadfast as friendly and helpful allies in the common defense against totalitarianism and Communist imperialism.

We candidly confess that we do not have all of the answers. But, as with any other responsible citizen group interested in a specific area of national responsibility, we shall study those problems and issues that may cause difficulties and differences between the United States and Japan and make known our views, as Americans dedicated to the preservation of peace and prosperity in the Pacific, to the appropriate agencies of our Government in the hope that our representations will aid in the satisfactory and mutually beneficial resolution of all outstanding questions.

As our first contribution, the American Committee on Japan respectfully urges the early ratification of the Treaty of Mutual Cooperation and Security with Japan. To delay ratification will not only play into the hands of the enemies of the United States in Japan and elsewhere but may well undermine the prestige and the position of our friends, also in Japan and throughout the Far East.

Respectfully,

MIKE MASAOKA,
Executive Secretary.

P.S.—For your information, enclosed is a short sketch of the officers of the American Committee on Japan.

AMERICAN COMMITTEE ON JAPAN OFFICERS

Honorary chairman: The Honorable DANIEL K. INOUYE, Honolulu, Hawaii. An attorney, he is the first American of Japanese ancestry to be elected to the Congress of the United States, first Representative elected by the 50th State of Hawaii to the National House of Representatives, one of the Ten Outstanding Young Men of America (1960) named by the United States Chamber of Commerce, a disabled and bemedaled veteran of the famed 442d Japanese American Combat Team of World War II, etc.

National chairman: Saburo Kido, Los Angeles, Calif. An attorney, he is also president and publisher of the New Japanese American News, a daily in both English and Japanese. World War II national president of the Japanese American Citizens League, he is respected as one of the leading Japanese Americans in the Nation.

Policy board chairman: Thomas T. Hayashi, New York, N.Y. Also an attorney, he is one of the community leaders. He is a past national officer of the Japanese American Citizens League.

Executive secretary: Mike M. Masaoka, Washington, D.C. An international trade and public relations consultant, he is best known as the long-time Washington representative of the Japanese American Citizens League. He is generally recognized for helping to secure corrective and remedial legislation for persons of Japanese ancestry after World War II, for helping in the judicial successes declaring unconstitutional many Federal and State statutes directed against persons of Japanese ancestry, and for helping to inspire the educational campaign that has won public acceptance for Americans of Japanese ancestry. He was named as the outstanding Japanese American for the decade 1940–50 and specifically as the Japanese American of the 1948–50 biennium. He and four brothers volunteered and served with the 442d Combat Team in World War II.

National treasurer: Samuel I. Ishikawa, New York, N.Y. An economist and trade specialist, he was in charge of raising funds for Japan relief after the surrender for the American Friends Service Committee (Quakers) and subsequently served as associate national director of the Japanese American Citizens League in the postwar years. He was also, at one time, a Jiji Press correspondent.

AREA CHAIRMEN

Hawaii: The Honorable Benjamin Tashiro, Lihue, Kauai, judge of the district court of the State of Hawaii. He was the first American of Japanese ancestry ever to be nominated for and confirmed to the Federal judiciary, when he was confirmed several years ago by the U.S. Senate to be a Federal district judge in the then Territory of Hawaii.

Thomas H. Takamune, Honolulu, Hawaii. An educator by profession and a former high school principal, he is the first American of Japanese ancestry to be named as executive secretary to a U.S. Senator, having been appointed by Senator OREN E. LONG, of Hawaii, to serve in this responsibility.

James Hirano, Hilo, Hawaii. A businessman and community leader, he was recognized last year as the individual responsible for the naturalization of more than a thousand resident Japanese as U.S. citizens.

Southern California: George J. Inagaki, Los Angeles, Calif. An investment adviser, he was the Japanese-American of the 1954–56 biennium. He also served two terms as the national president of the Japanese-American Citizens League and several terms as president of the Los Angeles Japanese-American Flower Market.

Northern California: Susumu Togasaki, San Francisco, Calif. An importer-exporter, a member of the board of directors of the Sumitomo Bank of California, of the Japanese Chamber of Commerce of Northern California ,of the Japan-America Society of San Francisco, etc., he is a respected community leader.

Pacific Northwest: William Mimbu, Seattle, Wash. An attorney, he too was a national officer of the Japanese-American Citizens League. A civic leader, he is currently chairman of the Washington State Committee to Repeal the Anti-Alien Land Law of Washington State.

Southwest: Hiroshi Miyamura, Gallup, N. Mex.: An automotive parts salesman, he is the only living Japanese-American Congressional Medal of Honor winner, being personally decorated by President Eisenhower for heroism in Korea. He was one of the 10 Outstanding Young Men of America in 1954, and the Japanese American of the biennium for 1952–54.

Intermountain: Henry Kasai, Salt Lake City, Utah. An insurance specialist, he is a naturalized citizen and a citizen of the community as named by the Salt Lake City Chamber of Commerce.

Rocky Mountains: William Hosokawa, Denver, Colo. The assistant managing editor of the Denver Post, he is probably the outstanding Japanese-American journalist and writer. A past president of the American Association of Sunday and Feature Section Editors and a member of the board of the Associated Press Managing Editors, he was named the outstanding Japanese American for 1956–58.

Western Plains: K. Patrick Okura, Omaha, Nebr. A psychologist, he was a personnel director of the city of Los Angeles, staff psychologist for Father Flanagans' Boys' Town for more than 10 years, and currently is the chief probation officer for the Douglas County juvenile court, and is credited with the establishment of that separate juvenile court.

Great Lakes: Dr. Gladys Ishida, Chicago, Ill. A professor of international relations, she is currently teaching at Wisconsin State College. Under a special grant, she recently conducted research in Japan.

Middle West: Dr. James T. Taguchi, Dayton, Ohio. A medical doctor, he is currently the acting chief of medicine for the Veterans' Hospital in Dayton.

Gulf States: Kiyoshi Saibara, Houston, Tex.: A pioneer rice grower, and a naturalized citizen, he was recently decorated by the Japanese Government for his activities in promoting Japanese-American friendship and trade.

Southern States: Sachihiko Butsuyen, White Oaks, Ga. A farmer-shipper, he too is a naturalized American. He has helped to sponsor many students from Japan in American colleges and universities.

Atlantic States: Dr. T. Scott Miyakawa, Boston, Mass. A professor of Far Eastern studies at Boston University, he was a Fulbright scholar in Japan recently. He is an acknowledged expert on the Japanese.

[From the Pacific Citizen June 10, 1960]

FROM THE FRYING PAN

(By Bill Hosokawa)

EXCITEMENT IN TOKYO

DENVER, COLO.—Whoever it was that said the Japanese are an orderly, disciplined people who mask their emotions has been proved completely wrong by the current series of demonstrations in Tokyo.

Able observers on the scene tell us the demonstrations are not essentially anti-American or anti-Eisenhower, but are directed against the proposed U.S.-Japan Mutual Security Treaty. This treaty was given preliminary ratification by the lower house of the Japanese Diet on May 20 after months of debate. The Socialists opposed the treaty bitterly, but Premier Nobusuke Kishi's Liberal-Democrat majority was able to ram it through when it finally came up for a vote.

Now, the Socialists are trying to embarrass Kishi by these demonstrations and force him to resign. If Kishi's government remains in office until June 19, the day Eisenhower is scheduled to reach Japan, the treaty becomes law. If the Kishi government falls, the treaty will be thrown out.

Kishi has stubbornly refused to resign. The danger in the demonstrations is that in the heat and excitement of political battle the rioting will get out of hand.

INTERVIEW

Why are the Japanese Socialists against the treaty? An interview granted me a year and a half ago by a leading member of the Socialist Party sheds considerable light on the current situation. The time was October 1958 and the place Tokyo. Mas Ogawa, influential, American-educated managing editor of the Japan Times arranged for me to see Sooji Okada, member of the House of Councilors (the upper house). Okada was chief of the international affairs committee of the Socialist Party, and the Socialists had a long reputation for hostility toward the United States. I wanted to find out what he had to say.

This week I dug through dog-eared old notes to refresh my memory of that interview, and this is what I found:

The Socialist Party, Okada said, is not necessarily anti-American.

"Our basic policy is neutralism," he said. "By that, I mean we believe we must not aline ourselves with any big power. The Socialist Party wants to avoid the U.S. sphere of power as well as the Soviet sphere.

The proposed United States-Japan Mutual Security Treaty is a military alliance. The Socialists will demand that Japan disentangle itself from the U.S. strategic and military sphere. We do not want to be dragged into the next war. Already Japan is being drawn against her will into the tense international picture because she is allied with the United States.

"Japan cannot defend herself by her own military strength. Poverty and social unrest would result from efforts to raise a military force strong enough to protect ourselves,

even if our Constitution permitted it. The only answer for Japan is strict neutrality. We want both East and West to guarantee Japan's security."

IMPRESSIONS

I remember coming away from that interview wondering at the naivete of political leaders who believed Japan could remain neutral in the struggle between East and West. Japan is far too valuable a prize—strategically and industrially—to be ignored for long by either side. If by unhappy chance the United States should drop Japan from its overall plans, it stands to reason the Communists would move swiftly into the political vacuum before the Socialists could shout Banzai.

The trouble, I think, is that the Japanese Socialists are under-rating the importance of their country. Japan today is a prize plum necessary to the West and coveted by the Red world. Of the two, there is no doubt that the masses of Japan would choose the West as friends, mentors and allies in the struggle for peace with honor and freedom.

[From the Japan Times, May 22, 1960]

THE ONLY ALTERNATIVE — SECURITY TREATY WITH UNITED STATES NECESSARY TO PROTECT PEOPLE'S INTERESTS

(By Shintaro Fukushima)

(Shintaro Fukushima, president of Japan Times, expressed the following views at the public hearings on the new Japan-United States Security Treaty at the House of Representatives on May 13. Fukushima was asked to testify by the Liberal-Democratic Party. The hearings were televised by NHK on its nationwide network.—EDITOR.)

It was argued when the existing Japan-United States Security Treaty came into being that it was forced upon Japan by the United States. The argument, it is believed, may have been true to a large degree, but can we say that the treaty, therefore, has no reason to exist?

The new Japanese Constitution was forced upon this country by the United States and many were dissatisfied with the way it was made. None, however, I believe, entertain doubt about the rationality of the principles it embodies.

It is so with the security treaty. I think that the people at large now approve the existence of the treaty itself, although they are aware that it has various defects.

The people of Japan, when the peace treaty was concluded and Japan recovered its independence, chose to reconstruct the country and maintain its independence through cooperation with the United States. The majority of the people approved this idea and few had doubts about it. This is why discussion about the security treaty has centered on its revision both within and without the Diet for the past several years. The press also held the same view.

WHAT MATTERS MOST

The public clamor for revision of the security treaty led Prime Minister Nobusuke Kishi and Foreign Minister Aiichiro Fujiyama to enter into negotiations with the United States for its revision. And a draft of the new treaty came out with nearly all points formerly at issue having been improved and corrected.

Public opinion made a sudden change of course when the draft treaty was laid before the national assembly. What matters at present is not whether the treaty needs revision but whether such a treaty is necessary for Japan or not.

We can well imagine how the no-treaty advocacy came into being while the matter of revision of the treaty became a political football between the conservative and renovationist forces. But it must be remembered that what is important is how to guarantee the security of this country and how to protect the people's interests.

We cannot approve the attitude of the Government and opposition parties to handle the security treaty issue as a mere domestic political issue for such a long time. As for the reports that various factions of the Government party have utilized it as a tool for their intraparty strife, we cannot but feel regrettable.

AIM OF TREATY

The people are free to oppose the Kishi administration. They are also free to denounce the Liberal-Democrats. But we do not want to have them analyze the international situation in an arbitrary way or try to distort the country's foreign policy merely for the sake of opposing them. We do not want to repeat the old mistake of being involved in war by making an inadequate analysis of the world situation.

The opposition once charged the Government that even if Japan wanted to revise the security treaty, the United States would not agree to it. The Government, however, managed to work out a revision and the opposition this time contends that Japan does not need such a treaty.

This, we believe, is the way the security treaty issue was handled in the Diet.

We do not believe that a real antipact opinion opposing cooperation with the United States and favoring a tieup with the Soviet Union exists on the Diet floor.

Fundamentally, I would like to ask what the aim of the security treaty is. Let me say once again that all depends upon judgment about how we should protect the interests of the people and the security of this country. What matters here is not the people's likes and dislikes but the means to guarantee the safety of this country. We should therefore, choose means that will prove most effective under existing circumstances. We do not want the Government and opposition parties to regard the matter as a mere political issue and gamble over it.

CHOICE OF TWO SIDES

The world of today is said to be a world of peace and war, of course between the United States and the Soviet Union or between the free and Communist camps.

There is no need to think of Japan taking the initiative in waging a war with either of these two camps. In order to defend its security, Japan has no choice, but to determine whether or not to take sides with either of the two.

There may be an opinion that Japan should adopt communism as a political system, side with the Soviet Union and Communist China and thereby become a member of the Communist bloc.

As seen in many cases of the birth of Communist states, any country which becomes a Communist state must live under the control of the Soviet Communist Party.

No one is treated as a human being except party members in the Communist world, which cannot be considered to be a democratic community in the true sense of the word. I believe that such a community is unacceptable to the majority of the Japanese people.

MATTER OF ECONOMICS

I do not know of any country which exists in the Communist bloc that does not adopt a Communist political setup. For Japan to join the Communist bloc, at least at present, amounts to severing its relations with the free countries.

Since Japan must feed its population of 90 million, I do not think that the Japanese economy can survive without being a member of the free world. Economic development and increased trade, I believe, are essential for Japan, which has no ambition of territorial expansion, to further its national prosperity.

Political problems are even more important than economic ones. I am convinced that the freedom we enjoy today—politics in which we are allowed to argue about the security treaty as freely as we do today—is a representative form of democratic politics. It is a political freedom which we have won after going through that devastating war. We would not like to part with it.

Joining the Communist bloc means abandoning this hardwon freedom. It is unimaginable that, for instance, the Soviet-China alliance was discussed in the Soviet Union as freely as we are now discussing the security treaty.

In this connection, it is recalled that the IPI (International Press Institute) conference in Tokyo last year did not admit participation of those countries where there is no freedom of the press.

NEUTRALITY UNSTABLE

I previously stated that Japan cannot become a Communist state because of its economic conditions. The problem of political concept counts more heavily. To me, any national policy which deprives Japan of free politics is unthinkable.

Then what about neutrality, if Japan is unable to enter the Communist bloc?

Is it possible for Japan to assume a neutral stand? The question is whether there is any possibility of either of the two worlds resorting to means that denies Japan's neutrality.

It is inconceivable from its history that the United States will attempt to control Japanese territory or force Japan to change its present political setup. In other words, it is unthinkable that the United States will press Japan to alter its present mode of living or political concept.

What about the Soviet Union and Communist China, then? There is no knowing what really exists behind the Iron and Bamboo Curtains. They may have no intentions of territorial expansion, but at least it must be remembered that the two Communist nations are taking interest in the progress of Communist movements in Japan.

It is possible that the Soviet Union and Communist China will tighten their strings on Communist movements in Japan, should Japan be isolated from pursuing a neutral policy.

That they are in a mood to do so is expressed in the utterances of their leaders, however. At least, it is undeniable that they want to communize Japan.

It can be easily imagined that there will arise friction with the Soviet Union or Communist China, if Japan, when isolated, does not want to become communized.

Undoubtedly, neutralism provides no stable course for Japan to follow as a matter of practical politics.

Japan which is the most modernized country in Asia, it seems, will prove a big temptation to the Communists, when isolated. Some point out in this connection that the Soviet Union is now engaged in a peaceful offensive and the world at large is now moving toward a so-called thaw.

The peaceful offensive, however, is nothing but a means to an end, as can be presumed from the Communist leaders' statements that such an offensive was only "for the immediate future." They said that they needed time to build up the economic strength of their country but that the ideological offensive would be continued at a higher pitch.

JAPAN RED TARGET

It can be expected, therefore, that even if Japan decided to rearm itself or pursue a neutral policy it would prove the biggest target of the Communists ideological campaign.

It is feared, moreover, Japan might be conquered economically by Communist China unless it maintains economic teamwork with the free world.

If Japan cannot hope to achieve stability either through cooperation with the Communist bloc or by upholding the principle of neutrality, the only way left for this country is to take part in a collective security system of the free world or for the time being, conclude a security treaty with the United States. The latest economic conditions in Japan show that Japan can achieve, by this method economic developments necessary for its existence.

The ideal method of maintaining peaceful coexistence may be to improve the function of the United Nations to such a lofty level and I believe this is possible. For the time being, however, I think there is no alternative for us but to support the security treaty formula and this will certainly serve our purpose.

TRUST AMERICANS

I recall in this connection a statement made by former Japanese Ambasador to the United States Hiroshi Saito a few days before his untimely death in Washington 23 years ago. The remark which sounded almost like a will or last testament was "Trust the common sense of Americans." His death occurred just when relations between Japan and the United States were fast deteriorating because of the Manchurian and Sino-Japanese incidents.

Various factors can be cited which caused the Pacific war. One of the most influential among them is Japan's misunderstanding of the world situation. The Japanese mistakenly thought at that time that Americans were a conglomeration of various different races and accordingly, once war broke out their unity would be lost, that Hitler would conquer the world and also that Japan should rather take up arms and deal a blow against the United States rather than remain idle and succumb to American imperialism.

Today we are at the crossroads between the United States and the Soviet Union and so it is desirable to use our common sense. We would like to follow the safe policy for the sake of the 90 million Japanese. It may not be interesting to remain sensible, but it is a matter of life and death for the entire population. One may feel that the principles of democracy, are slow and tedious. But am I alone in feeling that democracy, which is based on the principle of elections involving all the people, is better than the Soviet and Communist Chinese form of politics under which no election really deserving of that name is held?

TREATY A NECESSITY

The conclusion of my testimony is that under existing circumstances in which Japan is placed, I think the Japan-United States Security Treaty, if it is made the basis of Japan's foreign policy, will place this country on a safer basis. The ability of the Government and the Liberal-Democratic Party to revise the treaty cannot be wholly praised, but it can be said the new treaty and the administrative agreement, implementing it are better than the existing ones.

There is the opinion such as that held by Haruhiko Nashi, former Japanese Ambassador to London that this is not a suitable time to revise the security treaty. But the Japan-Soviet joint declaration itself notes the existence of the treaty and it is strange that the Soviet Union should have opposing views on it at this time. If there are any complaints, they are certainly forced.

If the security treaty is necessary for Japan, its revision should be improved as a step toward improving Japan's relations with the United States step by step. As such it is logical to ratify the revised treaty.

DEPARTMENT OF DEFENSE APPROPRIATIONS, 1961

Mr. SYMINGTON. Mr. President, it is my understanding that the defense appropriation bill will be considered by the Senate today.

The reason why the Japanese Government decided it could not adequately protect our President was that we in America have allowed our relative overall strength—economic and psychological, technical as well as physical—to decline steadily in recent years. If this willingness to put our complacency above our security continues, there will be steadily fewer countries in which the President will be welcome.

I hope the Senate will give consideration to this viewpoint as it considers the current inadequate defense request which has been submitted by this administration, and as it considers the mutual security bill.

Mr. President, everyone will have an opportunity to show how he feels about the latest success of the Communists when we, the richest people in the history of the world, decide shortly whether or not we can afford an adequate defense.

APPROVAL OF SENATE ACTION ON DEPARTMENT OF DEFENSE APPROPRIATIONS, 1961

Mr. BENNETT. Mr. President, I commend the chairman and the members of the Committee on Appropriations for the outstanding job which they have done in connection with Department of Defense appropriations for 1961.

The Senate Committee on Appropriations has certainly shown vision and foresight in adding over a billion dollars to the bill as passed by the House. This action not only restores many of the harmful cuts which had been proposed by the House, but in addition provides new funds in several important areas to help strengthen our defense efforts.

I am especially pleased with the action taken by the Senate Appropriations Committee in restoring funds for the Bomarc program. I quote from the committee report—pages 29 and 30:

> During the course of the House and Senate committee hearings a revised air defense program was submitted by the Department of Defense, requesting a reduction in the Bomarc program of $381,100,000. The House in acting on this matter, reduced the Bomarc program in accordance with the Defense request, and in addition, made a further reduction of $40,400,000 in the 1961 program and an additional $253,600,000 in prior years' programs, or a total reduction from the revised request of $294 million. The Senate committee recommends full restoration of the $294 million and in addition has provided $75 million for the equipping of two additional Bomarc bases which have been partially constructed but were not included in the revised Department air-defense plan. These two bases are at Camp Adair, Oreg., and Paine Air Force Base, Wash. The committee has also approved the restoration of $73,560,000 for procurement generally.

The restoration of the Bomarc program is particularly important, because it would cost over a billion dollars to build as many manned interceptors to replace the Bomarc, as can be produced for the $294 million which the House eliminated from the defense appropriations bill. Furthermore, the maintenance and operating costs of interceptors is four times that of the Bomarc missile, and it would take in excess of a year longer for the planes to become operational. Then too, there is no other defensive weapon available or under development which is capable of providing the firepower or rate of fire of the Bomarc. It is a key weapon in our defense network and will remain so until other improved missiles become operational. Therefore, it is important that this program not be scrapped overnight, but be orderly phased out as recommended by the Defense Department.

In view of the increased tensions which have arisen in the world since Nikita Khrushchev kicked over the traces at the summit conference in Paris, it is most important that we continue to strengthen our military forces. Since we cannot hope to surpass the Communist nations in manpower, we must keep ahead of them in firepower. This can only be achieved through the continued development of new and improved missiles, and the strengthening of our Strategic Air Command.

The Senate Appropriations Committee has recognized that with the tremendous strides the United States is making in improving our arsenal of weapons, it is necessary for the Defense Department to have a wide area of discretion in the use and transfer of funds to accelerate development of any strategic or tactical missile or satellite program. I am, therefore, pleased with the action taken by the committee in granting authority to the Secretary of Defense to utilize an additional $150 million at his discretion for accelerating programs which he deems advantageous to the national defense.

Mr. President, in my opinion the Appropriations Committee of the Senate has accomplished an admirable job in reporting the defense appropriations bill, and I think the proposed legislation is deserving of the complete support of the Senate. I also fervently hope that when this bill goes to conference, the will of the Senate will prevail, so that our defenses might be further strengthened during the next fiscal year.

WOHLSTETTER CALLS FOR DEFENSE DOVETAILED WITH INTERNATIONAL AGREEMENTS TO ACHIEVE PEACE

Mr. PROXMIRE. Mr. President, Mr. Albert Wohlstetter, a top official in the famed Rand Corp., a research organization, has made a tough-minded and provocative contribution to the Life-Time debate on the national purpose.

Mr. Wohlstetter insists that it is not so much a dream or a mission that America needs; it is a recognition that we must make a difficult, onerous analysis of what we want, what we can do, and the efforts needed.

Wohlstetter, in my judgment, is most eloquent and useful in his discussion of the limitations and possibilities of international agreement. He begins by con-

tending that we must have the courage to contemplate some very unpleasant realities:

The crucial problem of thermonuclear war is frequently dispatched with the label "War is unthinkable"—which translated freely means we don't want to think about it. * * * But a purpose hammered out of connected and partially conflicting desires has to be the product of reflection and choice, and if the problems are profound the choice, once made, calls for exertion. There is, unfortunately, no highway leading to high purpose. We cannot resolve the conflict of ends by the simple device of choosing one and ignoring all the others. This is true even of such important ends as reducing the risk of annihilation, a fact which explains the almost universal disparagement of "mere survival" as a national goal. We want much more than simply to survive. To preserve and extend democracy inside our own boundaries and in other parts of the world is not just a nice thought; it is vital.

Then he says:

Today many influential people believe that disarmament is the shortest path to world government as well as the only hope of avoiding a worldwide nuclear war. I believe that arms control may achieve very useful ends, but only if its limitations are understood.

* * * * *

For agreements might slow the increase or dispersion of a military technology that favored aggression rather than defense. They might limit the size of various military forces, or their method and area of operation, or provide information as to their whereabouts. Such devices or agreements might lower the likelihood of a war's being started deliberately or as the result of an "accident" or misunderstanding. They could reduce aggressive capabilities or provide warning of an actual aggression or reassurance that no aggression is under way, and so make mutual deterrents more reliable.

Mr. Wohlstetter contends that they cannot, as he said, bring us within shouting distance of international government. He concludes by saying:

It is a hard truth that for the foreseeable future arms control arrangements can only complement national defenses.

I think that on the eve of our debate on this enormously important defense appropriation bill, this statement by Mr. Wohlstetter is extremely important. While I may disagree with his emphasis, and some of his conclusions, he has made a notable contribution to the national purpose. We should be giving careful consideration to just this kind of practical, thoughtful, sober analysis based on reality, which can help us to arrive at conclusions on the very difficult, undecided problems which confront us in the consideration of the $40 billion defense appropriation bill.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the article entitled "National Purpose: Wohlstetter View," published in the New York Times for today, June 16, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 16, 1960]

NATIONAL PURPOSE: WOHLSTETTER VIEW—APPRAISAL OF THE NEED TO EXAMINE MEANS AS WELL AS ENDS

(By Albert Wohlstetter)

When we ask ourselves what has happened to our national purpose, we sound vaguely as if, in a moment of absentmindedness, we had mislaid it. In fact, our first self-conscious impulse is to see where we may have left it.

Shall we look in the Constitution? Will we perhaps find it in something Lincoln or Woodrow Wilson said?

What our Founding Fathers have said remains important and inspiring. Still, neglect of their teachings cannot be the whole story, for in the last decade or so, while our purpose is said to have been ebbing, their teachings have been less neglected than in preceding times.

Nonetheless, if the nationwide questioning of national purpose evokes uneasy stirrings, it is for this very reason useful. It indicates that we are in trouble, that a further questioning and debate are in order. But the limitation of the questions raised so far is that they ask for very general answers, for a statement of ends without any explicit weighing of means or costs.

They sometimes seem to imply, therefore, that our difficulties are not really complex, deep or particular, and that they can be solved by a simple reaffirmation—and of some one thing at that. To ask for our national purpose suggests that there is one high overriding aim waiting readymade, if not to be found by leafing through some documents, perhaps to be revealed effortlessly as in a dream, the American dream.

Even the word "mission," frequently used in discussions of national purpose, connotes revealed truth rather than working programs to be won by hard analysis of what we want and what we can do and the efforts needed.

While we may talk about national purpose in the singular, the first thing to observe about our aims is that we have many of them. They are connected; some depend on others; many conflict. Obviously two aims may conflict when each represents the interests of a different group. But even ends that the Nation as a whole can be said to share oppose other accepted national ends.

SURVIVAL VERSUS CONSUMER GOODS

Take "the common defense"—a purpose of nationhood recognized by the Founding Fathers, and even more critical today. We all want to avoid getting killed in a missile raid. On the other hand, most of us would like to see an increase in our present enjoyments. Yet reducing the chance of our demolition is at odds with getting the utmost in production of civilian goods and services.

Deciding to reduce the risk that we may have no future at all is only an extreme form of the choice between present and future enjoyments—a choice we make in the everyday act of saving—and there is a growing public recognition of the importance of that choice.

There are other conflicts. We want to make the new nations of the world more stable and help them abolish poverty by technical innovation—but innovation means change and instability.

We would like to increase democracy everywhere, but this conflicts with our desire not to interfere with the internal affairs of other nations.

We hope to propagate the peaceable uses of science and technology, but in doing so we spread information about methods of destruction.

We want to defend the independent non-Communist countries but this increases the hostility of the Communist world. In all these matters our desires are complex and partially conflicting.

To make fundamental choices, we must understand specific means as well as general ends. Today we need to learn about intricate and uncertain matters, like missiles and their implications. We must contemplate some extremely unpleasant possibilities, just because we want to avoid them and achieve something better.

Nobody, however, likes to think about anything unpleasant, even to avoid it. And so the crucial problem of thermonuclear war is frequently dispatched with the label "War is unthinkable"—which, translated freely, means we don't want to think about it.

But a purpose hammered out of connected and partially conflicting desires has to be the product of reflection and choice, and if the problems are profound the choice, once made, calls for exertion. There is, unfortunately, no highway leading to high purpose.

We cannot resolve the conflict of ends by the simple device of choosing one and ignoring all the others. This is true even of such important ends as reducing the risk of annihilation, a fact which explains the almost universal disparagement of mere survival as a national goal. We want much more than simply to survive. To preserve and extend democracy inside our own boundaries and in other parts of the world is not just a nice thought; it is vital.

If we did not take these goals seriously, physical survival might be easy. We could reduce the danger of thermonuclear attack on the United States by giving the Communists free anything they might want to take by aggression.

In fact, several eminent non-Communist Englishmen have suggested this alternative for our consideration. In rejecting it, however, we need not sound excessively disdainful about the value of keeping alive. Physical survival is necessary to achieve our other widely shared purposes, even though it is not enough.

When we have tended in the past to fix on one goal to the exclusion of others, we have in effect been evading the responsibility for taking greater pains. Since World War II our policy has been notable for both an extreme reluctance to call for national effort and a wild oscillation from one purpose to another, rather than a steady stress on some combination of goals.

For example, we have gone from supporting emergency economic aid for our allies to concentrating on their defense so exclusively that most economic aid had to be represented as defense support.

We have swung from unilateral disarmament—and a neglect of the Communist threat—to rearmament and even to a conception that negotiations with the Communists are futile, if not treasonable, and that liberation of the satellites should come first.

In recoil from this extreme and out of sheer fatigue, many of us have staked enormous hopes on the possibility of concluding broad agreements with the Russians soon, and our resolution to defend parts of the free world against Communist aggression has become subject to doubt.

Now the ghost of Paris has displaced the spirit of Camp David and the spirit of Geneva, and we may fear another emotional swing.

NO CHEAP ANSWERS SEEN

Throughout all these swings since the war, our wish for cheap answers concealed from us the depth of our problems. We adopted a technical assistance program as an inexpensive substitute for American capital to develop backward countries. A defense of our allies was based in nuclear threat rather than on matching the nonnuclear forces of our antagonists. Collections of gadgetry were hopefully supposed to provide a defense of our cities at modest cost. And now there has been a stripping of our air defense and a search undertaken for a method of deterring war with a minimum of effort and a maximum of hope.

For some, negotiations with the Russians were a labor-saving gadget to achieve stability at even lower defense levels. But the tremendous political and technical revolutions that rack the world today exclude any cheap or single solution.

We may fear that our achievements are menaced by the need to make an effort. I think this is wrong. They are threatened by the risks involved in failing to make an effort.

We have deep troubles, crises that call for resolution and leadership. It is worth saying, however, especially since laments about the quality of American life have become a ritual, that there are very large areas in our society that do not call for leadership and common purposes.

There may indeed be a crisis in American culture, as some of the contributors to this debate believe. I am not sure. Myself, I don't care for tail fins or Elvis or advertising jingles or even Coca-Cola, but I doubt that their popularity is a national danger.

MEDIOCRITY NOT UNIVERSAL

An immense sea of mediocrity surrounds but has not submerged poets such as Robert Lowell and Elizabeth Bishop, artists of the order of Alexander Calder, the choreographers Martha Graham and George Balanchine, and an Eero Saarinen, Gordon Bunshaft, Marcel Breuer, Walter Gropius, Richard Neutra and many others.

New York concert halls offer an extraordinary range of music from ancient to modern that is unmatched in Paris, London, or Rome.

The audience for the best in art, music, and literature may be limited, but so far it always has been, and I am more impressed than some with the wide accessibility of great works made possible by the long-playing record and the paper back. Perhaps, as Pablo Casals has said, when good music is easy to hear it can successfully compete with rock 'n' roll.

However, if it cannot, I doubt that anything our leaders have to say will help much. Whatever their differences on domestic and foreign policy, Mr. Truman's and Mr. Eisenhower's comments on contemporary art are similarly unflattering and would lead us nowhere I want to go. In any case I don't think we should all be going to the same place. In the area of our private enjoyments we can dispense with a single voice speaking for America.

There are, however, critical points at which private aims become a public concern. For example, as individuals we decide where to live, where to work, and how to travel to and from work; but if multiplied a millionfold without public guidance these decisions are not likely to be compatible at all. In fact, they have brought about intolerable congestion and an urban sprawl desired by no one.

Again, we are being forced to recognize that even individual decisions about where to eat or whom to serve in restaurants or to transport in buses are an urgent common concern. Clearly we must put high on our agenda a large extension of freedom and equality of opportunity especially to American minorities: the Negro, the Puerto Rican, the Indian, and the Asian.

Such a domestic purpose is worthy in its own right, and it also bears an obvious relation to our foreign policy. Race prejudice at home is an enormous handicap to any nation aspiring to lead a non-Communist world that is largely colored.

And foreign policy plays an increasingly important role in the American political scene. Most Americans seem to agree on the need for foreign economic and military aid. The growing recognition that our national ends must be international in scope is a sign of increasing national maturity.

To disperse the benefits of technology, to expand the forces of production so as to end poverty, and at the same time to extend political freedom and self-government in the world—these are great aspirations. As aspirations, they appear in the United Nations Charter, which was signed without embarrassment by some of freedom's sworn enemies.

To bring them down from the level of pious benevolence to something concrete enough to deserve the name of purpose requires the evolution of detailed and consistent policies. And we face enormous problems in assisting the non-Communist countries in their economic and political self-development, if at the same time we want to help them to remain free of Communist domination.

For a candid look at the free world suggests that the phrase, if not a euphemism, has a circumscribed meaning. It means "free from the domination of the Communist bloc," and covers nations with a tremendous variety of political institutions, ranging from those few that have an effective multiparty system and a considerable popular control to a very large number of authoritarian regimes. The truth is that in the world today there are only a few local enclaves of representative democracy.

In much of Latin America, more than a century after liberation from Spain and Portugal, dictatorships succeed one another and representative government, though symbolized in many constitutions, is an unrealized idea. And colonialism in Africa and Asia prepared its subjects no better for democratic self-rule.

While the technological revolutions underway will bring tremendous changes, few nations have institutions that permit internal shifts in political power without violence, and the time when such institutions will be general is a long way off. Even more remote is a world government insuring that revolutionary shifts in power among nations can take place without violence.

Today many influential people believe that disarmament is the shortest path to world government as well as the only hope of avoiding a worldwide nuclear war. I believe that arms control may achieve very useful ends, but only if its limitations are understood.

No arms agreement in prospect will bring us within shouting distance of world government. And while some agreed arrangements might add a little more stability to our present uneasy peace, others could make the balance even more precarious.

An examination of some of the great and complex issues will show why defining national purposes will take much hard thought and produce no panacea. We tend emotionally to associate peace and all that is good with treaties and international arrangements, just as we associate war and all that is bad with arms.

But our emotions mislead us in these simple equations. The principal goal of American arms today is to avoid war by deterring aggression. And history is replete with international agreements that have actually encouraged aggression.

Still it would be unfortunate if, reacting from our excessive wishfulness before the recent summit meeting, we now considered realistic agreements neither possible nor useful. For agreements might slow the increase or dispersion of a military technology that favored aggression rather than defense. They might limit the size of various military forces, or their method and area of operation, or provide information as to their whereabouts. Such devices agreements might lower the likelihood of a war's being started deliberately or as the result of an "accident" or misunderstanding. They could reduce aggressive capabilities or provide warning of an actual aggression or reassurance that no aggression is under way, and so make mutual deterrence more reliable.

Useful agreements are possible because not all our interests conflict with those of our opponents. But our mutual interests are limited, and any realistic agreement is likely to be a limited one and to contain safeguards against violation.

EARLIER PACTS RECALLED

There is no magic in agreement. In almost every year from the end of World War I to the start of World War II the United States, England, and France negotiated international agreements to limit armaments, but neglected controls and penalties. And their zeal was hardly diminished by the overt violations of these agreements and aggressions by the Japanese, the Germans, and the Italians.

The chronicle makes instructive reading today. Only a few months after the Japanese troops opened their offensive in Manchuria, 60 nations met in a general disarmament conference which, in time, drafted plans to limit warships, abolish submarines and, ultimately, to eliminate military aircraft. On March 7, 1936, Germany reoccupied the Rhineland, violating the Versailles and Locarno Treaties. Scarcely 2 weeks later, a treaty for the limitation of naval arms was signed at London by seven powers. On July 7, 1937, the Japanese invaded China; 10 days later the English concluded bilateral agreements with Germany and the Soviet Union. And so it went up to the eve of the war.

It is not too much to say that, for the Western Powers in the interval between World War I and World War II the international treaties were little more than formal records of their decisions to cut their own national budgets. The treaties were rationalizations for unilateral disarmament.

While it is true that arms have never staved off war indefinitely, the same must be said for arms-limitation agreements. An agreement cannot be taken as either good or bad without an examination of its contents. If both sides are wary, the arrangements instituted will be better for both sides than was the status quo before the agreement; and, more important, living up to the agreement will be better than violating it.

It is often asserted that the enormous dangers of the nuclear age make agreement easier now. They may make agreement more urgent, but in crucial respects it is harder. A wishful and careless plan would be much more dangerous than before the last war.

ADVANTAGE TO AGGRESSOR

Nuclear weapons offer an enormous advantage to the aggressor. They make retaliation much harder to achieve, thus giving no automatic assurance that an aggressor will be punished.

Even a partial disarmament, if one-sided, could invite the debacle. And total disarmament, in spite of its rhetorical usefulness, is really understood by both sides to be out of the question in a world of divided sovereignties.

In such a world, if one side were totally disarmed the concealment of even a few nuclear weapons by the other side would enable it to dominate. It is a hard truth that for the foreseeable future arms control arrangements can only complement national defenses.

Both sides recognize implicitly that some arms arrangements might worsen the chance of peace. The Russians fear that Western proposals for inspection will furnish the West with intelligence usable in aggression.

The West on the other hand fears correctly that, in the absence of adequate inspection, the Russians would be free to violate agreements secretly and so obtain the means to dominate.

Enthusiasts for agreement suggest, all too easily, that the parties opposed to arms negotiation are mad, or simply lacking in common sense. But to devise agreements that reduce rather than increase the possibilities for aggression will take great inventiveness and sober study. A realistic arms control arrangement has to be founded on a mutual interest and a recognition that this mutuality is only partial.

The West is quite right in saying that agreements should not be based on faith. If both sides had real faith, no agreement would be necessary. It would be more nearly accurate to say that sound arms control arrangements can be based only on an explicit and precise mutual distrust.

GOAL OF ARMS ACCORD

The best reason for any specific arms agreement is to reduce the risk of war. For us the most trivial, almost frivolous, motive for agreement is to reduce the defense budget—that is, the level of effort. But there is no evidence that a mutually useful agreement would permit less effort. Not counting the large cost of an adequate control system, any realistic agreement for reduction in one area is likely to call for increased effort in others. Nuclear disengagement in Europe, for example, might increase the stability of the peace, but it would require the reversal of our NATO military policy and a new emphasis on nonnuclear forces.

On no subject has discussion been more confused and inconsistent than on the abovementioned level of American effort. On the one hand we are told that Americans are fat, self-indulgent, undisciplined and at the highest peak of material prosperity. On the other, we hear the customary references to the "crushing economic burden of the arms race."

As fortresses are invariably "impregnable," risks "calculated" and disarmament "moral," so the burden of the arms race is always "crushing."

CITES DIREFUL PREDICTIONS

There have been direful predictions since the end of World War II that an attempt to defend ourselves would turn America into a garrison state. But, our defense budget has varied from 40 percent to 5 percent to 15 percent and down again to 9 percent of our gross national product, and our experience offers little confirmation for such fears.

The notion, repeated by Lord Russell, that present defense policies will "before very long reduce the population to subsistence levels" is simply nonsense. Whether or not Americans and Western Europeans are self-indulgent, they were never richer, and they consume more each year. The Government has estimated that our gross national product will increase from $500 billion to $750 billion in the next decade.

The most important implication of our great prosperity and rate of increase in productive power is that we can afford larger efforts for economic development, for reducing the risks of thermonuclear war and for protecting the political independence and self-development of the non-Communist world. Furthermore we may be able to do it with only a modest sacrifice.

In fact, I know of no responsible proposals for meeting these goals that have called for any reduction in our peak level of spending for immediate enjoyment. The widely discussed defense program recommended by the Rockefeller Brothers Fund, for example, could easily be accommodated by the growth in our gross national product predicted by the Government—with no decrease in consumer spending but only a temporary slowing in the rate of its growth.

Would the American public make this mild "sacrifice"? That seems to me to depend on what the public thinks the sacrifice is for. Rather too much has been made of the frivolity and self-indulgence of the fat American public.

An analysis of consumer expenditures hardly sustains the claim. Consumers have increased their spending for such sober purposes as medical care and education faster than the rise in their incomes and faster than the increase in spending for recreation or for the iniquitous tail fins. None of this seems foolish.

In particular there is no reason to believe that Americans would not make a greater effort to accomplish their major purposes if they understood that the risks of not making such an effort were large and the rewards for effort were great. But I doubt that the public of this country was ever less informed on matters directly affecting its life and death. On the contrary at each great crisis the public has been reassured that no further effort is required.

DISCUSSION IS URGED

Leaders of opinion have a large responsibility here to inform the public and widen discussion. The great issues of war and peace deserve to be treated candidly and objectively, without wishfulness or hysteria.

It is not only the politicians who have been deficient in these respects. In my view, the scientists also have performed poorly. They have been bitterly divided and both extremes have tended to use the authority of science rather than its method—to be wishful and impassioned rather than objective.

What is needed is sober thought about the concrete problems of extending democracy inside our own country, of helping the economic and political self-development of other countries, and of negotiating without illusion to settle differences with our antagonists while maintaining the military strength to discourage their use of force.

These are tall orders. They cannot be filled quickly, or finally, or by means of some semiautomatic gadget, or in one heroic burst of energy. Nor will the answer come to us in a dream.

I suspect that in the wide range of activities we must undertake, dreaming will require the least discipline and the least attention to diet. Our problem is more like that of training for a steep, rocky climb. If, as we are told, America is no longer a youth, we may yet hope to exploit the advantages of maturity: strength, endurance, judgment, responsibility, freedom from the extremes of optimism and pessimism—and steadiness of purpose.

A purpose is not the same thing as a wish. Or a dream. Or even a mission. But one fundamental purpose of a democracy is the exercise of reasoned choice, the conscious shaping of events. Even setbacks would be more meaningful if—to use Hamilton's phrase—instead of being ruled by "accident," we could govern ourselves by "reflection and choice."

If the hard problems of our time stir us to more reflective choice, then they will have helped us fulfill one important purpose of a democratic society.

ABOUT THE AUTHOR OF THIS ARTICLE

Albert Wohlstetter, 46, is associate director of projects at the Rand Corporation.

Since 1951 he has conducted studies for the Rand Corporation on the problem of deterring general war and the vulnerability of retaliatory forces. From 1956 to 1959 he was chairman of the strategic air power group of the Rand Corporation, dealing with problems of both offense and defense.

He was scientific adviser to the United States delegation at Geneva during the 1958 discussions with the Russians on the prevention of surprise attack. He has also been a consultant to the State Department.

Mr. Wohlstetter was educated in the New York public schools and Columbia University. In World War II he was a research associate at the National Bureal of Economic Research, a consultant to the War Production Board and an official of Atlas Aircraft Products.

MEDICAL CARE COST OFTEN ROBS ELDERLY OF BASIC DIGNITY

Mr. PROXMIRE. Mr. President, it is obviously and uncontestably impossible for elderly people on low fixed incomes to meet the high medical costs of these times. Even the briefest of hospital stays—and illnesses are neither brief nor infrequent among most of our senior citizens—can drain off a significant percentage of income desperately needed for the very necessities of life.

Here is a letter from a constituent intelligently analyzing the effect of a handful of days in a hospital has on a retired couple's ability to live in basic dignity and security.

I ask unanimous consent that the letter be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEAR SENATOR: There is a great need for some form of assistance for older citizens. I would like to tell you what my wife and I faced during the past 6 months, and ours is not an isolated case.

My wife was in the hospital for 3 days and I for 4 days for tests and observation. Our combined bill including hospital and doctor and medicine was $336. It's frightening to contemplate what a prolonged illness would do to our budget. Our income is about $2,200 a year. After taxes we have about $1,700 left to live on. During these inflated times no segment of our people is worse off than people on a fixed income. We try to do with less in order to make ends meet. We want to end our lives with dignity and in the security of our own homes, with the respect of our neighbors. Can't something be done to give us a break on costly medical bills.

Thank you for your kind consideration.

Sincerely,

——— ———.

RELATIONS WITH JAPAN

Mr. KUCHEL. Mr. President, several weeks ago, together with a number of my colleagues, I met and listened to the Premier of the Government of Japan. He spoke movingly of the desire of his Government and the people whom he represented to strengthen the bonds of amity and of friendship—and of our common purpose of man's liberty—with the Government and the people of the United States. Indeed, the mission which brought him to our Capital was to symbolize to the world two governments and two great peoples desiring to enter into an agreement of mutual security.

The Japanese are a great people. I pray and I hope, and I believe, that the great majority of them, like we Americans, intend to be free and intend to do that which is necessary to remain free, whatever the sacrifice, whatever the costs.

This is a melancholy moment in the history of the globe. Placed in proper perspective, the difficult decision made by the head of the Japanese Government with respect to the invitation to the Chief Executive of the American people must have been one which required realism and courage. I have no doubt that the decision of Premier Kishi was as difficult and as painful a one as he will ever be called upon to make in his life. Proceeding by an abundance of caution, he did not want any chance, however remote, for harm to be visited upon the leader of the cause of man's freedom on earth.

I aline myself with the comments made by you, Mr. President (Mr. MANSFIELD in the chair), when a few moments ago you said the Senate must now proceed to ratify the mutual security pact which pends before us and which will be our unequivocating demonstration that we desire to strengthen the bonds between our two countries, the head of the Japanese Government himself so movingly demonstrated when he was in this Capitol Building a few weeks ago.

The free world is indeed in peril. Strife has been fomented in almost every area of the globe. To the south, a youthful degenerate dictator has poured forth his ugly spleen upon the cause of freedom as we know it.

A high representative of the United States of America—and I make no political comment here—was spat upon by Communist sympathizers in a nation to the south a few months ago. And when the secretary to the President of the United States arrived in Tokyo, there were thousands of people singing the Communist Internationale as he drove from the airport to the city, demonstrating against the invitation to our President and demonstrating against the foreign policy of their own Government.

I cannot believe that those demonstrations, however ugly they may have been, represent the will of the peoples in the countries in which they occurred.

Mr. President, I look forward to voting in favor of the mutual security treaty with Japan.

Mr. JAVITS. Mr. President, I have in mind some comments upon the very grave situation we face in regard to Japan.

I am delighted to have had the opportunity to identify myself with the views of the present Presiding Officer [Mr. MANSFIELD] on the Japanese security treaty.

I believe there are two points in connection with this subject which the American people should today have very clearly in mind.

One is sympathy and friendship for the Japanese people.

The second is constancy in the policies of the United States. I believe that both of these are extremely important.

First, there is the sympathy and friendship of the American people for the Japanese people. The Japanese people have had their experiences in dealing with militaristic rule which got them into Pearl Harbor, and both of us into a devastating war in which they saw war, including the explosion of an atomic bomb, descend right upon their own homeland. Therefore, when efforts are made by the Communists to agitate the Japanese people, in terms of the possibility of a recurrence of that situation, through direct threats to them, one can understand why they would be worried and why this is so harmful to them—a harm inflicted by the Communists. But one can also understand why they, too, should be constant in resisting any such Communist efforts, because by now they have found that alliance with the free world, in defense of the values of freedom, is the only real way to have peace, and that surrender to an oppressive, despotic regime—like communism—often brings on war.

The Japanese people should by now be certain of the importance and the value of the ways of democracy. They should not be disheartened by what often is a thorny, difficult way in seeking democracy.

Thus the Japanese people should, and will, I believe, assert themselves strongly and definitely in favor of democracy.

The Japanese people have the power and authority, under their Constitution, to assert their will; and I believe that the great majority of the Japanese people understand that the hallmark of a democratic form of government is the fact that under it, it is not necessary to engage in riots and revolutions in order to bring about change—it can be done in an orderly legal way if they want it—but that, on the contrary, riots and revolutions only work against constructive change. Also, that riots may not be permitted to dictate a change—this is fatal to democracy.

So, Mr. President, first and foremost we must have sympathy and understanding for the Japanese people; and second, we must have constancy in our own policy.

There is no reason why we should hasten to reach any conclusions about U.S. bases overseas, based on what is happening in Japan. Analogies between India and Japan—and I heard one made on television this morning—are not apposite. They are not apposite, because of differences in geographical location, differences in regard to threats to liberty, and differences in regard to the previous histories of the two countries, particularly as regards the United States and Japan, insofar as both countries were locked in combat in the great World War II.

Mr. President, Japan is an industrial nation; and we know the cupidity of the Communist leaders with respect to a great industrial nation. Today, they are seeking to fasten themselves upon Japan in much the same way that they have sought to fasten themselves upon Germany, in the West; and West Germany affords Japan an excellent example of how constancy and devotion to progress in peace and the development of free institutions are of the greatest benefit to peoples who are subjected to the kind of pressures the Communists are now placing on Japan.

Mr. President, Japan is a very proud country; and I believe that, fundamentally, the pride of the Japanese people in their own traditions and in their own capabilities will assert itself most beneficially in this situation.

So far as we are concerned, I thoroughly agree with my colleagues that the United States-Japanese Security Treaty should be ratified. Also, we should not jump to any hasty conclusions about U.S. bases, unless those conclusions are dictated by the fundamental security of the free world, for which we bear such a heavy responsibility.

Mr. President, we are learning what it means to have world power. It is not uncomplicated, and it is frequently very dangerous, but the wise and constructive exercise of this power, without being rushed or panicked, is going to be determinative of whether this world will or will not be secure. And so, at one and the same time that we have sympathy and friendship for the Japanese people, we need to have a belief in ourselves and our own policy, to be constant in our policy, and not to be panicked, pushed, or threatened into a change which is adverse to the whole free world.

Mr. President, I shall vote for ratification of the United States-Japanese Security Treaty, and I hope we will ratify it promptly, and proportionately to the kind of challenge with which we are faced today.

Mr. President, on another subject——

Mr. JOHNSON of Texas. Mr. President, would it interfere with what the Senator has to say if he yields to me for a brief statement? I must go to the Foreign Relations Committee.

Mr. JAVITS. No. I yield.

Mr. JOHNSON of Texas. I should like to say, summing up the discussion this morning, that none of us are so naive as to believe that policies can be reexamined and decisions made to recast them overnight. That is a job that will take time, effort, and careful thought.

But there is always before us one immediate problem. It is to be certain that we do not fall into the trap that Premier Khrushchev has set for us all the way from Paris to Tokyo.

Our Japanese friends devised and became expert in a sport known as jujitsu. This is a form of wrestling in which an opponent is cleverly handled so that he uses his strength against himself. Premier Khrushchev has many qualities. One of these qualities is a highly developed skill in the art of political jujitsu.

I personally am not going to go into such questions as interviews in a Paris newspaper or the matter of who should send regrets to whom. I have made my position clear from the east coast to the west coast of this country. Neither am I going to go into charges of appeasement or peacemongering that may come from other directions.

It seems to me that the basic point is that we must not succumb to Premier Khrushchev's political jujitsu. We must evaluate the facts calmly and carefully, not because we are seeking scapegoats upon whom to vent our wrath, but because we are seeking the weak spots that must be shored up.

I said in the beginning, with regard to the Paris conference, that I felt Mr. Khrushchev had certain objectives, and that it was extremely important we do not do his job for him. That did not imply we should not assess the whole situation and examine into every question, as the committee has done, under the direction of the Senator from Washington [Mr. JACKSON], and as the Foreign Relations Committee, under the direction of the Senator from Arkansas [Mr. FULBRIGHT] has done. I think both of those have been models for the Senate, and I should like to see our committees emulate the performance that has taken place there.

We all realize we have a presidential campaign this year. That is a fact

which is known to all the world, and I do not think anybody knows it better than Premier Khrushchev, or that anyone is going to use it more than he will, if he can.

We can conduct that campaign, I think, without sacrificing one iota of America's traditional free speech, but we can also do it without helping Mr. Khrushchev and his political jujitsu.

I think the way to do it is the way we have done it in the Senate, through our appropriate committees, our outstanding experts, operating under our constitutional system, sweeping nothing under the rug, bringing the facts out where all eyes can see, but doing it in an atmosphere of judiciousness, and coolly and calmly assessing the whole situation.

The chairman of the Foreign Relations Committee stated, in my presence, this would be helpful to the country. I think the people of the country owe a debt of gratitude to the Foreign Relations Committee and the Jackson committee, and that when we have concluded deliberations relating to the President's good will trip and the Japanese peace treaty, the country will have the same high opinion of them that they now have in light of the Paris matter.

Mr. JAVITS. I wish to thank the majority leader for his comments. The Jackson subcommittee, with which I have personal experience, is conducting a hearing which is in the finest tradition of the Senate, emphasizing the bipartisan aspects of our national policy in foreign relations.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. JAVITS. I yield to the minority leader.

Mr. DIRKSEN. I call attention to the fact that the distinguished Senator from Massachusetts [Mr. KENNEDY], when he addressed this body the other day, in a very formal statement, said:

> As a substitute for policy, Mr. Eisenhower has tried smiling at the Russians, our State Department has tried frowning at them, and Mr. NIXON has tried both. None has succeeded.

I do not know about this jujitsu business, but I know we are up against a very tough customer; and this matter was not intruded into this discussion by the minority leader. The minority leader was on the floor and heard the speech just quoted, and he is going to make some answer to it today. But here is a candidate for the Presidency who made this speech when the Chief Magistrate of this land was out of the country, on a good will mission. If it requires a little jujitsu, I am willing to undertake it.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. DIRKSEN. Yes.

Mr. JOHNSON of Texas. I would hope the Senator would withhold his comments at least until we can notify the Senator from Massachusetts, so he can be present, before the Senator goes into detail.

Mr. DIRKSEN. The Senator from Massachusetts is out of town. The Senator from Illinois has been in town right along. We have a defense bill up today, which is an appropriate time for me to make some observations. I cannot always cut the cloth to suit the time of a candidate. We may just as well be clear on that.

I thank the Senator from New York for yielding to me.

Mr. JAVITS. Both the minority leader and the majority leader have alluded to the President and his trip. I think the hearts of all Americans go out to the President today in his feeling with respect to the cancellation of the Japanese trip.

I think we ought to assure him—and I am sure this goes for all of us, without regard to party—of our continuing appreciation of the dignity, capacity, and tremendous understanding with which he is handling this very difficult job of representing the whole image and concept of the American people to the peoples of the world.

NAACP—FIFTY-FIRST ANNUAL CONVENTION

Mr. JAVITS. Mr. President, I wish to greet the National Association for the Advancement of Colored People on the occasion of its 51st annual convention. This is a milestone in the fight against racial and religious discrimination in the United States. I cannot emphasize too much the primary importance to the well-being of our Nation which I place upon this struggle, in which I took an active interest long before I entered public life. The NAACP has been in the forefront of this struggle and its distinguished record of civilian courage, determination, patriotism, and achievement is almost without parallel in the annals of our land. May the second 50 years of its existence see it fully effective in attaining the objective of full equality of opportunity for all Americans without regard to race, creed, or color.

Be assured, as always, of my continued support and cooperation.

NEED TO IMPROVE SEISMIC SEA WAVE WARNING SYSTEM

Mr. LONG of Hawaii. Mr. President, following the extensive damage and loss of lives in Hawaii caused by the recent seismic sea waves resulting from the Chilean earthquakes, I wrote to the Secretary of Commerce, who has jurisdiction over the U.S. Coast and Geodetic Survey, and to Dr. Alan T. Waterman, Director of the National Science Foundation, seeking information as to what can be done to improve the seismic sea wave warning system and to educate people on how to respond to those warnings when they are issued.

The replies are most informative and helpful. It is obvious from what Commerce Secretary Frederick H. Mueller states that additional funds are needed for our seismograph observatories which detect and locate earthquakes and for our tide stations which attempt to detect whether so-called tidal waves have been caused by the earthquakes. Lives depend upon early detection in both cases. As Dr. Waterman points out in his letter, seismic sea waves travel at the rate of 450 miles per hour in the Pacific Ocean. As described by him, the potential force of seismic sea waves is astonishingly great. His letter makes clear that a great deal more research is needed. Furthermore, he points out that the Soviets are experimenting with hydrophones, an experiment which Dr. Waterman states certainly should be investigated.

This is a problem which affects not only Hawaii, but also the west coast and Alaska, as well as other parts of the Pacific. When an earthquake in Chile can wreak death and havoc all the way across the Pacific to Japan—halfway around the world—it is no longer a local problem but one of great international significance.

Because I believe that all Members of Congress will be interested in the information supplied by Secretary Mueller and Dr. Waterman, I ask unanimous consent that their correspondence with me be printed at this point in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

MAY 26, 1960.

Hon. FREDERICK H. MUELLER,
Secretary of Commerce,
Washington, D.C.

DEAR MR. SECRETARY: The rising toll of deaths and property damage in Hawaii has demonstrated dramatically and tragically the urgency of a reliable seismic wave warning system and the urgency of proper precautions once a reliable warning is received.

It is obvious that something must be done to help prevent a recurrence of this apparently needless loss of life. Since the Coast and Geodetic Survey is in your jurisdiction, I am calling upon you to give this problem a most thorough study.

I do not imply by this request any criticism of the Coast and Geodetic Survey. In fact, from what information I have gathered so far, the Survey is to be complimented on the timely warnings which it did provide following the earthquakes in Chile in the past week.

I do request, however, that the appropriate experts in your Department be called upon to suggest what improvements can be made, not only within the warning system of the Coast and Geodetic Survey itself, but also in connection with any other agencies of government—Federal, State, and local.

I also respectfully request that the recommendations be based upon opinions of scientific experts and not on budgetary grounds. For instance, would it be beneficial to have additional tide stations in the Pacific, say, at Easter Island?

In addition, I would appreciate your views and the views of your experts on whether there should be greater international cooperation on seismic wave warnings. Since the Coast and Geodetic Survey has had years of experience in manning a warning system, I would hope that your experts could also come forward with some suggestions on how other Federal, State, and local agencies might better make use of these warnings once they are available.

The problem of warning and protecting citizens from seismic tidal waves apparently involves not only scientific instruments and judgments, but also the psychology of people. How can people best be educated to respond properly to adequate warnings? How can they be convinced that the Government is not crying "wolf" when a seismic wave warning is issued?

Although these problems may or may not be your immediate responsibility, I would appreciate your views, for what good is the best warning system in the world, if it is misused or ignored?

Your cooperation in response to this inquiry will be most sincerely appreciated. It is submitted to you in an effort to be constructive and to offer to you and your experts an opportunity to make recommendations which conceivably could save many lives in the future.

Sincerely yours,

OREN E. LONG.

THE SECRETARY OF COMMERCE,
Washington, D. C. June 9, 1960.

Hon. OREN E. LONG,
U.S. Senate,
Washington, D.C.

DEAR SENATOR LONG: In acknowledgment of your letter dated May 26, 1960, I agree most emphatically regarding the urgency of a reliable seismic sea wave warning system and of proper precautions subsequent to the issuance of a reliable warning.

I am glad to assure you that the seismic sea wave warning system administered by the Coast and Geodetic Survey has successfully detected and issued timely warnings of every measurable seismic sea wave since its installation shortly after the 1946 tragedy at Hilo. Specifically, the disastrous wave of the early hours of May 22 was reported as an advisory to the military and civil authorities on Oahu more than 12 hours in advance of arrival. This advisory was changed to a full warning about 6 hours later.

Information now available in this office is not sufficient to ascertain the effectiveness with which the military and civil authorities disseminated the warnings to the public. This information may be directly available to you. However, the Coast and Geodetic Survey will solicit information from its Honolulu district officer, and I will be glad to forward additional information on this point when available.

I think we may state categorically on past performance that the warning system administered by the Survey is effective and reliable. The Survey officials, however, inform me that improved certainty of operation would be achieved by the addition of at least one assigned observer at each of three contributing seismograph observatories which are not now staffed strongly enough to permit uninterrupted watch to be maintained. Moreover, additional tide stations equipped with wave alarm devices would be helpful, particularly in the Aleutian Island area, where our coverage is now somewhat weak. Such a station at Easter Island would be notably helpful in the case of waves originating near South America.

The Coast and Geodetic Survey already enjoys some international cooperation, notably from Japan, New Zealand, Peru, and Chile, and it is not clear how the operation of the system could be substantially improved by additional emphasis on this aspect of the operation. Other Federal, State, and local agencies now cooperate effectively as far as we know. We issue technical advices to the military and civil authorities at Honolulu, and to the Federal Civil Defense Administration, region 7, which disseminates warnings in the western United States. We are not aware of other needs at present.

The most obvious fault of the existing warning system is our inability to make reliable predictions of the actual damage effects of waves once they have been detected. This results from a lack of present scientific knowledge of the wave effects. A program of exhaustive study and analysis of existing technical information may be productive and the Survey officials have indicated to me that they intend to carry out such a study. A model study would probably be even more useful, but we do not now have funds for this purpose. The damage effects of seismic sea waves are nevertheless so much a matter of local conditions and subject to so many factors that our ability ever to predict specific damage effects is in some doubt.

I believe the unfortunate casualties sustained at Hilo reflect some degree of indifference to the warnings. Dissatisfaction has been expressed in the Hawaiian press with past warnings of waves which created public disturbance but which caused no damage. I know of no way to combat such undesirable reactions except through vigorous and sustained public education by disaster agencies or public authorities.

Sincerely yours,

FREDERICK H. MUELLER.

U.S. SENATE,
Washington, D.C., May 26, 1960.

Dr. ALAN T. WATERMAN,
Director, National Science Foundation,
Washington, D.C.

DEAR DR. WATERMAN: The catastrophic seismic waves which earlier this week devastated communities on the Pacific from Chile across to Japan caused heavy losses of life and property in Hawaii, particularly in the city of Hilo.

Considering the frequency of seismic waves in the Pacific, I am addressing you to solicit your suggestions as to additional research which might be carried out to improve our knowledge of the causes of the tsunami and means of providing more adequate warning. Would it be useful to undertake research into methods of guarding port cities against seismic waves?

The success of the International Geophysical Year suggests to me that it might be possible to undertake research on seismic waves on an international basis. The recent waves hit virtually every large land mass from Chile to Alaska, and from New Zealand to Japan.

I am writing at the same time to the Secretary of Commerce, to determine if the present program of the Coast and Geodetic Survey for warning communities of impending seismic waves can be augmented. However, I am looking to the National Science Foundation for suggestions as to what research might usefully be undertaken to provide better understanding of the phenomenon. It seems to me that such understanding necessarily precedes more effective prevention.

Sincerely yours,

OREN E. LONG.

NATIONAL SCIENCE FOUNDATION,
OFFICE OF THE DIRECTOR,
Washington, D.C., June 10, 1960.

Hon. OREN E. LONG,
Committee on Interior and Insular Affairs,
U.S. Senate, Washington, D.C.

MY DEAR SENATOR LONG: As suggested in your letter of May 26, 1960, considerable additional research is required if we are to develop a reliable warning system for the seismic sea wave—the tsunami. Also, as you so rightly observe, a closely knit international system is urgently required if such a system is to be really adequate for the Pacific region as a whole. The present U.S. Coast and Geodetic Survey warning system is designed to protect only the west coast of the United States and the Hawaiian Islands. It is anticipated that important progress will be made on the problem of international cooperation at the forthcoming International Union of Geodesy and Geophysics meeting at Helsinki where it will be discussed at length.

It is well known that tsunamis are caused by large-scale disturbances of the sea floor—either the vertical displacement of large areas of the sea floor associated with tectonic earthquakes or, perhaps, by submarine landslides caused by an earthquake. The present net of seismograph stations can locate rather quickly the epicenter and estimate the magnitude of the shock; but this is not enough because only a very small percentage of observed coastal earthquakes are accompanied by tsunamis of sufficient magnitude to attract the attention of observers. The problem, then, becomes one primarily of determining which of the quakes will cause a destructive tsunami. This involves basic research on the mechanism of fault movements associated with submarine earthquakes and of submarine landslides triggered by an earthquake. What is really required here are detailed submarine topographic surveys in potential tsunami source areas before and after an earthquake. Seismological research is necessary to determine the limiting magnitudes and depths of focus of earthquakes that are capable of producing tsunamis. Perhaps we can some day answer the question as to why some quakes produce tsunamis and some do not. This would avoid false alarms such as accompanied the large earthquakes in 1958. It is important to determine if there are definite features on a seismogram which can be used to indicate a high probability of a tsunami.

Following the initial disturbance to the sea surface, gravity waves travel out in all directions. Their velocity depends on the depth of the water which varies in different parts of the oceans. An approximate value for speed across the Pacific is 450 miles per hour. The amplitude at the sea surface is measured in feet in deep water, but the principal wave length may be of the order of some hundreds of miles. Therefore, these waves are not noticed by ships well out at sea. Perhaps research on long-period wave recorders, such as that under the direction of Dr. Munk at the Scripps Institution of Oceanography, will enable us to estimate the amplitude of these waves and thereby predict their amplitude as they approach various coasts. It is possible that there are precursor waves that travel at greater speeds through the water, such as the T-phase, which may serve as definite warning of an impending tsunami. This problem has not been sufficiently studied.

The height of the tsunami wave depends considerably on the topography of the shore portions of the ocean and on the outline of the shoreline. When tsunamis approach shallow water close to shore, the amplitude increases, and in U- and V-shaped inlets, with broad mouths, sometimes reaches a height of nearly 100 feet. It is in low lying ground around such inlets that great damage is sometimes done. Frequently the wave front is a nearly vertical "water wall" or "ram" and the speed of onrush may be of the order of 30 feet per second. As in Miyako in 1896 and in 1933, such waves, having tremendous kinetic energy, sweep away everything movable. In such cases even massive concrete sea walls are broken and tossed around. On the Sanriku coast, the advancing wave exerted a pressure of 800 pounds per square foot. To stop it suddenly in water 15 feet deep would have required a force of about 6.5 tons per square yard. As the water depth decreases, and the wave breaks, the falling velocity of the crest then combines with the velocity of advance to develop greater pressures. These may be as much as 49 tons per square yard for a wave 30 feet high. Earth or concrete walls and groves of trees serve as sufficient protection for small waves, but if waves exceed 100 feet in height, the only sure protection is to build on high ground.

As for improving the warning system itself, it seems obvious that the seismic network should be sufficiently extensive and must utilize the most rapid of advanced techniques for determining the position of the epicenter, such as visible recorders and specialized processing devices. Tidal stations should be more numerous and perhaps have an automatic alarm system. The presence of an intense pressure wave should serve as the necessary identifying feature of the appearance of a tsunami. Hydroacoustic and mareographic observations must be investigated.

The Soviet system, according to Savarensky, employs hydrophones in the SOFAR Channel to record pressure waves produced by remote earthquakes. The speed of propagation of sound in the ocean is faster than that of the tsunami. He states that the hydroacoustic forerunners can be used in the same way as the seismic ones. The U.S. system, I believe, does not employ hydroacoustic posts nor do we know for certain that they would be valuable. However, it should certainly be investigated.

There are a number of scientists in the State of Hawaii who are interested in tsunamis, including people from the Coast and Geodetic Survey, Geological Survey, the Sugar Planters Association, and the University of Hawaii. As the Geophysical Institute of the university grows and develops, the study of tsunamis may well be one of its topics of major interest.

Sincerely yours,

ALAN T. WATERMAN,
Director.

POSTPONEMENT OF PRESIDENT'S VISIT TO JAPAN

Mr. KEATING. Mr. President, there has been and continues to be much speculation as to the causes of the disastrous riots in Japan which have now resulted in the postponement of President Eisenhower's visit. I think that about the most farfetched implication I have heard voiced was that by the distinguished Senator from Missouri, when he implied that the basic reason for the riots in Japan was the economic and military weakness of the United States.

Mr. President, if the United States had had an economic or military strength 20 times what it is today, we certainly would not have sent troops to Japan to put down the riots, and we would have or could have done nothing with our economic strength to that end.

The fact is that we are today the strongest Nation in the world economically, militarily, and I believe spiritually. To seek to assert that it was any weakness on the part of the United States which was the cause of the riots in Japan is little short of ridiculous.

Mr. President, it is apparent, it seems to me, that the Kishi regime is in very deep trouble. This is extremely regrettable. Premier Kishi has shown himself time after time to be a genuine friend of the West. We can express nothing but sorrow over the difficulty which a friend is suffering in this hour. He is an extremely able politician. If he were not, his regime might well have already fallen.

Certainly, if democracy is to survive anywhere in the world, we must learn how to cope with uncontrollable riots and mob violence as a technique used by a minority to promulgate political unrest and upheaval.

The second observation I have to make is that it seems to me apparent there is a relationship between the riots in Japan and the conspiracies and machinations of international communism. Many of the Japanese rioters are out-and-out Communists, as is apparent from their actions, and while they have been threatening violence to the President of the United States and have been engaging in riots, their next door neighbors, the Red Chinese, have not been idle. Communist radio propagandists, for example, have been working relentlessly to arouse radical elements in Japan. Since the beginning of June Red guns have been firing on the offshore islands of Quemoy and Matsu, not only on the odd numbered days, as was done in the past, but also on the even numbered days, in violation of a pledge which they had made, for whatever it was worth.

The Chinese Communists have shown themselves time and time again rapacious in their Asian ambitions, recently we have noted this along India's northwestern frontier. They have marched into Indian territory and have built roads and military airfields, which represent a direct attack upon the sovereignty of India.

Word from Tibet reveals that another Chinese offensive is under way against that unhappy land which has still not accepted the foreign rule of Red China.

These last few weeks should make it painfully clear to us, Mr. President, that in the Far East, as elsewhere in the world, the Communists are doing everything in their power to undermine peace and to put the United States in an unfavorable light.

The riots in Japan were certainly not a local, isolated incident. They were part of a coordinated worldwide effort inspired by international communism.

Mr. President——

The PRESIDING OFFICER (Mr. LUSK in the chair). The Senator from New York has the floor.

COMMEMORATION OF GENOCIDE DAY

Mr. KEATING. Mr. President, the history of man numbers days of glory and days of infamy. Surely one of the most infamous days recorded is that of June 14, 1941, now known as Genocide Day, when the brave Baltic nations of Estonia, Latvia, and Lithuania were literally enchained by brutal Communist tyranny. This week we marked the 19th anniversary of that fateful day when the cruel Soviet overlords tore many thousands of the Baltic peoples from their beloved homelands and deported them to slave labor camps.

The gross inhumanity of the Soviet regime has been displayed before the world on many occasions in the past, but none of these manifestations of savagery offers a more poignant and sorrowing picture than that of the valorous Baltic peoples torn from their homes and forced into enslavement.

Despite this cruel plunder of human lives, the Communist masters have never succeeded in extinguishing the bright flame of courage and of hope in the hearts of freedom-loving peoples they have subjugated. The enslaved citizens of Estonia, of Latvia, and of Lithuania have endured their imprisonment with a fortitude worthy of their great national heritages. Chained, but unbowed, they look forward to the day when the yoke of Communist tyranny will be thrown off, and they will be enabled once again to breathe the pure air of freedom in their native lands.

For our part, let us, on this memorable date, extend our pledge of a sustained and unending effort in behalf of this cherished cause of liberation. Let us commit ourselves to do all that lies in our power to the end that the sunlight of freedom will once again break across the darkened lands of these three courageous Baltic nations.

OUTSTANDING EXAMPLE OF INTERNATIONAL "SISTER CITIES" EXCHANGE

Mr. KEATING. Mr. President, one of the most significant and rewarding aspects of the people-to-people program of international exchanges, inaugurated in 1956, has been the establishment of city-to-city relationships. Under this plan an American city affiliates directly with an oversea community for the purpose of carrying out programs of mutual interest intended to foster international friendship and understanding. This experiment has met with such unqualified success, since its inception, that it represents a great and continuing forward step towards the climate of good will which is the prerequisite to true and lasting peace.

The opening contacts between international sister cities are normally made at the municipal level. Once this official relationship has been established, contacts may then be expanded between groups and organizations that have counterparts in the participating cities, such as in educational, cultural, technical, business, professional, social, civic, labor, religious, youth and hobby fields.

An excellent example of the practical working out of the sister city affiliations may be found in the relationship established between Rochester, New York, and Rennes, France. This affiliation has proved so markedly effective and exemplary that Rochester, together with Worthington, Minn., was selected to receive the first World Brotherhood awards for community activities promoting international understanding and friendship with overseas communities.

The Rochester affiliation with Rennes, in Brittany, has been made to grow and to prosper through the sheer dynamism and dedication of leading citizens of both cities. A most praiseworthy example of the results of such a living program came in the recent establishment in Rennes of a new American cultural center, the first of its kind in any European city.

In the course of a recent Rochester-Rennes committee meeting, honoring Bernard Morin, a Rennes journalist, Sol M. Linowitz, chairman of the mayor's committee on the "twinning" described the features of this unique new Franco-American center. It will contain books, exhibits, films, and other materials dealing with French and American life, art, literature, music, and other cultural activities. In addition it will serve as a clearinghouse for citizens of each nation seeking cultural information about the other.

Mr. Linowitz reported that the building in Rennes now housing a USIA library and the Franco-American Society has been purchased by USIA and will be remodeled for its new and expanded purposes. The decision to place this center in Rennes was largely dictated by the

fact of the existing close relationship between the Breton capital and Rochester.

An honorary planning convention of 10 Americans will be headed by Amory Houghton, U.S. Ambassador to France. A similar committee of 10 Frenchmen will be appointed by the Government of France. Serving on the U.S. committee will be members of the Rochester delegation which visited Rennes in 1958 to complete details of the sister city program. In addition to Mr. Linowitz they are Mayor Peter Barry, Dr. Cornelius W. de Kiewiet, president of the University of Rochester, Edward Peck Curtis, vice president of Eastman Kodak Co., and Paul Miller, publisher of the Rochester Democrat and Chronicle and the Times-Union.

In 1956, when President Eisenhower addressed the White House Conference convoked to establish the people-to-people program, he set the tone which has motivated such effective cooperative action as is illustrated by the Rochester-Rennes community relationship. The President stated:

> If we are going to take advantage of the assumption that all people want peace, then the problem is for people to get together and to leap governments—if necessary to evade governments—to work out not one method but thousands of methods by which people can gradually learn a little bit more of each other. It must have the active support of thousands of independent private groups and institutions and millions of individual Americans acting through person-to-person communication in foreign lands.

It is heartening, indeed, to note the manner in which patriotic and dynamic American citizens have, by their individual and group efforts, breathed life and meaning into the President's 1956 pronouncement. The initiative and vigor of the Rochester committee is typical of that displayed by hundreds of other community leaders throughout our Nation. As a result, the sister cities plan has enjoyed a truly inspiring rate of growth, and constitutes one of the most solid and most promising bridges of understanding now being erected between America and the world.

THE CLEVELAND ORDNANCE PLANT

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent that I may proceed for 3 minutes in addition to the allotted 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. YOUNG of Ohio. Mr. President, some time ago, in this Chamber, I listened with interest and enjoyment while the distinguished and articulate junior Senator from New York [Mr. KEATING] and the two outstanding Senators from California [Mr. KUCHEL and Mr. ENGLE] engaged in a prolonged debate over the New York Senator's allegation that California had been favored in securing defense contracts.

I listened with delight to the running debate engaged in by the three Senators—each one adverting to the advantages of his own State and maintaining to the uttermost that his State should have more, not less, Government and defense contracts, and each Senator giving reasons therefor that seemed impressive.

At that time I did not participate at all. Had I done so, doubtless I would have been a target for salvos from the junior Senator from New York [Mr. KEATING] and also from my colleagues, the hardworking and able Senators from California [Mr. KUCHEL and Mr. ENGLE].

Now, however, apparently chickens have come home to roost. The whims of top brass in the Pentagon, and the apparent unjustified harsh dealing relating to outstanding facilities in the suburbs of the city of Cleveland, where I live, compel me not only to sympathize deeply with the views expressed by the junior Senator from New York but to assert that again California has scored, and, in this instance, by reason of bidding procedures followed by Department of Defense officials which I challenge. We in Ohio are apparently the losers.

Officials of the Department of Defense apparently so worded the invitation for bids as to discriminate against us in Ohio.

A $42 million contract for the production of armored personnel carriers for the U.S. Army apparently will be awarded to a California corporation.

I cite this as a vivid example of a procedure adopted in the Department of Defense whereby a corporation in California benefits, and I believe the American taxpayers will be the losers, as a result of this military procurement method and procedure.

In Cuyahoga County, Ohio, within 10 miles of my home, there is a Government-owned Cleveland ordnance plant. This has been put in mothballs, so to speak. In other words, the plant is idle except for a small custodial force.

Here is a modern plant, formerly employing approximately 11,000 of my neighbors, giving in return for their hard work, steady employment, and some degree of prosperity to members of their families and to our community. This plant is and has been standing idle. It is a nonproducer. Yet it is costing taxpayers more than three quarters of a million dollars each year for maintenance and to keep the extremely valuable equipment and machinery from deteriorating. Not only is this plant a modern plant with late equipment, but in some respects it is a model plant.

This is a 28-acre structure and the machinery within it is said to be worth $130 million.

The Secretary of Defense has up to this good hour refused to surrender this plant to private industry. It has been retained by Pentagon officials on what is called a standby basis. In simple words—idle. This because big brass and administration officials will not use it; nor will they release it.

Civic leaders in my home city of Cleveland have felt all along that this is an outrageous situation and a discrimination against our community and the thousands of skilled workers who have heretofore been employed there.

Some months ago, along with my distinguished colleague, the senior Senator from Ohio [Mr. LAUSCHE], and at his suggestion, I accompanied him and Representatives VANIK and FEIGHAN, who ably and actively represent two of Cleveland's congressional districts, and we had a personal conference with the then Secretary of Defense at his Pentagon office. This followed a number of telephone talks and letter writing on the subject with various Defense Department officials.

The then Secretary of Defense, Mr. McElroy, informed us that this plant was ideal for the manufacture of armored vehicles.

At various times, Representative CHARLES A. VANIK, who has been most active and aggressive in his efforts to secure a fair deal, has spent many hours on this important matter and at all times has kept in touch with both of Ohio's Senators.

It appears to us that due to a lack of vision and good judgment, coupled with certain wording of offers to bidders for defense contracts, there has been a studied plan in the Pentagon to hang on to the plant but at the same time keep it in idleness.

The $42 million contract, which we had every reason to expect, if fairness had been exercised in the Pentagon, to cause reopening of this plant, seems likely to go to the Food Machinery and Chemical Corp. of San Jose, Calif.

This is notwithstanding the fact that our law provides that production of supplies for our Armed Forces shall be performed in Government plants wherever it is economically feasible to do so.

Last year the Department of the Army engaged the Ford Motor Co. at a cost of $338,000 to determine impartially the most suitable plant, either publicly or privately owned, for the economical production of vehicles of the airborne tank family, including the M–113 armored personnel carrier.

The Ford survey recommended the Cleveland ordnance plant on the basis of current needs, future mobilization requirements, and lowest cost to the taxpayers. Secretary of the Army Brucker approved this finding and recommended it be carried out.

In December 1959, the Department of the Army opened this contract to all prospective bidders with the option of using Government-owned plants and equipment or their own plant and equipment or both. The savings from the use of Government-owned facilities would have been passed on to taxpayers.

Two months later the Department of Defense—which has no authority or responsibility for the signing of Government contracts—mysteriously directed that production must be exclusively in the bidder's plant or exclusively in the Government-owned Cleveland ordnance plant.

However, if the Cleveland plant were used, the bidder would be required to pay 5.5 cents rent per square foot per month for the entire plant regardless of how much of it was actually used. This amounts to $67,200 a month or $1,280,000 over the life of the contract.

Furthermore, if Government-owned machinery is used, the bidder must pay a prohibitive rental based on original

acquisition cost, irrespective of actual depreciation. Finally, bidders are required to add to their cost figures the cost of special tooling needed for this project.

Each of these added requirements works to the disadvantage of any company which intends to bid on the basis of using the Cleveland ordnance plant. Together, they make it virtually impossible for any company to successfully bid with the intention of using this factory.

It happens that these restrictions work to the advantage of the California concern.

Mr. President, something is rotten in Denmark.

It is pretty clear that anyone but the most naive observer can see that someone or some group wants the California concern to receive this contract. They want it badly enough to disregard the $338,000 independent study made by the Ford Motor Co. and to ignore the concurrence in this study by the Secretary of the Army and the Army Ordnance Corps.

I certainly do not object to a reasonable and fair rental fee for the use of Government-owned facilities. However, I strenuously object to such a fee when it is used as a means of soaking the taxpayers for millions of dollars, as is the case here. I doubt that the Food Machinery & Chemical Corp. or any business concern for that matter, will be so generous as not to include in their bid a fee for use of their machinery, plant, and depreciation of both.

Congressman CHARLES VANIK, outstanding and able Representative from Cleveland, Ohio, has displayed great zeal and industry in ferreting out the facts of the scandalous affair, taking leadership in exposing it to full public view, and preventing its consummation. He is performing a real public service.

Congressman VANIK has estimated that if this contract is awarded to the Food Machinery & Chemical Co., the taxpayers stand to lose at least $6½ million. In addition, thousands of working men and women of Cleveland will be deprived of employment which would be theirs if this contract were awarded fairly.

Mr. President, this is not a question of Government versus private industry. Regardless of who wins the contract, private industry will do the job. The Cleveland plant should be open to use to all bidders.

It is, however, a question of economy in Government versus special interests who care little for taxpayers' hard earned money.

It is also a question of national defense. Are we to utilize our Government owned plants in line with future mobilization needs or are we to sacrifice these needs for the sake of special interest oriented officials in the Pentagon?

Before any further action on this contract is taken, I strongly urge that Secretary of Defense Gates carefully scrutinize and review the entire matter. The actions of the Department of Defense are in direct contradiction to the independent Ford Co. survey recommendations for which the Government paid $338,000. Was this money spent for nothing? Was this survey just a sham?

In view of the revelations made on the floor of the Senate last Monday by the distinguished senior Senator from Illinois [Mr. DOUGLAS] concerning military procurement mismanagement, we should insist that this contract involving $42 million be looked into thoroughly.

Although I would be less than frank if I did not admit that I would like to see the contract go to a firm doing business in Ohio, that is not my prime concern.

Our concern should be to see to it that taxpayers are dealt with fairly and that our national defense is given proper consideration. If this is done impartially and the California concern is still deemed to be the best for the job, then, of course, no one could properly have any objection to its being awarded this contract.

Mr. President, if it appears this contract is not awarded on that basis, then I shall certainly urge that the proper committee of the United States Senate conduct a full scale investigation of this entire affair.

SUEZ CANAL AND SENATOR GRUENING'S STATEMENT

Mr. SYMINGTON. Mr. President, I have read with great interest the remarks of the Senator from Alaska Tuesday on the curious Middle Eastern policy of this administration. Unfortunately I was unable to be on the floor at the time, but should like to add my congratulations on a concise and thoughtful analysis of the Arab-Israeli situation.

Senator GRUENING pointed up the ambiguous policy, or absence of policy, of the present Administration toward freedom of the seas.

We support the principle on the one hand, but refuse to take the practical steps necessary to assure free access for all nations to the sea lanes of the world.

I joined a majority of my colleagues recently in expressing the sense of the Senate that there shall be freedom of navigation in international waterways and economic cooperation between nations.

Conduct of foreign policy is, and should be, in the hands of the Executive. It is to be hoped, however, that expressions of congressional feeling will stimulate appropriate action by the President.

Steps should be taken by our Government to assure that all waterways, including the Suez Canal, are open to the ships of all nations, including Israel. Only this way can we work toward the international cooperation and understanding that leads to peace.

I congratulate the junior Senator from Alaska for the wise presentation he has made on this subject.

Mr. DOUGLAS. Mr. President, I ask unanimous consent that I may be permitted to comment for 3 minutes on the remarks of the senior Senator from Missouri.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator may proceed.

Mr. DOUGLAS. Mr. President, I congratulate both the Senator from Alaska and the Senator from Missouri for the statements which they have made on the necessity for the Suez Canal being opened to the traffic of all nations. This was provided for in the Convention of Constantinople of 1888. It was provided for in the declaration of the United Nations in 1951. It was pledged by Mr. Nasser in the fall of 1956 when he nationalized the Suez Canal. As both the Senator from Alaska and the Senator from Missouri have emphasized, our administration, while on the one hand it says it believes in this principle, on the other does nothing to effect it.

On the contrary, it approves of the granting of a $50 million loan by the International Bank, which in effect would permit the widening and deepening of the canal. This is running in both directions. I think it indicates that the State Department fundamentally is not concerned about the matter. Foreign aid is not the right of the receiving country. We have the right to withhold this aid from countries violating international law.

I do not charge the members of the professional Foreign Service with being anti-Israel. I wish to make that clear. However, I believe they have a pronouncedly pro-Arab bias. If one wants further proof of that fact, one has merely to turn to the history surrounding the recognition of the creation of the new State of Israel. That was a decision made by President Truman against the advice of the permanent Foreign Service officials. If we trace the history of the Foreign Service throughout the 12 years which have succeeded the recognition of Israel, I think it will be found to be consistently in this direction.

I know there is a school of thought in the United States which holds that the foreign policy should be directed by professionals, and that the citizens have no business interfering in such matters. I think this is a repudiation of the principle of democratic government. The Senate and House made a solemn declaration of policy that they believed foreign aid should not be granted to a nation which violates international law. The distinguished Senator from Arkansas [Mr. FULBRIGHT], chairman of the Committee on Foreign Relations, whom we all hold, and deservedly so, in the highest esteem, tried to reverse this decision on at least two occasions, but he was repudiated by crushing votes. It is now apparent that the Foreign Service and this administration have no intention whatsoever of following the recommendations made by the Senate.

While we gave to the President the ultimate authority in this matter, we believe that more serious consideration should be paid to the recommendations of Congress. I think there is a very real question as to who is fundamentally to control the foreign policy of the United States. Is it to be the people, through their elected representatives, or is it to be the inner circle of professional diplomats?

I hope, though I do not expect, that the Foreign Service, the Department of State, and the administration will take

due note of the very constructive statements made by the Senator from Missouri and the Senator from Alaska.

Mr. GRUENING. Mr. President, I express my appreciation to the distinguished Senator from Missouri and the distinguished Senator from Illinois for this helpful colloquy, which points up the situation which I discussed here the day before yesterday, illustrating the strange disparity in this administration between its words and high sounding pronouncements on the one hand and its deeds, on the other.

This matter was thrown into relief by a statement made by Vice President NIXON in a letter written by him to the president of B'nai B'rith, which was released to the press and which I subsequently placed in the RECORD. The Vice President wrote that the United States had unequivocally again and again affirmed its support of the principle that there should be freedom of transit through the Suez Canal for all nations, including Israel. He repeated that affirmation of support of that principle.

But what is the use of affirming such fine sentiments and proclaiming them to all the world, and then taking actions which distinctly nullify those wonderful sentiments which is what the Eisenhower-Nixon administration does.

As the distinguished senior Senator from Illinois [Mr. DOUGLAS] has pointed out, the International Bank, right in the face of these fine expressions in favor of the principle of freedom of transit through the Suez Canal for all nations including Israel, made a loan of $50 million to Nasser, with approval thereof by all the American delegates of the Bank, who thus registered the administration's support of the loan. They were aware of the boycott of Israel, and indeed it was so stated. They were aware of the violation by Nasser of his pledges. They were aware of Nasser's prevention of any traffic by or for Israel through the canal. They were aware of the fact that such a loan was a violation of our own Government's pronouncements. Yet they proceeded to make the loan to Nasser without even asking for any quid pro quo or any understanding from the Government of Egypt that in exchange for this assistance in widening and deepening the canal there should be freedom of transit for all nations.

So long as there is such a discrepancy between words and deeds, such a double standard of conduct I should say the administration's professions are not worth the paper on which they are written; they are utterly worthless. I emphasize the fact that again and again we see this administration's fine sentiments nullified by its actions.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. GRUENING. I yield.

Mr. SYMINGTON. I thank the able Senator from Alaska for what he has said; and also the great Senator from Illinois for his kind comments.

Does not the Senator remember that shortly after the previous summit conference, which I believe was in July of 1955, the first action taken by the Communists was to arrange an arms deal between themselves and the United Arab Republic?

Mr. GRUENING. That is correct.

Mr. SYMINGTON. Since that time, have we not seen a relatively steady deterioration of our position all around the world?

Mr. GRUENING. That is correct. Almost no week passes without new evidence of the deterioration of our relations with some other country, whether it be Korea, Africa, Japan, or Cuba. We wonder where the foreign policy of this administration is leading us. Obviously it is downhill.

Mr. SYMINGTON. Not only is that true in the Far East and in Europe, incident to the increasing tensions around Berlin; in South America, incident to the recent trip of the Vice President; and in Central America, incident to the problem of Cuba; but it is also very clear that it is a growing problem in the Middle East.

Mr. GRUENING. That is certainly true. The Senator may recall that for many years and even to this day the Republican Party has talked about the Democrats losing China. I should like to ask the Republicans, Who has lost Cuba, at our very door, in a situation not comparable in complexity with that of China?

Mr. SYMINGTON. Does not the able Senator from Alaska believe that we are being flooded with oratory, but are seeing very little constructive action from the standpoint of the reestablishment of the position we have lost?

Mr. GRUENING. Precisely.

Mr. SYMINGTON. If we took a definite position in this matter, which would merely be a reassertion of the right of all nations to the freedom of the seas, that would help to maintain and strengthen our position throughout the world.

Mr. GRUENING. In all these instances, we could take actions which this administration has not the guts to take. I contrast the weak, timid, wishy-washy policies of this administration in such situations as that of the Suez Canal with what Theodore Roosevelt, a great Republican President, would have done. The Senator may recall the situation relating to an Arab chieftain who kidnaped an American citizen of Greek ancestry named Perdicaris.

Mr. SYMINGTON. President Theodore Roosevelt sent a message to the American consul at Tangier, in which he said:

Perdicaris alive or Raisuli dead.

Mr. GRUENING. That is correct. T. R. got action. We should revive his kind of "speak softly but carry a big stick" policy, instead of the reverse. If we did, we might get somewhere. The United States was respected throughout the world in those days although its relative strength as compared with other nations was much less.

Mr. SYMINGTON. I congratulate the Senator from Alaska.

Mr. GRUENING. I thank the Senator from Missouri.

A BALANCED BUDGET MAY NOT BE ENOUGH TO SAVE BERLIN—ADDRESS BY THOMAS G. LANPHIER, JR.

Mr. SYMINGTON. Mr. President, recently a great American, who has already done more for his country than most of us, resigned his position with a defense firm. One of his reasons for doing so was that when he gave the American people the truth about our inadequate and declining overall strength, he was smeared by some persons, who said his primary interest was the sale of defense materials.

Mr. President, this American has no estate. He is young. He has a war record which is unsurpassed. He has a gracious wife and five small daughters. Nevertheless, typical of his devotion to his country, he is now speaking throughout the Nation in an effort to bring to the American people the reason for the steadily declining position of our country with respect to its relationships with the rest of the world.

It is typical of him that he does not take any fees for these talks. He is donating the fees to a project in the interest of the United States which is being conducted at Stanford University.

Mr. President, his addresses are invariably constructive and stimulating. Therefore, I ask unanimous consent that an address entitled "A Balanced Budget May Not Be Enough To Save Berlin," by Thomas G. Lanphier, Jr., delivered to the Independent Bankers Association, at Denver, Colo., on May 25, 1960, be printed in full at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A BALANCED BUDGET MAY NOT BE ENOUGH TO SAVE BERLIN

(Address by Thomas G. Lanphier, Jr., to Independent Bankers Association, Denver, Colo.)

The city of Berlin, by virtue of a series of positions taken by Soviet Russia and the nations of the free world, has become the Rubicon of world war III. Not only because of the large garrison of American troops and their families residing in that city, but because of principles invested there by the United States and its allies.

Events are moving with ominous rapidity toward a moment early in this decade when the free world is going to be called upon by Soviet Russia to stand for what it has long professed to believe. Or let the name of Berlin join that of Munich in the history of the world each of us will leave to his children.

The third world war, which has been waging on political, economic, educational, and scientific fronts for years—publicly unrecognized by our Government—has these past several weeks flared once again into martial headlines.

The U–2 incident, coming just prior to the summit meeting, and affording Khrushchev the several propaganda gambits he exercised at Paris is, of course, cause for immediate concern.

The concern being whether Khrushchev, who is now going through the classic steps of conditioning his people and the world for preemptive war, will press his momentary advantage all the way to actual conflict in the immediate future. This is a remote but never entirely unlikely possibility.

More likely, he will use this opportunity to heighten Russian popular expectancy and acceptance of preemptive war at some future date, should the Kremlin find it necessary and feasible.

In any event, the U–2 incident and Khrushchev's performances in Paris and Berlin are the most recent of a series of current events which point up and, in themselves, are part of the criticality of the decade into which we are moving.

In is my personal conviction that it is long past time for the people of the United States and particularly for such people as you, in responsible executive positions, to make a hard-boiled appraisal of our national situation and objectives for the future. And to make an equally hard-boiled appraisal of the virulent, well-organized, and effective opposition working against us. An appraisal uncluttered by personal, political, or economic considerations to the extent each of us, as an individual, is capable of making it so.

My own such appraisal leads me to the temporary conclusion that my country, as a result of popular inattention and indolent government in the midst of a new kind of war, is losing its position of leadership on behalf of men who believe in the dignity and usefulness of the individual. And may be drifting indifferently toward a senseless nuclear war or, more likely, national disgrace.

Ten years ago the United States was acknowledged, even by the U.S.S.R., to be the nation in the world. Not necessarily the ideal nation, but certainly the most advanced society on earth in a material sense. A society which the Communists had set as their objective to surpass and destroy. A society which many another people aspired to emulate or join because of the freedom it afforded its individual members.

Ten years ago the United States was the most powerful military force in the world. We had the hydrogen bomb and a unique force of bombers with which to deliver it in retaliation against an aggressor. Russia did not have the hydrogen bomb. And the intercontinental ballistic missile was not yet heard of in the world.

Ten years ago the man in the moon was still a romantic figure. No one had yet dreamed that in our lifetime he might be identified as a Communist.

Ten years ago Tibet and Laos were still relatively free. The name of Nasser was little known outside of Egypt. And even Cuba hadn't heard of Castro. In fact, very few people this side of the Iron Curtain had ever heard of Nikita Khrushchev. A considerable number of people at that time even held to the hopeful hunch that when Stalin died, Communist Russia might somehow explode from within.

Ten years ago the gross national product of the United States was $350 billion and the gross national product of the U.S.S.R. was $80 billion.

Today, on the threshold of the 7th decade of the 20th century, things have changed significantly. The United States and the free peoples of the world have experienced a number of changes for the better, particularly in the materialistic field.

For instance, over the past decade the annual gross national product has increased from $350 billion to $500 billion a year. It has risen at an annual rate of 3.5 percent for the decade and 3 percent for the past 5 years.

However, over the same decade, the annual gross national product of the Soviet Union has increased from $80 billion to $185 billion. It has risen at an average rate of 8.7 percent per year for the decade, and 7 percent a year for the past 5 years.

Concurrently Russia has advanced at an impressive rate in the fields of education, of the arts, and even athletics. And, of course, in science. The United States, a decade ago technologically supreme in the world, now shares that supremacy with Soviet Russia in the eyes of hundreds of millions of Asians, Africans, and Europeans.

And, having added to its vast arsenal of conventional arms and submarines its intercontinental ballistic missiles plus the hydrogen bomb, the U.S.S.R. has moved, at least in its own mind, to a point of parity with the United States as a military power in the world.

Historically notable: Within the past 2 years the United States has had the novel experience of having an ultimatum openly delivered to it by the head of another great nation.

And, over the past month, a series of naked threats of force have been hurled against us by the leader of the Russian people. We, through our President, have been called treacherous and thieves and have been likened to a cat which ought to be shaken by the scruff of the neck or dashed to death against the nearest wall for actions displeasing to the Soviet Union.

Indeed, a great many things have changed in the past decade. And while no one can deny that the United States and the free world have made advances in that time it must be apparent to any objective observer that the Communist world has moved further.

Granted it had to start from a more retarded position in many areas, the fact is communism has come further and moved faster and is still moving with an impetus that promises to sweep on past democracy through the next decade—unless democracy renovates itself, clarifies its objectives, and steps up both the tempo and the pace with which its individual members act to preserve its freedom and perhaps its very life.

Against this backdrop: The current events which I think might be pertinent in analysis of our Nation's chance for survival or advancement through the next decade:

First event: Bertrand Russell, whom a great number of people, including himself, consider one of the most reasonable men alive, tells an international television audience that he would rather be a Communist slave than die in a nuclear war. His point apparently being that it is somehow more heinous to die in a war involving nuclear weapons than it is in some other kind of war.

Second event: A crowd of tens of thousands of Englishmen march on Trafalgar Square in protest of nuclear weapons; the great majority of them I assume innocently participant and most of them I am quite certain ingenuously so.

Third event: A professor at a southern university, polling his seven outstanding students on matters of international policy asks the question: If you were today responsible for the leadership of the United States and you were faced with a political action over a matter of principle which would require that you either resort to nuclear war, as you currently understand it, or surrender; which would you do? All seven students chose surrender.

Fourth event: A few weeks ago the President of France visited the United States, and, throughout his tour of our country, he was enthusiastically greeted by the greatest crowds of Americans who have ever turned out to welcome a foreign leader.

Fifth event: Early this spring the Pentagon's Deputy Comptroller, John M. Sprague, remarked that, "the United States economy today could support a larger defense program." But he maintained that that is not the real issue. He opined that the Nation's "most important weapon is a balanced budget or, if at all possible, a budget surplus."

Sixth event: Less than a month ago, in a major address on U.S. policy prior to the Geneva summit meeting, Undersecretary of State Douglas Dillon said peace or war may be involved unless the summit powers resolve the German problem by negotiation.

"Mr. Khrushchev and his associates will be profoundly disillusioned," he said, "if they assume that we will bow to threats or that we will accept their distorted picture of the German problem as a factual premise on which to negotiate."

Seventh event: About a week later, Defense Secretary Gates told the Associated Press meeting in New York that the United States is still the most powerful military nation on earth, is equipped to defend us in the event of either massive attack upon our country or limited war upon ourselves or our allies.

Eighth event: About a week after that, in Baku, Mr. Khrushchev told the Russian people that if the summit meeting did not include favorable action toward recognition of East Germany, that Russia would do so separately. And would support with force what he predicted would be East Germany's subsequent move to envelop Berlin and the allied garrison there.

Ninth event: Soon thereafter, in Moscow, Mr. Khrushchev first told the Presidium that an invading U.S. aircraft, the U–2, had been shot down. Subsequently, in a series of fast-breaking utterances, he has profiteered on this incident against a backdrop of rising popular indignation within Russia. And has threatened to use his missiles, which he describes as more accurate and reliable than bombers, against the United States and/or its allies if such aggression against Russia is continued.

Tenth event: A composite of actions taken by the executive branch of the U.S. Government in execution of our national interest in world war III beginning with May 1, when the U–2 went down into Russia, and ending with May 18:

Over these critical 18 days of stepped-up action in the unfamiliar conflict our Government has in succession been guilty of bad timing and bad luck at the outset; then having been caught in spying, lied about whether or not it was spying; has then been caught in the lie; thereafter at least given the world the definite impression it was going to continue spying flights; then told the world it wasn't going to spy any more, at least in the form of manned aircraft flights over Russia.

Adding to the agitation and dangerous excitement caused by this series of events, on the eve of the summit meeting our Secretary of Defense ordered an advanced form of alert without telling our allies of it, or in fact even advising authorities in Washington he was doing so.

Eleventh event: Last week a crowd of American citizens marched through the streets of New York into Madison Square Garden and filled it with exhortations, presumably to the U.S. Government, to ban nuclear weapons.

Twelfth event: On his way back to Moscow from Paris, Khrushchev stopped off in East Berlin to advise the East Germans their formal recognition will now be put off for 6 to 8 months—until after the American elections.

Hopefully, there are advantages to be gained from the troubles we've had in recent weeks. The principal advantage being an alerting of the American people to the real gravity of the threat against them. A spotlighting of the razor's edge upon which the whole world walks between uneasy peace and idiotic war. And, being alerted, perhaps notice of a pattern in current events such as the dozen I have outlined.

A pattern leading to three questions, the answers to which bear on whether or not our Nation may survive this decade—alive and free.

The first question: Does Mr. Khrushchev believe Mr. Dillon and Mr. Gates when they say we will and can fight over Berlin if Russia resorts to the device Mr. Khrushchev threatened at Baku?

Second question: If Mr. Khrushchev either concludes we are bluffing or decides we are not as strong as we think we are and moves on Berlin, what will we do?

And the third question: If we fight, can we survive?

The answer to all three questions lies in a combination of our Nation's physical defenses and our national determination to accept great risks and possibly great destruction in defending the principles for which we stand.

Of equal importance, the answer lies in the Kremlin's estimate of our physical defenses and our national will.

I have a foreboding that our physical and moral strength to support such a policy may be questioned in the Kremlin. Witness Khrushchev's performances in Paris and Berlin and especially over the subject of Berlin itself.

We are actually physically weaker, and Khrushchev knows it, than we were a year ago to meet any form of local aggression by the East Germans in and around Berlin. And you will remember that President Eisenhower himself attested at that time that we could not meet local aggression in Germany with conventional forces. And offered no other alternative than the possible use of nuclear weapons.

As to our national moral strength to agree to the use of nuclear weapons in reaction to localized aggression in Berlin, I believe the Kremlin would have a growing suspicion that we and our allies may not resort to what most of our people, rightly or wrongly, believe could be national suicide over the Berlin issue.

Witness the popular attitudes reflected in Bertrand Russell's remarks, the protesting crowd in Trafalgar Square, the unanimous seven students down South, and most recently, the rally in Madison Square Garden.

The Soviet Premier knows, far better than the American people do, the relative chances the Soviet people and the American people and their respective forms of government have to survive a nuclear exchange at this moment in history.

Khrushchev knows Soviet Russia has been preparing for over a decade to visit maximum destruction upon us and insure minimum loss of his own population in the event of our exchanging nuclear blows with him. And he knows that, while we have made a considerable effort to develop a retaliatory nuclear striking force for our protection, we have taken few steps to defend our civilian population in the event of nuclear war.

As to armed power: In light of the relative military forces available to the U.S.S.R. and to the free world—the so-called mix of missiles, bombers, submarines, and more conventional armed forces—I am concerned that the Kremlin may be persuaded that it has a more appropriate balance of these forces than ours at the moment and for the next 2 to 3 years.

Our fundamental requirements for physical defense are three:

That we maintain a well-protected, modernized, massive deterrent.

That we have some form of deterrent for limited war.

That we have a home guard for defense against aircraft, ballistic missile, and submarine attack—and some program for insuring survival of our populace in the event of such attacks.

The ominous fact is that we may be highly vulnerable in the first instance, and we have no significant strength in the second and third.

Our massive deterrent, which is vested in our Strategic Air Command bombers and a handful of ballistic missiles, sits in a highly vulnerable state upon less than 100 cramped bases on this continent and in advanced sites abroad. All of these sites are well within range of Soviet short range or intercontinental ballistic missiles. None of these sites has warning against attack by such missiles. And no official or our Government can positively say such an attack cannot be launched by Russia this year or next.

In the second instance, possible limited war, we actually have no force with which to effectively deter it. Secretary Gates recently argued that we do, and cited as instances of its effectivity: Lebanon and Quemoy.

At Lebanon there was no physical resistance either offered us or apparently contemplated since the one airfield we had to rely upon for all our support activity in and out of these was not even denied us by covert methods.

In the case of Quemoy, it is quite possible the brandishing of the massive deterrent may have had some effect in discouraging the enemy from crossing the Straits of Formosa. However, it must be recalled that in this instance the enemy was Communist China. China's day will certainly come, but it is not yet a military force of the modernized status of Communist Russia and the United States.

The inadequacy of our forces for deterring limited war were highlighted by President Eisenhower last spring when, about a month before Khrushchev's deadline on Berlin expired, the President was asked if we would use conventional forces to defend our garrison against East German aggression with similar forces.

The President replied that everyone knew that we could not. When asked if he might resort to nuclear weapons as an alternative, he replied that we would face that when he came to it.

He offered the American people and Khrushchev no other alternative but the two implied: nuclear war or capitulation. There is, of course, another. But it costs money. And concentrated allied effort in the construction of a modernized and mobilized deterrent to limited war in the area of NATO and elsewhere.

As to the home guard, our defenses against manned bomber attack are considerable, but not of major significance as a deterrent. If the bombers came in high we have warning of such attack and could destroy a percentage of them, though not enough to prevent frightful destruction on our continent. If the bombers came in low we would have some warning and little defense against them.

Such attacks as may come from submarines will be detected to a considerable degree. But we will have comparatively little defense against such attack which, itself, can reach a significant number of our SAC bases.

An attack from out of the atmosphere, that is, from intercontinental ballistic missiles, will meet with no resistance. We have no warning of such attack in the immediate future and will have nothing better than partial warning for several years to come. And we will have no significant active defense against such missiles even if and when the Nike-Zeus system is established around such local points as we feel we can afford to protect.

The foregoing inventory of our weaknesses does not necessarily add up to a fatal total. There are things we can do to improve our defenses quickly.

Our massive deterrent could be rendered considerably less vulnerable by the simple device of keeping a significant element of it hovering over the United States at all times; by the further device of rapidly increasing the number of relatively vulnerable but soon available intercontinental ballistic missiles in our arsenal, that is, Atlases and Titans; by accelerating the less vulnerable but not yet available mobile systems: the underwater Polaris and the land-based Minuteman; by resumption of underground testing of more appropriate warheads for these mobile systems; and by stepping up the development of the reconnaissance and warning satellites, Midas and Samos.

Our ability to deter limited aggression with localized forces could be developed within 2 to 3 years—with extraordinary action. Sufficient airlift, not now available, could be purchased in that time to support simultaneous limited situations. The development and production of modernized and appropriate weapons, including nonlethal gases, could also be expedited. And a resumption of underground testing of special weapons would also be helpful for the limited war deterrent.

Parenthetically, the added cost to our current rate of defense expenditure would, I estimate on the basis of some practical experience, run a minimum of $4 billion in fiscal 1961 (less than 3 days of our national income); should be between $8 billion and $9 billion in fiscal year 1962 (approximately 6 days of our national income).

Please bear in mind, in regard to the foregoing dollar estimates, that the Rockefeller report of a couple of years ago estimated the emergency as of 1958, 2 years ago, demanded a minimum additional expenditure over the current rate of $3 billion for fiscal year 1959, $6 billion for fiscal year 1960, and $9 billion for fiscal year 1961. And added that in the estimation of its signators (who included some of the outstanding financial men in the Nation) such additional expenditures would not jeopardize the solvency of the national economy.

While I am on the subject of money I would observe a phenomenon of our time that concerns me in the context of the war we are in: the almost Pavlovian reaction our stock market takes each time the Kremlin blows hot or cold upon us.

Most recent incident: the rush to buy defense stocks in reaction to Khrushchev's heated remarks just prior to and during the summit meeting and the slump in these same stocks following his statement that he will take the heat off Berlin for 6 to 8 months.

Such immediately manic and depressive responses to the utterances of a Communist dictator is of concern in several ways: it seems poor business method in the first instance; it shows a considerable lack of sophisticated understanding of the biggest business in America, i.e., the defense business; and perhaps most disturbing of all, it is an alarming acknowledgment that our national economy, not to mention some of our national policies, is subject to the calculated whim of a man or group of men in Moscow.

Parenthetically, such economic nervousness might be considerably minimized if the American people had cause to be more confident in their defenses and intelligently advised as to positions their Nation plans to take in the world.

Along such lines, we could begin to reorganize our defense establishment along the lines pertinent to the actual form of the physical threat. We could do this by unification of the services with a single promotion list, by creating an integrated retaliatory force, an integrated home defense against submarine and air attack, an integrated limited war deterrent, and an integrated logistic force.

We could begin to effect real economy of time, talent and money by revising our defense planning system toward a more appropriate objective. One in which the formal intelligence estimates of the threat against our defenses is officially used by both the

executive and legislative branches as the basis for constructing our perennial defense budget.

Certainly, the threat against our country has, over the past several years, obviously increased in tempo, in magnitude and has changed significantly in the character of weapons that might be launched against us. Yet the rigid budgetary domination of our defense planning has not changed; for years, under this administration, the allocation of moneys under the ceiling established by the Bureau of the Budget each year has remained exactly the same: 23 percent for the Army, 28 percent for the Air Force. I submit such inflexibility of planning in our defenses is out of joint with the hurrying and changing times.

On another and most important front we could, and long since should, have established a Government agency for the long-term purpose of planning arms control. In this regard, last fall President Eisenhower asked a group of private citizens called the Coolidge Committee to consider on an ad hoc basis possible American policy in the field of disarmament. The Coolidge Committee's report was rendered several months ago—I doubt you will ever see it. My doubt is based on a strong hunch that this report included, among others, the conclusions that—

(a) Arms control should be a matter of permanent rather than ad hoc consideration by the American Government.

(b) Arms control may, in the long run, cost as much if not more than our current defense effort does.

(c) It may be academic for the United States to seriously talk of arms control or disarmament until that day when it is once again strong enough to be listened to on the subject.

We could take broad and intelligent steps to acquaint the American people with the value of a civil shelter program as an element of our deterrent capability that would impress Khrushchev—who considers such things important in his factoring of our national attention to the facts of life or death in the age of nuclear weapons.

In the final analysis, an American people alerted to the conflict being waged against them and obviously working industriously and without fear to meet it would engender a national attitude which, in itself, would be the most impressive element of an effective and continuing defense against nuclear war or the political advances of communism.

For if the Kremlin can be impressed that the American people clearly understand the principles involved and are willing, if need be, to risk their national life to defend those principles—I doubt the risk need ever be taken.

Can the American Nation convert itself, in a brief space of time, to such an attitude? Can we switch from our current preoccupation with the good life to one more appropriate to the grim realities of the day without the violent impetus of actual war?

I believe we can. I have a feeling the people are inherently ready to better organize themselves to deal with this new form of conflict. I suspect this feeling can be coalesced with great rapidity by a leader who understands the conflict and who, himself, has the moral force to deal with the situation.

Witness the American people's reaction to Charles de Gaulle. And witness what De Gaulle and the French people together have done, in a couple of brief years, to come from a point of international condescension to a position of at least respectful consideration by Soviet Russia and the world.

I firmly believe that, despite the gloomy aspect of the moment, there are physical things we can do, there is intellectual attention we can pay, and there is a moral position we can take—all in time enough to insure the safe passage of our society through the decade we are now entering.

We can do these things if we, as a people, understand the threat; if we are willing to work extraordinarily hard to reorganize ourselves to meet that threat; and if the world, and particularly communism, understands we are willing to lay our national life on the line, if need be, to defend in the future the principles for which so many Americans have given their lives in our Nation's illustrious past.

Mr. SYMINGTON. Mr. President, I do not necessarily agree with each and every one of the observations made by Mr. Lanphier; but I hope the address will be read by every Member of this body. I wish it could be read by them before we decide on this all-important measure relative to our national defense.

As many of us have been saying for years, if we are wrong in regard to what we believe is needed, the United States will lose some money—perhaps 2 days of its annual income. However, if we are right, but if these policies are not changed, we may lose our country.

ORDER IN CONNECTION WITH RECONSIDERATION OF VOTE ON BILL ELIMINATING AFFIDAVIT OF LOYALTY

Mr. JOHNSON of Texas. Mr. President, I shall vitiate the order I am trying to obtain if, after it is entered, it is found that it is not agreeable to the minority leader. However, I must leave the floor; and, therefore, I ask unanimous consent that at 12:30 the Senator from Florida [Mr. HOLLAND] be recognized in connection with his motion to have the Senate reconsider the vote by which the loyalty bill was passed last evening, and that not to exceed 20 minutes be allowed for debate, with that time to be divided equally between the majority leader and the minority leader.

Mr. President, if there is objection to that proposal by any Member of the minority, I shall withdraw it.

The PRESIDING OFFICER (Mr. LUSK in the chair). Is there objection? The Chair hears none. Without objection, it is so ordered.

JOHN TATSEY WRITES AGAIN

Mr. MANSFIELD. Mr. President, in the past several months the Senate has discussed many serious legislative proposals of importance to the Nation and the well-being of our allies. It often seems that the proceedings of the CONGRESSIONAL RECORD are sometimes lacking in human interest material. I think it is about time that the thousands of people who read the CONGRESSIONAL RECORD are again treated to a selection of news columns by Montana's colorful news analyst, John Tatsey.

As many colleagues in the Senate will recall, John is the Blackfeet Reservation policeman at Browning, Mont., and writes a weekly news column for several of the local newspapers.

Mr. President, I ask unanimous consent to have printed at the conclusion of my remarks a series of news columns taken from the Glacier Reporter, of Browning, Mont., and the Hungry Horse News, of Columbia Falls, Mont.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Glacier Reporter, Jan. 7, 1960]

HEART BUTTE NEWS

(By John Tatsey)

The community dinner which was given on the 24th of December was well attended and had plenty to eat.

There were a lot of people at the midnight services Christmas Eve, some folks from town.

Mr. and Mrs. Joe Buggar went to Starr School for the Christmas dance and Joe strayed away in Browning. The day after Christmas Joe was seen walking down an alley with a lady. Mrs. Joe Buggar finally found him and took him home. That evening at supper Joe was mad instead of his wife. He took and threw some turkey and stuffings at his wife. She jumped behind her brother-in-law and he got the turkey on the cheek.

Wm. Comes at Night came home from Warm Springs for the holidays and will be going back this week.

Mrs. Francis Bull Shoe and daughter, Mrs. Eagle Feathers, came back from Flandreau where she spent Christmas with her son. Nice trip. Patty and Peter Tatsey, Jr., were along. Patty said she saw Crow Indians at Hardin. She said they were short and fat.

The school program was one of the best for a long time. The children did really fine and one boy by the name of Hot Dog had the crowd laughing all the time.

The Heart Butte dance was really a dance where everyone had a good time and a lot of people from all over. The dancers did not have much room. It was a real Indian dance. There were a few disturbances but they were soon taken care of.

Mrs. George Choate lost her car at Starr School. The driver parked the car and was picked up for fighting. The next night he got out of jail and was caught driving the car and was back in Jimmies Motel.

Mr. and Mrs. Joe Burdeau were at Heart Butte last Sunday for the stick game.

Mose, the trapper, was hired by Richard Heavy Runner to trap some beaver. He made his set and caught two that night. He told Richard he would take some wine for pay. If he did not get that he would turn the beaver loose.

Stoles did some trapping. He caught one large beaver. He brought it to town and asked big money for it but wound up getting $1.50 for it.

One night Stoles was wandering around town after the bars closed. Did not know where to find a friend but finally thought of J. H. Walters. So he headed up that way. When he got there everyone was in bed. An old lady told him to go in the office. The trustees gave him a mattress to lay on. Next morning Jim Walters came in and saw Stoles laying on the floor and asked what it was.

[From the Glacier Reporter, Jan. 21, 1960]

HEART BUTTE NEWS

(By John Tatsey)

Last week there was no news sent on account of the reporter being too busy to take time to write.

There was a lot of snow fell Sunday night which measured up to 8 inches on the level.

There was some elk meat sent out to Heart Butte last Saturday and people were glad to get it.

Ralph Larson from Big Badger trailed his sheep to his lease east of Heart Butte where the feed is still good, hills and ridges bare of snow.

Ed Gobert and Tatsey were driving around the community last Wednesday checking on

an assault and battery case which took place Tuesday night at a deserted cabin on White Tail Creek.

Wm. Comes at Night left last week for Warm Springs where he will stay till this summer and may be released.

Joe Running Crane motored to Valier and Conrad last week where he visited the Conrad packinghouse and came home with some entrails and gave himself a big supper.

Some of the folks went to Browning Tuesday for an open meeting at the agency barracks. Purpose of the meeting was on irrigation and ownership of the water; there were several speakers. Attorneys John P. Moore and Cedar B. Aranow tribal attorneys were present. Fish Wolf Robe of Moccasin Flat made the following statement, he said that he was 89 years old and knows that the Blackfeet Tribe owned the water which runs through the reservation and the reclamation came along and put in ditches and started running water to different parts of reservation and charged the Indians $1.80 per acre weather they used the water or not. The Indian was being charged for his own water. Fish said all water which runs from the Rockies east runs clear to New York and why don't the reclamation charge the people that use the water between here and New York.

Big Eagle told the reporter that Joe Running Crane took a notion to go hunting jack rabbits during the last snowstorm. Joe went on horseback; when he went he took a long stick and wire on the end. He shot a jack and used the stick and wire to get the rabbit. He could not get off his horse. If he got off he would not be able to get on. Nothing to stand on for a booster.

Stoles Head Carrier told Tatsey of his last big spree. One Sunday afternoon he was going home when he came to a bank along the creek. He said he did not know of being so close to the bank when he staggered and stepped off the bank. He rolled 15 feet down to the bottom. The only thing that saved him from going in the creek was a patch of birch. That's what saved Old Napi one time is birch.

Joe Running Crane came to the police quarter this morning and told the reporter that Big Eagle took a sneaker yesterday. He told his wife that he was going to the creek and chop a water hole. Never came home. His son went out and looked for him and found him at Victor Mad Plume home sick, sober, and sorry.

[From the Glacier Reporter, Feb. 18, 1960]

HEART BUTTE NEWS

(By John Tatsey)

It sure has been nice weather the last few days and many people were able to come to church. James Walters was out from town to attend the church services, he has more faith in the Heart Butte church.

A sheepherder went wild for several hours Monday. He had two, shotgun and rifle. He stuck the shotgun in the belly of his boss. The boss got away and came straight to the police quarters at Heart Butte. The Pondera officer came late in afternoon and drove out to the camp and got the man out in the open country. Tatsey was going to use Indian style on him—run circle around his sheep wagon.

Rodger Crawford heard of the excitement. Got home and was already for any one to show up. Checking over his rifle when a chicken flew up on the window he dropped his gun and hit for the next room.

The Conrad Junior basketball team came to Heart Butte and lost the game Sunday afternoon. The Browning Merchants came and lost to the Heart Butte Warriors. The score had a big gap in favor of the Warriors.

Sunday evening there was another game between the Warriors and Independents of Browning. Game going to Heart Butte 117 to 94.

Mose the trapper has not had any luck this winter. There is a little boy who lives near the school; one evening he got home when he noticed a beaver sign at the water hole. He got some baling wire which he used for a snare. Next morning he caught a blanket beaver.

Stoles Head Carrier has been hanging close to home. When he goes any place he goes at night so no one knows or see what he does.

The picture which showed up in the Reporter last week. People were wild over it wondering what it was. The old timers tell of such things like it which they call water people. The old timers have seen those things live and moving. A few days after the picture was seen the people still wondering what it was.

Mr. and Mrs. John Head Carrier was out visiting and were coming home late. While walking along White Tail Creek he saw a person standing in the creek through the ice. He could not go down or out. When John got up to him it was his uncle he pulled him out and he was drunk. He still had his wine and beer at Heart Butte. Everything is alive all real.

[From the Glacier Reporter, Mar. 10, 1960]

HEART BUTTE NEWS

(By John Tatsey)

Last week there was not much going on as every one was attending the all Indian Basketball Tournament in Browning, which was one to brag about.

Sunday was a nice day and were a lot of People come to church, and in the afternoon Wippert Place was also crowded.

John Tatsey was lucky in winning the TV set, first time in his miserable life won something.

Joe Running Crane invited John Tatsey to go to Conrad to get intrails, but they had not butchered.

The Heart Butte sewing club had a display of aprons, quilts, and dresses at Mrs. Geo. Wippert Place.

Stoles Head Carrier stayed in all during the zero weather and one day he got out in the brush to get wood. When two boys came by they saw something moving around among some willows. One said it was a porcupine. When they went to see it was Stoles.

The reporter is writing the story of how the Blackfeet got the name (Blackfeet), and also the Piegan name. It will be a week or two and might be interesting.

Francis Evans No. 2, Leonard Mt. Chief, Sammy Vielle were picked up on a theft charge. All posted bond.

Tatsey got a letter from a man from Brady inquiring about Stoles. He has a job as soon as it warms up. He forget to finish a few loads of rock.

[From the Hungry Horse News, Mar. 11, 1960]

COMES AT NIGHT OFF ON WRONG TRAIL

(By John Tatsey)

HEART BUTTE.—George Comes at Night got off on the wrong trail one Saturday evening. The wife was worried she had a search out for him but was found safety at Jas. H. Walters Place (the jail). It took him just 1 year to step off. He did alright.

Dave Marceau has come home from Washington where he spent a few years. Glad to see him back.

There was no news sent in last week on account of a 1 day change at the office.

The tribal council were at Heart Butte Wednesday the 23d of February where they had a meeting with the Heart Butte people.

The Heart Butte Warriors went to Cardston last week and had a basketball game with the Saint Marys school team and lost by the score of 75–74.

Last Sunday the St. Marys team came to Heart Butte and played in the afternoon and lost to Heart Butte by a score of 50–62 in favor of H.B.

The school basketball team went to east Glacier and came home with the trophy.

Last week Stoles Head Carrier was in town with his furs but came out short after selling but came home happy.

There was a young lady in Browning last week who was on the street. She had something in her hand which she wanted to soak for a few days. The victim look at it, it was a glass eye. Believe or not but its true.

[From the Glacier Reporter, Mar. 24, 1960]

HEART BUTTE NEWS

(By John Tatsey)

Last Sunday was a real beautiful day and they had a lot of People in church and afternoon People gathered at Geo. Wippert Place which went into morning.

Spring has showed that its really here. There were black birds and Killdeers around.

Tatsey drove to Cut Bank Tuesday with a boy that wanted to join the armed forces.

There has not been much going on at Heart Butte but should boom from now on and the weather gets better.

Mose the trapper has been hanging around Browning so the beaver are rather safe.

Stoles was out looking over his traps one morning and found a yearling heifer in a beaver dam drowned so he pulled it out and next 2 days used all his wind cutting dried meat and smoking it to keep the flys away. Remember the flys wont show up till it really warms up.

Pete Day Rider has been taken to the hospital for treatment.

Last week there was a young lady who was fighting her husband and a young girl so she ran down to Tatsey quarters to make a warrant. She started to run and soon she heard some thing behind her so she ran faster. When she got to the Police quarters she looked back and saw a big black dog following her. She thought it was her husband.

[From the Hungry Horse News, Apr. 22, 1960]

MARGARET BOY WEDS COMES AT NIGHT

(By John Tatsey)

Wilard Comes at Night and Margaret Boy were united in marriage Sunday in church. When they left the church they found their car with tin cans tied to the back end and writings such as big daddy.

Mose the trapper has moved to the Frank Johnson place on birch Creek. He has been getting trapped at Heart Butte. Over there are no human trappers.

Tatsey the Police was Patroling Big Badger Creek and saw some fresh signs of beaver and set a couple of traps. When he went to see the next morning there was a mallard in one of his traps.

Palm Sunday was warm and sunny and there were a lot of People in church and everyone was driving around enjoying the warm weather.

Stoles came back from Conrad Monday where the Party last saw him in a back alley with a quart of Gallo and one whole raw kidney. When they looked for him he was gone. Maybe he found a warmer alley and sleep. He don't forget to feed and take care of Stoles.

Mrs. Gorge Wippert said that she has finally got her deed and abstract to the land she is living on at Heart Butte.

Last Monday morning the Police was called that some boy was disturbing Peace up the creek. When found it was Calf Robe and was brought to Browning with some beaver hides.

The Heart Butte race track has been bladed out and leveled for the summer Races.

The committee held a meeting at the school Gym where Calvin Augare was present discussing the coming July Rodeo in Browning.

[From the Glacier Reporter, Apr. 21, 1960]

HEART BUTTE NEWS

(By John Tatsey)

Everybody had a happy Easter and enjoyed dinners at several homes.

Stoles spent his Easter in Browning and came home Easter Monday and doing all right. There might be a wedding we'll wait and see.

Bernie Wilson, Tatsey and two railroad men, Larson and Powell, were on the southside looking over things. The country was a little rough for railroad men.

Tatsey drove to Cardston last Monday evening to a Indian dance at the Gladstone dancehall. A beautiful building. Every one had a good time.

Richard Heavy Gun, John Head Carrier, Henry Bear headed to Cardston for the dance but were tanked up. They did not even go by the customs and were in a farmers pasture when the officer from Cardstone came. They faced a real judge. They will be over there awhile.

All tribal Police have the two-way radios in there cars and are really handy, so boys be more careful.

At the last law and order meeting it was suggested to arrange to send some of the bad wino cases to the Warm Springs. It might help a lot.

HEART BUTTE NEWS

(By John Tatsey)

The storm that came up Saturday sure disappoint a lot of folks because they could not get to church and there week end stick game. There was all of 3 feet of snow on the level.

Police Tatsey was stalled between Old Agency and Duck Head Hill and could not go either way. Lucky he had his two way radio. Porky Sellars came out only to get stuck but all got home O.K.

Mose the trapper headed toward Swift Dam before the storm to trap. He is trapped in there by the deep snow. There was a letter sent to the reporter asking if Mose would rather give up beaver trapping and go killing porcupine for the hide. Some money in it.

Stoles Head Carrier has been staying close to home. He can not walk in deep snow. He may loose some weight when the snow goes off.

Alfred Bouttier is out to Big Badger helping with cattle and sheep at the Tatsey ranch.

Dr. King was called out to the Richard Heavy Gun place Tuesday night where Richard got an attack of some sort and was very sick.

Mrs. Frank Comes at night rushed her little girl to the hospital Saturday afternoon.

Louie Red Head has been staying near the school all winter. Last Friday he went home west of Heart Butte about 4 miles. Sunday morning he saw that he was hemmed in by snow.

The storm was really hard on the loafers. Farmers and stockmen were happy. All worried before the snow came. All safe now.

There will be a music festival at Heart Butte School on May 5 by the school children.

George Wippert was rather lonely Sunday. No one come but had a few boys who played pool till late at night.

Old time doctors who first came to work among the Indians claimed that they could cure drunkenness by injecting horse blood in their veins. Maybe now it would be better to inject horse sense into their heads. Might help some.

Sam Horn was seen in Browning last Thursday first time all winter. He thought it was summer but found it different Sunday morning.

[From the Glacier Reporter, May 12, 1960]

HEART BUTTE NEWS

(By John Tatsey)

Thomas Weasel Head was jailed at Heart Butte, Sunday night and came to town Monday and was picked up by the city police—rather unlucky.

Stoles Head Carrier was in town Tuesday did his shopping and went home. No one knows what happened at home. Wait and see next week.

Mr. and Mrs. Francis Bull Shoe motored to Great Falls Saturday returned in the evening. Francis has started lambing.

John Aims Back has been sitting in the dark after the storm last week. After hunting on Monday in the mountains he got snowblind.

All roads to homes off the main roads were plowed out so everyone was able to move around.

No word has been received of the trapper Mose—he should have showed up on the first of the month.

Mr. and Mrs. John Little Dog were at Heart Butte Sunday evening for the stick game.

Geo Aims Back has been on a 180-day suspended sentence. He completed the sentence Sunday and took off on a celebration. Warrant coming up.

A late report has come in of Joe Running Crane emergency police help. Last Monday he started to walk to the store to get some stuff to eat. He was with his brother in law, he did not go far when he laid down and sent for his wife to go on where he left off and some one came along with a go devil, and rolled Joe on it and took him home.

Johnnie Calf Tail was picked up Monday for causing a disturbance at his home Sunday night. Judge Sharp sentenced him to 60 days.

Sunday was a big day at Heart Butte. A lot of people attended the morning services at the church and most everybody stayed around enjoying the nice weather.

Saturday must have been yard cleaning day for every house. Fires burning trash and the yards are nice and green and some had flower beds and some are out of the ground.

Some of the boys that do plant little grain are getting ready to work up their grounds.

People are all excited about a per capita payment. Heart Butte may have a hot time.

Mose the trapper showed up after the snowstorm and came out with beaver pelts and been staying in town waiting for payment.

Last Sunday was the first time Stoles showed up. He was dressed up and had a straw hat. He is a good looking man but wait until he gets the hundred dollars.

Stoles has stayed on the wagon during last month, but his partner, Crow Tail Feathers fell off somewhere.

Louie Jackson motored to Conrad to see Mr. Robert Kropp on business.

Joe Running Crane has been reporting at the tribal office as sergeant at arms, he fits the job perfect.

James H. Walters quarters look like big construction act last week the way men were moving around and shovels flying around. He works them too hard they don't stay too long.

[From the Glacier Reporter, May 19, 1960]

HEART BUTTE NEWS

(By John Tatsey)

Harry Morris deputy from Dupuyer was at Heart Butte last Tuesday on business.

John Tatsey the tribal police motored to Conrad last week.

People are wondering how they are all going to get to Browning when that time comes for the payment. The tribe should run a triweek railroad to Heart Butte so Stoles and some of his followers will have transportation. No one wants to have them.

Wm. and Helen Running Crane were called to Spokane, Wash., where their daughter Cecil is in the Saint Mary's Hospital. She broke her back in a car wreck which happened last Friday night.

The seven and eight grade children from Heart Butte School took a field trip to Hungry Horse Dam and on to Columbia Falls for dance.

Lower grades took a trip to East Glacier and to Medicine Lake.

There are some folks that are going to Flandreau Indian School for the graduation of some of the Blackfeet children who have been attending that school.

Women are getting wised up in collecting alimony money for their children where the father neglected them. There were three cases this week and more coming.

Chas. L. Jacobson from Conrad was at Heart Butte Sunday getting acquainted with the voters of Heart Butte. He will be around and talk to people in person. He may be a good man for our courts. He is young and good hearted so let's consider him and support him at the primary.

There is something the Indian never got over is that they are fast drinkers. They cannot just sit and sip. They take all they can in one shot. Before liquor was opened on the reservation they used to drink all they can before the police came.

Still doing it, take it easy boys.

There will be a committee meeting Saturday, May 21 to select the Fourth of July committee for the camp at Heart Butte. This is an Indian celebration so all are invited and help us put on a good celebration Saturday afternoon.

[From the Glacier Reporter, May 26, 1960]

HEART BUTTE NEWS

(By John Tatsey)

Some new happened last Sunday, just before the People went in the church two Spotted Eagles started scuffle or fighting which the Mrs. Spotted Eagle headed for Police. This took place in dizzy land, some good People and some bad.

There was a meeting held at Pete Stabs by Mistake home last Saturday where they elected there committees for the celebration camp in July. Sam New Breast, Lomie Red Head, John Tatsey, Joe New Robe, Leo Sure Chief, Paul Running Crane, Wm. Running Crane Treasurer. This group will hold another meeting next week and set there program in the line of Indian doings.

There are nine folks from Heart Butte landed in James Walters quarters while Jim was gone. Stoles bought a car Friday and was giving free rides. The first trip to town the officers nailed him and his riders with him. Stoles was good while on foot he covered too much territory in a car.

We see Posters and card scattered on the reservation with the name Margaret Walters seeking office Clerk of District Court. She is one our Browning citizens has been operating the Yegen Hotel. She has served the People well mainly the old folks so let's remember her on June the 7th, they serve some good boiled ribs.

Last week Stoles was seen at Twin Lakes laying by the shore had a fish pole with no line or hook but he had something else by him.

Last Sunday there was banquet held at the school dining room where the Parents were all Present. Had plenty to eat. So some never went home to eat they stayed with the stick game.

There is a couple that never mingle with Indian stuff but are regular comers now on Sundays at the hand games. Mr. and Mrs. Earl Olinger its OK.

Sorry readers last weeks news was not in the reporter. Maybe the editor may have mislayed it so will have to Jack him up about it.

[From the Glacier Reporter, June 2, 1960]

HEART BUTTE NEWS

(By John Tatsey)

Sunday was a nice day and there were a lot of people at the church and the rest of the day some were in Conrad for the radio and everyone enjoyed a good time.

Monday, Decoration Day, there were a lot of people taking care of their loved ones. The graveyard was a beautiful sight all day with flowers and flags for the soldiers.

Stoles Head Carrier was a visitor at the police quarters Tuesday, he was O.K.

Lost—Dan Calf Boss Ribbs was to put on a medicine pipe smoke. He went up to the store to buy some tobacco and landed in jail, and never came home for a week. He made his medicine at Walters Hotel.

All the folks that went to Flandreau all came home and report a fine trip.

Francis Bull Shoe took his son and others to Duck Lake to fish. Did not have any luck so drove to Cut Bank Creek where his grandson Rusty was fishing when a beaver came out from the bank and swam into his line and hooked it by the tail. The little boy got scared and ran.

Tuesday the funeral was held for Melvin Rutherford and there were a lot of people attended so it showed Melvin had a lot of friends.

Mose the trapper has not been around. He went to town and has not been home so may have to look for him.

"HOW TALL IS A GIANT"—DOCUMENTARY FILM ON LITTLE LEAGUE CHAMPIONSHIP BASEBALL TEAM FROM MONTERREY, MEXICO

Mr. MANSFIELD. Mr. President, on Monday night, I had the pleasure of witnessing on television one of the very few good shows put on through that medium. The show had to do with the Little League world's championship baseball team, from Monterrey, Mexico. I thought the show was both moving and factual as well as was outstanding.

As I recall the championship game, it was my impression at the time, and still is, that these Little Leaguers from Monterrey, Mexico, were, as a group, the best ambassadors the Republic of Mexico had ever sent to our country. They certainly were the Cinderella team of the series. They started as an organized team and in their first year, won the regional playoffs in Texas and Kentucky. They had to work and play under circumstances which were quite different, insofar as they were concerned, from the ones which they were accustomed to in Monterrey.

It is my hope that this documentary film, entitled "How Tall Is a Giant?" will be shown on as many networks as possible, because it will help bring about better understanding between our great neighbor to the south and our country.

I recall that after that team won the championship, the members were received by the President of the United States, in the White House, and also visited the Capitol. One picture which struck my fancy was that taken of the majority leader of the Senate, the senior Senator from Texas [Mr. JOHNSON], with Angel Macias, the star pitcher of the Mexican team.

Special credit certainly should go to Mr. Cesar Faz, who managed the team. He was born in the States, played minor league baseball, and proved himself to be an inspiration and an example to these youngsters. He was, and is, a real credit to both the United States and Mexico.

Also worthy of commendation is an American who was working in Monterrey at the time, Harold (Lucky) Hastings, who along with Mr. Faz, did much to get the team organized, and accompanied it on its various trips to the United States, and is to be commended for the part he played in bringing about a better cementing of the relationships between the Republic of the United States of America and the Republic of Mexico. Mr. Faz, Mr. Hastings, and all the members of the Monterrey world champions are giants in their own right. The Senate and the people of the United States are very proud of all of them.

Mr. President, I ask unanimous consent that an article written by Jack Gould, and published in the New York Times of June 16, be printed at this point in the RECORD, in connection with my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TV: LITTLE LEAGUE HEROES—DOCUMENTARY ON MEXICAN TEAM THAT WON 1957 CHAMPIONSHIP SHOWN ON CHANNEL 4

(By Jack Gould)

A documentary reenactment of the storybook success of the Little League baseball team from Monterrey, Mexico, which in 1957 won the championship at Williamsport, Pa., made for a warm and absorbing film Tuesday over channel 4.

The small youngsters from poor homes in the Mexican community were shown clearing a lot for their first game and then steadily moving forward to greater triumphs, first in the regional playoffs in Texas and then in the Little League World Series.

The film related how the boys lived in their uniforms, walked 7 miles to their first game in Texas and in other ways fulfilled their designation as a Cinderella team. Through the film the problem of racial prejudice was gently introduced. The few unpleasant incidents were more than counterbalanced by acts of thoughtfulness and generosity on this side of the border.

The narrative weaving through the film was the role of Cesar Faz, who organized the Monterrey team with an American friend, Harold (Lucky) Hastings. Mr. Faz himself had had baseball ambitions. In his protege, Angel Macias, who pitched a perfect game at Williamsport, he saw the fulfillment of his own dreams. At times the secondary story seemed a shade overdone, if only because the large accomplishment of the youngsters spoke for itself.

Use of the film on the National Broadcasting Co.'s facilities represented something of a departure—and a welcome one—from usual network practice. The film appeared to have been shot on a silent basis, with the commentary of Mr. Faz and other dialogue dubbed in afterward. From the purely technical standpoint it might not be normally considered for a network special.

But the appeal of the film was enhanced by the absence of the familiar Hollywood slickness; the program had a naturalness and credibility often lacking in many of TV's simulated documentaries. Hugo Mozo, who directed, attained some striking shots of life in Monterrey and displayed considerable artistic ingenuity in making the film on a relatively modest budget.

"How Tall Is a Giant?" as the presentation was entitled, suggests that TV might find other programing material in the experiences of real people. Where the story values are strong, as they were Tuesday night in the courage and determination of the Mexican lads who made their hopes come true, production frills are not too important.

The presentation of the film coincided with Little League Week. No doubt the TV program further stimulated interest in the expanding organization of baseball for young boys. But in watching Tuesday night's show perhaps some viewers wondered a little about the wisdom of placing such extreme pressures on children. Asking youngsters of the age of 12 or 13 to play for a "world championship" would not seem to reflect maximum credit on the judgment of the adult generation.

COMMUNIST INFILTRATION

Mr. BRIDGES. Mr. President, I commend to my colleagues in the Senate a column written by David Lawrence in last night's Washington Evening Star.

It alerts us to a problem about which we have become indifferent or lax. It is the problem of Communist infiltration in this country and in countries abroad. This infiltration takes many forms. It might be spying and subversion or it might be in the guise of so-called student demonstrations.

Student demonstrations cannot be taken lightly whether or not they occur in San Francisco, Ankara, or Tokyo. This is certainly true today when we read in the news dispatches that student demonstrations have forced the Kishi government in Tokyo to withdraw its invitation to President Eisenhower to visit that country.

These Communist-inspired student demonstrations have become so potent in Japan that they threaten the stability of that country and they are expected to force the overthrow of the Government at any moment.

Mr. President, David Lawrence has pointed out the dangers of Communist infiltration and I commend his article to my colleagues in the Senate. I ask unanimous consent that this column be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star, June 15, 1960]

U.S. PERIL: COMMUNIST INFILTRATION—MANIPULATION OF COAST STUDENT RIOT AGAINST HOUSE PROBERS SAMPLE OF THREAT

(By David Lawrence)

Although the Secretary of State, Christian A. Herter, has reported to Congress that the Government of the United States knows the Soviet Government and its allies have 300,000 spies and subversive agents in Western countries, including the United States, this hasn't attracted much attention, even in Congress.

While the rise in Communist activity has been going on inside the United States in recent years, the battle to root out subversives has been flagging. "Student" demonstrations are being boldly organized in an attempt to influence public opinion to demand the abolition of the House Committee on Un-American Activities—an effective

means of exposure through publicity that can warn citizens against being duped and misled by the Communist apparatus.

The Communist menace, indeed, has been pooh-poohed in America recently to the point where indifference now takes the place of alertness. The American people have been lulled into a mood of acquiescence. This has been brought about by the attitude of many misguided persons who, though themselves loyal to America, have assailed all efforts to cope with communism as just "McCarthyism." Conceding that at times some Members of Congress have been overzealous or even oversuspicious about Communists, the facts nevertheless show that Communist activity inside the United States is certainly not a myth.

The favorite comment of those who minimize the Communist operations is to measure the Communist movement in terms of the relatively few members of the Communist Party itself. Actually, however, it takes only a few persons to infiltrate and directly to influence the speeches and comment of persons inside churches, the labor unions, the press, the theater, the colleges and the government.

Not long ago a "student" demonstration occurred in San Francisco. It got headlines because demonstrators sought to discredit the House Committee on Un-American Activities, which was holding a hearing there. Representative GORDON H. SCHERER, of Ohio, Republican, who presided at the California session, said in a speech to the House of Representatives on June 2:

"Let me state categorically that the shameful San Francisco city hall rioting was not a spontaneous outburst of student indignation against the House Committee on Un-American Activities, as many people would like for us to believe. Approximately 3 years ago the Communist apparatus decided that, if its operations in the United States were to be less hampered and more successful, it had to get rid of the Committee on Un-American Activities, discredit the great director of the Federal Bureau of Investigation, and generally weaken the FBI's influence and powers."

Representative SCHERER gave a detailed account of how persons admittedly members of the Communist Party had helped to steer civic and student organizations to participate in the demonstrations. Unfortunately, some churchmen of the leftwing groups have been assailing the House committee and its hearings. That's why Mr. SCHERER included in the speech a statement by a group of ministers who actually witnessed the demonstrations in San Francisco against the committee. This statement said in part:

"The shameful demonstration against law and order and against this duly constituted committee of the Congress defies description. It is our certain conviction that this indefensible demonstration against law and order was conceived, planned, and directed by a few hard-core Communist agitators who were carrying out their textbook orders on insurrection with classic success. Leaders of the mob included faculty members and well-known leftist lawyers for the fifth amendment Communists."

The real story of Communist activity among students in Japan is just emerging. The Tokyo correspondent of U.S. News & World Report in a dispatch last week said Japanese security officers were convinced that funds for student demonstrations there had come from Russian reserves built up in Japan through book sales and cultural tours.

Within the last 24 hours, the United Press International reported from Tokyo that "International communism poured hundreds of thousands of dollars into Japan to oppose President Eisenhower's visit and to fight the new Japan-United States security pact." The dispatch added:

"This confirmed earlier reports from Hong Kong which said the Chinese Communists were supplying huge sums to visitors to mainland China who returned to their homelands to promote the Communist line. Some of the funds went to assist unions which reluctantly supported the anti-American forces against their real wishes but which were in need of money."

When will the American people wake up to the fact that the biggest danger in the near future isn't a nuclear war, but Communist infiltration? Just at a time when exposure and full publicity on Communist methods and tactics are most needed, there is a tendency on the part of leftwing groups in this country to give aid and comfort to the Communist cause by trying to frustrate or abolish the only congressional machinery available for investigation and exposure of Communist intrigue in America.

RECLAMATION PROGRAMS—STATEMENT BY WILLIAM E. WELSH, SECRETARY-MANAGER, THE NATIONAL RECLAMATION ASSOCIATION

Mr. YOUNG of North Dakota. Mr. President, I think it safe to say that no domestic program of the U.S. Government is more important to the growth and prosperity of the West, the Nation's fastest-growing region, than the Federal reclamation program. Regulations and policies affecting this vital program must be kept abreast of changing circumstances and the national need. They must be realistic and sound with respect to the circumstances in which the program is intended to operate. In recent years there has been ground for belief that some of the policies applied to the reclamation program are such as to hamper, and even stifle, western progress, rather than guide and support it.

Last month the secretary-manager of the National Reclamation Association, Mr. William E. Welsh, testifying before the Senate Select Committee on National Water Resources, presented a brief and clear statement with respect to these matters. Since this statement very ably presents views which I believe are important to the welfare and future of the Nation, I commend it to the attention of the Members of this body, and ask unanimous consent to have it printed in the RECORD as a part of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BEFORE THE SENATE SUBCOMMITTEE ON APPROPRIATIONS FOR PUBLIC WORKS BY WILLIAM E. WELSH, SECRETARY-MANAGER, NATIONAL RECLAMATION ASSOCIATION, WASHINGTON, D.C.

My name is William E. Welsh. I am secretary-manager of the National Reclamation Association. It has been my privilege to appear before this committee for the past 11 years in support of the reclamation program for the Western States in behalf of the National Reclamation Association. I wish at this time to express my appreciation to the members of this committee for the very courteous treatment and consideration that has been shown to me on these numerous occasions. Also, on behalf of the association, I wish to express our appreciation for the splendid treatment that has been given to reclamation by this committee over the years.

IMPORTANCE OF RECLAMATION

To a very large extent the future growth, development and prosperity of the West depends upon reclamation. Based upon information contained in the last annual report published by the Commissioner of Reclamation and recently made available to the public, the reclamation projects of the West last year enjoyed the greatest and most prosperous year in all of the history of reclamation.

As a major contribution to the economy of of the Nation it was revealed that the total crop values of all the crops raised on the Federal reclamation projects of the West almost reached the figure of $1 billion, namely, $987,441,504.

Repayment record: Another high spot in the annual report was the remarkable repayment record of the settlers on the reclamation projects. That record is simply fantastic. The amount due and unpaid on September 30, 1959, would make any banker envious of that account. The amount due on that date was $140,294,831.61 and the amount unpaid was only $4,174.80; to state it in a different way, the amount that was due and unpaid on September 30 was less than one three-hundredths of 1 percent of the total amount that was due on that date.

The total cumulative value of all crops raised on all reclamation projects from the time the reclamation law was enacted up to and including the crop year of 1958 was $14,265,102,495. This is more than three times the total amount appropriated for reclamation since 1902. In that connection, it should be pointed out, however, that many of the large projects for which large appropriations have been made are still under construction and have not yet started producing crops. A great many of the other remaining larger projects have been brought under cultivation only during the past decade or so. It is also interesting to note that the total annual value of crops produced is more than three times the total annual appropriation.

The total amount of land irrigated on reclamation projects in 1958 was 6,756,737 acres. Of this amount, 3,405,057 acres received a full water supply, while 3,254,388 acres received a supplemental water supply from the Federal projects. Some of the projects receiving supplemental water received a major portion of their water supply from other sources, but the production on most of the supplemental water projects would have been far less without the water supply they received from the Federal projects.

Increase in income taxes: Numerous economic studies made on several different reclamation projects have revealed a fact that is not too widely known—that the increase in Federal income taxes from the projects areas and the areas supported by the projects are, in many cases, sufficient to repay the cost of the project about every 4 years.

GENERAL INVESTIGATIONS

For quite some time there has been an apparent misunderstanding by the general public with respect to authorized reclamation projects. Just a short time ago, in response to my request, the Bureau of Reclamation made avialable to us a list of projects pending and under various stages of consideration. This reveals very definitely that there is not an adequate backlog of reclamation projects. In fact, outside of the Missouri River Basin and the Upper Colorado River Basin, there are only two authorized projects pending before the Congress on which construction could be started if funds were made available, and the advance planning has not been completed on those two projects. They are the Canadian River project in Texas and the Spokane Valley project in Washington. With the exception of those two, there are no authorized projects ready for construction in any of the other areas of the West. This situation very definitely points out the need for adequate funds for general investigations.

BUREAU OF RECLAMATION INVESTIGATIONS

The trend that has developed in recent years in appropriations for general investigations and planning activities is a matter of increasing concern. The budget now before the Appropriations Committees includes requests for a total of $7,842,000 for the Bureau's planning programs. This is broken down with $4,650,000 for the general investigations program, $2 million for the Missouri River Basin planning work, $938,000 for the Colorado River advance planning program, and $254,000 for the construction and rehabilitation advance planning program.

Taking into consideration anticipated contributions of $104,000 and the fact that the fiscal year 1961 request includes $250,000 for an engineering methods and materials research program which heretofore has been financed from other sources, the overall request for the planning programs represents a reduction of $440,000 below the level of the planning funds available this fiscal year and a decrease of $797,000 from the level of the program actually accomplished in fiscal year 1959. This reduction also is reflected in the number of investigations the Bureau is capable of carrying on. In fiscal year 1959, there were approximately 150 investigations under way. This has been reduced to 139 this fiscal year and, with the further reduction in funds for the next fiscal year, only 115 investigations will be active.

Most of this reduction has taken place in the funds for the general investigations program which is the heart of the Bureau's planning program. On the basis of the requests now before the committees, this program is being curtailed from a level of $5,323,000 of work actually accomplished in fiscal year 1959 to $4,754,000 in fiscal year 1961, including anticipated contributions. This represents a reduction of $569,000, or almost 10 percent. Again this is reflected in the fact there were some 109 investigations under way in fiscal year 1959 whereas only 89 investigations will be active in fiscal year 1961. Or, expressed in another way, there were 25 new investigations started in fiscal year 1959, but, with the limited funds for fiscal year 1961 and the need to concentrate those funds on the work already under way, there will be only 13 new starts in the planning program next fiscal year.

If this trend is to continue it is inevitable there will be a gradual "drying up" of the reclamation program. It is these planning studies that culminate in reports that are submitted to the Congress for authorization and, after authorization, that complete the detailed preconstruction studies to prepare those projects for construction. Again I wish to emphasize that with the exception of the Upper Colorado River Basin and the Missouri River Basin, the Bureau of Reclamation has no significant backlog of authorized projects. Even in those two basins, where there is a shelf of authorized projects, there are only a few developments on which the detailed advance planning work has been completed to the point where they are ready for construction. In the light of the tremendous growth that has taken place in the population of the United States in recent years and which is expected to continue in the future, it is essential this downward trend in the scope of the planning program be reversed.

In evaluating the need for planning and its relationship to the future needs of the Nation it must be kept in mind that most of the potential developments of today require several years of careful planning and the projects that are now under study will not reach full production for 10 to 20 years. It is evident that if the Nation is to meet this challenge it must be laying the groundwork now by carrying on an adequate planning program geared to long-range needs.

Another important consideration is the need for a stable and uniform planning program. The general investigation activity in the past has been characterized by wide fluctuations in annual appropriations. For instance, the total appropriations for the Bureau's planning program reached a low of $4,301,940 in fiscal year 1953. Over the next 5 years the appropriations for these activities were gradually increased to reach a peak of $8,834,000 in fiscal year 1958. Since that time the program has been gradually curtailed and the fiscal year 1961 request represents a reduction of almost $1 million from the 1958 level. This has resulted in inefficient and costly stop-and-go operations. With each reduction in appropriation, the Bureau loses highly trained technicians with many years of experience in water resources planning only to have to recruit and train new employees when the program is expanded. A stable program would enable the Bureau to maintain a more efficient organization.

Attached is a tabulation showing the appropriations for general investigations and advance planning over a period of years. This tabulation points out very clearly the fluctuations which have been most disturbing.

RESEARCH IN ENGINEERING

Under the heading of "General Investigations" there is a request for $250,000 for research in engineering methods and materials. This item is to provide nonreimbursable funds to conduct research which would develop the use of new engineering methods and the application of new materials to bring about lower costs of reclamation projects. This research is necessary to be performed on a nonreimbursable basis since it is for the benefit of all reclamation projects. We do not believe that this type of research should, in equity, be charged against any one going project since the benefits endure for use on other projects. As an example, research in the field of suppressing evaporation from our reservoirs will benefit all future reclamation projects and, similarly, research on new techniques. New materials, such as plastic canal linings, should not be charged to present projects. Also, much of the research work is published and made available for the benefit of all countries of the world.

Attached hereto is NRA Resolution 16 adopted at the last annual meeting of the association held in Denver, Colo., in October 1959 which fully sets forth the position of the NRA with respect to general research and laboratory costs and specifically urges that such costs should be made nonreimbursable.

NEW STARTS

We wish to express to this committee our very deep appreciation for the strong position taken a year ago in which a number of new starts were approved. We believe that those projects were extremely important and we strongly commend the committee for this reason. The budget recommendations this year include six new starts. We heartily endorse that recommendation and urge that the six new starts recommended in the budget be included in the bill to be reported out by this committee.

Attached hereto is a list of projects which were made available to us by the Bureau of Reclamation in response to a request which we submitted to them several months ago. This is a list showing the status of planning on proposed or potential reclamation projects. The first list, marked "A," includes "projects now authorized on which construction could be started if funds were made available." This is the same list of projects recommended for new starts in the budget. The list marked "B" includes "authorized projects on which advance planning will probably be completed during the fiscal year 1961."

If the planning on these projects should be completed in time so that they will be ready for construction, then we urge that funds be made available either in the regular or a supplemental appropriation bill.

The "C" list includes "other authorized projects on which planning will be under way during fiscal years 1960–61." At the present time, it is not known whether any of these projects will be ready for construction during the fiscal year 1960.

PROJECTS ALREADY UNDER CONSTRUCTION

While there may be one or two exceptions, we believe that the budget recommendations as a whole for projects now under construction are adequate to keep the construction program moving forward satisfactorily on those projects, and we recommend and urge that the amount recommended by the budget be approved by the committee.

With respect to projects which have been authorized and for which initial appropriations have been made, I wish to call to your attention NRA Resolution No. 21, which was adopted at the last annual meeting of our association.

THE AINSWORTH PROJECT

Sponsors of the Ainsworth project, Nebraska, have called my attention to a peculiar provision in Nebraska law to the effect that construction on a project must be started within 6 months after the Supreme Court has confirmed the contracts and finally approved the water rights. As they have explained it to me, this means that their money must be made available now, subject to confirmation of the contracts and final approval of the water rights; otherwise, they will lose their water rights. We believe this is a good project and urgently needed.

SMALL RELOCATION PROJECTS

The National Reclamation Association, we believe, has a right to be proud of this program. We worked for quite a number of years in order to get a satisfactory law enacted by the Congress. We believe that the program is now proving to be very helpful and quite satisfactory. We are especially appreciative of the fact that this committee has approved appropriations for every project which has met the requirements of the law and been submitted to the committee for consideration. We wish to endorse the recommendations contained in the budget for the small reclamation projects program. Also, we are advised that there are at least two projects which would have completed the 60-day waiting period before the Interior and Insular Affairs Committees and will be ready for consideration for appropriations before the adjournment of Congress. We would like to urge favorable consideration for these projects by this committee and request that funds be made available.

SUMMARY

In summary, there are several points which I wish to emphasize and point out in connection with our overall reclamation program for the entire West:

1. It requires many years, often a quarter of a century to bring a major reclamation project into agricultural production.

2. The Nation's population is increasing at the rate of about 3 million per year.

3. We are losing each year more than a million acres of good cropland to suburban developments, shopping centers, airports, industrial developments, municipal expansion, highways, and other uses.

4. Our agricultural surpluses, which represent approximately 6 percent of our total production, could easily be wiped out by 1 bad year of drought similar to that of the 1930's.

In fact, there were several years during that period when agricultural production dropped as much as 25 percent.

5. Reclamation projects produce only very insignificant amounts of our surplus crops.

It is estimated that the following percentages are raised on reclamation projects:

	Percent
Wheat	2.2
Upland cotton	5.3
Corn	.46
Tobacco	none
Rice	.54

6. Our total cropland being farmed has remained practically the same for the last 40 years and there is very little likelihood of any material increase.

In view of the foregoing, we believe that we are fully justified in urging that the reclamation program for the West which has accomplished such an outstanding record should be continued on a sound and orderly basis in order to meet the demands of the future.

Again, I wish to express to the members of this committee our very deep appreciation for the splendid support which you have given to the reclamation program over the years.

MEDICAL CARE FOR THE AGED

Mr. HUMPHREY. Mr. President, in today's Washington Post appears a fine discussion by Walter Lippmann on the problem of financing medical care for our older citizens.

Mr. Lippmann presents the choice we will have to make. We can finance medical care for retired people through social insurance with taxes paid during a person's working life before his income drops off.

This is the approach of the Forand bill. This is the approach of my own proposal, S. 1151, to provide hospital and nursing home care through the social security mechanism. And this is the approach of the McNamara bill, which I am proud to join in sponsoring.

The administration opposes this approach, but fails to offer a reasonable or humane alternative.

The Eisenhower administration proposes instead to finance medical care for our aged citizens by charitable doles to the very poor, paid for out of compulsory taxes collected by the National Government and the State governments, Mr. Lippmann points out:

> For reasons which he has never explained, the President regards compulsory social security taxes as unsound, socialistic, and rather un-American; on the other hand, he regards compulsory taxes to pay for doles based on a means test as somehow more voluntary, sounder, more worthy of a free society and more American.

Mr. President, I believe Mr. Lippmann gives a persuasive and convincing argument for extension of social insurance to finance the health care needs of our senior citizens in a reasonable, humane, and dignified manner, and I ask unanimous consent that his article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEDICAL CARE FOR THE AGED

(By Walter Lippmann)

Almost everyone realizes that a great mass of the old people do not have the savings, and cannot depend upon their children, to pay for the doctors, hospitals, nursing homes, and drugs which, because they are aging, they need more than do younger people.

There are a few eccentrics, professing to be conservatives, who think that in a truly rugged individualism these ailing old people would do without medical care if they can't pay for it, or would make their children mortgage the future to pay the medical bills.

But the country is not that ruggedly obtuse to the facts of life, and accordingly both the administration and the Democratic opposition are agreed that the need, which is obvious and urgent, must be met by Government measures.

Thus, this administration has prepared a program which the Director of the Budget, Mr. Stans, says will cost $1.5 billion by 1964 and $2.5 billion by 1970. For the Democrats, Senator MCNAMARA and some 19 Senators, including KENNEDY, SYMINGTON, and HUMPHREY, have introduced a bill that would add medical insurance to the existing old-age insurance. After the first year, the cost of this program would be $1.5 billion. Thus the two programs are approximately of the same size.

But between the two programs there is a basic issue of principle. On one side are the President and his advisers. On the other side are the preponderant mass of the Democrats and also a considerable minority of the Republicans led by Governor Rockefeller. They differ essentially on how the program shall be financed.

Shall it be financed by compulsory insurance, which means that throughout a person's working life he and his employer will be taxed to provide an insurance fund for his medical needs when he is retired and is no longer earning an income? This is the principle of the McNamara bill in the Senate, as it was of the Forand bill in the House, and it has the support of the leading Democrats and of Governor Rockefeller.

Or shall the program be financed, as the administration proposes, by charitable doles to the very poor, paid for out of compulsory taxes collected by the national and the State governments?

For reasons which he has never explained, the President regards compulsory social security taxes as unsound, socialistic, and rather un-American; on the other hand he regards compulsory taxes to pay for doles based on a means test as somehow more "voluntary," sounder, more worthy of a free society and more American.

Under the McNamara bill, medical insurance would be added to the existing old-age insurance system. During his working life, each person covered by the social security system would contribute an additional amount, as would also his employer, to supplement his retirement income to include medical services.

It is true that during the first few years benefits would be received by persons who had not contributed because the system did not exist when they were earning their living. These benefits would be paid for by the younger people. But as the younger people would be buying their own insurance, there is little inequity in this. Nobody will lose anything, although those who are already too old to have been contributors to an insurance plan will benefit. In a few years everyone receiving the benefits will have paid his share.

Why does the President feel so strongly opposed to the principle of compulsory insurance for medical care to supplement the insurance, which already exists, for old age? What is wrong about its being compulsory that a man should insure himself against the needs of his old age? What is so wonderful about a voluntary system under which a man who doesn't save for his old age has to have his doctors and his hospital bills paid for by his children or public welfare funds? There is nothing un-American in the principle that the imprudent shall be compelled to save so that they do not become a burden to their families and the local charities, so that they can meet the needs of their old age with the self-respect which comes from being entitled to the benefits because they have paid the cost out of their own earnings.

The President has been led to think, he says, that compulsory insurance is "a very definite step in socialized medicine." Why? In a system of compulsory insurance the Department of Health, Education and Welfare, which would administer the program, could and should use as its agents private organizations like the National Blue Cross Association in negotiating with hospitals and nursing homes and in dealing with claims and complaints. The system would be financed as insurance. But it would be worked not by a new Government agency but by the kind of private voluntary association which the President otherwise believes in.

In this connection it is interesting to remember that in the early 1930's when voluntary health insurance plans were inaugurated, our old friend, the American Medical Association, was declaring that they were communism and socialism and socialized medicine. Today, the American Medical Association is pointing to these same voluntary insurance plans as the solution of our present needs and the proper alternative to compulsory old-age medical care insurance.

Among the opponents of medical insurance there seems to be a vague and uncomfortable feeling that it is a new-fangled theory, alien to the American way of life and imported, presumably, from Soviet Russia.

The Founding Fathers were not subject to such theoretical hobgoblins. In 1798 Congress set up the first medical insurance scheme under the U.S. Marine Hospital Service. The scheme was financed by deducting from seamen's wages contributions to pay for their hospital expenses.

If that was "socialized medicine," the generation of the Founding Fathers was blandly unaware of it.

Mr. MANSFIELD. Mr. President, is morning business concluded?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

DEPARTMENT OF DEFENSE APPROPRIATIONS, 1961

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business be laid before the Senate for consideration.

The PRESIDING OFFICER. The Chair now lays before the Senate the unfinished business.

The Senate resumed the consideration of the bill (H.R. 11998) making appropriations for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes.

Mr. CHAVEZ obtained the floor.

Mr. GRUENING. Mr. President, will the Senator from New Mexico yield to me?

Mr. CHAVEZ. Yes, if it is understood that I may do so without losing the floor, because I wish to have the Senate proceed with the consideration of the Department of Defense appropriation

bill. We have been talking all morning about improving our foreign relations, and this bill will do a great deal to improve them.

MEDICAL CARE FOR THE AGED

Mr. GRUENING. Mr. President, one of the really vital problems confronting our Nation and this Congress before adjournment is that of providing adequate medical care for the aged.

Mr. President, the situation no longer is what it was half a century ago, when Federal taxes were negligible and when it was assumed—whether rightly or wrongly—that, with thrift and prudent management, most families could save enough to make possible the care of the infirmities of old age.

However, since enactment of the Federal income tax, nearly half a century ago and the steady increase in its rates it has become also increasingly difficult for the average American family to meet this problem. To this difficulty may be added not only the steady rise in the cost of living, but also, and even more pertinent, the mounting cost of medical care. The pyramiding costs of drugs is an additional factor which has been so effectively exposed by the distinguished Senator from Tennessee [Mr. KEFAUVER] who is rendering a great public service thereby. Mr. President, all these factors require that a new approach to this problem be made.

There are two points of view, and I believe they approximately represent the difference between the attitude of the Democratic Party and that of the present administration. The difference between those points of view is excellently shown in an article entitled "Medical Care for the Aged," which was written by the distinguished columnist Walter Lippmann, published today in the Washington Post. It is a valuable analysis of these two divergent points of view. I ask unanimous consent that the article be printed at this point in the RECORD, in connection with my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEDICAL CARE FOR THE AGED

(By Walter Lippmann)

Almost everyone realizes that a great mass of the old people do not have the savings, and cannot depend upon their children, to pay for the doctors, hospitals, nursing homes, and drugs which, because they are aging, they need more than do younger people.

There are a few eccentrics, professing to be conservatives, who think that in a truly rugged individualism these ailing old people would do without medical care if they can't pay for it, or would make their children mortgage the future to pay the medical bills.

But the country is not that ruggedly obtuse to the facts of life, and accordingly both the administration and the Democratic opposition are agreed that the need, which is obvious and urgent, must be met by Government measures.

Thus, this administration has prepared a program which the Director of the Budget, Mr. Stans, says will cost $1.5 billion by 1964 and $2.5 billion by 1970. For the Democrats, Senator MCNAMARA and some 19 Senators, including KENNEDY, SYMINGTON, and HUMPHREY, have introduced a bill that would add medical insurance to the existing old age insurance. After the first year, the cost of this program would be $1.5 billion. Thus the two programs are approximately of the same size.

But between the two programs there is a basic issue of principle. On one side are the President and his advisers. On the other side are the preponderant mass of the Democrats and also a considerable minority of the Republicans led by Governor Rockefeller. They differ essentially on how the program shall be financed.

Shall it be financed by compulsory insurance, which means that throughout a person's working life he and his employer will be taxed to provide an insurance fund for his medical needs when he is retired and is no longer earning an income? This is the principle of the McNamara bill in the Senate, as it was of the Forand bill in the House, and it has the support of the leading Democrats and of Governor Rockefeller.

Or shall the program be financed, as the administration proposes, by charitable doles to the very poor, paid for out of compulsory taxes collected by the National and the State governments?

For reasons which he has never explained, the President regards compulsory social security taxes as unsound, socialistic, and rather un-American; on the other hand he regards compulsory taxes to pay for doles based on a means test as somehow more "voluntary," sounder, more worthy of a free society and more American.

Under the McNamara bill, medical insurance would be added to the existing old age insurance system. During his working life, each person covered by the social security system would contribute an additional amount, as would also his employer, to supplement his retirement income to include medical services.

It is true that during the first few years benefits would be received by persons who had not contributed because the system did not exist when they were earning their living. These benefits would be paid for by the younger people. But as the younger people would be buying their own insurance, there is little inequity in this. Nobody will lose anything, although those who are already too old to have been contributors to an insurance plan will benefit. In a few years everyone receiving the benefits will have paid his share.

Why does the President feel so strongly opposed to the principle of compulsory insurance for medical care to supplement the insurance, which already exists, for old age? What is wrong about its being compulsory that a man should insure himself against the needs of his old age? What is so wonderful about a voluntary system under which a man who doesn't save for his old age has to have his doctors and his hospital bills paid for by his children or public welfare funds? There is nothing un-American in the principle that the imprudent shall be compelled to save so that they do not become a burden to their families and the local charities, so that they can meet the needs of their old age with the self-respect which comes from being entitled to the benefits because they have paid the cost out of their own earnings.

The President has been led to think, he says, that compulsory insurance is "a very definite step in socialized medicine." Why? In a system of compulsory insurance the Department of Health, Education, and Welfare, which would administer the program, could and should use as its agents private organizations like the National Blue Cross Association in negotiating with hospitals and nursing homes and in dealing with claims and complaints. The system would be financed as insurance. But it would be worked not by a new Government agency but by the kind of private voluntary association which the President otherwise believes in.

In this connection it is interesting to remember that in the early 1930's, when voluntary health insurance plans were inaugurated, our old friend, the American Medical Association, was declaring that they were communism and socialism and socialized medicine. Today, the American Medical Association is pointing to these same voluntary insurance plans as the solution of our present needs and the proper alternative to compulsory old age medical care insurance.

Among the opponents of medical insurance there seems to be a vague and uncomfortable feeling that it is a new-fangled theory, alien to the American way of life and imported, presumably, from Soviet Russia.

The Founding Fathers were not subject to such theoretical hobgoblins. In 1798 Congress set up the first medical insurance scheme under the U.S. Marine Hospital Service. The scheme was financed by deducting from seamen's wages contributions to pay for their hospital expenses.

If that was "socialized medicine," the generation of the Founding Fathers was blandly unaware of it.

DEPARTMENT OF DEFENSE APPROPRIATIONS, 1961

The Senate resumed the consideration of the bill (H.R. 11998) making appropriations for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum, with the proviso that following the quorum call the Senator from New Mexico [Mr. CHAVEZ] will have the floor.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). Is there objection? Without objection, it is so ordered; and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from New Mexico is recognized.

Mr. CHAVEZ. Mr. President, the Senate will now consider the appropriation bill for the Defense Department, which originated in the House as H.R. 11998.

SENATE COMMITTEE ACTION

The bill that is presented for the consideration of the Senate today provides for $40,384,897,000. It is $1,049,897,000 over the budget, $1,047,030,000 over the amount allowed by the House, and $1,150,658,000 over the amount provided in 1960.

For the Army it provides approximately $9.5 billion; for the Navy, about $12.2 billion; for the Air Force, about $17.4 billion; for the Office of the Secretary of Defense, about $1.2 billion.

From the standpoint of general categories, it provides for military personnel, about $11.8 billion; for operation and maintenance, about $10.5 billion; for procurement, about $13.9 billion.

Mr. DOUGLAS. Mr. President, would the Senator from New Mexico be gracious

enough to be willing to answer a question about operation and maintenance items and the so-called procurement items?

Mr. CHAVEZ. Yes. If the Senator will permit me to complete my statement first, I shall be glad to answer any question, or try to, anyway.

Continuing with my statement: For research development, test and evaluation, about $4.2 billion.

Further statistical information will be found in the report which Senators have before them.

I ask unanimous consent to insert at the conclusion of my remarks a tabulation showing the major actions taken in the bill by appropriation title.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. CHAVEZ. The committee made 97 distinct changes in the bill. I cannot hope, nor would Senators wish me, I am sure, to detail each one. They are all outlined in the report. Instead, I shall confine my remarks to the major items in which there were important changes.

ARMY PROCUREMENT

I shall begin with the Army. Recognizing that the most important need of the ground soldier was modern equipment, the committee voted approximately $162 million above the budget for new equipment. According to Army testimony, this will provide $125 million above the House amount for equipment modernization, reinstating the availability of an estimated $120 million from off-the-shelf sales of military assistance program materiel to the program, as distinct from the appropriation.

Army Secretary Brucker was asked, if he had his wish, would he speed up Army modernization. The following are excerpts from his reply:

> You will see, as I go along, I urged it and I believe in it. I cannot emphasize too strongly the importance to the Nation—indeed to the whole free world, of providing the most modern arms and equipment to troops of the U.S. Army.

The committee regards this increase as an absolute must if we are to have a modern Army.

RESERVE COMPONENTS

For Reserve components, the House had already provided funds to maintain the Army National Guard at 400,000 and the Army Reserve at 300,000—or your committee would have done so, as we have in the past. To make certain that the Army Reserve components will not suffer the fate of the Marine Corps, we have added language to the bill which makes mandatory the above-named strengths, and which earmarks the increased funds solely for that purpose. The committee has also provided $7.5 million to increase the strength of the National Guard technicians program, which otherwise would have been reduced.

NAVY SHIP CONSTRUCTION

The committee has made substantial changes in the Navy shipbuilding program. Included are funds to construct a new conventional type aircraft carrier priced at $293 million. Testimony by Navy spokesmen was unanimous in placing this carrier as its No. 1 priority among Navy building necessities if we are to continue to have a strong, balanced program. The committee dealt with this matter at great length and the conviction was that if we wish to maintain the control of the seas, and to continue to exert a powerful deterrent, either for limited or nuclear war, then we must also continue to replace our fast aging and obsolescent World War II aircraft carriers. The demonstrated value of the versatile carrier force has been amply proved in the past 2 years of cold war. The purchase price is a pittance compared with the cost of what might have happened in Lebanon or off Formosa had there not been this bulwark of defensive readiness available for action.

Here are some statements culled from Admiral Burke's testimony:

> If it were a choice between the carrier and the other items, we would prefer the carrier. The attack aircraft carrier is the Navy's most powerful offensive weapon. It is the unit around which the strike force is built; they are not vulnerable to ballistic missiles. In a limited war in many places in the world they will be the only capability whereby you can bring air power to bear in support of our military forces, early enough, quickly enough, and strong enough in amount to accomplish the mission we will have to accomplish if the free countries are to remain free.

Secretary Gates stated that the need for the carrier is urgent. The committee agreed and recommends approval of this carrier as a necessity if we are to maintain a balanced modern Navy.

POLARIS AUGMENTATION

The committee approved the action of the House in providing increased impetus to the Polaris submarine program. The original budget submission in January contained funds for three complete Polaris submarines and for long leadtime items for three more. A later submission revised this request to provide long leadtime construction of an additional six—a 3-by-9 program, as it is called. The House strengthened this to provide a 5-by-7 program—five complete Polaris submarines and long leadtime components of seven more. This the committee has approved. The program is in addition to the nine Polaris submarines already funded, some of which it is expected will shortly be operational, and should prove to be among the most powerful offensive weapons we possess.

The committee also recommends approval of funds for the construction of three attack submarines for antisubmarine warfare. This is two more than in the revised request of the Department, one less than the number provided by the House, but the exact number of the original budget submission.

AIR FORCE AIRCRAFT PROCUREMENT

For Air Force aircraft, the committee has also made substantial changes which it believes will strengthen the future forces in being. The committee, while subscribing to the possible future threat of push-button warfare, does not believe it wise to overlook the value which the manned bomber will continue to have in the foreseeable future. The B–47 bomber is presently being phased out of inventory as newer models are being brought in. Budgeted funds are contained in this bill to provide additional B–58 aircraft and for equipping both B–58's and B–52's. But, looking, forward, the committee was impressed by the need for the development of the B–70 intercontinental supersonic strategic bomber. The Chief of Staff of the Air Force, General White, testified as follows:

> I stated with all the conviction at my command my belief that the B–70 is one of the most important weapons systems of the future, and it was turned down.

The committee included $285 million above the budget for this weapons system.

AIRLIFT MODERNIZATION

The House included in a separate item $250 million above the budget for airlift modernization. The committee recognizes the value of this contribution and has recommended an appropriation of $200 million of the House increases to be used for transport aircraft suitable for the movement of fully equipped troops and combat equipment. The chairman of the Subcommittee on Defense Appropriations personally inspected the operation Big Slam-Puerto Pine earlier this year in Puerto Rico and was convinced of the need for rapid and large-scale airlift augmentation. The funds provided will be found in the appropriation "procurement of aircraft."

The committee decided that the funds added by the House for an expanded airborne alert capability are not required at this time, believing the authority contained in the bill in section 512(b) is adequate to expand the program if the necessity arises.

Funds were also provided to procure F–27 cargo aircraft.

Section 512(b) is the one which gives the administration the authority, if an emergency develops in a hurry, to use up to $150 million for the emergency and to come to Congress for a deficiency appropriation.

AIR DEFENSE MEASURES

The Department of Defense, subsequent to the presentation of the budget, requested certain changes in the air defense program. Among these was a reduction in the Bomarc missile program of $381 million. The House approved this reduction, and reduced the total Bomarc program an additional $294 million, replacing it with an expanded F–106 fighter program. The committee heard a great deal of testimony on this controversial subject. The Department of Defense and the Department of the Air Force strongly supported the Bomarc restorations and requested that the additional funds amounting to $215 million for the F–106 program be deleted. Impressed by the statements of air defense authorities, the committee has deleted the additional amounts for the F–106 program and reinstated the Bomarc reductions included in the revised program. It also recommends $75 million

for two Bomarc locations which were included in the original budget submission and for which, since they are partially completed, funds would be wasted if construction is stopped.

Those two installations are in the Northwest, either Oregon or Washington.

SPACE SATELLITES

In addition to the amounts provided in the budget, the committee has made substantial increases in the Samos satellite program. The House added $33.8 million for Samos, and the committee, impressed by the value and immediate need for this surveillance vehicle, has added an additional $50 million.

For Midas, the heat-detecting, infrared space satellite, and for Discoverer, the space satellite, the committee recommends the House additions be reduced to the revised requests of the Department, an amount $61.4 million over the original budget estimate, but $20.2 million below the House figure.

DEPARTMENT SIDE ACTIONS

The House, during its consideration of the bill, made certain so-called across-the-board reductions. The committee has acted variously on these, making some further cuts, but generally recommending partial restoration. In one area in particular, that of procurement of defense weapons, the committee made full restoration of the House general procurement reduction of 3 percent to improve contractual practices. The committee is in complete agreement with the House objective, even though it did not agree with the method, and wishes it understood, as stated in the report, that a determined effort must be made to improve contractual procedures by the Pentagon.

In another area, the House made a 10-percent reduction in departmental administration. The Department agreed to accept a reduction of about 5 percent in civilian personnel in departmental administration and also volunteered to shift a like percentage of military personnel to field and operational work. The committee has restored most of the funds requested but wishes it clearly understood that, having deleted the limiting provisos, it expects the Department to carry out reductions in both civilian personnel and the administrative use of military personnel as testified.

In the field of communications, the committee made full restoration of the House reduction. Once again, this was done not because the committee disapproved of the purpose of the House reduction, but because it was indicated by the Department of Defense that many of the increased requirements for 1961 would not be affected by the establishment of an integrated communications system. Further, the Department has indicated that it will push communications consolidation vigorously and that it had already planned utilization of savings through consolidations. The committee expects the Military Establishment to begin immediately to expedite this program.

In other general areas—notably in the administrative use of aircraft, proficiency flying, motor vehicle hire, travel and dependents' education—the committee has made varying restorations. In the field of maintenance of family housing, it was believed that substantial economies could be effected and the committee acted accordingly.

Instead of allowing $600 a year for renovation and painting of houses, the committee allowed $500.

ACCELERATION OF MISSILE AND SATELLITE PROGRAMS

The committee has included again this year the provision to permit the acceleration of strategic or tactical missile or satellite programs. While adding nothing to the appropriations in the bill, the inclusion of this section enables the Department to intensify vital defense projects should the need arise.

In other language provisions, the committee has provided the same amount for congressional legislative liaison as was approved last year; included a limitation on officers receiving flight pay slightly higher in number than that proposed by the House; and provided new authority in connection with the sale of timber on military reserves.

PROGRAM IN DETAIL

It is the regret of the chairman of the subcommittee that I cannot detail in full the contents of the bill which will strengthen our defenses. As you have seen, to describe but briefly the more important changes which have been made by your committee is time consuming in itself. However, I shall attempt to describe many of the more salient points in the bill which have not been covered thus far.

During 1961, military forces of about the same size and composition as those planned for the end of fiscal year 1960 will be maintained. Overall, a Military Establishment of 2.5 million men and a Reserve of well over a million are contemplated.

ARMY

With funds provided in the bill, the Army will support 14 divisions, 5 armored cavalry regiments, 1 armored combat command, 2 infantry brigades, 9 battle groups, 3 Redstone missile groups, and 5 Army missile commands. This represents an increase of one missile command and one battle group over the fiscal year 1960 planned-end strength. The number of air defense battalions will increase by 2½. Continuing the trend of the last several years, the Army's active aircraft inventory will also increase. The active military personnel strength of the Army will be kept level during fiscal year 1961 at 870,000 men. In the case of the Reserve components, the drill pay strength of the Army National Guard and the Army Reserve funds are provided to maintain them at present strength, as I have stated.

Included in the total of $1½ billion for Army procurement are funds for the new Davy Crockett man-carried rocket system with nuclear capability, the new medium tank, the Hawk and Pershing missiles, an improved Honest John rocket, the solid-fueled longer ranged Sergeant, the new M–14 rifle, and the new M–60 machinegun. Continued modernization of the tactical truck fleet and the armored personnel carrier program is planned, as are procurements of new supply and transport aircraft. Tank recovery vehicles, amphibious vehicles, and large quantities of ammunition are also funded.

In the Army research and development program, substantial sums are included for the Nike-Zeus anti-missile-missile tactical ballistic missile system, the Mauler mobile surface-to-air tactical missile, the Goers transporter, a light weight self-propelled artillery carriage, the Shillelagh antitank weapon, and an armored reconnaissance airborne assault vehicle.

NAVY

During 1961, the funds recommended will support a Navy of 817 ships, including 382 warships, in the fleet, the same as that at the end of fiscal year 1960. The Navy will also maintain 16 attack carrier air groups, 11 carrier antisubmarine air groups and 41 patrol and warning squadrons. The Marine Corps will continue to maintain three divisions and three air wings. Moreover, because of personnel economies, the Marine Corps will activate two additional battalion landing teams while keeping its total strength level at 175,000. The Navy's active duty military strength will also remain the same as at the end of the current fiscal year—619,000. The drill pay of the Navy and Marine Corps Reserves will be kept unchanged during 1961 at 129,000 and 45,000, respectively. With newer and better aircraft entering service, the active aircraft inventory will decrease by about 300 planes to a total of 834.

The Navy's procurement budget includes a shipbuilding program of 22 new ships and 15 conversions. Half of the program, approximately, will contribute to the antisubmarine warfare program. In other procurement, new electronic ship-support communications equipment, the new Asroc antisubmarine weapons, the Zuni air-launched rocket, high-speed antisubmarine torpedoes, air-dropped submarine detection buoys, equipment for an additional Marine Hawk battalion, the shoulder-fired Redeye missile system and electronic modernization items are all included. The bill provides for over 600 aircraft and helicopters for the Navy.

The Navy research program includes the Eagle long-range air-to-air missile, the Typhon surface-to-air missile, the Corvus air-to-surface missile, Subroc, and Polaris. The new Missileer aircraft equipped with an Eagle missile, the Asroc ship-launched rocket-throwing weapon, and a new assault transport are also included.

MARINE CORPS

With respect to the modernization of equipment, the Marine Corps is in much the same situation as the Army. Because of the Marine Corps mission to provide promptly a combat capability in distant trouble spots, the GV–1 tanker assault transports provided in the Committee's recommendations are especially significant. This aircraft—a modification of the C–130—will enable the Marine Corps to move its combat elements

expeditiously or, alternatively, to refuel Marine Corps strike aircraft, thereby extending their range and tactical flexibility.

In 1961 the Marine Corps will increase its ground combat potential by reactivating two battalion landing teams within an overall strength of 175,000 men. The committee wishes to commend the Marine Corps for its good management and continued efforts to increase the proportion of its personnel in the combat elements.

AIR FORCE

The active duty military personnel strength of the Air Force is expected to be maintained at 825,000 during 1961—the same as at the end of the current fiscal year. The drill pay strength of the Air National Guard will remain level at the low level of 72,000 men, while the Air Reserve will increase by 1,000 over 1960 to 63,000.

For the strategic retaliatory forces, in addition to action taken on the B–70, the committee's recommendations provide for additional quantities of the B–52H heavy bomber, the B–58 medium bomber and the KC–135 jet refueling tanker. Also provided for are additional quantities of the Hound Dog air-to-ground missile and the Quail decoy missile, together with a large amount of electronic aids to improve the penetration capabilities of the manned bomber force. Funds for the procurement of the intercontinental ballistic missile—Atlas, Titan, and Minuteman—have been increased over the amount provided last year. Funds in this bill provide that the last 6 Atlas squadrons will have 12 missiles instead of 9 as in the earlier squadrons. Most of the later Atlas and all of the Titan squadrons will be protected in hardened underground sites. The quicker reacting solid propellent Minuteman, too, will be placed in protected dispersed positions or employed aboard railway cars—a technique already under development and being studied.

Reference has already been made to changes in the Air Defense program.

With respect to defense against ballistic missile attack, most of the programs trend sharply upward. For the Ballistic Missile Early Warning System, funding in 1960 was very heavy in order to enable the system construction to proceed at the fastest possible rate. Funds recommended by the committee will support early operational capability of the last two sites.

Similarly, development of the Midas infrared missile warning satellite will be speeded by new funds recently requested by the Department of Defense and which this bill provides, although not to the extent recommended by the House.

The Air Force includes in its research work continued work on Midas, the early warning system; Samos, the reconnaissance satellite, of which I have already spoken; the X–15, the very high altitude hypersonic research aircraft; and Dynasoar, the ground-launched manned flight vehicle.

The items listed, and others too numerous to mention, plus the day-to-day operations, including the costs of military and civilian personnel, and the maintenance of the farflung Military Establishment make up the costs involved in this requested appropriation of over $40 billion.

NEED FOR ADEQUATE DEFENSE

It is a large bill, as I have said. I believe it is quite a responsibility to pass judgment and to vote on $40 billion of taxpayers' money. Therefore I am trying to justify the bill.

Since the Senate Appropriations Committee filed its report on the Defense Department appropriation measure a year ago, much has transpired. At times it seemed that hopes were justified that there would be a relaxation of tensions making way for the attainment of a lasting peace throughout the world. At other times it would seem that these hopes were but one of the high points in the constantly fluctuating temperature of the cold war.

Regardless of encouraging overtures or discouraging actions, one fact is indisputably clear: In dealing with those whose primary tenet is that might makes right, there must be no relaxation of the guard, no diminution of overall strength until we are assured beyond all doubt that such action will in no wise jeopardize the future of the free world.

This has been the goal of the committee in its consideration of this important bill. Even more, the committee recognizes that it is one of the primary responsibilities of the Congress to satisfy itself as to the completeness of that defense. At the beginning of our hearings your chairman of the Defense Department Subcommittee said:

> I for one have always been a strong advocate of rigid economy in government, wherever possible. But of far greater import to us and to the free world is an American defense posture that brooks no doubts as to its adequacy, either in our minds or in the minds of a possible aggressor, or in the minds of the American people. * * * We must strive with all the resources at our command to provide a defense which will make foolhardy any aggressive action on the part of an adversary.

It is the hope of the committee that the funds herein to be appropriated will provide in the years ahead such a deterrent that the might of our forces will be sufficient to make any nation hesitate to unleash the forces of aggression. But when we speak of a deterrent, we mean to imply the full meaning of the word. We must make our forces so strong that there can be no doubt in the mind of the enemy but that he will lose all and gain nothing. A truly strong defense position guarantees that once the aggressor has struck us, our offensive might may be unleashed with no uncertainty as to the outcome. I believe we have such a force in being today. The effort your committee has made in strengthening this bill will, I believe, help to make it true tomorrow.

There can be, and are, honest differences of opinion as to what constitutes adequate defense. But as long as there are doubts expressed by our dedicated military leaders as to that adequacy, it ill behooves any of us to brush military preparedness aside in favor of other considerations. In the last analysis, the men who will direct the course of the missiles, aircraft, bullets, and ships are the experts on whose opinions we must rely. Under close questioning during the course of our hearings these experts, military men, have repeatedly expressed the wish to bolster their military programs but, like good soldiers, they indicated that they bowed to the dictates of higher authority. I for one hold that no necessary procurement or research should be squeezed out of program consideration because it could not be jammed under the magic line of a predetermined budget ceiling. Yet in response to close committee questioning the record is replete with instances directly substantiating this—Army modernization, Polaris, the B–70, fleet modernization, to mention only a few.

The Senate Committee on Appropriations has increased the bill by a little over a billion dollars. It did not do this in a partisan political mood. In my opinion there should be no partisan politics on defense matters. Democrats and Republicans alike voted for this bill as it stands before the Senate. We had our individual differences; they were not all unanimous votes. But by and large this is a committee bill, the expression of the entire committee. Also, we were fortunate enough to have the valuable assistance of members of the Armed Services Committee who also serve on Appropriations. We had a single purpose in mind: To provide more adequately for our national defense.

If there is one thing above all others which I wish could be made clear to those who carry out the laws of the Congress, it is this: When this bill is enacted into law, it is my hope that those who decide upon the allocation of appropriated funds will remember that it is the Congress which, under the Constitution of the United States, has the power to provide for the national defense. As the representatives of the American people we, who are here today, regard that power as a solemn duty. The executive branch of the Government is empowered to carry out the law. I hope that that will be done in this case, not a part of the law, but the whole law. It should not be necessary for the Congress to write mandatory language into a bill in order to have its provisions carried out. The appropriation of funds clearly defined in law and in the committee reports and floor history should be sufficient to indicate that mandate. Our defenses will be strengthened only if the funds are permitted to be used. It is my hope that they will be. In that regard, let us remember that monetary surpluses never stopped an offensive; that there can be no price tag on freedom; that this freedom today is, in effect, being challenged in every corner of the world. We must ever be alert to wipe out the waste, the duplication, the frills. But we must be even more alert to foresee the needs of the possible future conflict.

Before I close, I wish to express my sincere appreciation to all those who participated in the preparation of this bill. In particular, I wish to thank the

members of the Senate Appropriations Committee who, day after day, week after week during our deliberation on the bill, patiently explored the countless volumes of words and figures which were presented to us. We began our hearings on the 1st of February. Except for a few short exceptions, we have kept steadily at it until today, as the two volumes of our hearings will attest. To those faithful members, I give my thanks. Much of the credit for fashioning this bill into the strong defense measure which I believe it is, belongs to every member of the committee.

This bill is not a war bill. Were a a conflagration to start tomorrow, tremendous additional sums would be required almost immediately. I believe that it is a strong peace bill, stronger for the Senate additions which will help strengthen our position in the years ahead—until, in the final analysis, we can but hope that the forces of aggression will be stilled and a lasting peace will result. I know that it is the desire of all of us.

EXHIBIT 1

DEPARTMENT OF DEFENSE APPROPRIATION BILL, 1961 (H.R. 11998)

Comparative statement of appropriations for 1960 and estimates and amounts recommended in the bill for 1961

TITLE I—MILITARY PERSONNEL

Item	Appropriations, 1960	Budget estimates, 1961	Recommended in House bill, 1961	Amount recommended by Senate committee 1961	Increase (+) or decrease (−), Senate bill compared with—		
					Appropriations, 1960	Estimates, 1961	House bill, 1961
Military personnel, Army	[1] $3,233,063,000	[2] $3,261,000,000	[2] $3,244,448,000	[2] $3,247,548,000	+$14,485,000	−$13,452,000	+$3,100,000
Military personnel, Navy	[3] 2,476,700,000	[4] 2,528,000,000	[3] 2,507,055,000	[3] 2,508,244,000	+31,544,000	−19,756,000	+1,189,000
Military personnel, Marine Corps	[5] 620,600,000	607,000,000	[6] 604,577,000	[6] 605,146,000	−15,454,000	−1,854,000	+569,000
Military personnel, Air Force	[7] 3,918,000,000	[8] 4,030,000,000	[8] 4,013,460,000	[8] 4,019,676,000	+101,676,000	−10,324,000	+6,216,000
Reserve personnel, Army	231,700,000	200,000,000	233,115,000	233,998,000	+2,298,000	+33,998,000	+883,000
Reserve personnel, Navy	88,000,000	88,000,000	87,168,000	87,584,000	−416,000	−416,000	+416,000
Reserve personnel, Marine Corps	24,300,000	25,000,000	24,661,000	24,831,000	+531,000	−169,000	+170,000
Reserve personnel, Air Force	54,000,000	54,000,000	53,764,000	54,000,000			+236,000
National Guard personnel, Army	234,961,000	199,000,000	229,903,000	230,277,000	−4,684,000	+31,277,000	+374,000
National Guard personnel, Air Force	48,000,000	46,000,000	45,609,000	46,000,000	−2,000,000		+391,000
Retired pay, Department of Defense	715,000,000	775,000,000	775,000,000	775,000,000	+60,000,000		
Total, title I—Military personnel	11,644,324,000	11,813,000,000	11,818,760,000	11,832,304,000	+187,980,000	+19,304,000	+13,544,000

TITLE II—OPERATION AND MAINTENANCE

Operation and maintenance, Army	$3,075,390,000	$3,112,000,000	$3,116,555,000	$3,132,283,000	+$56,893,000	+$20,283,000	+$15,728,000
Operation and maintenance, Navy	2,611,220,000	2,550,000,000	2,499,388,000	2,525,354,000	−85,866,000	−24,646,000	+25,966,000
Operation and maintenance, Marine Corps	175,850,000	176,000,000	174,726,000	174,796,000	−1,054,000	−1,204,000	+70,000
Operation and maintenance, Air Force	4,195,006,000	4,282,000,000	4,172,404,000	4,240,732,000	+45,726,000	−41,268,000	+68,328,000
Operation and maintenance, Army National Guard	151,700,000	157,000,000	156,827,000	164,501,000	+12,801,000	+7,501,000	+7,674,000
Operation and maintenance, Air National Guard	169,000,000	176,000,000	175,892,000	187,291,000	+18,291,000	+11,291,000	+11,399,000
National Board for the Promotion of Rifle Practice, Army	300,000	300,000	300,000	501,000	+201,000	+201,000	+201,000
Operation and maintenance, Alaska Communication System, Army	5,676,000	7,000,000	7,000,000	7,000,000	+1,324,000		
(Indefinite appropriation of receipts)	(675,000)						
Salaries and expenses, Secretary of Defense	20,500,000	20,000,000	18,000,000	19,300,000	−1,200,000	−700,000	+1,300,000
Contingencies, Department of Defense	15,000,000	30,000,000	15,000,000	15,000,000		−15,000,000	
Claims, Department of Defense	16,500,000	16,575,000	16,575,000	16,575,000	+75,000		
Operation and maintenance, Olympic winter games—Department of Defense	800,000				−800,000		
Salaries and expenses, Court of Military Appeals	425,000	425,000	425,000	425,000			
Total, title II—Operation and maintenance	10,437,367,000	10,527,300,000	10,353,092,000	10,483,758,000	+46,391,000	−43,542,000	+130,666,000

TITLE III—PROCUREMENT

Procurement of equipment and missiles, Army	$1,407,300,000	$1,337,000,000	$1,374,102,000	$1,499,102,000	+$91,802,000	+$162,102,000	+$125,000,000
Aircraft and related procurement, Navy	1,961,644,000				−1,961,644,000		
Procurement of aircraft and missiles, Navy		2,113,000,000	2,141,760,000	2,208,000,000	+2,208,000,000	+95,000,000	+66,240,000
Shipbuilding and conversion, Navy	1,330,700,000	2,032,000,000	2,080,650,000	2,331,000,000	+1,000,300,000	+299,000,000	+250,350,000
Other procurement, Navy		434,000,000	420,980,000	434,000,000	+434,000,000		+13,020,000
Procurement of ordnance and ammunition, Navy	567,719,000				−567,719,000		
Procurement, Marine Corps	133,850,000	94,000,000	91,180,000	94,000,000	−39,850,000		+2,820,000
Aircraft procurement, Air Force	4,284,600,000	[9] 2,994,000,000	3,225,056,000	3,607,409,000	−677,191,000	+613,409,000	+382,353,000
Airlift modernization			359,288,000				−359,288,000
Missile procurement, Air Force	2,540,550,000	3,024,000,000	2,378,440,000	2,821,000,000	+280,450,000	−203,000,000	+442,560,000
Other procurement, Air Force	1,109,650,000	1,057,000,000	877,171,000	904,300,000	−205,350,000	−152,700,000	+27,129,000
Total, title III—Procurement	13,336,013,000	13,085,000,000	12,948,627,000	13,898,811,000	+562,798,000	+813,811,000	+950,184,000

TITLE IV—RESEARCH, DEVELOPMENT, TEST, AND EVALUATION

Research, development, test, and evaluation, Army	$1,035,715,000	$1,041,700,000	$1,041,190,000	$1,041,286,000	+$5,571,000	−$414,000	+$96,000
Research, development, test, and evaluation, Navy	1,015,920,000	1,169,000,000	1,268,530,000	1,210,510,000	+194,590,000	+41,510,000	−58,020,000
Research, development, test, and evaluation, Air Force	1,159,900,000	1,334,000,000	1,542,668,000	1,553,228,000	+393,328,000	+219,228,000	+10,560,000
Salaries and expenses, Advanced Research Projects Agency, Department of Defense	455,000,000	215,000,000	215,000,000	215,000,000	−240,000,000		
Emergency Fund, Department of Defense	[10] 150,000,000	[10] 150,000,000	[10] 150,000,000	[10] 150,000,000			
Total, title IV—Research, development, test, and evaluation	3,816,535,000	3,909,700,000	4,217,388,000	4,170,024,000	+353,489,000	+260,324,000	−47,364,000
Grand total, titles I, II, III, and IV	39,234,239,000	39,335,000,000	39,337,867,000	40,384,897,000	+1,150,658,000	+1,049,897,000	+1,047,030,000

[1] In addition, $281,000,000 to be derived by transfer from stock funds.
[2] In addition, $260,000,000 to be derived by transfer from stock funds.
[3] In addition, $75,000,000 to be derived by transfer from stock funds.
[4] In addition, $60,000,000 to be derived by transfer from stock funds.
[5] In addition, $24,000,000 to be derived by transfer from stock funds.
[6] In addition, $500,000 to be derived by transfer from stock funds.
[7] In addition, $50,000,000 to be derived by transfer from stock funds. Also includes $6,000,000 appropriated in the Supplemental Appropriation Act, 1960.
[8] In addition, $30,000,000 to be derived by transfer from stock funds.
[9] Includes $120,400,000 which House has placed under new appropriation "Airlift modernization."
[10] In addition, $150,000,000 to be derived by transfer from other appropriations available for obligations in the respective fiscal year.

Mr. SALTONSTALL. Mr. President, will the Senator from New Mexico yield?

Mr. CHAVEZ. I yield.

Mr. SALTONSTALL. I have prepared some remarks which I shall make at a later time. At this time, I simply wish to join with the chairman of the Subcommittee on Defense Appropriations in supporting the bill before the Senate. While I do not agree with all the conclusions, I believe the measure as a whole is adequate for the support of the Armed Services for the fiscal year 1961.

I commend the Senator from New Mexico upon his faithfulness at the hearings, the fairness with which he presided, and also the care with which he has compiled the report he has just made to the Senate. It is an all-inclusive report. In an objective way, I believe it supports the actions of the committee.

Mr. CHAVEZ. I believe that not one dollar more should be added to the bill. We have provided for an adequate defense. We want to be ready. But if the Armed Forces cannot use a billion dollars, why give it to them? They have accumulated money. I think the bill does what it is intended to do—to keep us ready for defense, or offense if necessary.

Mr. SALTONSTALL. I agree with the statement of the Senator from New Mexico. The bill is all-inclusive and should be adequate in the next fiscal year for our defense purposes, and for any small wars, as that expression is used, which might arise. I believe it provides what is necessary for our overall security, and is adequate for that security.

Mr. CHAVEZ. I thank the Senator from Massachusetts.

Mr. DOUGLAS. Mr. President, will the Senator from New Mexico yield?

Mr. CHAVEZ. I yield.

Mr. DOUGLAS. First, I express the appreciation of those of us who are not members of the Committee on Appropriations for the hard work, diligence, and patriotism of the members of that committee and for the great care which they have shown in the preparation of the bill.

I should like to address a few factual questions to the very able chairman of the subcommittee, reserving for later in the day some comments about policy.

First, and preparatory to these questions, I heartily approve of the action of the committee insofar as the bill increases the combat strength of the Armed Forces. I think the appropriations for the modernization of the weapons of Army are certainly badly needed. Perhaps more money will be needed. The strengthening of the Air Force is excellent. Other features which will increase the striking power of our Armed Forces are badly needed and should be approved. As a matter of fact, I favor still further increases in the combat strength of the Armed Forces and in raising the strength of the Marine Corps from 175,000 to 200,000. So the questions which I am about to ask are not intended in any sense to work for a reduction in the total appropriations but rather are designed to help effect a better distribution of the appropriations and to see if it is not possible to eliminate some of the fat and to strengthen the muscle.

The first question is directed toward items on page 1 of the speech of the Senator from New Mexico, in which he said that the bill calls for appropriations for procurement in the amount of about $13.9 billion, and for operation and maintenance in the amount of $10.5 billion. Am I correct in understanding that the $13.9 billion is almost exclusively for weapons?

Mr. CHAVEZ. It includes all procurement, but, of necessity, weapons.

Mr. DOUGLAS. May I ask about the operation and maintenance item? Does this include appropriations for clothing, for shoes, for subsistence, for trucks, and so forth?

Mr. CHAVEZ. That is correct.

Mr. DOUGLAS. So the appropriation for total purchases and total procurement by the defense forces would be in excess of $13.9 billion?

Mr. CHAVEZ. Practically all the $13.9 billion is for procurement.

Mr. DOUGLAS. Yes, I understand; but I mean the total of all procurement.

Mr. CHAVEZ. It is all-inclusive. It could be used to purchase a sack of flour.

Mr. DOUGLAS. But in addition to the $13.9 billion, is there not a very large portion of the total set aside for operation and maintenance? Does not that consist largely of supplies?

Mr. CHAVEZ. Well, in procurement it is necessary to carry out operations and maintenance.

Mr. DOUGLAS. So the provision of clothing, food, shoes, trucks, and so forth, would be included in operation and maintenance, and hence would be in addition to the $13.9 billion?

Mr. CHAVEZ. The trucks are in a separate category. They are a separate item in the bill, not included in the $13.9 billion.

Mr. DOUGLAS. They are not included in the $13.9 billion?

Mr. CHAVEZ. No; not the trucks.

Mr. DOUGLAS. Last year, according to the Department of Defense, the total supplies purchased under contracts by the Department with firms within the United States cost $22.7 billion. That was under an appropriation approximately $1 billion less than the appropriation in the pending bill. Does not the Senator from New Mexico believe that the total volume of supplies purchased under the bill will be at least $22.7 billion, and possibly slightly in excess of $22.7 billion?

Mr. CHAVEZ. That is correct. It depends on where the supplies are bought.

Mr. DOUGLAS. That is correct. This amount was for supplies purchased within the United States.

Mr. CHAVEZ. If the purchases were made in the United States, my opinion would be that that amount would be about right.

Mr. DOUGLAS. That did not include any of the figures for 1959, so it is at least $22.7 billion, if we include any other items to bring the amount to $22.7 billion.

Mr. CHAVEZ. That is correct.

Mr. DOUGLAS. Is it not true that the House made a cut of $400 million for procurement; and is it not true that the Senate committee restored that cut?

Mr. CHAVEZ. I think the House was partially correct, too.

Mr. DOUGLAS. Did not the Senate committee also add language critical of the procurement practices of the Department?

Mr. CHAVEZ. The Senate committee also did that.

Mr. DOUGLAS. Nevertheless, $400 million was restored, was it not?

Mr. CHAVEZ. That is correct. I have a statement I should like to make on the procurement situation, if the Senator will permit me to do so.

Mr. DOUGLAS. Certainly.

Mr. CHAVEZ. It has to do only with procurement. In the figures the Senator used a little awhile ago, he also included the procurement of military aid for foreign countries.

Mr. DOUGLAS. The figure of $22.7 billion expended in 1959 included supplies purchased through contracts with firms within the United States.

Mr. CHAVEZ. But we purchase in the United States to aid foreign countries.

Mr. DOUGLAS. Yes.

Mr. CHAVEZ. There is no doubt in my mind that something should be done—something must be done—in regard to procurement generally and procurement contracts in particular. All too frequently evidence of waste, laxity in negotiation, carelessness, overpricing, lack of cost data, and the like, indicate weaknesses in the procurement process. Reports from the General Accounting Office are replete with examples of this.

The Department, in rebuttal, states that in a multibillion dollar procurement program, the largest in the world, there are bound to be some mistakes, but that they are constantly attempting to take corrective efforts. I do not doubt this.

On the other hand, it would seem to me that with the ample experience the Department has had in the field of negotiation and purchasing, more stringent regulations, sharper procedures, and penalties if need be should be provided. This is and should be an administrative matter. But I believe that it would be wise for the Congress to continue its studies to enact corrective legislation if the situation does not improve markedly in the very near future.

As Senators know, the House made an overall 3-percent reduction in procurement covering nine appropriations titles in an attempt to combat this administrative laxity. Your committee wholeheartedly approves the philosophy expressed by the House cut. But, on the other hand, we were faced with the realities of the situation.

Should we approve the House action, thereby cutting Army modernization, the very item which many of us agree needs strengthening? Should we reduce the Navy shipbuilding and conversion funds, which we have increased over the budget by about $300 million? Should we reduce the progress being made by the Navy and by the Air Force? Those are the things we had in mind.

Mr. SALTONSTALL. Mr. President, will the Senator from New Mexico yield, to permit me to make a comment?

Mr. CHAVEZ. I yield.

Mr. SALTONSTALL. I should like to make an additional answer to the question asked by the Senator from Illinois. I would say we voted to restore the 3-percent cut because we believe it was a meat-ax straight across the board, and could not be accomplished in 1 year.

We are in favor of putting into effect, insofar as possible, the recommendations of the Hoover Commission.

But I should like to call the attention of the Senator from Illinois to the fact that in the last 2 fiscal years the Department of Defense has reduced its supply system and inventory by $7.3 billion, or 14 percent. The volume of surplus property of the Defense Department is stated as $26.7 billion. But in the fiscal year 1959 the Department of Defense disposed, at the original acquisition cost, of $8.9 billion worth of property.

I could proceed further; but I wished to make that statement to supplement what the Senator from New Mexico has so ably said, in connection with pointing out that we could not make the overall 3-percent cut without interfering with some of the modernization which we wish to have made, and that the Department of Defense has taken this matter under very serious consideration, and has reduced its supply system and inventory by 14 percent during the last 2 years.

Mr. DOUGLAS. Mr. President, will the Senator from New Mexico yield?

Mr. CHAVEZ. I yield.

Mr. DOUGLAS. Is it not true that for at least 10 years various Members of the Senate and the House, including the Senator from Illinois, have called attention to the gross wastes in procurement, and that from time to time the two bodies issue to the Defense Department advice that it should improve its procurement practices and obtain more centralized purchasing? Is it not also true that this advice has almost totally been disregarded?

Mr. CHAVEZ. I shall not accuse the Department of completely disregarding it.

Mr. DOUGLAS. Well, has not the Department predominantly disregarded it?

Mr. CHAVEZ. Of course, the Congress appropriates the funds, and the Defense Department uses the funds pretty much as it pleases, in effect.

Mr. DOUGLAS. Is it not true that, as regards negotiated contracts, which were intended to be the exception to the rule, rather than the rule, in the last year 86 percent of the dollar volume of all contracts were not competitive, but were negotiated?

Mr. CHAVEZ. That is my understanding, and I believe that is correct.

Mr. DOUGLAS. Is it not also true that, far from diminishing during the last 2 years, the percentage of negotiated contracts has actually increased, and has increased from approximately 81 percent to approximately 86 percent?

Mr. CHAVEZ. Yes, and we have called that to their attention right along, and have practically begged them to take competitive bids, instead.

Mr. DOUGLAS. But that advice by us has been disregarded; and, as a matter of fact, the percentage of negotiated contracts has increased, so that at the present time six-sevenths of all the defense purchases are made by negotiation.

Mr. CHAVEZ. Well, I know that practically all they understand is money.

Mr. DOUGLAS. If that is true, then the best means of obtaining a correction of the practices of the Defense Department would be to make a cut in the field of procurement; and the Senator from New Mexico has just now provided most eloquent testimony in support of my suggestion.

Mr. CHAVEZ. No, not at the expense of the Nation's security.

Mr. DOUGLAS. Is it in the interest of the Nation's security to pay, under negotiated contracts, many times the price of what the articles obtained could be acquired for in the open competitive market? In my speech of Monday, I gave many horrible examples of these excess costs.

Mr. CHAVEZ. No, that is not in the interest of the Nation. But one mistake is no reason why we should deprive the military services of the weapons that are needed.

Mr. DOUGLAS. Let me make clear that I am not proposing to deprive the military of a single weapon. If, later today, there are offered on the floor amendments to increase the weapons complement of all the armed services, I intend to support those amendments. If there are offered amendments to increase the strength of the Marine Corps, I will support those amendments. So let it not be said that I am trying to weaken the strength of the Armed Forces of the Nation.

But I say that we can properly practice economies and get more competitive pricing and, therefore, have more funds with which to increase the strength of the combat forces.

Mr. CHAVEZ. Yes. I believe, with the Senator from Illinois, that there should be competitive bidding. I do not want them to negotiate for the new aircraft carrier. Instead, I want them to call for bids on it, so the shipbuilders of the Nation can do a proper job. But I do not want to deprive the Armed Forces of the weapons they need.

Mr. DOUGLAS. Mr. President, will the Senator from New Mexico yield further to me?

Mr. CHAVEZ. I yield.

Mr. DOUGLAS. The Senator from New Mexico referred to the reports made by the very distinguished and honorable Comptroller General of the United States, Mr. Joseph Campbell, who was appointed by President Eisenhower. Is the Senator aware that in at least 52 instances the Comptroller General has made investigations which have indicated gross negligence in the determination of negotiated contracts? On Monday, I placed in the RECORD those 52 letters of transmittal. I should like to have the distinguished Senator from New Mexico allow me the privilege, later today, of presenting a tabulation of the overcharges which the Comptroller General says occurred. That survey does not relate to all the contracts, but relates to only a few of them.

Mr. CHAVEZ. I realize that.

Mr. DOUGLAS. In virtually every instance, mismanagement, or worse, was discovered.

Let me say that I know that, if I were to move that a cut be made in the procurement appropriation and that a transfer be made to the combat forces appropriation, the amendment would be defeated, because I know that the members of the Appropriations Committee close ranks and oppose such amendments, and I know that the chairmen of the various Senate committees would join the chairman of the Appropriations Committee in opposing such an amendment. So would the administration stalwarts. So it is not my present intention to propose such an amendment.

But as the debate proceeds during the day, and as there is introduced the testimony in regard to the need for more weapons for the Army and the need for more men in the Marine Corps and the need to keep our airplanes in the air, so we can be in a greater state of alertness, and as there is shown the need for more Polaris submarines, I hope the committee will realize that one of the best places to get the funds needed for these purposes is from the waste and the extravagances which already exist. It is because they exist that it is said by the administration we do not have sufficient funds to maintain a strong Army and a strong Marine Corps or to have more Polaris submarines or to have an air alert, whereas we do in fact have the necessary funds if we will only make the economies which can be made.

So I hope very much that as the debate proceeds, those who are striving to strengthen the Armed Forces of our Nation—and I am sure the Senator from New Mexico is one of them—will turn to the sources from which that can be financed. I for one will support all these moves.

Furthermore, if these proposals are rejected by the Senate, I hope the House conferees will stand like a rock in insisting on the making of these economies.

I thank the Senator from New Mexico for his courtesy in yielding to me.

Mr. BIBLE. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. LAUSCHE in the chair). Does the Senator from New Mexico yield to the Senator from Nevada?

Mr. CHAVEZ. Mr. President, I shall be glad to yield; but first I should like to read a statement.

Mr. BIBLE. Certainly.

Mr. CHAVEZ. Mr. President, I read now from page 41 of the report:

> The committee notes with grave concern the numerous and admitted examples of waste and duplication in Defense procurement which have been reported to this and other congressional committees. The audit reports of the General Accounting Office show that these are not isolated examples; rather they underscore the urgency of integrating the "supply systems and service activities" of the military departments as repeatedly expressed as the intent of Congress. Such integration is provided for in the O'Mahoney amendment to the 1953 Defense Appropriation Act and the McCormack-

Curtis amendment to the Department of Defense Reorganization Act of 1958.

While some progress has been made in this direction, it has been far from satisfactory. The committee calls upon the Department of Defense to take immediate and vigorous steps to integrate its procurement, supply, and service activities in order to provide maximum utilization of the defense dollar.

Mr. DOUGLAS. Mr. President, I congratulate the committee on its statement. But is it not true that similar statements have been made year after year, in the past, but have had very little effect?

Mr. CHAVEZ. That is correct.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. DOUGLAS. I should like to have the Senator from New Mexico reply to my question. Is it not true that it has very little effect?

Mr. CHAVEZ. Very little effect.

Mr. DOUGLAS. I am glad the Senator said that. How does he believe another statement will have any effect?

Mr. CHAVEZ. I have faith in human beings. I know Secretary Gates happens to be a Republican, but I trust him.

Mr. DOUGLAS. I do not care whether he is a Republican or a Democrat. I believe he said he wants to be bipartisan. I am perfectly willing to accept that statement. But does the Senator remember on two occasions we provided funds to bring the Marine Corps strength up to 200,000, and the Department asked us not to make it mandatory? We did not make it mandatory, and the increase in strength was not effected, and the appropriation was not spent. Is that correct?

Mr. CHAVEZ. That is correct.

Mr. DOUGLAS. Yet the Senator is saying, "Do not make it mandatory this time." Does not the Senator have very serious doubt about not making it mandatory?

Mr. CHAVEZ. In many instances, we have to trust someone, and I believe in the Secretary of the Defense Department. I have a lot of respect for Mr. Brucker, Secretary of the Army.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. CHAVEZ. Yes.

Mr. SALTONSTALL. May I respectfully reply to the Senator from Illinois? I know the Senator was a very brave member of the Marine Corps, and I know he is interested in this. General Shoup, Commandant of the Marine Corps, told us that with the present allowance of 175,000 men, by better organization he is going to build up two new fighting battalions.

Mr. DOUGLAS. I hope the Senator will not press that too far, and I hope I am not guilty of service egotism when I say we in the Marines have always sought to increase the proportion of combat troops and to diminish the administrative and supply overhead.

Mr. SALTONSTALL. That is right.

Mr. DOUGLAS. I may say I am a little discouraged at the way the other services fought the 10 percent reduction in personnel at the Pentagon, which is grossly overstaffed. I think we could squeeze, out of the service personnel, enough for at least two Army divisions. There is a waste of personnel as well as material.

I believe the Senator from Missouri has an amendment, which he will offer later in the day, to make mandatory an increase in the strength of the Marine Corps. I do not have the floor, but I shall be glad to sit down so he may address an inquiry to the Senator from New Mexico.

Mr. SYMINGTON. Mr. President, will the Senator from New Mexico yield to me for a moment so that I may reply to the Senator from Massachusetts?

Mr. CHAVEZ. Certainly.

Mr. SYMINGTON. First, I should like to congratulate the senior Senator from New Mexico. I have sat through the hearings with him. Nobody worked more faithfully, diligently, and patiently in those hearings than he. I do not agree with him on a couple of points, but that is the way it is; and he knows of my great respect for him and for the magnificent job he has done in presenting this bill to the Senate.

The statement of Gen. Wallace M. Greene, chief of staff for General Shoup, with respect to the Marine Corps is pertinent to what the Senator from Massachusetts has said:

With a Marine Corps of 175,000—

That is the figure at which the Marine Corps is today—

three Marine divisions can be maintained at 90 percent of their authorized strength; three Marine air wings at 80 percent; and combat support forces at between 65 and 70 percent strength.

With the world as it is today, I would think this Nation, with its great wealth, could afford to have the Marine air wings at full strength and the combat support forces at more than 65 to 70 percent strength.

As the able Senator from Illinois has pointed out, I do not see why we cannot have the three Marine divisions at 100 percent of strength. The Marines are generally in the front when a battle is in process.

Mr. SALTONSTALL. Mr. President, if the Senator will yield, the figures the Senator from Missouri has given are correct, but General Shoup did say, if my memory is correct, he was moving a number of men into fighting divisions, that the reserve strength was not as much as he would like, but that the actual combat units were enough.

Mr. SYMINGTON. If I may read further from the General's statement, he said that with a Marine Corps of 200,000—which, in my opinion, is the minimum figure we should have, and I am quoting—it is estimated each of the Marine divisions of all elements could be maintained at 100-percent strength—the three Marine air wings, with 200,000, could be maintained at 90 percent, and the combat support forces at 85-percent strength.

If the Commandant of the Corps is going to add to the Marine combat forces, he can take them away only from the combat support forces, which are already down to 65 to 70 percent of authorized strength. That is the point I wanted to make.

Mr. SALTONSTALL. I should like to read from what General Shoup said, as appears on page 172 of the hearings:

All of these savings permit me to correct some of the personnel shortages in the Fleet Marine Forces. I plan to reactivate at least two of the six previously deactivated battalion landing teams and to activate a surface-to-air missile battalion to utilize the new Hawk missile.

Mr. SYMINGTON. I understand, but as long as the Senator brought it up, I am pointing out that, on the basis of present Marine Corps strength, according to the Marine Corps letter to me of June 6, we do not have full strength either in the divisions or air wings, and the combat support forces are down to 65 to 70 percent of authorized strength.

Mr. JOHNSON of Texas. Mr. President, first I want to compliment the Senator from New Mexico [Mr. CHAVEZ] for the thorough, outstanding, and intelligent manner in which he has presented the Department of Defense appropriation bill for 1961.

Those of us who have observed his long record of distinguished service in both the House and the Senate, recognize that he has few equals as a public servant, and no superior.

I believe the Appropriations Committee, for which he is an agent, also deserves the commendation of this body for the splendid job that has been done.

Frankly, I can recall few occasions when the merits and shortcomings of various proposals were discussed with greater deliberation and given more careful consideration than has been the case in the markup of this Defense Department appropriation bill.

I think the Senator from New Mexico deserves the respect and the compliments of the entire Senate for these results.

The high quality of his work is evident in the finished product now before us.

Obviously there will always be differences among us as to the degree of emphasis that should be given to individual programs. However, I believe that the bill recommended by the committee goes a long way to remedying many of the serious defects of the budget proposals that were presented to the Congress in January. I personally support this bill and believe it warrants the support of this entire body.

Earlier this session, the Preparedness Investigating Subcommittee, which I have the honor to serve as chairman, held a series of hearings on our missile, space, and other major defense programs. During these hearings, we received testimony from our key military leaders—including General Twining, Admiral Burke, General White, General Lemnitzer, General Shoup, General Power, General Schriever, Admiral Rickover, and Gen. Maxwell Taylor, the distinguished former Army Chief of Staff.

After hearing from all these distinguished military officials, we asked the Secretary of Defense to testify. If I may, I should like to quote a statement I made to him summarizing the import of the testimony we had received up to that

time. I should like to have this a part of the record of the consideration of this bill:

To date we have heard from each member of the Joint Chiefs of Staff, including the chairman, as well as other key military witnesses responsible for America's defense programs. These senior military officials have made it clear that while our defense posture today is adequate, our programs for the future involve a degree of risk which could affect the very survival of our Nation.

Some of our outstanding military experts warn us that we must act now to step up such key programs as the B–52 continuous airborne alert, Army, Navy, and Marine Corps modernization, airlift, Polaris submarines, dispersed, hardened, and mobile ICBM's and antisubmarine warfare.

We must take decisive steps to shorten, rather than lengthen, the leadtime for developing an operational aircraft to replace the B–52.

We must also accelerate the development of space satellites and the high-thrust engines vitally needed for our space programs.

General Power, commanding general of America's principal deterrent force, testified he was not satisfied that we were doing all we should to insure our future survival.

General Schriever said that the missile gap we now face results from failure to make the necessary decisions in the past. He also advised that we could increase our operational missile strength during the critical year of 1962 if necessary decisions were made now.

General White testified that there was immediate and continued need for more manned aircraft. He personally recommended more B–58's to replace our obsolescent B–47's and the rapid development of the B–70 hypersonic bomber as an operational weapons system.

Admiral Rickover testified about the Soviets that "Their program is world domination, and no Russian Communist leader has ever deviated from that principle. Our main enemy is wishful thinking. Only those who learn nothing and forget everything refuse to look at the record."

Admiral Burke testified that the Navy was approaching the breaking point with regard to obsolescence, but that restrictive budgetary guidelines had prevented the Navy from presenting its military requirements. He urged immediate expansion of the Polaris program.

General Lemnitzer testified that the Army was not modernizing as rapidly as it should and that only a small portion of the funds added by the Congress in 1960 for Army modernization had been released for this purpose. He voiced the need for more airlift and warned that the country has as yet no adequate defense against ICBM's.

General Taylor testified that unless heroic measures are taken now, this Nation faces a threat to its survival.

There has, of course, been a difference of opinion among individuals both as committee members and as witnesses.

I cannot help believe, however, that we are all agreed that preparedness and security are the necessary watchwords of this age of advanced and destructive weapons.

America must maintain a position of unquestioned strength to assure that world peace will not be broken by any aggressor tempted to gamble for world domination.

The path to a lasting peace lies through the strength of free nations, and America is the key strength in the free world.

As I have said before, there may be some disagreement on some points discussed before our committee, but one simple proposition remains absolutely clear.

If we speed up our defenses and they are not needed, all we lose is money. If we fail to step up our defenses and they are needed, we could lose our country.

In addition to the hearings held by the Preparedness Subcommittee, the Armed Services and Appropriations Committees of the House and Senate conducted long and intensive hearings into various aspects of the defense program. One simple conclusion emerged from all these hearings; namely, that there was justifiable cause for concern over the adequacy of the defense program, particularly with respect to our future military capabilities. It also became clear that the continued application by the executive branch of fixed budget ceilings made it impossible for our military leaders to press for consideration of valid military requirements.

It should be noted that the administration itself belatedly recognized some of the shortcomings of its defense program. Despite repeated attacks on the so-called parochial views of those patriotic military leaders who had testified to the deficiencies of the program as they saw it—and despite repeated statements that acceleration was either impossible or unnecessary—in April of this year the administration did endorse a number of program increases. Of course, it was specified that any increases had to be offset by decreases in other programs, so that there would be no increase in total defense expenditures.

Not only were the recommendations too little and too late, but for some reason they were never officially transmitted to the Congress.

Now, as we meet this afternoon, we all know that when the executive branch considers it necessary to change the budget estimates, while the appropriation request is still pending before the Congress, the simple and correct way to do this is to submit a budget amendment to the Congress. Only last year, the Appropriations Committee took the executive branch to task for its failure to submit budget amendments to cover a number of admitted deficiencies in the defense estimates. As a matter of fact, the committee made the following statement in its report:

I should like to have the RECORD show this, and to have Senators hear it:

The committee is emphatic in its belief that this deficiency should not again occur without the committee being promptly informed in accordance with the statutes on deficiencies.

With reference to the deficiency in the Air Force military personnel account for fiscal year 1959, there appears to be a definite violation of the provisions of the Antideficiency Act (sec. 3679, revised statutes) in the failure of the Bureau of the Budget to submit the detailed reports required by the statute, accompanied by the required supplemental estimates. Furthermore, the failure of the Bureau of the Budget to submit formally revised estimates to cover the admitted deficiencies in the Air Force military personnel account for fiscal year 1960 is in conflict with the applicable provisions of the Budget and Accounting Act of 1921, as amended.

It would seem that an administration which has appropriated for itself the slogan of "fiscal integrity" would pay attention to the simple request of Congress to obey the law. Unfortunately, once again this has not been the case. Despite the fact that the Secretary of Defense testified before the House Appropriations Committee in April endorsing and recommending certain changes in the defense program, no budget amendment was ever submitted to the Congress.

The failure to do so was not an oversight, but was a calculated decision. This was brought out clearly in response to a question raised by the very able chairman of the House Appropriations Subcommittee, my distinguished colleague from Texas, Mr. GEORGE H. MAHON. So there can be no doubt about this, I would like to read the exact testimony:

Mr. MAHON. Will a formal budget submission be made by the Director of the Budget with respect to the Air Force program which was submitted about 10 days ago and with respect to this program which you have presented, both of which you advise have the official approval of you as Secretary of Defense and the approval of the President?

Secretary GATES. Well——

Mr. LINCOLN. I can answer that, Mr. Chairman, if I may. I talked to the people in the Bureau of the Budget before I came up here and Mr. Stans would prefer to have it the way we set it up now, by the Secretary writing a letter to you.

Mr. MAHON. Do you have a letter?

Secretary GATES. Yes, sir.

Mr. MAHON. Does that cover both the Air Force program and the Polaris program?

Mr. LINCOLN. It does, sir.

Mr. MAHON. And, that is a letter from the Secretary?

Secretary GATES. From me to you, sir, as chairman of the committee.

Frankly, I do not understand this kind of fiscal hocus-pocus. I think it is unfortunate to have a situation which makes it look as though the Secretary of Defense and the Director of the Bureau of the Budget deliberately avoided asking the President to approve the program changes and submit a formal budget amendment to the Congress. Yet, there has been no explanation for avoiding the course of action which both the law, and respect for fiscal integrity, clearly require.

I would like to return now to the appropriation bill that is now before us. I do not propose to discuss the bill in detail, since this has been done so well by the distinguished Senator from New Mexico [Mr. CHAVEZ] and by the committee report. I do want to mention, however, that the full story is not told by the simple statistic that the Senate bill would appropriate $1,050 million more than the budget estimate. As a matter of fact, the bill provides $1,581 million above the budget estimate for 12 key programs which our military leaders advised the Preparedness Investigating Committee and other congressional committees are needed for our national security.

I would like to list these increases, so the American people can see clearly exactly what the Senate proposes to do to strengthen this Nation's defenses now.

First. Additional Army modernization, $162 million.

Second. Additional airlift capability, $200 million.

Third. Acceleration of the Minuteman ICBM, $27 million.

Fourth. Increase and acceleration of the Polaris program, $394 million.

Fifth. Increased research and development for antisubmarine warfare, $42 million.

Sixth. Acceleration of the Samos reconnaissance satellite program, $84 million.

Seventh. Acceleration of the Midas ballistic missile detection satellite, $76 million.

Eighth. Increase in the Discoverer satellite program, $35 million.

Ninth. Acceleration of the Atlas ICBM program, $136 million.

Tenth. Acceleration of the Ballistic Missile Early Warning System, $35 million.

Eleventh. Development of the B–70 as an operational weapons system, $285 million.

Twelfth. Maintenance of the Army National Guard strength at 400,000 and the Army Reserve strength at 300,000, instead of permitting a 10 percent cut, $105 million.

I would like to say a few words about one program that is not included in this list of dollar increases. As Senators know, the 1961 budget included $85 million for the procurement of spare parts for an "on-the-shelf" SAC airborne alert program. This program is planned to cover approximately one-eighth of the B–52 force.

In acting on the bill, the House added $115 million to cover the cost of procuring and storing additional spare parts which would increase the "on-the-shelf" capability by some 25 percent. In other words, these additional funds were proposed to expand the airborne alert program from one-eighth of the B–52 force to close to one-sixth of the B–52 force.

The Senate Appropriations Committee has deleted the $115 million added by the House from the bill. I cannot speak for the committee as a whole on this item, but I would like to make my position clear. I believe that General Power, the able commander of the Strategic Air Command, presented a convincing case for proceeding as rapidly as practicable with an actual airborne alert—not just an "on-the-shelf" capability—for one-fourth of our B–52 force. It is a sobering fact that if the Soviet Union proceeds to build up its missile strength during the next few years on the basis of its capabilities, the SAC airborne alert force would be our only umbrella to deter a possible deadly rain of missiles.

While this bill does not include the specific amounts added by the House for an expanded airborne alert, it does provide the means of carrying out the full program recommended by General Power. Section 512(b) reads as follows:

> Upon determination by the President that such action is necessary, the Secretary of Defense is authorized to provide for the cost of an airborne alert as an excepted expense in accordance with the provisions of R.S. 3732.

What this language does is to provide the President with a complete blank check to spend any and all amounts necessary for an airborne alert.

I submit that the President will not use the authority that we give him under the bill if he feels it is unnecessary. By the same token, however, he would not use any additional money which we might give him, which is a point that Congress should carefully consider. This is something that the Congress rarely does. I earnestly hope that the executive branch will review this situation carefully and will not let budget ceiling considerations inhibit the full use of the authority to initiate an expanded airborne alert.

I do not intend to use this occasion to discuss the U–2 incident and the failure of the summit conference. I cannot help but feel, however, that Mr. Khrushchev would not have felt so free to abuse and humiliate our President if he had had more respect for our future military strength.

The history of communism has made it clear that despite the millions of words that have been written about Marxist theory and philosophy, Communists basically still act and react to strength. They are "tough" when they feel they can get away with it; "soft" when they feel that they have no other alternative.

No set of alleged principles has ever prevented Communist aggression against a weak and helpless Nation. Similarly, no alleged set of principles has ever led the Communists to attack against strength—unless they have made a miscalculation.

By this, I do not wish to infer that military strength alone will ever bring us to peace. But it is clear that without strength we will not have the necessary shield against aggression, behind which we can make the moves that ultimately will lead this world to a true and just peace.

No one can claim to know the inner workings of Premier Khrushchev's mind at Paris or in any other spot. But we do know that he and his predecessors have only been conciliatory in situations where they had good reason to respect the power of the Western World.

In preparedness, as in all other matters, judgment must still be the governing factor. We cannot adopt a "sky is the limit" philosophy in determining the amount of funds that are necessary to keep our Nation strong. But neither can we adopt a philosophy that it is more important to save money than it is to support the programs that will save the Nation.

It seems to me that the bill now before us will supply us with the necessary margin of deterrence. It may be argued that more is desirable. But this is the kind of argument to which there is no terminal point.

I think that we have struck a balance to which reasonable men can subscribe. I would not foreclose the adoption of any amendment, although I do think the bill as reported is a good bill.

The action taken by the committee to provide additional funds for accelerating development of an operational SAMOS reconnaissance satellite system will save us a previous year's time. This will narrow—although it cannot eliminate—the intelligence gap resulting from loss of the U–2.

Finally, in summary, I firmly believe that the increased overall strength we are providing contained by the program increases in this bill will have a definite and desirable effect on the future conduct of Mr. Khrushchev and his cohorts.

I should like to make one further observation if I may before I conclude. The 1961 budget will be administered—at least for almost half of the fiscal year—by a new President. None of us knows who that will be. I am sure, however, that our next President will be in a position to act from strength if we provide him with the additional resources called for by the bill that is now awaiting our approval. I recommend that we approve it. Obviously, the next President can submit any revised suggestions he may have early in his term.

AMENDMENT OF NATIONAL DEFENSE EDUCATION ACT OF 1958—ELIMINATION OF AFFIDAVITS OF BELIEF

During the delivery of the speech of Mr. JOHNSON of Texas,

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). The hour of 12:30 o'clock having arrived, the Senator from Florida [Mr. HOLLAND], under the order previously agreed to, is recognized to make a motion with respect to the motion entered yesterday to reconsider the vote by which Senate bill 2929, to amend the National Defense Education Act of 1958 in order to repeal certain provisions requiring affidavits of belief, was passed.

Mr. HOLLAND. Mr. President, I gladly defer to the majority leader if he is approaching the end of his address.

Mr. JOHNSON of Texas. I have three or four more pages. If it would not inconvenience the Senator from Florida, I ask unanimous consent that I may be given 5 additional minutes to conclude.

Mr. HOLLAND. I certainly have no objection. However, there are other Senators present in the Chamber who are interested. I see them nodding. I have no objection.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas? The Chair hears none, and it is so ordered.

Mr. JOHNSON of Texas. I thank the distinguished Senator from Florida for his usual courtesy to me.

Mr. HOLLAND. I am always glad to accommodate the distinguished majority leader.

Mr. President, last evening, coming into the Chamber some minutes after the Senate had passed, by voice vote, S. 2929, I made a motion to reconsider the vote by which that measure had been passed. At the time I stated my reasons for making that motion. I shall not review them in detail. In brief, this is the situation:

An announcement had been made informally on the floor of the Senate that the distinguished junior Senator from Vermont [Mr. PROUTY] was prepared to speak for approximately 3 or 4 hours on an amendment which he had offered in the nature of a substitute for the pending bill.

Numerous Senators, of whom I was one, left the floor, some to adjoining

rooms, some to dinner, some to the office of the Sergeant at Arms, some to the Secretary's office, and some to the reading room. Suddenly we were advised that the matter had taken a new turn, and that the bill had been passed by voice vote.

My own reason for concern in the matter was not only my own very real interest in the legislation, but also my understanding that the amendment, upon which the junior Senator from Vermont had begun a long speech, would in effect strike out both oaths, that is, the so-called loyalty oath and the antisubversive statement. I felt that that course would go too far.

A number of Senators, including myself, desired an opportunity to examine closely as to what had been done At that time, I understand, and as the facts show, the Senator from Vermont changed his proposed amendment, which was originally in the nature of a substitute, to an amendment only to that part of the original bill which required an antisubversive statement on the part of the applicant.

Insofar as the Senator from Florida is concerned, he is happy that the loyalty oath has remained in the bill. He would not have supported the bill if it had not remained in the bill.

Insofar as the Senator from Florida is concerned, he would have preferred that the matter not be brought up, because he was not dissatisfied with the provisions of the original law.

However, I have studied the amendment proposed by the Senator from Vermont. I have conferred with distinguished lawyers in the Senate, such as the distinguished senior Senator from North Carolina [Mr. ERVIN], the distinguished junior Senator from South Carolina [Mr. THURMOND], the distinguished junior Senator from Mississippi [Mr. STENNIS], the distinguished junior Senator from Connecticut [Mr. DODD], and others, and they all seem to feel that the provisions retained in the bill last night merely as a substitute for the antisubversive statement constitute a very strong enforcement measure. Although some of them would not have favored its substitution for the strong language in the original bill, nevertheless, they feel it is a strong enforcement measure.

Therefore, the Senator from Florida is not disposed to insist upon his motion to reconsider the action of the Senate. He is gratified that he has had an opportunity to confer with all the Senators with whom he has had a chance to talk on this matter. He is only sorry that he did not have a chance to advise with all concerned. He sees on the floor of the Senate the senior Senator from New Hampshire [Mr. BRIDGES], who is rising to his feet, and who has great concern in this matter.

I have no intention of insisting upon my motion to reconsider. I feel that the question of reconsideration should be disposed of at this time, and therefore, after my remarks are concluded, and after other Senators have made their remarks, within the time allowed under the unanimous-consent agreement, I shall await the making of a motion to lay on the table, either by the distinguished majority whip, or whoever cares to make it; or I will make it myself, if no one else cares to make it. In other words, I am not seeking to hold up the bill, and I am not an obstructionist. I merely wish to say that the Senate should make certain in such a case that it does not act too quickly, without every Senator having a chance to understand what is going on.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. JOHNSON of Texas. I merely wish to say that the Senator from Pennsylvania will make a motion to table.

Mr. HOLLAND. I thank the Senator.

Mr. BRIDGES. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield to the Senator from New Hampshire.

The PRESIDING OFFICER. The Chair is advised that the Senator from Florida was recognized, but that in order for him to yield time, he must first make his motion to reconsider.

Mr. HOLLAND. Mr. President, I ask unanimous consent to take at this time from the calendar the motion to reconsider the vote by which the Senate passed S. 2929.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the question is on agreeing to the motion of the Senator from Florida that the Senate reconsider the vote by which Senate bill 2929 was passed.

Mr. HOLLAND. I yield to the Senator from New Hampshire.

Mr. BRIDGES. My feelings are somewhat along the line of those of the distinguished Senator from Florida. In the first place, I believe the National Defense Education Act as it was passed in 1958 was a good act. I see no reason for fuzzy-minded people in this country to object to it. And I see no reason why this controversy should be before the Senate at the present time in view of the fact that the sentiment of this body was clearly expressed less than a year ago when S. 819 was recommitted by a vote of 49 to 42.

Rather than the action taken last evening, I believe we should have either recommitted this bill, as we did last year's version, or we should have defeated it. I believe there was sufficient opposition to S. 2929 in this Chamber yesterday to do that. I was absent from the floor for a short time yesterday. I was told before I departed that the Senator from Vermont [Mr. PROUTY] had a 3- or 4-hour speech to deliver. I believe there were six names on the list of Senators who wished to speak. My name was the seventh. The distinguished junior Senator from Connecticut was on the floor and speaking when I stepped out of the Chamber.

Now, however, if the great lawyers in this body, and other capable Senators who feel as strongly about security matters as I do, are satisfied that the measure as it now stands contains a strong antisubversive penal provision in addition to the loyalty oath, it removes some of my doubts.

Nevertheless, I still think it would have been better if the original requirements remained intact. If the Senator were to move to reconsider the vote, I would certainly support his motion. However, I am very happy that at least we have retained the loyalty oath. A year ago an attempt was made to eliminate both the loyalty oath and the disclaimer affidavit. Many people gave the appearance of being against the loyalty oath. Finally, when the pressure became too great, they decided to let the loyalty oath stand.

The Prouty amendment, in its original form, would have deleted the loyalty oath but I am pleased that the oath was retained.

Although it would have been better to leave the National Defense Education Act in its initial form, I am glad that we were at least successful in salvaging the loyalty oath.

It upsets me to think that after 10 years of experience with the National Science Foundation Act, with no one objecting to its oath and disclaimer provisions, and after the National Defense Education Act was in effect for a year with no audible objections, all at once, in the face of a furor created by a handful of sophisticates, everyone runs to cover. We bow down to the demands of a few dissenters and change the law.

If the bill satisfies the lawyers in the Senate, whom I respect, it makes me feel a little better but I am far from satisfied.

Mr. HOLLAND. Mr. President, I accept the Senator's apology for not being a lawyer.

Mr. BRIDGES. If the Senator from Florida intends to proceed with reconsideration of the vote, I shall certainly support him; if he is not going ahead with it, I suppose the only thing we can do is to accept the bill as proposed, trust that it will be satisfactory, and hope that it provides the means to penalize any of this country's enemies who might seek to reap the benefits of this act.

I point out that under the Prouty amendment, any former Communist who has not been a member of a subversive organization during the past 5 years is not covered despite his prior affiliations and whether or not he has made a complete disclosure of the facts surrounding his membership in these organizations.

Mr. HOLLAND. I thank the Senator from New Hampshire for his comments.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. THURMOND. I am bitterly opposed to deleting the non-Communist oath from the law. In my judgment, it is a good law. There are two provisions: One, if a person receives a grant or a loan under the National Defense Education Act, he is required to take an oath to support the Constitution of the United States. The other is that he is required to execute a non-Communist oath; that is, he states that he is not a Communist and that he does not believe in the overthrow of the Government. I do not see how any true, patriotic American could oppose either one of those oaths. I do not see how any citizen, if he is not a Com-

munist and is not sympathetic with communism, could oppose either of those oaths.

I strongly favor the present law. However, the amendment of the Senator from Vermont [Mr. PROUTY] provides a criminal penalty, and that has a great deal of merit. After the amendment was offered last evening, and after the oath of allegiance was added to his amendment, then I had no special objection.

I think that possibly such a headline as that which appeared in the Washington Post and Times Herald today might be misleading to the American people. On page A–2, the headline reads: "Non-Red Oath Lifted From Education Act."

I think the action of Congress ought to be clear to the American people. We are not relenting one iota in our attitude toward Communists. We are strongly in favor of every measure to protect this country and the people of the Nation. We shall not lend money to anyone who has pro-Communist inclinations.

It is my opinion that under the amendment offered by the Senator from Vermont last evening to provide a criminal penalty, there will be, possibly, stronger enforcement than under the present law. Therefore, I did not object last night to the substitution.

We are not simply deleting the provision for the taking of an oath. We are substituting an enforcement provision for the non-Communist oath.

The Prouty amendment also provides that persons who have been members of subversive organizations within 5 years and who apply for or receive loans must in all faith make a sworn, written, full disclosure of their membership. I feel that that is important, too. If they have ever belonged to any organization which is not truly American—100 percent American—I think that before they receive any aid from the Government, they ought to make full disclosure of that fact. So the Prouty amendment has a double feature in that respect.

For these reasons, I did not oppose the adoption of the Prouty amendment last evening. However, because many Senators were out of the Chamber at the time, I felt that the matter should be reconsidered, so that Senators would have an opportunity to express their views. Therefore, I joined with the distinguished Senator from Florida [Mr. HOLLAND] in his motion last evening.

Mr. HOLLAND. I thank the Senator from South Carolina.

Mr. President, I promised to yield to the Senator from North Carolina [Mr. ERVIN].

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the time be extended for an additional 5 minutes, because other Senators desire to discuss the matter. I promised 5 minutes to the Senator from Pennsylvania [Mr. CLARK]. The extra time is needed.

Mr. HOLLAND. I certainly hope every Senator who wants to be heard on the matter will be given a reasonable time in which to speak. I would not want any Senator to be excluded from expressing his opinion on the subject.

Mr. GOLDWATER. Mr. President, reserving the right to object, may I ask what the request is?

Mr. JOHNSON of Texas. I have asked for an additional 5 minutes.

Mr. GOLDWATER. Was the Senate operating under controlled time?

Mr. JOHNSON of Texas. Yes.

The PRESIDING OFFICER. Does the Senator from Texas mean an additional 5 minutes for each side?

Mr. JOHNSON of Texas. Yes.

The PRESIDING OFFICER. Is there objection?

Mr. CLARK. Mr. President, reserving the right to object, how much time has been used?

The PRESIDING OFFICER. The proponents have used all but 3 minutes of the time under the original agreement, and the opponents have used none.

Mr. CLARK. I thank the Chair.

Mr. HOLLAND. Mr. President, if the Senator from Texas will permit me to do so, I should like to yield to the Senator from North Carolina.

Mr. JOHNSON of Texas. How much time does the Senator from Florida wish to yield?

Mr. HOLLAND. Three minutes.

Mr. JOHNSON of Texas. I yield 3 minutes to the Senator from North Carolina.

Mr. ERVIN. Mr. President, I commend the position of the able and distinguished senior Senator from Florida. I think it is a wise position to take in the light of the circumstances. It is very difficult to make a case of perjury in the courts, and that was the sole remedy which, under the original act, was available against one who made a false anti-Communist oath.

The Prouty amendment, as modified, as I understand, by the distinguished Senator from Vermont, at the request of the distinguished Senator from Connecticut [Mr. DODD], improves the original act, in my judgment, from a legal standpoint, because it retains the loyalty oath and substitutes for the anti-Communist affidavit a statutory crime which is easier of enforcement than a prosecution for perjury.

As a result of what has happened, I believe the original act has been improved, rather than injured, by the addition of the Prouty amendment, as modified. Therefore, I believe what the Senator from Florida has suggested is a wise course for the Senate to take.

Mr. HOLLAND. I thank the Senator from North Carolina.

Mr. STENNIS. Mr. President, will the gentleman from Florida yield?

Mr. HOLLAND. If I have time, I will yield. I had agreed to yield first to the Senator from Connecticut. Then I will yield to the Senator from Mississippi.

Mr. DODD. Mr. President, I commend the distinguished Senator from Florida for his attitude this morning. I think we have a good bill, and the Senator from Vermont [Mr. PROUTY] deserves much credit. We have been successful, at least, in putting some additional teeth into the statute. We have preserved what I call the oath of allegiance.

With respect to that, I direct my remarks to what the Senator from South Carolina [Mr. THURMOND] said. I think it is of the greatest importance that word go out that the Senate has preserved the oath of allegiance. I do not believe we retreated one whit last night. That is important.

I was opposed to the disclaimer affidavit, but not for the reasons advanced by the committee or by 99 percent of the advocates of the removal of the disclaimer affidavit. I think they were spurious reasons, as I tried to point out in considerable detail last night. The objective was good, but the reasons advanced were erroneous, in my judgment. I hope we can get to the people the true story of what we have done here. We have had trouble with some of our news outlets which obviously misunderstood our action last night. I hope we can get the information to the people through our explanations today.

Mr. HOLLAND. Mr. President, I now yield 1 minute to the Senator from Mississippi.

The PRESIDING OFFICER. The Senator from Texas has control of the time.

Mr. JOHNSON of Texas. I yield 1 minute to the Senator from Mississippi.

Mr. STENNIS. Mr. President, I desire to add this thought. I think a word ought to be said by someone who is proposing the change that the objections to the law as it now exists—certainly most of them—were made in good faith, and that the persons who objected are not to be censured or condemned. Such a course would cover many of the leading educators of the Nation, to whom we entrust our youth, and many others who are leaders in that field.

I am very happy to find that, upon analysis, the amendment adds strength to the purposes reflected in the present law.

The Senator from Florida has added greatly to the debate by bringing the matter up as he has. I highly commend him.

Mr. HOLLAND. I thank the Senator from Mississippi.

Mr. DIRKSEN. Mr. President, how much time remains?

The PRESIDING OFFICER. The Senator from Texas has 4 minutes remaining; the Senator from Illinois has 15 minutes remaining.

Mr. DIRKSEN. Mr. President, I yield 4 minutes to the Senator from Vermont.

Mr. PROUTY. Mr. President, I know that many Senators were surprised at the action taken on the floor last night. I shall try to clarify it a bit, if I can.

I assured many Senators that I would speak at length—perhaps 3 or 4 hours—and I sincerely intended to do so. But the course of the debate took a very sudden and unexpected turn when the junior Senator from Massachusetts [Mr. KENNEDY] accepted the amendment which I had proposed, and which later was modified.

It was for this reason that we did not make the customary motions to reconsider and lay on the table. We knew that many Senators were away; they had not expected any action to be taken at that time and had been given assurance to this effect. That was why we felt they should have an opportunity to bring up the question today, if they so desired.

I am glad it has been brought up, because it gives us an opportunity to point out that the amendment I proposed will strengthen, rather than weaken, existing law. I was very glad to retain the loyalty oath, for while it constitutes no real ground for possible prosecution, it maintains the principle that every American should be willing to swear allegiance to his country, and certainly this is true if he is receiving from his Government funds to help him obtain an education.

I believe that if my amendment is adopted we shall have a stronger law and one which would be much easier to enforce than the affidavit provision in existing law.

For example, today a man could sign such an affidavit in good faith, but if later on he joined the Communist Party, he could not be prosecuted, because—as was pointed out to me by the Department of Justice—the provisions of the statute which relate to perjury and the making of false statements are applicable only to statements which are alleged to have been false at the time when they were made. I believe there are many court decisions which substantiate that point of view. I, myself, am not a lawyer; and sometimes legal technicalities can be confusing to a layman, but a great deal of thought, time, and effort went into the drafting of my amendment and I believe that all of us can support it in good conscience.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). The time yielded to the Senator from Vermont has expired.

Mr. DIRKSEN. Mr. President, I yield 2 minutes to the Senator from Arizona [Mr. GOLDWATER].

The PRESIDING OFFICER. The Senator from Arizona is recognized for 2 minutes.

Mr. GOLDWATER. Mr. President, I was not in the Chamber last night when the vote on the amendment was taken. I believe a yea-and-nay vote should have been taken, so as to show how the Members of the Senate feel in regard to such a change in the law.

I do not believe there is any need for such a change. I think it is ridiculous to permit 10 percent of the students in the institutions of higher learning to force through the Congress such a measure, when 99 percent of the American people believe the disclaimer affidavit is needed.

However, the amendment has been agreed to and the bill has been passed.

The Senator from Vermont [Mr. PROUTY] and other Senators have for a long time urged this change on the proponents of the Kennedy-Clark bill, but they refused to accept it. I anticipated that there would be long debate on the Kennedy-Clark proposal. But now the bill has been passed.

I think that in many respects the amendment improves the bill; but I never like to see the Senate take any action which would reduce the protection of the American people from communism.

Mr. DIRKSEN. Mr. President, I yield 3 minutes to the Senator from New York [Mr. JAVITS].

The PRESIDING OFFICER. The Senator from New York is recognized for 3 minutes.

Mr. JAVITS. Mr. President, I am a cosponsor of the bill, along with the Senator from Pennsylvania [Mr. CLARK] and the Senator from Massachusetts [Mr. KENNEDY]; and I take full responsibility for the inclusion of the amendment, although I was not on the floor at the particular time when the amendment was adopted. I think my colleagues proceeded correctly.

A great effort is now being made to show that we have not really accomplished anything by deleting the non-Communist affidavit. But I believe it should be said that we have done a great deal, because we have refrained from casting suspicion on all American young people who wish to receive aid under the National Defense Education Act, in connection with the national defense effort, as they proceed to obtain higher education; and in that connection, thousands and thousands of them were complaining about the law as it has stood on the statute books.

We have now voted to remove that part of the law; and we have substituted what I believe every normal American student agrees to. Perhaps we did not express it in the detail in which such matters are dealt with in other laws, including the Smith Act; but that is all right. The point is that no one wishes to have an American student receive aid from his Government while he is achieving higher education if he favors the overthrow of the Government of the United States and its institutions which are dedicated to protecting him. Therefore, the Prouty amendment is right, although it is not essential, whereas the non-Communist affidavit was wrong; and by adopting the Prouty amendment the Senate has taken a definite and practical step toward meeting the deep-seated feeling and conscience of thousands of American students and of great numbers of leading educators in the United States and also the associations which represent them.

I believe that the Senator from Pennsylvania [Mr. CLARK] and the Senator from Massachusetts [Mr. KENNEDY] have performed a useful service for the country and have rendered an accomplishment which the American students have had a right to demand, and have demanded; and I thank my colleagues for the effort they have made in that connection.

Mr. DIRKSEN. Mr. President, I yield myself 2 minutes.

The PRESIDING OFFICER (Mr. YOUNG of Ohio in the chair). The Senator from Illinois is recognized for 2 minutes.

Mr. DIRKSEN. Mr. President, I think there is a valid point in the observations which have been made by the Senator from Florida [Mr. HOLLAND]. Perhaps I may summarize them by saying that our view is that the Senate itself never is at fault, although sometimes its procedures are.

So, Mr. President, when, late in the day, an effort is made by both sides to reach agreement on a controversial matter, no one can quite determine how soon such an agreement can be contrived. It is quite true that it was anticipated that Senators would speak on that issue for at least 3 hours, and perhaps longer; and it may be that we should have alerted the Members of the Senate by having a quorum call before the vote was taken. But because many were anxious to meet other commitments, we did not have a quorum call or a yea-and-nay vote; and I am sure that many Senators who wished to be here when the vote was taken—and they include the senior Senator from New Hampshire—were foreclosed the opportunity of submitting their views at the time.

So there is a point in the motion to reconsider; and I am glad that I did not move, last night, that the vote be reconsidered, or did not move to have a motion to reconsider laid on the table, for if such action had been taken, Senators could not now be heard on this subject.

Mr. President, I have no more to say; and I am ready to yield back the remainder of the time available to me.

With respect to the measure itself, I can only say, from long experience on many committees and with our difficulties with persons who take the fifth amendment or put clothespins on their consciences, that there is one way to obtain some enforcement, and that is through a perjury statute. That is what we have undertaken to do.

So I think this measure, with the original oath in it, but with the disclaimer affidavit deleted, is, from the enforcement standpoint, stronger than the original bill.

I understand that the Senator from Pennsylvania [Mr. CLARK] has some concluding remarks to make. After he finishes, I shall offer a motion to lay on the table the motion to reconsider.

Mr. President, if no time remains available to those on the other side, I yield 5 minutes to the Senator from Pennsylvania.

Mr. JOHNSON of Texas. Mr. President, I believe I have some time remaining under my control.

The PRESIDING OFFICER. Yes, the Senator from Texas has 5 minutes remaining.

Mr. JOHNSON of Texas. I yield 5 minutes to the Senator from Pennsylvania.

The PRESIDING OFFICER. The Senator from Pennsylvania is recognized for 5 minutes.

Mr. CLARK. Mr. President, the purpose of the proponents of Senate bill 2929 was to get rid of the disclaimer affidavit.

The compromise which was agreed to last night, and which is about to be confirmed at this time, achieves that purpose.

It is desirable to state briefly why many of us who supported the bill felt as we did.

First, we believed that the disclaimer affidavit singled out one group of Americans—namely, college students—from almost all of their fellow citizens, by requiring them not only to affirm their loyalty to our country, but also to dis-

claim any association with communism. This we believe to be an affront to the best brains of the Nation, as well as a restriction on their right of freedom of thought and action. As the Senator from Connecticut [Mr. BUSH] well said, last night, this is a matter of the mind and the spirit.

It is no answer to this argument to assert that a similar requirement exists in connection with some Federal employment and in connection with the National Science Foundation. The situations cited in the debate are quite different; and, in any event, serious consideration should be given to eliminating the requirement in these other areas where it presently exists.

Mr. President, there is no justification for making this requirement before a student is able to obtain a Federal grant or loan, whereas farmers, home buyers, and scores of other groups in our country are able to receive Federal subsidies without taking such an affidavit.

In the second place, we believe that the disclaimer affidavit writes into law an entirely unjustified suspicion of the loyalty of the college student body of our country. Unlike the students of certain other countries, America's college youth are intensely loyal to their Nation and its democratic form of government.

Third, we believe that the disclaimer affidavit is a symbol of the wave of immaturity and anti-intellectualism which swept the country during the decade from 1946 through 1956.

It was during this time of witch hunts that so much damage was done to our country by the movement which has come to be known as McCarthyism.

We wanted to destroy that symbol to show to the world that that discreditable part of our recent history is now over.

Fourth. We believe that the objections to the affidavit of the overwhelming majority of the colleges and the universities of our country justified the Congress in repealing the requirement.

It was stated several times in debate yesterday that only a small minority of the colleges of this country objected to the affidavit, but this, frankly, is not true.

I refer to the associations which specifically filed objections in one form or another:

First, the American Association of Land-Grant Colleges and Universities.

Second, the Association for Higher Education.

Third, the Association of American Colleges.

Fourth, the Association of American Universities.

Fifth, the Association of Graduate Schools.

Sixth, the Association of Land-Grant Colleges and State Institutions.

Seventh, the National Education Association.

Eighth, the State Universities Association.

Practically every college or university in this country belongs to one or more of those organizations, which is authorized to speak in their behalf.

Mr. BRIDGES. Mr. President, will the Senator yield?

Mr. CLARK. I do not have the time to yield. I will yield when I am through.

Mr. BRIDGES. How will the Senator be able to yield then?

Mr. CLARK. I will yield at the end of my speech.

The PRESIDING OFFICER. The Chair requests the regular order. The Senator from Pennsylvania may proceed.

Mr. CLARK. Finally, Mr. President, we believe the affidavit is perfectly ineffective to accomplish its presumed purpose—that of disclosing the existence of Communists in our colleges. No one seriously controverts this contention.

In short, the disclosure affidavit is just plain silly.

Finally, we regret that it seemed desirable, in order to achieve our objective, to agree to creating another crime in the general area of espionage, sabotage, sedition, and subversive activities. Goodness knows, we have legislated adequately, if not excessively, in this field already.

I ask unanimous consent that there may appear at this point in my remarks a list which I have compiled of the various crimes and penalties in this field which are already a part of existing law.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

CHAPTER 37 OF TITLE 18—ESPIONAGE AND CENSORSHIP

Section 792: Harboring and concealing persons.

Section 793: Gathering, transmitting, or losing defense information.

Section 794: Gathering or delivering defense information to aid foreign governments.

Section 795: Photographing and sketching defense installations.

Section 796: Use of aircraft for photographing defense installations.

Section 797: Publication and sale of photographs of defense installations.

Section 798: Disclosure of classified information.

Section 799: Violation of regulations of National Aeronautics and Space Administration.

CHAPTER 105 OF TITLE 18—SABOTAGE

Section 2152: Trespassing upon, injuring or destroying fortifications, harbor defenses, or defensive sea areas.

Section 2153: Destruction of war material, war premises, or war utilities.

Section 2154: Production of defective war material, war premises, or war utilities.

Section 2155: Destruction of national defense materials, national-defense premises or national defense utilities.

Section 2156: Production of defective national defense material, national-defense premises or national defense utilities.

CHAPTER 115 OF TITLE 18—TREASON, SEDITION, AND SUBVERSIVE ACTIVITIES

Section 2381: Treason (5 years; $10,000).

Section 2382: Misprision of Treason (7 years; $1,000).

Section 2383: Rebellion or insurrection (10 years, $10,000).

Section 2384: Seditious conspiracy (20 years, $20,000).

Section 2385: Advocating overthrow of Government (20 years, $20,000).

Section 2386: Registration of Certain Organizations (5 years, $10,000).

Section 2387: Activities affecting Armed Forces (10 years, $10,000).

Section 2388: Activities affecting Armed Forces during war (10 years, $10,000).

Section 2389: Recruiting for service against the United States (5 years, $1,000).

Section 2390: Enlistment to serve against United States (3 years, $100).

Subversive Activities Control Act of 1950 (50 U.S.C. 794): Penalties 5 years, $10,000.

Mr. CLARK. The new crime we have created adds little to existing law, is relatively unimportant, and of doubtful constitutionality. I suspect it will be a long, long time before any indictments are brought under it.

So the price we paid was well worth paying.

As it so often does in the course of debate, the Senate has ended a controversy with an acceptable compromise. I am happy to support it, as I am sure are the many other Senators, in all likelihood, a majority, who would have supported S. 2929 had it come to a rollcall vote.

I now yield to the Senator from New Hampshire.

Mr. BRIDGES. The point the Senator was trying to put across, as I understood it, was that these national associations of college professors he mentioned spoke for all the colleges in this country. Am I correct in this understanding?

Mr. CLARK. These are not associations of college professors; these are associations of colleges, and also one association of college professors. Every college belongs to one or another of these associations.

Mr. BRIDGES. Does the Senator mean they speak for every college in this country?

Mr. CLARK. The fact that only one small college in Pennsylvania objected is clear proof that these organizations do speak for them.

Mr. BRIDGES. I do not agree with the Senator at all.

Mr. CLARK. I would not expect the Senator to; he rarely does.

Mr. BRIDGES. This is a fact, and it is particularly true with respect to the issue before us today.

Mr. DIRKSEN. Mr. President, I yield 1 minute to the distinguished Senator from Florida [Mr. HOLLAND].

Mr. HOLLAND. Mr. President, without laboring this question further, I want to show how completely the press has misunderstood the action of last night; and I hope my friend from Pennsylvania will follow me: For instance, in the Philadelphia Inquirer, which is a well-regarded paper, which ably reports the news.

Mr. CLARK. It is well regarded, indeed, although Republican in nature.

Mr. HOLLAND. It would seem to me they are well informed.

Mr. CLARK. Not necessarily.

Mr. HOLLAND. We find this headline for the article covering the action in the Senate last night: "Senate Votes To Kill Loyalty Affidavit in Student Loans Program."

Mr. CLARK. Mr. President, will the Senator yield?

Mr. HOLLAND. In the New York Times, another well-informed paper—I believe it is independent, or perhaps sometimes Democratic and sometimes

Republican, and I am not making this a political matter—we find an article on the same subject under the headlines, "Senate Votes End of Student Oath."

The point I am making is that the hasty action we took last night, without full disclosure on the floor of what we had done, has left baffled even the well-informed press correspondents who cover matters of this kind for the large newspapers of the country. I feel that the debate of this morning will do more to clarify this issue than anything that happened last night.

The PRESIDING OFFICER. The time of the Senator from Florida has expired.

Mr. DODD. Mr. President, will the Senator yield?

Mr. DIRKSEN. Does the Senator from Connecticut wish me to yield him some time?

Mr. DODD. I wished to ask the Senator from Pennsylvania a question.

The PRESIDING OFFICER. The Senator from Illinois has 2 minutes remaining.

Mr. DIRKSEN. I yield 2 minutes to the Senator from Connecticut.

Mr. DODD. Did the Senator from Pennsylvania, being the good lawyer that he is, suggest that he had great doubt about the constitutionality of the Prouty amendment?

Mr. CLARK. Yes, in view of the case of Speiser against Randall.

Mr. DODD. Does the Senator favor passage of an act when he has doubt about its constitutionality?

Mr. CLARK. Under the circumstances I thought it was justified. There are many on the floor who think the measure is constitutional.

Mr. DODD. I suggest to the Senator this is something new in my experience. I had always supposed it was our solemn duty, under our oath, not to pass any unconstitutional act, or even one about which we had serious doubt.

Mr. CLARK. If the Senator had been here even as long as I have, he would know we often do.

Mr. DODD. I am glad I have not been here long enough for that. I hope I do not see it happen again.

Mr. PROUTY. Mr. President, if the Senator will take time to read the rather lengthy statement I had inserted in the RECORD yesterday, I think it will resolve any doubts he has about constitutionality.

Mr. CLARK. I shall be glad to read it, because my friend from Vermont always has something worthwhile to say.

Mr. DIRKSEN. Mr. President, I move to table the motion to reconsider.

The PRESIDING OFFICER. All time allotted has expired.

Mr. COOPER. Mr. President, I wonder if the Senator from Illinois will yield me 3 minutes.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the Senator from Kentucky may be permitted to speak for 3 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator from Kentucky is recognized for 3 minutes.

Mr. COOPER. Mr. President, we are considering a basic issue. This may be the only opportunity I have to express myself on it, so I should like to speak for a few moments.

I do not want to appear perverse in being in opposition to good friends in the Senate who are loyal and patriotic Americans. Yet I must say I believe it is basically wrong for the Congress of the United States to impose oaths and affidavits upon the people of this country, unless there is some compelling reason to do so.

I have taken the oath of allegiance to the United States, as a State official and as a Member of this body. I have taken the oath of allegiance as a private soldier and as an officer of the U.S. Army, and I can say I was never prouder in my life than when I took these oaths. An official, and a member of the armed services bears a special relationship to the Government of our country. As for myself, I would be glad to take the oath upon any occasion. But I believe that it is a new concept to impose oaths upon young people, the young men and women, who are in our high schools and colleges.

Why do we do it? Do we distrust their loyalty to the United States? Are we requiring that this single group in our country prove their loyalty to the United States?

Mr. BRIDGES. Mr. President, will the Senator yield?

Mr. COOPER. I shall be glad to yield in just a moment.

Do we distrust the loyalty of the young people of the United States? Is there any reason why we should not trust them as we trust other people in the United States who take loans and grants from the United States? I do not think so. I do not want to see the distrust of any group in our country.

I know my views on the oath of allegiance and the disclaimer are contrary to the views of many in this body. But they are my views, and I felt I should express them.

Mr. BRIDGES. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. BRIDGES. Does the Senator not realize this is an act for the educational defense of this country? Does that not put these students in a little different category from the common mass of the citizenship?

Mr. COOPER. I do not think so. It is called the National Defense Education Act. But when one reads the act, one sees it includes vocational training. And scholarships are given to teachers so that they may obtain summer training. Scholarships are given to boys and girls who will take English, history, and general college subjects, including the sciences.

I know the patriotism of my distinguished friend, and I respect him, but I simply say I think we are taking a long step when we begin to require the people of the United States to hold up their hands and swear they are loyal to the United States—overwhelmingly, they are loyal to the United States.

Mr. BRIDGES. The Senator has been a Member of the Senate before. The students who take advantage of the National Science Foundation Act are required to do this same thing. Why did the Senator not object to that?

Mr. COOPER. I was not in the Senate when the bill was passed. And there may be some special reason for that provision. Those who come under the act may be doing a special kind of work, relating to security.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). The time of the Senator from Kentucky has expired.

Mr. DIRKSEN. Mr. President, I move to table the motion to reconsider.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Illinois to table the motion of the Senator from Florida.

Mr. GOLDWATER. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. The yeas and nays have been requested. Is there a sufficient second?

The yeas and nays were not ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Illinois to lay on the table the motion of the Senator from Florida.

The motion to lay on the table the motion to reconsider the vote by which Senate bill 2929 was passed was agreed to.

DEPARTMENT OF DEFENSE APPROPRIATIONS, 1961

The Senate resumed the consideration of the bill (H.R. 11998) making appropriations for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes.

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STENNIS. Is the Department of Defense appropriation bill before the Senate?

The PRESIDING OFFICER. Yes.

Mr. STENNIS. Mr. President, I shall not detain the Senate at length on this matter. I have no prepared address, except some very brief remarks on one point. I shall express briefly some general observations on the appropriation bill as it came from the committee to the Senate.

In the first place, Mr. President, there are contained within the bill, as it is now written, funds for a beginning of a substantial improvement in our military airlift program, which has been somewhat neglected over the last few years. I believe there are sufficient funds to provide what will be a substantial airlift for our ground fighting troops, a highly important phase of a well rounded-out military program.

This program has been delayed by planning and considering the use of civilian aircraft. Because of a lack of a sustained, well rounded-out drive for more funds, and because there was some division of responsibility within the different services concerning this problem, there has been some delay. The bill before us now contains funds for a real beginning of a substantial airlift program, which will make it possible to take our special infantry troops in large

numbers to any trouble spot speedily and to provide the airlift necessary to carry the armor, the light vehicles, the light tanks, and all other modern weapons the troops might need.

This will be independent of any other assigned mission. I think it represents one of the highly important parts of our mission in world affairs as of now. There is a need for a quick and effective striking force which can be put in motion on the very shortest of notice and taken to the point of trouble within the shortest reasonable time.

It makes no difference how good a force of Marines we may have or how strong are our regiments or divisions, if we do not have the airborne troops with an adequate airlift to take them to a given place. Such a lack automatically greatly reduces their effectiveness.

Mr. President, however much doubt there may be about so-called all-out war, I am one of those who believe that certainly for a considerable time there are going to be trouble spots and brush wars—we of course pray they will not reach even that proportion—at least threats and disorders in various parts of the world. What will be done about this will depend almost altogether upon our action. This airlift is an essential part of the plans, and has been deferred on the priority list and therefore largely neglected. I am very much pleased that funds have been provided to the extent they have been included in the bill before the Senate.

Mr. President, I shall say a word as to the background before I discuss the matter of the air alert.

Mr. PROXMIRE. Mr. President, will the Senator yield to me for a question in regard to the airlift, before he leaves that subject?

Mr. STENNIS. I am glad to yield to the Senator from Wisconsin.

Mr. PROXMIRE. Would the Senator indicate how much of an increase in appropriations the improvement in the airlift represents?

Mr. STENNIS. I do not have the exact figure before me at this time. I hesitate to state it from memory. I shall supply the figure within the course of my remarks on the airlift. I am sorry I do not have the information before me now. It is a substantial amount, to make a real start.

This is something which cannot be done overnight, as the Senator from Wisconsin understands. There is a lead-time involved. Preparations must be made. Decisions must be made as to the exact plane or planes which will be purchased.

I recall the interest of the Senator from Wisconsin in this subject. I recall the remarks the Senator made, which were very timely and forceful, during the course of our deliberations last year. I commend the Senator for his interest.

Mr. PROXMIRE. I am indeed interested. I am much interested in this subject. This sounds like an excellent contribution to the strength of the Nation.

Mr. STENNIS. Yes.

Mr. PROXMIRE. I should like to obtain a few more facts in regard to it. How much of an increase in airborne troops would the appropriation provide for?

Mr. STENNIS. I shall read, briefly, a paragraph from the report:

> Within the appropriation "Aircraft procurement, Air Force," for airlift modernization, the committee recommends an increase of $200 million over the budget and a reduction of $50 million from the increase of $250 million provided by the House. The committee has also included the following language in the bill: "Of which not less than $200,000,000 shall be for transport aircraft suitable for the movement of fully equipped troops and combat equipment."

In other words, this nails it down to the specific requirement of aircraft designed to transport fully equipped troops and combat equipment. An appropriation of $200 million is recommended. That is the amount of the Senate committee increase. The House bill provided $250 million over the budget.

Mr. PROXMIRE. Why was it that the Senate committee did not go as high as the House?

Mr. STENNIS. It was not because of a lack of interest in the subject matter. It was simply because of an apportionment of some of the overall funds. Also, it was learned there had been some delay in making decisions as to the type of plane which was gonig to be used. The Senate committee feels that it is going along with the program fully, as a practical matter, by providing these funds.

Mr. PROXMIRE. It is a matter of timing.

Mr. STENNIS. Yes. It is a matter of timing in planning and a matter of timing in procurement.

Mr. PROXMIRE. Is there any indication of the size of the proposed airlift increase specified in terms of a division, a regiment, or anything of that sort? Is that information available?

Mr. STENNIS. Will the Senator repeat his question?

Mr. PROXMIRE. I wonder whether the proposal means that there will be an additional division which will be subject to airlift?

Mr. STENNIS. No. The Senator's question is timely. The program as contemplated will not in and of itself add a division to the present Army complement. I point out that the proposed plan is the beginning of a real substantial implementation of the entire program.

Mr. PROXMIRE. When the program is further implemented to provide for the specific number of personnel required, whether it be an additional division, two divisions, or whatever it is, a further appropriation from Congress at a later date will be required?

Mr. STENNIS. This increase in airlift capability does not involve any increase in the total number of troops, however, it will greatly increase the capabilities of our ground forces.

Mr. PROXMIRE. I thank the Senator.

Mr. STENNIS. I thank the Senator for his inquiry.

As I said, I shall not detain the Senate at great length, but I should like to make a few brief remarks regarding the problem of air alert. Since January it has been my privilege to attend almost all briefings before the Preparedness Subcommittee of the Armed Services Committee, and to hear some testimony before the subcommittee of the Appropriations Committee which heard testimony on the bill, as well as the Space Committee.

I have heard in the military department the Secretary of Defense and all the Chiefs of Staff, including General Power, the head of the highly important Strategic Air Command, and General Kuter, who is in charge of air defense, and many others. I am very happy to report to the Senate that in my opinion the figures that appear in the bill presented by the Senator from New Mexico [Mr. CHAVEZ] cover in a very substantial way all of the essential requirements for a well-rounded military program.

After being alerted in the first part of this year by the Senator from Missouri [Mr. SYMINGTON], to whom I am indebted in many ways for suggestions and explanations of our military program, I listened with special interest to testimony with respect to the air alert. While I have a generous attitude toward the witnesses, I believe they failed to make out a case for funds beyond what the subcommittee has provided in the bill, and which the full committee approved.

We have hard money in the bill as recommended by the Defense Department and the Budget Bureau for on-the-shelf air alert, which will provide the necessary spare parts and certain training preparations. Then the chairman of the subcommittee, the Senator from New Mexico, wrote into the bill a special provision that should the President of the United States, in his wisdom, feel the need or cause to augment the air alert program in the course of the coming fiscal year, he is expressly authorized by this language to proceed with a program regardless of cost, and the Congress would thereby be committed to appropriate the money.

In other words, the President can make valid and binding contracts in behalf of the Government to install the air alert to whatever extent the President sees fit. I believe it is a happy solution to this vexing and uncertain problem.

I desire while I am on my feet to say a few words with reference to the highly important subject of Army modernization. My remarks will proceed along the same points that I have made with reference to an airlift for the Army. For several years everyone from the President on down, has been concerned about the modernization of weapons in the Army. The question has been one of priorities. When I say "Army modernization," I refer to the matter of having the most modern tanks, the most modern rifles, and the most modern ground-to-ground or tactical missiles and all the other modern, up-to-date weapons in an amount that might reasonably be needed in order to make our reorganized pentomic infantry divisions as effective as

possible with the most modern weapons. We have included in the bill figures with which I shall not encumber my presentation, because it is difficult to pull them out of the figures of current funds and transpose them over to the incoming budget. This is a continuing program, of course.

We must have funds remaining at the end of each year. Therefore, without untangling those figures in any way, I will summarize my point in this way: If the bill is left as it is in respect to Army modernization, we shall have at least $300 million more for Army modernization than we have for the current fiscal year that is about to end. Even though that amount of money is not as much as could be spent for this purpose, it is certainly a long start and a sizable sum of money and would go a long way toward meeting, not a weak point, but a lapse or a gap in our highly important military program. Something like $162 million, in round numbers, in additional new money over the budget, has been provided for those purposes. Such expenditure is in the face of the fact that we appropriate more money already than is being spent for those purposes. But when the hard money in the bill is added to the estimated reimbursements which are coming in and that will come in for the off-the-shelf sales in connection with the military assistance program, we shall have more than $300 million additional that can be spent for those purposes; and I think it should be spent.

Mr. PROXMIRE. I hesitate to interrupt the Senator from Mississippi for I know he wishes to make his presentation as concise as possible, and it is very persuasive.

Mr. STENNIS. I am glad to yield to the Senator from Wisconsin.

Mr. PROXMIRE. I understand that the Army felt it was necessary to have about $1 billion in addition in order to provide a net gain in real modernization of equipment rather than a replacement of the equipment it then had. The House added $37 million; in addition to that increase, the Senate committee added another $125 million, making a total of $162 million. These figures would indicate that we are only about 16, 18, or 20 percent along the way toward the modernization of the Army which was actually requested.

Mr. STENNIS. Mr. President, before any percentages are arrived at, we must have a starting point. Some within the Army disagree among themselves as to what constitutes Army modernization. Those of us who have tried to wrestle with the problem have had to formulate a definition of our own. My definition can be illustrated in this manner: Whenever the Army buys a new, modern tank to replace an old one, that is what I call Army modernization.

They may call that a replacement and say that the costs should not be charged in that way. My concept is the bringing forward of more and more of the new modern weapons and bringing forth better weapons, better than the kind we have already, to do a better job. That is the best way I can explain this matter to the Senator from Wisconsin. I am satisfied that the pending bill carries over $300 million more than we provided last year, although it is true that the Army asked for about $926 million over the budget to carry out their definition of Army modernization.

Mr. PROXMIRE. Is it correct to say that that amount would not include the new M–14 rifle or the armored personnel carrier, and so forth?

Mr. STENNIS. My recollection is that we wrote a provision into the bill that the additional funds must be used only for Army modernization. I would like to read from the report. The first item is the new rifle using the NATO rounds. The amount put in the bill for these purposes was not the amount the Army had requested. If the Senator wishes, I can read from the report, to show just what items are included.

Mr. PROXMIRE. I wish the Senator would do that.

Mr. STENNIS. According to the report, the second item would be the NATO rounds for the new rifle and machinegun. The third is a new armored personnel carrier. The fourth item is a fully mobile division artillery howitzer. Then there is the new extended range ammunition for the division artillery howitzer. There is also the fully mobile long-range gun, 175 millimeter. Then there is the ammunition for the new long-range gun. The next item is what we call the main battle tank. That is the Army's main or major battle tank. According to our records, at that point there is the cutoff.

Mr. PROXMIRE. Would it or would it not be accurate to say that what the committee did was to provide the most urgently needed equipment?

Mr. STENNIS. Yes, according to the priorities provided by the Army.

Mr. PROXMIRE. According to the priorities set up by the Army?

Mr. STENNIS. Yes.

Mr. PROXMIRE. The committee did not provide all the new types of equipment the Army said it needed. Is that correct?

Mr. STENNIS. That is correct. There are some items which are not included in the list given to us by the Secretary of the Army. Further on down on the priority list as submitted by the Secretary of Defense we get into the ground-to-ground rockets, or tactical rockets, that I mentioned a while ago. The funds that we provide do not get into those on as large a scale as the Army suggested. This is a very modern weapon, and it will be next on the list, no doubt, if we can make these funds stick.

Mr. PROXMIRE. I thank the Senator.

Mr. STENNIS. The Senator from Wisconsin has contributed to the debate by asking these questions.

I should like to say one word further on the Army modernization question. The fact that the committee did not include more funds is certainly not to be interpreted as any doubt of the program, or the soundness of it, or the need for it—in fact, the essential needs for it, but within the immediate future or as soon as it can reasonably be provided. We concluded that this was a reasonable balance. I am speaking for myself. The Senator from New Mexico and other Senators have spoken for the committee. I wish to emphasize that in my opinion this is one of the most important programs, and I believe that we make more headway by picking the proper parts of it at a time. The big consideration now is really to get it moving in a substantial way, and on such a base as that we can keep it going.

If the Senator from New Mexico wishes the floor, I will yield the floor now. I have a few remarks to make on the Samos.

Mr. CHAVEZ. I wish the Senator would proceed now.

Mr. STENNIS. Mr. President, I support the committee amendment concerning the funds for the satellite Samos.

We all know that we have no intention of starting a nuclear war by striking the first blow. On the other hand, we cannot risk another Pearl Harbor in this day of nuclear weapons.

It is imperative that we continue to maintain a defense posture which will provide us with maximum knowledge of potential enemy capabilities and warning of any possible attack.

Until recently, aerial photographs obtained by our U–2 planes provided one of our most important sources of information about Soviet military activities. This method of obtaining intelligence is no longer available to us.

There is general agreement that our Samos reconnaissance satellite offers the only foreseeable means by which we can get timely and accurate information about major Communist military movements and preparations. The Samos has no capability for harming any nation—it is a passive observer. It can be a powerful servant for world peace by providing information necessary to protect the free world. This system will provide critical information about targets, military capabilities, and changes in military activities—it will give us strategic warning of a hostile buildup.

It is vital to our national security that this program be pushed vigorously. All reasonable steps should be taken to increase the reliability of the Samos system and to achieve the earliest possible date of operational readiness.

The funding of this program as approved by the budget authorities allowed only for a "minimum essential" research and development program. Flight testing at this level would be very limited. Any unprecedented and unforeseeable malfunctions or accidents would cause a slip in the projected operational date. Invaluable time could be lost because spare vehicles would not be available. We cannot run such risks in this vital program.

The $83.8 million additional in the Senate bill will permit a greater number of component tests. This is the only way to increase the reliability of the small but vital parts whose failure can doom any flight.

These funds will also permit comprehensive engineering studies to capitalize on improvements discovered in the course of the research and development program. This will allow us to get the greatest return in the least possible time

from discoveries made during the research stage.

And last, perhaps, most important of all, the additional funds will carry the program through into the operational stage. It will provide for production of operational as well as test vehicles and equipment.

It is reliably estimated that adequate funding at this time will advance the date of operational readiness by about one full calendar year. That will make this system operationally available to us by 1962 instead of the late 1963 target date.

This is a rare opportunity to buy time in a vital program. By providing a saturation of necessary funds to see this promising and vital system through, we will avoid, now, the time lost by stops and starts which characterized many other defense development programs and contributed greatly to the so-called missile gap. I consider the earliest possible development of the Samos satellite to be one of the highest priority programs for the defense of our Nation. For this reason I urge the Senate to consider favorably the committee's recommendations for this program, and by this positive, affirmative action in the legislative branch express our clear intention that the executive branch take immediate action to develop an operational Samos reconnaissance system.

I hope the Senate will approve the inclusion of the full amount and that the House conferees, in consideration of the newly developed facts since the House passed the bill, will see fit to accept the amendment and that the entire funds contained in the Senate bill will be made available for these very essential and important purposes. The language in the bill permits the use of these funds for no other purpose. So if the program should not develop fast enough to use these funds, the funds will remain in the Treasury until they can be used.

That concludes my statement. I yield the floor.

Mr. BIBLE. Mr. President, I should like to direct my attention for a few minutes to one phase of the report on the defense appropriation bill, which is now before the Senate. It is the section which deals with the provision for liquid oxygen.

I was privileged, by assignment of the Senator from Alabama [Mr. SPARKMAN], the chairman of the Committee on Small Business, to conduct hearings before that committee on the plans of the Air Force to procure liquid oxygen generators. The hearings were held in mid-May and lasted 2 full days. They were the outgrowth of a number of complaints which the committee had received from the commercial producers of liquid oxygen to the effect that the new Air Force facilities represent a serious economic threat to the commercial producers.

Those hearings were a continuation of a series of hearings which the Committee on Small Business has held over the past number of years, since we have found that it is inevitably the smaller business which is constantly being threatened by the existence of commercial and industrial activities owned and operated by the Federal Government.

Over the course of the years, I know the chairman of the Subcommittee on Defense Appropriations has become well aware of this situation. There have been strong pronouncements from those in authority and strong statements from those in the defense installations that they would give small business a little larger share of the defense dollar. Many, many statements have emanated from them; but unfortunately the achievements do not seem to keep pace with the pronouncements.

We appeared before the subcommittee headed by the chairman, the Senator from New Mexico, in order to present our case in this particular field. It seems to me that a strong case was shown by the industry that the Air Force did not need some 70 new oxygen generators, which were line items in the defense budget for this year, at an expense of some $5.2 million.

I am happy to say that on yesterday I filed a unanimous report of the Committee on Small Business which agrees with our conclusions that the production of liquid oxygen is a small business enterprise which can be carried forward commercially rather than on base by the Air Force.

It was significant—and it came out in the testimony—that just 3 years ago the Office of Defense Mobilization urged these very producers to increase their production. In order to enable them to do so, the ODM issued a number of certificates of necessity providing for rapid tax amortization. Now, just 3 short years later, the Air Force has reversed its position and is attempting to create an on-base productive capacity of its own.

I think it should be very clear, and I think our committee felt it was very clearly shown, that liquid oxygen is an essential commodity. The Air Force must have it. But we learned a number of things in the hearing which I think should be reflected in the RECORD. Among them was a very fine recent advancement and improvement in the method of storing liquid oxygen. It is possible today to store liquid oxygen without any losses whatsoever. The Committee on Small Business felt, and I think the hearings made it abundantly clear, that this particular phase of the problem had not been adequately explored by the Department of Defense.

So that the RECORD may be very clear as to the conclusions which our committee reached as a result of the hearings, I should like to recite the five conclusions of the Committee on Small Business. In our unanimous report, we said:

1. Having assessed the information it obtained, your committee recommends that the Air Force hold up its procurement of 64 of the 70 liquid oxygen generators scheduled for purchase.

2. The Federal administration has on several occasions stated that it would follow a policy of procuring goods and services commercially wherever possible. Decisions of operations personnel that are contrary to basic policy should be reviewed at the secretarial level. At all levels, alternative courses of action should be considered and the tentative decisions of operational officers brought in line with administration and departmental policies.

3. The Air Force should consult representatives of private industry in its review of this problem.

I was shocked beyond words to find the testimony replete with evidence that the Air Force had never counseled with the industry people in this problem. The Air Force was not aware of the advances which had been made, for example, in the field of storage.

The final conclusions of the Committee on Small Business were:

4. The review should take cognizance of the impact upon private industry. To say that the Air Force will continue to procure liquid oxygen from commercial sources begs the question. Government agencies should not operate any commercial or industrial facilities unless commercial sources are clearly unable to meet their needs.

5. Both the Department of Defense and the Bureau of the Budget should revamp their procedures in reviewing commercial and industrial activities. This case illustrates that present procedures are ineffective.

Mr. CHAVEZ. I think the Committee on Appropriations was in complete agreement with what the Senator from Nevada had in mind. The committee would not accept the suggestion in the hearings; however, in the report we have made pretty plain what we had in mind.

Mr. BIBLE. I appreciate the Senator's statement.

Mr. CHAVEZ. That is, that the Air Force should buy from private enterprise at all times, except in the isolated instances when it is necessary for the Air Force to produce its own liquid oxygen.

Mr. BIBLE. Of course, we do not question that fact. As a matter of fact, the Department was asking for the procurement of 70 generators. I think it is very clearly shown that six were in isolated places.

I commend the chairman of the Subcommittee on Defense Appropriations, the subcommittee itself, and the full committee, for including the language that appears on page 43 of the report. I direct attention to the last sentence on this particular finding, which reads as follows:

The committee has not included this language in the bill, but does expect the Department of Defense to carry out the intent of the provision insofar as is possible by acquiring only such facilities as there is a demonstrated need for, using commercial supplies wherever possible.

I appreciate the committee's position, and I appreciate the fact that they have written this language into the report. This is my question: Is the word "expect" in the phrase "expect the Department of Defense" strong enough wording to constitute a directive to the Department to carry out this policy?

Mr. CHAVEZ. I believe the word "expect" can be defined as a directive to the Department to do just that. However, if there is any other word by which we can make it certain, I am willing to consider it.

Mr. BIBLE. So that we may be in a position to make legislative history, I think the response of the Senator from New Mexico is helpful. I construe the

language which I have just read—namely, the expectation which is expressed by the committee—to be a directive to the Department of Defense to carry out the intention of the committee.

Mr. CHAVEZ. It was so intended; and we have had word from the Department of Defense that they are trying to do that.

Mr. BIBLE. That is excellent.

Mr. CHAVEZ. Everyone was concerned about that proposition. We want to get the Government, including the Pentagon, out of business. Now we hope we can get the Government out of the business of producing liquid oxygen, except where it may be necessary in an isolated place.

Mr. BIBLE. The committee, in conducting the hearings, recognized and accepted this general rule; but we were very well convinced by the showing made to us by the available sources that the Department of Defense, more particularly, had not investigated the new technologies which have been developed in the matter of the storage of liquid oxygen. So we are hopeful—and we feel very keenly—that this directive should be followed through by the Department of Defense.

I believe, among other things, that the representatives of the Department certainly should meet with the members of the industry and at least bring themselves up to date on the advances which have been made in this field.

I appreciate the answers which have been made by the able chairman of the Subcommittee on Defense Appropriations. I know that the Senators from Alaska have a keen interest in the problem. The senior Senator from Alaska is in the Chamber now. Probably he has some comments to make on the subject.

I thank the Senator from New Mexico.

Mr. BARTLETT. Mr. President, will the Senator yield?

Mr. CHAVEZ. I yield.

Mr. BARTLETT. I was very happy to hear the Senator from New Mexico, the chairman of the subcommittee, state that, so far as he is concerned, the word "expect," as read by the Senator from Nevada from page 43 of the committee report, could be interpreted as a directive. I think this is most useful legislative history. It will be helpful.

It was my privilege to serve under the guidance of the distinguished Senator from Nevada [Mr. BIBLE] on the Committee on Small Business, which held hearings on this subject.

I wish to say that in my opinion the hearing was a model for an inquiry of that kind, because the Senator from Nevada made a most searching and objective inquiry into this proposition, and witnesses from the Government and witnessess from industry were heard at length.

Mr. CHAVEZ. Did witnesses for the Air Force appear before the committee?

Mr. BARTLETT. They did. But they failed to convince the Senator from Nevada and they failed to convince the Senator from Alaska of the justice or merit of the case of the Air Force.

I was rather disturbed by some of the testimony which was offered in behalf of the Bureau of the Budget. The Senator from Nevada recalls that some years ago the Bureau of the Budget had issued a directive which was intended to take the Government out of business, whenever and wherever that was possible. But, as I recall, it was stated before the Small Business Committee that in the cases involving the Department of Defense, whenever the words "national security" were offered by departmental representatives, in regard to any proposed activity which could be performed by private business, the Bureau of the Budget was not inclined to look behind the use of those words or to inquire further into the particular matter involved. But I believe that the Bureau of the Budget does have that right and that very positive duty. It has a duty insofar as the Department of Defense is concerned and every other department of Government.

I am very much gratified that the language referred to appears in the report; and, buttressed as it is by the chairman's use of the word "directed," instead of "expect," I believe it will be all the more instructive.

All of us know, as the Senator from Nevada has said, that the Air Force requires oxygen; it is an absolute requirement. But the Air Force also requires jet fuels. However, jet fuel refineries are not established on the Air Force bases, in order to provide that fuel. Instead, the fuel is purchased from other sources. The Air Force stores the fuel; that is all.

I think the testimony submitted before the subcommittee headed by the Senator from Nevada [Mr. BIBLE] demonstrated the fact that, except in isolated instances, commercial sources can furnish adequate amounts of liquid oxygen.

Mr. CHAVEZ. We received testimony to the same effect.

Mr. BARTLETT. Yes.

So I am happy that as regards the Alaska situations involved—and, of course, Alaska is only one of the many States concerned—this directive has been advanced to the Department of Defense.

Mr. CHAVEZ. I, for one, do not believe the Department of Defense means to do wrong; but it has many duties which it must perform.

Mr. BARTLETT. I must say that the Air Force is not yet completely out of the laundry and bakery businesses. The Air Force is engaged in many businesses in which it should not be engaged. But that is another matter.

On another subject, I understand that the language in section 513 is identical to the language in section 613 of last year's act. It requires the Department of Defense to adopt in Alaska, insofar as commissary price procedures are concerned, policies identical with those followed in the other States with regard to transportation costs. Last year's language never was implemented by the Department of Defense. Does the Senator know any justification for the Department's failure to implement the mandate from Congress?

Mr. CHAVEZ. I do not know of any justification; but the Department has not done so. The congressional policy under section 613 requires that extensive study and planning be carried out. However, although it seems that a year's time has already been wasted, still nothing has been done about the matter.

Mr. BARTLETT. I thank the Senator from New Mexico.

I should like to ask him a further question. This year, two witnesses on this subject appeared before the subcommittee headed by the Senator from New Mexico. They were Mr. Lanman, of the Department of Defense, and Mr. Suddock, of Anchorage, Alaska. Did not Mr. Lanman tell the committee that, regardless of the form of section 513, the position of the serviceman in Alaska would suffer no hardships? Did not the Department of Defense witness tell the Senate committee that under the language of section 513, as ultimately included, the serviceman in Alaska would suffer no financial hurt by reason of the inclusion of that language?

Mr. CHAVEZ. Mr. Lanman is the one who made that statement, as I recall—that they would suffer no hardships.

Mr. BARTLETT. Yes. Did not he say the servicemen would not suffer financially?

Mr. CHAVEZ. Yes.

Mr. BARTLETT. I should like to say that no one should be penalized or will be penalized by reason of the place of his military assignment, because of the inclusion of this language with reference to the commissary situation.

I wish to commend the committee for its understanding of the situation and for its desire to end a discriminatory procedure which has placed artificial barriers upon economic development in Alaska and the efforts of the Alaska community to reduce living costs.

Mr. President, in conclusion I wish to commend the Senator from New Mexico and his colleagues for bringing this bill to the floor of the Senate, for the bill is most important for the Nation and for the entire free world.

I know well the effort, the devotion, the dedication, and the plain hard work which, over a period of weeks, and even months, the Senator from New Mexico has devoted to this bill. He deserves our thanks, and he has received mine right now.

Mr. CHAVEZ. I thank the Senator from Alaska. Let me say that I received excellent help from Senators on both sides of the aisle, and they include the Senator from Massachusetts [Mr. SALTONSTALL].

Mr. SALTONSTALL. I thank the Senator from New Mexico.

I should like to say that Alaska is a very important State, and I felt very strongly, as did the Senator from New Mexico, that Alaska should receive the same treatment and the same opportunities that all other States of the Union received.

Mr. BARTLETT. I thank the Senator from Massachusetts. I know he has been of great assistance in connection with this matter, not only to Alaska, but also, on a broader scale, to the entire Nation.

Mr. SALTONSTALL. I thank the Senator from Alaska.

Mr. ROBERTSON. Mr. President——

Mr. CHAVEZ. I yield to the Senator from Virginia for a question.

Mr. ROBERTSON. Mr. President, I do not wish to interrogate the chairman of the subcommittee. But after he concludes his remarks, I should like to make a few comments.

Mr. CHAVEZ. Certainly.

Mr. President, I ask unanimous consent that the committee amendments be agreed to en bloc, and that the bill, as thus amended, be regarded for the purpose of amendment as original text, provided that no point of order shall be considered to have been waived by reason of the agreement to this order.

The PRESIDING OFFICER (Mr. HART in the chair). Is there objection?

Mr. CASE of South Dakota. Mr. President, reserving the right to object, let me say I have hoped we might take separate votes on three issues in the bill—namely, the B–70's, the aircraft carrier, and the mandatory size of the National Guard.

Therefore, I hope the amendments will not be agreed to en bloc. I should like to have the question divided, so we may take separate votes on the three items I have mentiond.

Mr. CHAVEZ. Mr. President, I do not think my request would preclude that at all, because the bill would still be subject to amendment, and any Senator who might wish to offer an amendment from the floor would be able to do so.

I may say to the Senator from South Dakota that I ask unanimous consent as I did heretofore, with the exception of the three items the Senator from South Dakota has in mind.

The PRESIDING OFFICER. Will the Senator designate the items he has in mind?

Mr. CASE of South Dakota. Those are readily identifiable amendments. I think the clerk can supply the references. But the consent granted could be to agreeing to all the amendments en bloc except those which pertain to the increase for providing the B–70 airplanes, the naval aircraft carrier, and the mandatory size and appropriations for the National Guard.

The PRESIDING OFFICER. The Chair desires to correctly understand the proposal.

Mr. CHAVEZ. The request is as follows: I ask unanimous consent that the committee amendments be agreed to en bloc, with the exception of the three referred to by the Senator from South Dakota, and that the bill as thus amended be considered as original text for the purpose of amendment, provided that no point of order shall be considered to have been waived by reason of consenting to this request.

The PRESIDING OFFICER. Is there objection?

Mr. PROXMIRE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. PROXMIRE. I want to make sure what is happening here. Does it mean that if the pending proposal is agreed to the amendment relating to the aircraft carrier will be in the bill or will not be in the bill?

Mr. CASE of South Dakota. There will merely be a separate vote on it.

The PRESIDING OFFICER. The Chair is advised that these three identified amendments have not been acted upon.

Mr. PROXMIRE. They will not be in the bill. They will have to be put in on the basis of some later proposal.

Mr. CASE of South Dakota. They will be voted on separately.

Mr. PROXMIRE. They will be offered as committee amendments at a time?

The PRESIDING OFFICER. They will be stated as committee amendments.

Mr. CHAVEZ. But there will be a separate vote on each item.

The PRESIDING OFFICER. That is correct.

With that understanding, is there objection to the unanimous-consent request? The Chair hears none, and the committee amendments, with the three exceptions, are agreed to en bloc.

The amendments agreed to en bloc are as follows:

On page 2, at the beginning of line 13, to strike out "$3,244,448,000" and insert "$3,247,548,000", and in line 15, after the word "fund", to strike out the colon and *"Provided,* That no part of these funds shall be available for the pay and allowances of personnel assigned to departmental administration in excess of the number so assigned on December 31, 1959."

On page 3, line 4, after the word "case", to strike out "$2,507,055,000" and insert "$2,508,244,000", and in line 6, after the word "fund", to strike out the colon and *"Provided,* That no part of these funds shall be available for the pay and allowances of personnel assigned to departmental administration in excess of the number so assigned on December 31, 1959".

On page 3, at the beginning of line 20, to strike out "$604,577,000" and insert "$605,146,000", and in line 21, after the word "fund", to strike out the colon and *"Provided,* That no part of these funds shall be available for the pay and allowances of personnel assigned to departmental administration in excess of the number so assigned on December 31, 1959".

On page 4, line 11, after the word "case", to strike out "$4,013,460,000" and insert "$4,019,676,000", and in line 13, after the word "fund", to strike out the colon and *"Provided,* That no part of these funds shall be available for the pay and allowances of personnel assigned to departmental administration in excess of the number so assigned on December 31, 1959".

On page 4, line 23, after the word "law", to strike out "$233,115,000" and insert "$233,998,000", and, in the same line, after the amendment just above mentioned, to insert a colon and *"Provided,* That the Army Reserve shall be maintained at an average strength of not less than 300,000 for the fiscal year 1961: *Provided further,* That $35,000,000 of the funds provided in this appropriation shall be available only to meet the increased expenses necessary to maintain the Army Reserve at the strength provided for in this Act."

On page 5, line 12, after the word "law", to strike out "$87,168,000" and insert "$87,584,000".

On page 5, line 20, to strike out "$24,661,000" and insert "$24,831,000".

On page 6, line 3, after the word "law", to strike out "$53,764,000" and insert "$54,000,000".

On page 6, at the beginning of line 10, to strike out "$229,903,000" and insert "$230,277,000".

On page 7, line 3, after the word "law", to strike out "$45,609,000" and insert "$46,000,000".

On page 9, line 18, after the word "Government", to strike out "$3,116,550,000" and insert "$3,132,283,000"; in line 19, after the amendment just above stated, to strike out the colon and *"Provided,* That not to exceed $89,084,000 of this amount shall be available for departmental administration", and in line 21, after the amendment just above stated, to insert a colon and *"Provided,* That $18,100,000 of the funds provided in this appropriation shall be available only to meet the increased expenses necessary to maintain the Army Reserve at the strength provided for in this Act: *Provided further,* That $20,440,000 of the funds provided in this appropriation shall be available only to meet the increased expenses necessary to maintain the Army National Guard at the strength provided for in this Act."

On page 11, at the beginning of line 19, to strike out "$2,499,388,000" and insert "$2,525,354,000", and in line 24, after the word "stations", to strike out the colon and *"Provided,* That not to exceed $102,690,000 of the funds provided in this appropriation shall be available for departmental administration".

On page 12, line 23, after the word "salaries", to strike out "$174,726,000" and insert "$174,796,000", and in line 24, after the amendment just above stated, to strike out the colon and *"Provided,* That not to exceed $7,625,000 of this amount shall be available for departmental administration".

On page 14, line 21, after the word "Government", to strike out "$4,172,404,000" and insert "$4,240,732,000"; in line 22, after the word "not", to strike out "to exceed" and insert "more than", and in line 24, after the word "Academy", to strike out the colon and *"Provided,* That not to exceed $85,214.000 of the funds appropriated in this Act for the Air Force shall be available for departmental administration".

On page 15, line 22, after the word "aircraft", to strike out "$156,827,000" and insert "$164,501,000", and on page 16, line 9, after the word "Government", to insert a colon and *"Provided further,* That $200,000 of the funds provided in this appropriation shall be available only to meet the increased expenses necessary to maintain the Army National Guard at the strength provided for in this Act."

On page 17, line 8, after the word "Bureau", to strike out "$175,892,000" and insert "$187,291,000".

On page 18, line 1, after the word "Board", to strike out "$300,000" and insert "$501,000".

On page 18, line 24, after the word "conclusive", to strike out "$18,000,000" and insert "$19,300,000".

On page 20, at the beginning of line 23, to strike out "$1,374,102,000" and insert "$1,499,102,000".

On page 21, at the beginning of line 13, to strike out "$2,141,760,000" and insert "$2,208,000,000".

On page 23, at the beginning of line 3, to strike out "$420,980,000" and insert "$434,000,000".

On page 23, line 17, after the word "only", to strike out "$91,180,000" and insert "$94,000,000".

On page 24, after line 19, to strike out:

"AIRLIFT MODERNIZATION

"For development, construction, procurement, production, and modification of transport aircraft, including spare parts and accessories therefor; and procurement and installation of equipment, appliances, and machine tools in public or private plants; $359,288,000, to remain available until expended: *Provided,* That no part of the funds provided in this paragraph shall be available for the procurement of aircraft for assignment to passenger service."

On page 25, line 18, after the word "things", to strike out "$2,378,440,000" and insert "2,821,000,000".

On page 26, line 18, after the word "amended", to strike out "$877,171,000" and insert "$904,300,000".

On page 27, line 9, after the word "law", to strike out "$1,041,190,000" and insert "$1,041,286,000".

On page 27, line 22, after the word "law", to strike out "$1,268,530,000" and insert "$1,210,510,000".

On page 28, line 11, after the word "law", to strike out "$1,542,668,000" and insert "$1,553,228,000".

On page 33, line 4, after the word "of", to strike out "$270" and insert "$280".

In section 511, page 35, line 24, after the word "materiel" to insert "and for all expenses of production of lumber or timber products pursuant to section 2665 of title 10, United States Code".

In section 530, on page 45, line 3, after the word "for", to strike out "congressional" and insert "legislative", and in line 7, after the word "exceed", to strike out "$900,000" and insert "$2,650,000".

At the top of page 46, to strike out:

"SEC. 533. Not to exceed $660,000,000 of the funds made available in this Act shall be available for travel expenses in connection with temporary duty and permanent change of station of civilian and military personnel of the Department of Defense."

On page 46, after line 5, to strike out:

"SEC. 534. No part of any appropriation contained in this Act shall be used to provide flight pay at the rates prescribed in section 204(b) of the Career Compensation Act of 1949 (63 Stat. 802), as amended, for more than 97,546 officers (other than Reserve officers on active duty for training and officers receiving flight pay pursuant to section 514 of this Act)."

On page 46, after line 12, to insert:

"SEC. 533. Effective January 1, 1961, no part of any appropriation contained in this Act shall be used to provide flight pay at the rates prescribed in section 204(b) of the Career Compensation Act of 1949 (63 Stat. 802), as amended, for more than 99,362 officers (other than Reserve officers on active duty for training and officers receiving flight pay pursuant to section 514 of this Act and flying student officers)."

On page 46, after line 20, to insert:

"SEC. 534. During the current fiscal year, the Secretary of Defense, should he deem it advantageous to the national defense to accelerate any strategic or tactical missile or satellite program, may transfer, under the authority and terms of the Emergency Fund, an additional $150,000,000 for the acceleration of such missile or satellite program or programs: *Provided*, That the transfer authority made available under the terms of the Emergency Fund appropriation contained in this Act is hereby broadened to meet the requirements of this section: *Provided further*, That the Secretary of Defense shall notify the Appropriations Committees of the Congress promptly of all transfers made pursuant to this authority."

On page 47, after line 8, to insert:

"SEC. 535. Not to exceed 5 per centum of the appropriations for National Guard Personnel, Army, or for Operation and Maintenance, Army National Guard, may be transferred to the other appropriation, but neither shall be increased more than 5 per centum thereby."

On page 47, after line 13, to insert:

"SEC. 536. Not to exceed 5 per centum of the appropriations for National Guard Personnel, Air Force, or for Operation and Maintenance, Air National Guard, or Military Construction, Air National Guard, may be transferred to any other of such appropriations, but no appropriation shall be increased more than 5 per centum thereby."

On page 47, line 20, to change the section number from "535" to "537".

Mr. ROBERTSON. Mr. President, before discussing two changes made by the Senate Appropriations Committee in the House defense bill, which amendments will be presented separately, namely, the amendment relating to the aircraft carrier of the *Forrestal* type, which is of No. 1 priority with the Navy, and the one relating to the B–70 bomber, which is of No. 1 priority with the Air Force, I wish to pay tribute and express appreciation for the work that is done each year by the House subcommittee on the defense appropriations bill, under the leadership of one of the ablest Members of the Congress, the Honorable GEORGE H. MAHON, of Texas.

Since the House acted on this bill——

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. ROBERTSON. For what purpose?

Mr. CASE of South Dakota. In view of what the Senator just said about the Air Force, I would like to second his tribute.

Mr. ROBERTSON. Mr. President, I would rather not yield at this time. After I have concluded my brief remarks, I shall be glad to yield, but in the meantime, I should like to make reference to the amendments relating to the aircraft carrier and the B–70 which have now been eliminated from the en bloc voting and which will have to be presented separately.

I cannot yield at this time.

Mr. CASE of South Dakota. I hope the Senator does not proceed on the assumption that I am opposed to these three items. Actually, I am in favor of them, but I wanted the Senate to go on record on each one of them. I did not want to be in the position later of a Senator offering a motion to strike in order to get a separate vote.

Mr. ROBERTSON. The Senator from Virginia is pleased to know that the purpose of keeping the amendments from being adopted is to get them adopted.

Mr. President, as I was saying, since the House acted on this bill we have had the advantage of expert advice on what would give us the best balanced defense program for the funds available, and there also have been serious developments that increase world tensions.

Therefore, in presenting to the Senate a bill that shifts the emphasis from a primary reliance on missiles to a better balanced program and substantially increases the funds in the House bill, we imply no criticism whatever of the splendid work done by Representative MAHON in the preparation and presentation of a defense bill which the House accepted without any change.

More than a month ago I reminded my colleagues in this Chamber of the urgent need for funds for the construction of a new attack aircraft carrier to bolster our Nation's defensive strength against potential aggression anywhere in the world.

As Senators will recall, the House had cut out of its military appropriations bill the $293 million the President had requested in his budget for the building of another conventionally powered carrier of the *Forrestal* class.

Since that time, the appropriation has been restored by the Senate Appropriations Subcommittee and by the full Appropriations Committee. It is before us now as part of an overall defense appropriations bill that the Congress must approve in full if it is to adjourn next month with any reasonable assurance that it has done its duty to provide for the Nation's safety.

The dramatic change in course and speed of world events in the last 5 troubled weeks has made all of us take a long, hard, sober second look at our country's military posture. We find the temperature of the cold war hotter than at any time since the death of Stalin. We hear new blasts of vituperation directed against the President with each new day that dawns. We have seen dramatic evidence in Japan of the ability of the Communists there to call out enormous mobs of disciplined agitators to demonstrate against the President and his personal representatives as symbols of free-world leadership in the Far East. This morning, the President was forced to cancel his visit because of these threats to his safety.

We have heard repeated threats from the Soviet military and party leaders of rocket attacks against airbases provided for our use in friendly countries around the periphery of the Soviet Union in the Middle East and in Northern Europe. The Chinese Communists have stepped up the pace of their ominous threats against the security of friendly or noncommitted nations throughout the Orient.

All these hostile alarms and excursions are part of a pattern designed to test our will and resolution, to intimidate our friends, and to pave the way for further military, political, and propaganda aggression against us.

We must prove again the strength of our resolution to stand firm and unflinching in the face of these attacks. We must rely on divine providence to lead us safely through the very valley of the shadow of death. But we must go fully armed and watchfully alert against the enemy who has threatened to bury us and who has demonstrated time and time again his capacity to bury our friends.

This voluntary undertaker is looking over our shoulders to watch the action we take here today. I am confident that we shall acquit ourselves as men and provide our Armed Forces with the means to do the same. One of our most vital needs at the moment is for a new attack aircraft carrier, which the U.S. Navy considers the life's blood of naval striking power for the immediate present and for the foreseeable future. These are some of the reasons:

Manned combat aircraft in naval warfare cannot be replaced by inflexible ballistic missile systems.

The modern carrier provides a mobile base to take jet planes to the scene of crisis or conflict, to concentrate this force where it is needed, to keep it there as long as the need exists, and then to move it to another location.

The modern carrier is the least vulnerable of any base for airpower, particularly in terms of surprise ballistic missile attack. Its very mobility provides effectively for its safety.

The carrier is essential to our balanced antisubmarine warfare effort. Carrier airpower provides the primary means of destroying sea-based enemy submarine support vessels.

The carrier is the most effective instrument of naval striking power. Each carrier can deliver from 40 to 60 nuclear weapons on target. A carrier can fight in any type of war, but is exceptionally important for limited objective wars.

A point of added importance which may be overlooked in this connection is that the aircraft carrier constitutes sovereign U.S. territory, which can be established off the shores of any country without treaties, commitments, or monetary grants.

Overall, the modern attack aircraft carrier represents a capital investment in security which pays dividends for well in excess of 20 years, a feature unique in this respect among U.S. weapons systems.

Now, Mr. President, the Navy has an inventory of 14 attack aircraft carriers, including 4 of the modern *Forrestal* class, 3 of the modernized *Midway* class, and 7 of the World War II *Essex* class. Under construction are two more carriers of the *Forrestal* class and one nuclear-powered carrier. In 1962, the Navy's operating carrier inventory will include six *Forrestal* type, one nuclear type, three *Midway* type and four *Essex* type class ships.

The Navy's prime need now is to start 1 additional *Forrestal* class carrier, with operating facilities for 90 modern jets and improved landing safety features, to replace 1 of the obsolete *Essex* type carriers. As new attack carriers join the fleet, they replace carriers which are then designated for antisubmarine warfare. Thus both the attack carrier strength and the strength of the antisub carrier fleet are kept at requisite levels through a single carrier building program.

As to the powerplant of the proposed new carrier, the Navy advises me that nuclear propulsion is far down the list in relative importance. The carrier deck and modern aviation facilities are of primary concern. Since the proposed new carrier is to be conventionally powered, an estimated $130 million has been freed for use in other programs.

Taking into account the leadtime involved in the construction of a ship of this size and complexity, we must appropriate for the foreseeable future, not merely for the present time. Four full years are required to construct a new carrier. If funds for a new one are not provided this year, there will be a gap of more than 3 years after the commissioning of the nuclear-powered *Enterprise* before the next modern replacement carrier could join the fleet.

By that time, the four remaining World War II ships still forced to operate as attack carriers will be on the brink of unserviceability for the operation of modern aircraft. This would constitute a serious deficiency in the Navy's readiness for either limited or nuclear warfare.

In considering the carrier fleet's readiness for action at any given time, a clear understanding also must be grasped of the magnitude of necessary maintenance and upkeep of these enormously complex mobile airbases and their complement of planes.

At any given point of time, two of our carriers will be laid up for overhaul, repair, and refitting. This means that the remaining 12 attack carriers must be deployed throughout our fighting fleets in areas of assignment best calculated to maintain for the United States her traditional position of supremacy on the seas.

Now, Mr. President, while we are strengthening our Navy at sea we must enlarge our arsenal of airborne weapons as well.

I urge the full development of the B–70 weapon system for the Air Force and the removal of its now limited development as a prototype.

I remind Senators of the budget history surrounding the efforts of the Air Force to provide continued modernization of our manned bomber force through the development of the mach 3 B–70 bomber. Two years ago, the Air Force's proposed program for jet speed combat ready units was reduced to conventional speed by a 50-percent cut in its proposed funds. Last year, those funds were again more than halved, and progress now barely exceeds the speed of the Kittyhawk developed by the Wright brothers. It is directed at one or two prototype, noncombat, flying machines.

In both of the above instances, because of the possibility of improving international relations. I was not inclined to challenge those limitations. However, thanks to Khrushchev's invectives and tirade last month and the failure of the summit, I am now convinced that we must put this weapon system back on the fastest possible pace. Thus, while many look gloomily on the ruins of the summit conference, I take an opposite view. I look upon that disaster as early warning providing an additional grace period and a challenge to awaken from an apathy which may well cost us our very survival.

That survival has been assured for these past years primarily through the dedication of the crews of the Strategic Air Command and the modernity of its equipment. Continued modernization of that manned force is required to maintain our national security, and the B–70 is the weapon system which best fulfills the vital requirement for a manned follow-on aircraft to the B–52. Missiles alone, fixed on concrete pads or in holes in the ground, are not enough. We must have the proper balance of manned aircraft and missiles.

We have been told by those responsible for our survival that the B–47's and B–52's are aging and more modern bombers should be available by the mid-sixties. This condition, coupled with an ever-increasing Soviet aggressive posture, requires continued modernization of our manned strategic capability. The B–70 is the weapon system best suited to fulfill that requirement. Its early attainment is well within the state of the art. It will travel the entire distance of its very great range at mach 3, which is roughly 2,100 miles an hour, and at tremendous altitudes. It transcends the heat barrier and opens the door for further major advances in aeronautical science. It is designed to carry a variable internal payload, which means that it can carry several large nuclear bombs or a great many very small nuclear or conventional ones. It can carry and fire the long-range air-to-surface ballistic missile which is now under development. Its maneuverability, speed, and large load-carrying capacity offer great potential as an antisatellite weapons carrier, an air defense missile platform, and as a carrier for Army troops and equipment.

Mr. President, this is not a time in our critical history to reduce our own security measures. The Soviet Union gave enough concrete evidence of its intentions last month to make us realize that the time is not yet arrived when we can relax our military might. Russian threats to dispatch rockets at bases in Western Europe, plus the granting of authority to fire those rockets to Soviet military commanders, should be sufficient to jolt us from any lingering complacency and apathy.

We in the Congress have the solemn duty and obligation to prepare this country for any military threats that might be directed against us. We have had enough experience in our history to indicate that delays in this area are dangerous. Fortunately for us in the past, time and geography were God-given gifts. After the initial warnings and rumblings, we had time to meet in these Halls, pass a draft act, hold a public ceremony to draw the first number and then give our people at least 6 months of military training. Such will not be the case in the next encounter. We do not even know if this Hall will be standing in which to meet; we do not know if we will even be able to gather a quorum to pass a draft act and we certainly would not have the luxury of pulling numbers from the draft gold fish bowl.

I urge the restoration of the B–70 program to its full development. It is a weapon of tremendous flexibility. It can operate completely independent of bases outside of our own country. It can be launched during periods of emergency and be invulnerable to enemy attack on our country. Unlike a missile it can be headed toward the enemy but be recalled at will. Unlike missiles it can carry repeated and enormous loads of weapons of tremendous explosive yield. It can fly over our allies during critical times as evidence of our capability and determination. It will provide a possible vehicle for future nuclear propulsion and too, it will be the forerunner of the supersonic commercial transport of tomorrow, an area in which we must maintain our lead. This must be our answer to Khrushchev—the answer which our President could not give in Paris and still maintain his dignity as the President of these United States.

But it is an answer our duty demands, the American people expect, and history will not excuse.

Mr. CASE of South Dakota. Mr. President——

Mr. ROBERTSON. Mr. President, I yield to the Senator from South Dakota.

Mr. CASE of South Dakota. I said what I wished to say merely to make clear that the reason I asked for a separate vote was that I thought it was a good idea for the Senate to express itself individually on the amendments. I intend to vote for the B–70 amendment, the aircraft carrier amendment, and the amendatory language concerning the National Guard.

Mr. ROBERTSON. I appreciate that expression from the Senator. He is no doubt quite right. If we have a separate vote on the amendments and a large majority of Senators vote for both the carrier and the bomber, it will help us in conference to secure the adoption of those two items, which were not contained in the House bill, but which subsequent worldwide developments have indicated should be undertaken. The Appropriations Committee has indicated that these items should be added to our capability.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. ROBERTSON. I yield.

Mr. PROXMIRE. What is the cost of the proposed aircraft carrier?

Mr. ROBERTSON. The cost is $293 million.

Mr. PROXMIRE. The appropriation is for $293 million?

Mr. ROBERTSON. Yes, but it will not all be spent because it is a 4-year project.

Mr. PROXMIRE. I understand that, but the bill provides $293 million for that purpose.

Mr. ROBERTSON. It provides for the funding of the whole item.

Mr. PROXMIRE. I am puzzled, for having gone over the transcript of the hearings, I ran repeatedly into this situation: I will take just a moment, with the Senator's indulgence, to refer to the hearings and ask for his clarification of this situation. On page 18 of the transcript of the hearings the Senator from New Mexico [Mr. CHAVEZ] said:

> Suppose your conclusions are correct, and I am not doubting them whatsoever, the Congress advanced $35 million for lead items for the carrier?
>
> Secretary GATES. That is correct.
>
> Senator CHAVEZ. You finally decided you were going to have a conventional carrier. Have you contracted for any lead items for even a conventional carrier out of the $35 million?
>
> Secretary GATES. No, sir.
>
> We have reserved that money and applied it to the cost of the conventional carrier requested in this budget and that, of course, will have to be approved by the Congress.

Later the Senator from Maine [Mrs. SMITH] said:

> I am not quite clear, Mr. Secretary, about the withholding of the $35 million which Congress appropriated last year for the lead items for a nuclear carrier. What happens to that $35 million?
>
> Secretary FRANKE. It has been applied in this budget as a reduction against the estimated cost of a conventional carrier.

One further reference makes the situation very clear to my mind, at least.

Admiral Beakley said:

> The first slide is the "Attack Aircraft Carrier." We have one in the budget at a cost of $293 million.
>
> * * * * *
>
> Senator CHAVEZ. Admiral, before you proceed with the next item, $35 million was appropriated last year for long leadtime parts for a nuclear carrier.
>
> Admiral BEAKLEY. Yes.
>
> Senator CHAVEZ. Have you used that money?
>
> Admiral BEAKLEY. We have not. It is still in escrow.
>
> Senator CHAVEZ. What you are asking now is to use that money for the conventional carrier that you are requesting in the 1961 budget.
>
> Admiral BEAKLEY. It will come off the whole price of our bill; yes, sir.

It seems to me, on the basis of the colloquy which I read, that the Senate and the House conferees provided $35 million for an aircraft carrier. It was apparently not used for that purpose. The money was put in escrow and set aside. If we appropriate another $293 million, we shall end with $35 million too much, will we not?

Mr. ROBERTSON. Last year the Department asked for a conventional carrier, and the Senate Appropriations Committee provided funds for a conventional carrier. In conference with the House, in whose bill there was no provision for a carrier, the House conferees said, "If we are to have a carrier, it must be a nuclear carrier." Some conferees from the Senate said, "We would favor a nuclear carrier, but the nuclear carrier would cost too much."

So as a compromise, in order to get something started, we receded on the request for a conventional carrier. The nuclear carrier would cost $190 million additional. The House yielded on the point of any carrier, and we inserted in the bill $35 million for leadtime, but the Department would not commit itself to a nuclear carrier. In the first place, the Department thought it would cost too much. In the second place, it wished to try out the *Enterprise* and see how a nuclear carrier performs. It wished to know what the economy of operation would be and whether it is really as good as it thought it would be. It knows what the *Forrestal* type of carrier will do.

So this year we asked for the price of a conventional carrier, which the witnesses said was $293 million. They have not spent the $35 million, but the fact that they have not would not make the price of a new carrier any less. They simply did not spend the $35 million, and they will never spend that money for what it was appropriated for. All the Department will spend for the carrier is what the carrier is estimated to cost, which is $293 million, the amount we put in the bill. We reappropriated the $35 million into the $293 million, but that action does not mean they now have $35 million hanging loose that they can add to the $293 million.

Mr. PROXMIRE. This point is exactly the one I wish to nail down. It seems on the basis of the hearing that the $35 million that was appropriated last year is still held by the Navy and can be released at any time, probably through a committee, for use in constructing a conventional type carrier. If we appropriate an additional $293 million, it seems to me that we add the $293 million to the $35 million, making $328 million.

Mr. ROBERTSON. When an appropriation lapses, in the opinion of the junior Senator from Virginia, the Navy has no power to obligate that $35 million after the end of the fiscal year for which it was appropriated. In any event, there is not $35 million available in addition to the $293 million provided for a conventional type carrier.

Mr. PROXMIRE. I wished to make that legislature history, so we can be absolutely clear that if the Senate acts favorably on the committee amendment, and if the House recedes from its position, and the bill passes and is signed into law, $293 million will be made available for this carrier, and no more, and the $35 million that is held in escrow at the present time will probably be returned to the Treasury or, at any rate, will not be added to the cost.

Mr. ROBERTSON. That is absolutely correct.

Mr. PROXMIRE. I thank the Senator.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. ROBERTSON. I yield.

Mr. GRUENING. I desire to associate myself with the remarks of the distinguished junior Senator from Virginia. This is no time to diminish our military strength. I wish to pay tribute to the Subcommittee of the Committee on Appropriations on the Department of Defense. The distinguished chairman and the members of the subcommittee have worked hard on the pending bill. We in Alaska are particularly gratified—as are also those from other States—for their statement about liquid oxygen. We do not believe that it is proper for the Air Force to compete with private business when that business is doing the job adequately. It is a time for the Air Force to concentrate on its essential duty, that of strengthening our defensive and offensive air weapons.

We are also grateful for the serving of fresh whole grade A milk to the troops in Alaska. Until this action was taken last year, the only GI's under the flag who were drinking reconstituted class C milk were those in Alaska.

There is one aspect of the defense picture which still gives us much concern, and that is the drastic reduction of our fighter interceptor strength in Alaska.

This has been done in spite of the fact that my distinguished colleague from Alaska [Mr. BARTLETT] and I have protested against the removal of nearly half of the fighter strength from Alaska, a plea warmly supported before the subcommittee by the distinguished Senator from Missouri [Mr. SYMINGTON], the former Secretary of the Air Force. We Alaskans might possibly be charged with a certain amount of localism or a certain amount of partiality. However, that is not the case. Our interest is in the national defense, and our facts are emphatically buttressed by the distinguished military commentator and ex-

pert of the New York Times, Mr. Hanson W. Baldwin, whose judgment is entitled to great respect.

Yesterday he published an article in the New York Times entitled "A Weak Line in Defenses." The subhead reads: "Alaska's Vulnerability Now Pointed Up by Plan To Abandon Two Fighter Squadrons." He refers to the virtual defenselessness of this vast area, larger than many of our 48 States, which results from this action.

I will not quote all of the article, but I will ask later to have it printed in full in the RECORD. He points out:

In considerable measure, the responsibility for Alaska's weakness lies with the President's own defense policies, particularly his level budget concept, and the increasing tendency of the Air Force toward a "Fortress America" concept. The latter concept envisions the withdrawal of its principal installations into the continental 48 States.

This withdrawal seems incredible at this time. This my colleague and I expressed to the Chief of Staff of the Air Force, among others, at the Pentagon. Despite the eloquence of their statements to us presenting their point of view I must say that they left us completely unconvinced.

Mr. Baldwin points out the fact that the 449th Fighter Interceptor Squadron, which has been operating 25 Northrop F–89 fighters, all equipped with missiles which are armed with nuclear warheads, is to be inactivated within 6 weeks. Now, the point to remember, which he emphasizes, is that this squadron is the only one north of the Alaska Range, which means in an area two-thirds the size of Alaska—in other words, an area much larger than Texas—and the American area nearest the Soviet installations. It has been based on Ladd Air Force Base, near Fairbanks.

As Mr. Baldwin correctly states, this elimination leaves Alaska defended by only 33 F–102 fighter interceptors normally based at Elmendorf Air Force Base, near Anchorage and near the southern coast of Alaska.

The value of these fighter interceptor squadrons, as Mr. Baldwin correctly points out, is primarily for identification of unknown aircraft. There is, so far—as we all know, and as he points out—absolutely no substitute for this visual identification of enemy aircraft, and as Mr. Baldwin correctly says:

There is no other U.S. territory where it is so badly needed as Alaska.

And he goes on to say that because of the proximity of Soviet bases and the overflights of many commercial lines, of bush pilots, and so forth, these unknown planes are recorded on the Alaska radar screens often after they are well within the coastline before they can be identified. If they happen to be Russian—and Russian planes have flown over Alaska on missions similar to that of the U–2—they turn back before the interception is made.

Now, Mr. Baldwin is obviously correct in his assertion that 33 aircraft cannot do the job as well as 58, and that of the remaining 33 fighter interceptors, which, for the moment, at least, the Air Force plans to keep in Alaska, perhaps only 6 planes can be kept on constant ground alert.

It is true that the Air Force has indicated that the squadron at Anchorage will rotate some of its planes to the Fairbanks area, and that Alaska will be defended from the continental United States. But, as he points out:

Any such arrangements obviously reduce materially the effectiveness of the defense.

And that is the heart and essence of what this expert has to say.

This is not, therefore, despite the attempted Air Force's justification, a strategic redeployment designed to produce as good a result in other ways. The fact is that it does "obviously reduce materially the effectiveness of the defense," and that means the defense of the entire Nation.

Then, I quote the following paragraph from Mr. Baldwin's statement:

The newest reduction in strength of our Armed Forces in Alaska was originally intended to be a modernization. The old F–89's at Fairbanks were to be replaced by modern F–101's.

However, the strict administration ceiling on defense spending and the Air Force tendency to try to concentrate offense and defense within the United States led to the projected inactivation."

In other words, this is a budgetary decision.

I shall not summarize the remainder of the article, except to quote its logical and, if it be not too strong an adjective, damning conclusion:

But the Air Force, in its strategic plans, is committed to an isolationist, "Fortress America" concept (technologically speaking), and Alaska, after the Panama Canal Zone, is the weakest command under the U.S. flag.

The impending reduction in the 49th State's fighter-interceptor strength will leave both Alaska and the rest of the States weaker, not stronger. And no amount of the "gobbledegook" and doubletalk by which the cut was justified to a Senate Appropriations Subcommittee can change this fact.

I dislike to say this, but it is tragic to have a high official in the Air Force say to one privately, "You hate to testify in favor of something that you know is wrong." That is one of the most lamentable decisions that has ever been made, in time of gravest peril, this taking of the 449th Squadron from Alaska and not replacing it with better fighter-interceptors as it was first intended to do only a few months ago.

I hope this decision will be reversed. The committee has not recommended this in its report, but I hope that my comments and those of others will indicate that this is a vital matter and that this is no time to weaken our defensive and offensive strength in one of the most strategic parts of the Union. After all, Alaska is a part of the United States, which the Air Force seems now to be overlooking.

Mr. ROBERTSON. A part of that criticism does not relate to this bill at all.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. ROBERTSON. I yield.

Mr. SALTONSTALL. I would say to the distinguished Senator from Alaska that I know of the discussion he has had on this subject. He had a discussion of it with the Senator from New Mexico and with me. I have the greatest sympathy for what he has been stating. There may be some difference of opinion as to the adequacy of the Air Force defenses in Alaska.

I know that the Senator from Alaska has the same information that I have. I only hope that as time goes on, with the development of the Minuteman, the development of missiles, and also the keeping of the bases in Alaska, our defenses in Alaska will not only be maintained, but improved. I hope that as time goes on the Senator will feel the same way too, although I know he feels concerned about the present situation, as I do.

Mr. GRUENING. I thank the Senator and I want precisely what he hopes for, the maintenance and, if possible, the improvement of our defenses in Alaska.

Mr. ROBERTSON. No member of our committee is unmindful of the need for the adequate protection of Alaska. We have not slowed down or eliminated in any way our warning programs. Our committee cannot control the dispersal of the present intercepter force of the Air Force. We had nothing to do with the removal of the squadron, if that is what is complained of.

Mr. GRUENING. I am aware of that.

Mr. ROBERTSON. This is a matter for the Air Force and the Defense Department. The distinguished commentator of the New York Times, Hanson Baldwin, for whom I have a great deal of respect, then moved from that point into another issue, and that is the question of which is better; to build a great many new F–106 interceptors or to put the money behind the Bomarc? The unquestioned testimony before us was that it would be more effective, cheaper to build, and far cheaper to maintain to put our money in the Bomarc rather than to step up and have a great production of the F–106.

So from a reading of that comment, Mr. Baldwin evidently moved from the first proposition, of taking a squadron of interceptors away from Alaska, over which our committee has no power or responsibility, to the action of our committee in putting our money on the Bomarc and the B–70.

Mr. GRUENING. The Senator is mistaken in assuming that Mr. Baldwin refers to the building of new F–106's. He merely urges that the plan to substitute the F–101's, which are already in existence, and for which a great number of parts have already been sent to Alaska, and are now in storage there, be not reversed, which is what the Air Force has done.

Mr. ROBERTSON. Again, that does not relate to the building of them; it relates to the policy of the Air Force.

Mr. GRUENING. I agree; but I believe the Senate is a proper forum for the airing of such views as these.

Mr. ROBERTSON. Oh, that is something else. The Senate is such a forum.

Mr. GRUENING. Mr President, I ask unanimous consent that the article entitled "A Weak Link in Defenses," written by Hanson W. Baldwin and published in the New York Times of June 15, 1960, together with a telegram which I sent to the President and two replies from his administrative assistant on this subject, be printed at this point in the RECORD.

There being no objection, the article and correspondence was ordered to be printed in the RECORD, as follows:

A WEAK LINK IN DEFENSES—ALASKA'S VULNERABILITY NOW POINTED UP BY PLAN TO ABANDON TWO FIGHTER SQUADRONS

(By Hanson W. Baldwin)

President Eisenhower's overnight stop in Alaska focused attention on a region that, in the President's words, "constitutes a bridge to the continent of Asia and all its people."

This traditional description of the strategic importance of Alaska is, however, vitiated by the military weaknesses of the forty-ninth State. The President's visit to the Anchorage area may, indeed, have provided an opportunity for Alaskans to impress on the Commander in Chief the virtual defenselessness of an area that is about one-fifth as large as the entire United States.

In considerable measure, the responsibility for Alaska's weakness lies with the President's own defense policies, particularly his level budget concept, and the increasing tendency of the Air Force toward a "Fortress America" concept. The latter concept envisions the withdrawal of its principal installations into the continental forty-eight States.

WEAKNESS NEWLY POINTED UP

This weakness has been reemphasized recently by an issue that has caused a storm in Alaska and elsewhere—the elimination and inactivation of one of the two fighter squadrons that had been assigned to the forty-ninth State, and the inactivation of the 71st Air Rescue Squadron.

The 449th Fighter-Interceptor Squadron, operating twenty-five Northrop F–89 fighters, equipped with missiles armed with nuclear warheads, is to be inactivated within 6 weeks.

This squadron, the only one north of the Alaska Range, was based on Ladd Air Force Base near Fairbanks. Its elimination leaves Alaska defended by thirty-three F–102 fighter-interceptors, normally based at Elmendorf Air Force Base, near Anchorage, where the President spent the night.

These air defense forces are part of the 10th Air Division, answerable to the North American Air Defense Command, with headquarters at Colorado Springs.

In addition, Alaska has two Nike-Hercules antiaircraft battalions, one near Fairbanks, one near Anchorage, and two Army battle groups. Its coast line is ringed with radar, and the scopes daily record the tracks of Soviet aircraft rising from fields just across the Bering Strait.

NO SUBSTITUTE FOR SEEING

The value of the fighter-interceptor squadrons in Alaska was primarily for identification of unknown aircraft. There is, so far, absolutely no substitute for this visual identification of enemy aircraft, and there is no other U.S. territory where it is so badly needed as Alaska.

Because of the proximity of Soviet bases, and the overflights of many commercial lines, "bush pilots," and so on—the unknowns recorded on the Alaskan radar screens are often within the coastline before they can be identified.

It is routine, in Alaska, to scramble fighter-interceptors three or four times each month to identify unknown aircraft before they approach vital centers. If they are Russian, as they sometimes are, they turn away before the intercept is made.

There is no substitute for this visual identification and it is idle to assert that 33 aircraft can do the job as well as 58. Thirty-three aircraft—those that will remain in Alaska—will be able to keep perhaps six planes on constant ground alert.

The Air Force has indicated that the squadron at Anchorage will rotate some of its planes to the Fairbanks area and that Alaska will be defended from the continental United States. But any such arrangements obviously reduce materially the effectiveness of the defense.

MODERNIZATION THE INTENT

The newest reduction in strength of our Armed Forces in Alaska was originally intended to be a modernization. The old F–89's at Fairbanks were to be replaced by modern F–101's.

However, the strict administration ceiling on defense spending and the Air Force tendency to try to concentrate offense and defense within the United States led to the projected inactivation.

If the F–89's had been replaced by weapons—planes or missiles—with an offensive capability, this would have made great strategic sense. Not a single fighter in Alaska has the range to reach and return from Soviet bases—just across the Bering Strait and in Kamchatka Peninsula.

Lt. Gen. Frank A. Armstrong, Jr., commander in chief of the Alaska Command, has long asked for some offensive capability in the form of a few intermediate range ballistic missiles or even light bombers, or longer range aircraft such as the F–101.

The Thor or Jupiter missiles are already proved and in place in England and elsewhere. Some of them emplaced in the uninhabited wilds of Alaska could do more to neutralize the Soviet bases across Bering Strait and in Kamchatka and to defend Alaska and the rest of the United States than a multiplication of our purely defensive strength.

COULD BE DIVERSIONARY

Moreover, missiles or long-range fighter-bombers or light bombers in Alaska would have a strategic diversionary effect upon Soviet plans; some of the atomic lightning would be attracted away from our shores by the Alaskan "lightning rod."

But the Air Force, in its strategic plans, is committed to an isolationist, "Fortress America" concept (technologically speaking), and Alaska, after the Panama Canal Zone, is the weakest command under the U.S. flag.

The impending reduction in the 49th State's fighter-interceptor strength will leave both Alaska and the rest of the States weaker, not stronger. And no amount of the "gobbledegook" and doubletalk by which the cut was justified to a Senate Appropriations Subcommittee can change this fact.

MAY 26, 1960.

The Honorable DWIGHT D. EISENHOWER,
President of the United States,
The White House, Washington, D.C.

DEAR MR. PRESIDENT: Together with my fellow members of the Alaska delegation in Congress, I have been greatly shocked to receive information from the Air Force that the 449th Fighter-Interceptor Squadron will be removed from Ladd Air Force Base, near Fairbanks, Alaska, in August, thus leaving no fighter planes whatever north of the Alaska Range in my State. This announced withdrawal will reduce Alaska's fighter plane strength by 25, leaving only 33 fighter aircraft in all of Alaska, these being based at Elmendorf Air Force Base.

I call this matter to your attention and ask that you intervene to keep our guard up in the part of our Nation closest to our potential enemy. The decision respecting the 449th Fighter-Interceptor Squadron was announced to me May 10, which was before the sudden worsening of relations between our Nation and the U.S.S.R. as a result of the U–2 incident and the disgraceful manner in which Chairman Khrushchev addressed you at the summit conference at Paris.

I hope you agree with me that this is no time to reduce our Air Force's fighting strength in Alaska. The announced decision followed by less than 2 months notification from the Air Force that the 449th Fighter Interceptor Squadron would be strengthened by replacing its F–89 aircraft with more modern and effective F–101 aircraft. This reversal, on the eve of a great crisis in our international relations, certainly would seem to me to merit your personal review.

If, after that review, you find you agree with the announced policy of the Air Force that it is not necessary or advisable to maintain fighting strength north of the Alaska Range, I hope you will ask the Interior Department to draft legislation which would undo a feature of the Alaska Statehood Act which, you will probably recall, segregated almost half of Alaska north and west of a so-called Eisenhower line, within which the President has authority to create one or more national defense reservations. If we are to write off Alaska militarily, there would seem to be no reason remaining to perpetuate this division of my State. There is a practical aspect of this matter, even if you or your successors should not decide to create national defense reservations in Alaska, because the State is now prohibited by the Statehood Act from including any area north of the Eisenhower line in its selection of 103 million acres of land which the Federal Government is bestowing on Alaska in connection with statehood.

ERNEST GRUENING,
U.S. Senator.

THE WHITE HOUSE,
Washington, D.C., May 31, 1960.

The Honorable ERNEST GRUENING,
U.S. Senate,
Washington, D.C.

DEAR SENATOR GRUENING: This will acknowledge, for the President, your May 26 telegram respecting the 449th Fighter-Interceptor Squadron at Ladd Air Force Base in Alaska. I can assure you that a further reply will be forthcoming as promptly as possible.

Kind regards.

Sincerely,

EDWARD A. MCCABE,
Administrative Assistant to the President.

THE WHITE HOUSE,
Washington, D.C., June 8, 1960.

The Honorable ERNEST GRUENING,
U.S. Senate,
Washington, D.C.

DEAR SENATOR GRUENING: With further reference to your May 26 telegram to the President concerning the 449th Fighter-Interceptor Squadron at Ladd Air Force Base in Alaska, I wish to advise that the Secretary of Defense is currently reviewing the Air Force decision in this matter. I will of course be in touch with you again as promptly as possible after the completion of the review.

Kind regards.

Sincerely,

EDWARD A. MCCABE,
Administrative Assistant to the President.

Mr. SALTONSTALL subsequently said: Mr. President, I ask unanimous consent to have printed in the RECORD,

directly following the remarks of the Senator from Alaska [Mr. GRUENING], a brief memorandum which I have received from Maj. Gen. Howell M. Estes, Jr., Assistant Deputy Chief of Staff Operations, Air Force, with relation to revised plans for Air Force units in Alaska.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

In March of this year, the Chief of Staff, U.S. Air Force, recommended to the Congress certain changes in the U.S. Air Force programs, including items originally submitted in the President's fiscal year 1961 budget. In the main, these changes involved a reorientation of previous plans related to defense of the North American Continent against manned bomber attack. Prior to presentation to Congress, the major aspects of these changes were approved by the Joint Chiefs of Staff and the Secretary of Defense.

The essential purpose of the reassessment which led to these revisions was to realine U.S. Air Force force structure, while time is still available, in order to meet to the most effective degree possible within current and expected resources, the estimated overall Soviet threat in the midsixties and beyond.

Today, the predominant threat is unquestionably from the Soviet strategic bomber force. The threat from this force will continue to exist indefinitely into the future. As time progresses, however, the threat of the growing Soviet ICBM force will rapidly become our principal concern. U.S. Air Force analysis indicated that maximum achievable effectiveness against the total threat would result from an accelerated completion of a semiautomatic defense system against the manned bomber, substantially improved over that existing today, coupled with further concentration on timely deployment of systems designed to counter the ballistic missile threat.

Specifically, the revisions involved:

(a) Elimination or reduction in quantity of those components of the planned manned bomber defense system which could not become operational during the period of dominance of the manned bomber threat. This included reduction of the Bomarc program, curtailment of certain planned radar modernizations, and elimination of the supercombat center program.

(b) Modernization of the intercept capabilities of existing Century series fighter interceptors.

(c) Acceleration of ballistic missile warning systems such as BMEWS and Midas.

(d) Improvement of our deterred posture.

The substantial reduction in the Bomarc program will be offset, to a degree, by the fighter-interceptor modernization. Nonetheless, the decrease in total weapons available resulting from this curtailment of the Bomarc program made it necessary to reposition fighter-interceptor forces in consonance with the intended limited deployment of Bomarc and with other existing air defense weapons. A twofold objective guided planning in this repositioning of fighters. The first objective was to insure maximum defense capability along the most probable attack routes toward the most important national strategic targets; the second was to provide a rough equivalence in all areas of the United States as regards the relationship between weapons available, strategic targets to be defended, and enemy attack capabilities. This planning resulted in reducing the total number of weapons previously located in certain of the States and in other areas of the North American Continent. Alaska was among those States in which the previous number of fighter-interceptors was reduced.

It has been stated that Alaska, lying close to Soviet territory, is strategically located along a major attack route into the heart of the United States and, consequently, a large air defense force stationed in Alaska would be of great value in defending all other States of the Union. A detailed analysis of the known and estimated Soviet strategic airbase structure and long-range Air Force capabilities, however, demonstrates that the full weight of the Soviet bomber force can be thrown against the remaining States without overflying Alaska. Any air defense weapons placed in Alaska for this purpose alone could thus be either bypassed or taken under attack by accurate medium-range ballistic missiles preliminary to any manned bomber overflight.

In consequence, U.S. Air Force air defense weapons in Alaska are planned for defense of Alaskan strategic targets. The plans include:

(a) Inactivation of the 449th Fighter-Interceptor Squadron, now stationed at Ladd Air Force Base, in the immediate future.

(b) Increasing the numbers of F–102 fighter-interceptors now stationed in Alaska.

(c) Improving the capability of these interceptors in the near future through provision of the GAR–11, a guided, nuclear warheaded, air-to-air missile. The increased number of F–102's equipped with this new missile will provide, in the future, a greater total air defense capability in Alaska than that which exists today. This capability will be equivalent to that which will exist in many other areas of the United States.

(d) Maintaining continuous air defense alert with these interceptors in several strategic locations in Alaska, including Fairbanks.

Representations have also been made concerning the value of Alaska as a base for offensive weapons. Any analysis of the utilization of Alaska for this purpose must take into account the change which has occurred in weapon technology in the past few years. Not very long ago, all of our offensive weapons were severely range limited. To be capable of retaliating effectively to any attack on us, it was essential that our bombers and scanty tanker forces be positioned as far forward as possible. Today, the extensive range of the B–52, coupled with the advent of the jet tanker in quantity, has greatly reduced the need for forward basing of the strategic bomber force. Further, the ICBM is even more rapidly changing the strategic situation. Range of these new weapons in excess of 9,000 miles has been demonstrated. Technology has thus made it possible to base strategic offensive power where force survivability and economy can be maximized while still retaining full target coverage.

An example can be cited from a thorough study comparing IRBM's based in Alaska with Minuteman ICBM's based in the mainland of the United States. The study results indicate that, in approximately the same time period, over four Minuteman ICBM's could be deployed in areas of the United States other than Alaska for the same cost as one IRBM deployed in Alaska. Should it be desired to target Soviet bases near Alaska, it would therefore be possible, for the same dollar cost, to program either four Minuteman missiles against each base or one IRBM. The added flexibility which would be available because of the range of the Minuteman makes the comparison even more out of balance.

For essentially the same reasons as expressed above, the short range of tactical fighter bombers, such as the F–105, prevents their optimum application in an offensive role from Alaska. For the present, only the B–47 strategic bomber, maintained in an immediate alert status and warned by Alaskan radar coverage against bomber attack or by BMEWS against missile attack, can adequately and economically carry out an offensive role from Alaska.

In today's strategic situation as created by new weapon technology, therefore, Alaska serves as a vitally important base in a defensive role for early warning of manned bomber attack through Alaskan radar and DEW line extensions and of ballistic missile attack through BMEWS. Its importance in an offensive role is chiefly related to forward basing capability for the medium bomber force of the Strategic Air Command.

Mr. CANNON. Mr. President, will the Senator from Virginia yield?

Mr. ROBERTSON. I yield.

Mr. CANNON. I compliment the Senator from Virginia on his excellent statement in relation to the carrier and also the B–70's. I have a few questions in my mind on matters which have not been brought out.

I think the Senator from Wisconsin [Mr. PROXMIRE] brought out the cost factor of the carrier. I should like to ask, What is the amount of the additional cost of the B–70 program?

Mr. ROBERTSON. $285 million.

Mr. CANNON. Is that in addition to the amount which was already in the bill for the skeleton program?

Mr. ROBERTSON. That is correct. But the prototype airplane does not get us anywhere at all, even if we had the engines to operate it. So we put in the entire system—everything that goes with the operation of the B–70. It is a quite expensive operation.

Mr. CANNON. In other words, the $75 million in the bill initially would provide only for the shell of the aircraft without a weapons system as such?

Mr. ROBERTSON. That is correct. But this puts the weapons system into the program. It includes a plane that can fly at the rate of 2,100 miles an hour, at an altitude of, say, 70,000 or more feet, and having a range of—I do not know for certain, but certainly 6,000 miles or more. Also, it can be refueled. It can be throttled down and refueled in the air. There is nothing in the world like it. We know how to build it.

Mr. CANNON. Will the $360 million which will now be provided, if the amendment shall be agreed to, provide for the full and complete development of the weapons system, based on the present estimate?

Mr. ROBERTSON. For 1 year.

Mr. CANNON. For how many aircraft?

Mr. ROBERTSON. I cannot say how many airplanes this money will provide for a complete weapons system.

Mr. CANNON. So we would have a complete operational unit rather than the shell of an aircraft which would be no good to us without a complete weapons system.

Mr. ROBERTSON. Absolutely. I can say without contradiction—and I got the information directly yesterday—that it is No. 1 on the program of the Air Force.

Mr. CANNON. I certainly agree with the Senator from Virginia on that point. I believe the Senator has made it very clear that this is the only follow-on aircraft which we have to follow the B–52. In other words, we have no other aircraft of that type in the research and development program.

Mr. ROBERTSON. The B–47 is practically obsolete now. The B–52, by the middle of the 1960's, should be phasing out.

This is the airplane of the future, not only to protect the peace, not only to participate in any kind of war, whether it be a brushfire or an all-out war; but it also tells us how to get mass transportation, which we do not now have, at three times the speed of sound.

Mr. CANNON. I believe the Senator has pointed out that the advantage of manned aircraft, which can be recalled and used, actually is psychological, in that it need not be headed on its way and continued in that direction once it is placed in movement.

Mr. ROBERTSON. If the distinguished junior Senator from West Virginia [Mr. BYRD] were here, he could probably quote the poem about how one can shoot an arrow into the air and get it back; but when the word is spoken, it is gone.

When a missile is cut loose, it is gone; we cannot get it back. But a B–70 can be started and can also be called back.

Mr. CANNON. I compliment the Senator. I thank him for his response.

Mr. ENGLE. Mr. President, will the Senator yield?

Mr. ROBERTSON. I yield.

Mr. ENGLE. I, too, wish to compliment the Senator from Virginia on his interest in this important matter and his very fine discussion of it, together with the remarks made by the distinguished Senator from Nevada.

Most of the points I had intended to make have already been referred to. However, in line with the remarks made with respect to the speed of this airplane, I have a map which shows the distance that that plane can fly on 1 hour's range at a speed of approximately mach 3, which is a little less, incidentally, than that which the Senator from Virginia referred. However, in a little more than 2 hours, this airplane would be over Formosa from a standing start from a base on the Pacific coast.

Mr. ROBERTSON. That is correct.

Mr. ENGLE. In other words, the Chinese Communists could initiate an airborne invasion of Formosa. This airplane, from a standing start, would be there to catch the Communists in midchannel, from a standing start at an airbase in America.

The map shows that the airplane could fly clear to the end of South America in less than 3 hours. It could fly clear into the heart of Russia in less than 3 hours. It could fly clear into the heart of the Soviet Union from the east coast in less than 3 hours.

This is an extremely interesting chart. I shall make it available to the Senator from Virginia for his information. For instance, it could be in the Philippines in 4 hours from a standing start from a base on the Pacific coast.

Mr. ROBERTSON. That is all the way around the world.

Mr. ENGLE. That is correct. It would be absurd if we failed to develop this phenomenal weapons system.

Mr. ROBERTSON. All the information before our committee was that it is the most wonderful airplane that human ingenuity ever designed. We should not delay a day to get it started.

Mr. ENGLE. I am delighted to learn that the Senate committee saw fit to restore this item. I compliment the committee for doing so. This is the airplane of the future.

We went through the sound barrier. The next thing we had to get through was the heat barrier. This airplane takes us through the heat barrier. Once through the heat barrier, we can go 2,000 miles an hour, 3,000 miles an hour, perhaps 4,000 miles an hour. We do not know of any limitations.

Mr. President, inasmuch as the remarks which have been made in this discussion have mainly covered matters which I proposed to speak about independently a little later, with the permission of the distinguished Senator from Florida I should like to ask unanimous consent to have printed at this point in the RECORD my statement on this subject matter.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR ENGLE

I should like to commend the Committee on Appropriations for the wisdom of its decision to recommend we provide $360 million for the continued development of the B–70 bomber as a weapons system—an increase of $290 million over funds provided by the House.

I rise to urge the Senate to vote its approval of these funds for developing the B–70 weapons system. Equally as important, I hope the Senate conferees will stand firm for the retention of these funds when they meet their counterparts from the House in conference to iron out differences between the bills as passed by the Senate and the House.

Ever since the administration announced its decision, while Congress was in adjournment last winter, virtually to eliminate the B–70 as a weapons system, I have been pointing out the folly of this decision, and urging that it be reversed.

I have spoken on this subject repeatedly on the floor of the Senate. I have told the people of California about it, in person, on radio and on television, through the newspapers. I have testified before the subcommittee of the Committee on Appropriations. In this effort, I have had the support of many of my distinguished colleagues in this body from both sides of the aisle, and I am grateful for it.

In a speech on the floor of the Senate on January 11, I pointed out that what the administration proposed was that we build one or two "bare bone" vehicles, and absolutely no matched subsystems involving radar, navigation and bombing, air date, electronic countermeasures, mission and traffic control, and power pods.

In other words, they proposed that we fit out this airplane capable of speeds of from 2,000 to 3,000 miles an hour with gear designed for one-third its speed, and cancel development of gear designed to match its speed. At the very least, this procedure would lose us years of invaluable time in the development of this invaluable weapons system.

I pointed out in that speech, and in the second speech of May 13 that the reason behind this gutting of the B–70 had nothing to do with the merits of the airplane, but had everything to do with the obsession of this administration to go out of office with a balanced budget.

I am glad to see that the Committee on Appropriations has recognized the fact that however desirable a balanced budget is, and however necessary it is to keep military appropriations at the lowest level consistent with national security, there are yet some programs which we cut only to our own great peril * * * and that the B–70 is one of these.

One of the most interesting and significant things which I have noted about all the testimony and discussion about the B–70 which has ensued during the last 6 months is unanimous agreement of professional Air Force men on the need for the B–70 intercontinental bomber.

Let me sum up very briefly these unanimously agreed to arguments in favor of our going forward with development of the B–70 as a weapons system:

1. The B–70 manned bomber possesses certain inherent advantages over a missile. It is recallable. It is reusable. It can change targets in flight. It can be used for a variety of missions, including reconnaissance, and low-level attack. It can be adapted to use a variety of weapons.

2. The unique characteristics of the B–70 including mach 3 speed at 70,000 to 80,000 feet, quick reaction to warning, and the most advanced reconnaissance systems the technology can provide, overstrain the defense system state of the art. It is both technically and economically feasible for our enemies to oppose lesser performance vehicles, but not the B–70.

3. The B–70 possesses phenomenal capability in the field of limited war. As an example, a squadron of B–70's could leave San Francisco after word was received that a waterborne invasion force had left mainland China bound for Formosa and overtake that force long before it reached its destination. The B–70 is the ideal global police cruiser.

4. The B–70 is not merely a drawing board dream, dependent upon the planning of events, or inventions, or scheduling of "breakthroughs" for success. Design has progressed to a point where fabrication of components of an aircraft has begun. The Air Force plans to bring the B–70 into operation during the mid-sixties when our aging B–47's and earlier B–52's will be phased out of Air Force inventories.

5. The B–70 represents a major aeronautical breakthrough since it transcends the heat barrier and opens the door to even faster speeds and further major aeronautical advances. Its development provides the basic engineering to the development of mach 3 and higher speed civilian transports.

The $360 million appropriation recommended by the Committee on Appropriations represents less than 1 percent of the total appropriations for the Department of Defense in this bill. But that fraction of 1 percent of this appropriation can mean the difference between our maintaining—and our losing—our leadership in the field of aeronautical science.

As General White has well said: "We must strive to conquer any so-called barriers to further progress in manned flight—not because it is a challenge, but primarily to develop the answer to the threat of exploitation of the same advancing technology—militarily or commercially—by others."

Again I urge the Senate to include this $360 million in this appropriation, as recommended to it by its Committee on Appropriations.

Again I urge the Senate conferees to stand firm on this point in conference with Representatives of the House.

Mr. ENGLE. Mr. President, I again wish to compliment the distinguished Senator from New Mexico [Mr. CHAVEZ], the chairman of the Subcommittee on Defense Appropriations, for taking this

action, and to compliment the great Senator from Virginia [Mr. ROBERTSON] for the fine speech he has made.

Mr. ROBERTSON. I thank the Senator from California.

Mr. President, I yield the floor.

Mr. PROXMIRE. Mr. President, I have objected to a unanimous consent agreement to limit the debate on the bill. The majority leader has asked for a limitation of debate of 3 hours on the bill and 40 minutes on any amendment. He has come forth with another proposal also to limit debate.

I appreciate his position. I deeply sympathize with the difficult problem of acting on the tremendously important legislation which is before us and having it considered by the Senate before it is time to adjourn for the conventions.

At the same time, I simply feel that a bill of this importance, which provides for the appropriation of 40 thousand million dollars—$40 billion—having this enormous amount of money at stake and under consideration, and with the No. 1 issue, which perhaps has divided the parties, being in regard to the strength of our military forces, particularly at this time of great world crisis, for the Senate, the greatest deliberative body in the world, to limit itself in debate, so this measure could be handled in the course of an afternoon or 3 or 4 hours, would not, in my opinion, be proper, because I do not know enough now to be able to cast my vote on a number of issues in this $40 billion bill. Perhaps later I shall be able to agree to the request for such an order, but I cannot do so at this time. I regret that, for I do not like to inconvenience Senators. But I feel very deeply that all Senators have this responsibility, and I believe that is especially true of those of us who are not on the committee. Certainly we should obtain some answers before we proceed to vote on some of these very costly amendments.

Mr. President, I wholeheartedly agree with the presentation which has been made by the Senator from Virginia in regard to the B–70 bombers. From all I have heard and read, I believe his proposal is very sensible, and I believe it will greatly increase and improve our Nation's strength.

Nevertheless, I believe we must be discriminatory. It is possible that the armed services will request too much in some areas; and I feel very strongly that the Navy is requesting too much when it asks for another aircraft carrier in this day and age. The House deleted that item, after extensive hearings and consideration. I have heard from many Senators that this is the weakest request the Armed Forces are making. The proposed aircraft carrier would not be delivered for 4 or 5 years. We know that an aircraft carrier travels on the surface of the ocean at a constant altitude—that is sea level at about 35 knots, and is of enormous size as a target, as compared to an airplane, a submarine, or a missile. In that connection, reference has been made to the shooting down of missiles by the use of antimissile missiles. Obviously, in this atomic age an enemy would have very little difficulty in destroying an aircraft carrier, which operates on the surface of the ocean, and would be as long as three football fields end to end, and would travel at relatively slow speed, a wide open sitting duck; and certainly it would not be difficult for an enemy to destroy such a carrier 4 years from now in 1964.

Perhaps there is some reasonableness to the point that aircraft carriers are mobile and are useful in brushfire wars under certain limited circumstances.

But to appropriate $293 million for one ship which could be destroyed by one bomb, and would be a sitting duck, makes no sense to me.

I realize that utility in connection with nuclear war is only one part of the usefulness of an aircraft carrier; and everyone who is informed on the subject, to whom I have talked, states that nuclear war is the least important use of an aircraft carrier. They say the greatest usefulness of an aircraft carrier is in connection with situations such as that which has occurred in Lebanon or in the Formosa Straits.

But the proposed new carrier would not be an additional one; instead, it would be a replacement for an *Essex* class carrier, with a *Forrestal* class carrier. In other words, it would replace a carrier which was built near the end of World War II; but that replacement would not be made until 4 or 5 years from now.

Mr. ROBERTSON. Mr. President, will the Senator from Wisconsin yield?

The PRESIDING OFFICER (Mr. MCGEE in the chair). Does the Senator from Wisconsin yield to the Senator from Virginia?

Mr. PROXMIRE. I yield.

Mr. ROBERTSON. The testimony on that point was correct.

But it was testified that planes are being wrecked and valuable personnel are being killed by trying to handle modern planes on aircraft carriers which have small decks—for instance, carriers such as those of the *Essex* class—and that, therefore, we shall spend our money to better advantage and shall have more efficient operations if we provide for the construction of another carrier of the *Forrestal* type.

As to adding an item of $293 million to the bill, let me remind my colleague that we are proceeding on the basis of a somewhat different concept, in regard to how to use our funds in order to do the most good. The House took the position that provision should be made for submarines and for means to oppose submarine attacks, and included for that purpose an additional amount of $221 million, but the House deleted the item of $293 million for the aircraft carrier.

When the bill came to the Senate committee, the testimony before it was that we had better eliminate all that the House had done in regard to submarines, rather than fail to restore the item for the aircraft carrier. But we did not do just that; instead, we restored the item of $293 million for the aircraft carrier, but we also added an item of $99 million for the stepped-up submarine program. That helped increase the total called for by the Senate committee version of the bill, as compared with the total called for by the bill as passed by the House, by approximately $400 million.

However, in places such as Lebanon, the carriers can be of the greatest service.

Mr. PROXMIRE. Mr. President, the Senator from Virginia spoke, in making his first point, about safety; and I believe that is the strongest point or argument to be made in favor of the proposed new aircraft carrier. I concede that a new carrier will be safer.

However, Admiral Beakley stated, in the course of his appearance before the House Appropriations Committee, when he was referring to safety:

> This requires the commander to judge what he pushes these carriers into and how he operates them and the type of airplane you put aboard each one.

On page 690 of the Senate committee hearings, in connection with the report made by the Navy in regard to the accident rate, I notice the following:

> 7. The overall carrier accident rate has been reduced from 14.4 per 10,000 hours in fiscal year 1957 (first year for which records are available) to 9.7 in fiscal year 1959, and 6.2 in the first quarter of fiscal year 1950.

It seems to me that on the basis of that evidence, in view of the fact that there has not been any tremendous addition of *Forrestal*-class carriers and retirement of *Essex*-class carriers from the attack-carrier fleet, it is obvious that safety measures have been installed and more careful and more effective methods of operating carriers have been adopted, and have resulted in that reduction; and the safety record seems to have been greatly improved, and no longer seems to constitute a very serious problem.

Mr. ROBERTSON. Mr. President, I would call attention to the fact that they have brought into the service five of the new, modern carriers; and they have constituted a big factor in regard to increased safety.

Furthermore, the admiral said they could use only the smaller, older type planes on the small decks of the Essex-class carriers. Jet planes cannot be used on those carriers. The jet planes take off and land at very rapid rates of speed. But the testimony before us was that the Navy is not discarding the *Essex* class carriers; they will be good for piston-engine planes, in antisubmarine warfare, but not for the use of jet planes for attack purposes. We need large decked carriers for those purposes.

Mr. PROXMIRE. Yes.

My point was that it seems that the safety situation has been greatly improved during the last few years, and no longer amounts to as important a point as it did before.

Furthermore, it is exactly in situations such as that in Lebanon that the aircraft carrier can be useful, because it provides a base for the carrier-type planes and for our marines and also makes a favorable impression, as regards power and prestige, on the smaller countries.

But it seems to me that, for such purposes, it would make very little difference whether an *Essex* class carrier or a *Forrestal* class carrier were used. It is true that this now would be larger and

could handle a larger number of planes. But in terms of the mission to be performed—in other words, to do a satisfactory job in connection with a brushfire, limited war—it would seem, on the basis of every argument I have heard, that the *Essex* class carrier could do as well.

Mr. SALTONSTALL. Mr. President, will the Senator from Wisconsin yield to me?

Mr. PROXMIRE. I yield.

Mr. SALTONSTALL. I thank the Senator.

I think the point is that there are now seven *Essex* class carriers in the fleet, and almost all of them are coming to their full age, which is 20 years.

The Navy has 14 operating aircraft carriers, today. Seven are of the *Essex* class, three are of the *Midway* class, and four are of the *Forrestal* class.

Since 1957, the *Kittyhawk* has been authorized, and it will join the fleet, for a shakedown, in April 1961. The *Kittyhawk* is of the *Forrestal* class.

The *Constellation*, also of the *Forrestal* class, authorized in 1957, will join in late 1961.

The *Enterprise*, which is in a class by itself, and is a nuclear aircraft carrier, will join the fleet in 1962.

Consequently, the Navy's aircraft carrier inventory in 1962 will be one *Enterprise*, six of the *Forrestal* class, three of the *Midway* class, and four of the *Essex* class.

In other words, three of the *Essex* class will have been retired for obsolescence. If we do not appropriate for this new carrier this year, which will come into the fleet in 1963 or 1964, our carrier fleet may be down below the possible safe limit.

At the present time we have eight carriers in the Pacific Fleet, six carriers in the Atlantic Fleet. Of this total of 14 carriers, 2 are constantly being repaired and maintained for overhaul.

The Navy maintains—and I believe it is correct—it is absolutely necessary, if we are going to maintain our carrier fleet, to build a new carrier this year.

Mr. PROXMIRE. Let me say at that point that I went over every line of testimony I could find in the hearings. At no point did I find the Navy documenting the assertion that at the end of 20 years they have to sink a carrier, or have to take it out and dispose of it in some way. It seems to me this is a matter of its relative purpose and mission. I appreciate the Navy can say that the carriers have a life of approximately 20 years, but it is like the use of an automobile—it depends on how one drives it. Some people can wear out a car in 2 or 3 years. On occasion one finds a person driving a car which was built 50 years ago.

Mr. SALTONSTALL. Not only aircraft carriers, but other Navy ships are given a life, ordinarily, of 20 years. The Navy can modernize them, and it may take substantially less money than building a new ship. However, after a period, it does not pay to modernize them. The Navy can maintain them for approximately 20 years, but if it is to try to modernize a ship, it has to do it fairly early in the game. Otherwise, it is more prudent to build a new ship, because of modern inventions. It is easier to put them in, and maintenance is less expensive.

When I said that an aircraft carrier has a life of 20 years, I meant that the average warship has a life of 20 years. After 10 years, the Navy hesitates to modernize them because of the expense involved, although it is doing so.

Mr. PROXMIRE. I thank the Senator from Massachusetts.

Mr. President, this is a matter of relative priority and where we are to spend money. I appreciate that one can make a case that we will have some benefit out of a new carrier, but in this nuclear age, when we have been talking about the B–70, which flies at 2,000 miles an hour, and at an enormous altitude, and which would be tremendously difficult to hit and knock down, when we have a missile which we have been able to fire 9,000 miles, when we have a submarine which can stay submerged and be extremely hard to find and hit, that in this kind of world the flattop carrier that will operate roughly the same as it did 20 years ago is "over the hill," so far as use is concerned. For brushfire war use, it would seem to me, on the basis of all the testimony that has been put before the committee, an old carrier of the *Essex* type is virtually as useful as a new carrier would be.

In order to put this matter in perspective, Mr. President, it is necessary to compare the expenditure of $293 million—which may not seem like much in a $40 billion bill—with some of the alternatives.

This year we passed a depressed areas bill, which was of immense importance to many of us and to many sections of the country where people have been out of work for a long, long time. It was a sort of point 4 program for America. It was discussed widely in the press, and was vetoed largely because of its cost. But it cost less than this one single ship, which is of limited advantage, in my opinion.

In medical research this year we will appropriate $62 million for heart research. The $62 million constitutes about one-fifth of the amount we would pay for this one ship.

This Federal Government will spend $91 million for cancer research, less than one-third of the amount for the one aircraft carrier.

Sixty-eight million dollars for people who suffer from the No. 1 health problem, mental illness, less than one-quarter of what we are appropriating for this one single ship.

There has been discussion on the floor about safety. The most important argument one can make for the *Forrestal* type of carrier is that it may save lives. The amount we provide for medical research can save lives, too. The fact is that over 2 million lives have been saved since 1944, directly and provably as a result of medical research, which has been accomplished in substantial part by Government assistance.

The fact is that in 1959 the Government spent $192 million for hospital construction in every State of the Union—only a little more than half the cost for one aircraft carrier.

Let me refer to Federal aid to education. The House-passed bill would have cost about the same for 1 year as the total cost of this vital service.

Of course, there are many, many other bases of comparisons I could make, but if economy means anything, if alternative priorities mean anything, either within the Defense Establishment or the Government as a whole, it seems to me ridiculous for us to go forward and appropriate $293 million.

I understand a distinguished Member of the House has said that America today leads the world in bows and arrows, slingshots, and aircraft carriers.

The fact is that we are not in competition with the Soviet Union in aircraft carriers. They do not have any. Red China does not have any. It is not a matter of comparative obsolescence, because we are the only substantial power that has aircraft carriers. The only other ones would be our allies. So the argument for appropriating $293 million for one noncompetitive ship seems to me very limited.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield to the Senator from Pennsylvania.

Mr. CLARK. I have listened with great interest to the argument of the Senator from Wisconsin, which has impressed me a good bit. Obviously, the mind of this administration is turned away from remedying domestic obsolescence in our economy. My friend from Wisconsin has given some very pertinent examples of that in the last minute or two.

I know he has made a very careful study of the hearings. I am not too clear as to whether he believes that this new aircraft carrier is obsolete for most purposes of modern war. Is that the case?

Mr. PROXMIRE. I would say that the aircraft carrier is not useful for all-out nuclear war, and its usefulness in brushfire wars does not appreciably exceed that of the aircraft carrier it would replace.

Mr. CLARK. Is it the view of the Senator from Wisconsin that we have an adequate number of carriers in the fleet or building to handle our brush-fire war requirements, so far as anybody can look ahead?

Mr. PROXMIRE. That is certainly my conclusion. That was the precise reason why the House rejected the request for the aircraft carrier, after most careful and thoughtful scrutiny.

Mr. CLARK. Is my friend of the view that there are a number of higher priorities in the field of national security and national defense than the priority for the new aircraft carrier?

Mr. PROXMIRE. There are, indeed. As a matter of fact, a short time ago the distinguished Senator from Mississippi pointed out that the Senate committee reduced the House request for the airlift from $250 million to $200 million. It seems to me, if we are going to fight brushfire wars, the effective way to fight them is with the airlift. If we are going to have any kind of airlift which means

anything, we ought to do our very best to go along with the Army's request.

At about the same time, there was some discussion as to whether we have provided adequately for modernizing the Army. Upon the basis of the best statistics which I can obtain, it seems that we have gone far less than halfway toward meeting the Army's request for modernization, although I think the Senator from Mississippi made an excellent case for the progress we are making with respect to Army modernization.

Mr. CLARK. The Senator is aware that the junior Senator from Washington [Mr. JACKSON] has an amendment which would substantially increase the appropriation for modernization of the Army, is he not?

Mr. PROXMIRE. I am aware of that.

Mr. CLARK. Is the Senator of the view that we are in need of more airlift than will be provided by the bill?

Mr. PROXMIRE. That is my judgment.

Mr. CLARK. Does the Senator think we have been deficient in terms of adequate defense against submarine warfare?

Mr. PROXMIRE. Yes, particularly in view of the fact that this is the principal naval weapon which our most likely opponent has.

Mr. CLARK. It is my understanding that Russia has at least 400 modern, well equipped submarines capable of offensive action not only against our shipping but also against our shores, to a substantial extent; is that correct?

Mr. PROXMIRE. The Senator is absolutely correct.

Mr. CLARK. There has been a good deal of talk, has there not, about the so-called missile gap which will exist in the early 1960's, and many statements have been made on the floor of the Senate that we will be deficient in missiles in comparison with Russia?

Mr. PROXMIRE. What the Senator is saying is very sensible, because the Senator is talking about the weapons of the present and the weapons of the future. The submarines—particularly the nuclear-powered submarines—and the missiles are the weapons of the next war. In the event the next war has to be fought, these are the weapons with which it will be fought, unfortunately and very sadly.

The aircraft carrier is a weapon with which the last war was fought. Many people thought that by the end of the last war the aircraft carrier was reaching a state of obsolescence.

I am sure the Navy could make an excellent case for the battleship. The battleship is the most powerful naval vessel ever devised. It has an enormous fire power. However, the battleship has exactly the same kind of weakness, only to a greater degree, that the aircraft carrier has.

The point I am making is that the Senator from Pennsylvania is talking about modern weapons, to be used to give us the greatest possible strength in the future. The aircraft carrier will not be available probably until 1964, and perhaps later, upon the basis of past experience. By that time, of course, there will be missile and submarines and weapons of the future, such as the B–70 bomber, and these will be the dominant weapons.

Mr. CLARK. Not to mention the Polaris.

Mr. PROXMIRE. Not to mention the Polaris and the kinds of modernized weapons with which we are equipping the Army.

Mr. CLARK. Mr. President, the Senator from Wisconsin and I have frequently been assailed by our critics as being "wild-eyed spenders." I am one who is not reluctant to vote to provide every cent of money needed for our national security. I expect to support the efforts of the Senator from Missouri, of the Senator from Washington, and of other Senators to provide more money in these categories where our lack is so obvious. Hence I am prepared to support the Senator from Wisconsin in his move to strike the money for the aircraft carrier, because I agree with the Senator that there are other and greater needs for which this money should be spent.

I thank the Senator for his courtesy.

Mr. PROXMIRE. I thank the Senator from Pennsylvania.

Mr. President, I yield the floor.

Mr. SALTONSTALL. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. SALTONSTALL. Am I correct in my understanding that there are three committee amendments to be voted upon before any other amendments can be offered?

The PRESIDING OFFICER. The Senator is correct.

Mr. CHAVEZ. Mr. President, I move that the committee amendment on page 6 of the bill be agreed to.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On page 6, in line 15, after the word "Code," it is proposed to insert a colon and *"Provided further,* That the Army National Guard shall be maintained at an average strength of not less than 400,000 for the fiscal year 1961: *Provided further,* That $31,700,000 of the funds provided in this appropriation shall be available only to meet the increased expenses necessary to maintain the Army National Guard at the strength provided for in this Act."

The PRESIDING OFFICER. The question is on agreeing to the committee amendment on page 6, line 15.

Mr. PROXMIRE. Mr. President, is this the amendment which would provide for the aircraft carrier in the bill?

Mr. CHAVEZ. No; this is the Army National Guard amendment.

Mr. PROXMIRE. I see. I misunderstood.

The PRESIDING OFFICER. The Chair is advised that this amendment does not pertain to the aircraft carrier.

Mr. PROXMIRE. I thank the Presiding Officer.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment on page 6, line 15.

Mr. CHAVEZ. Mr. President, the Senator from South Dakota [Mr. CASE] is deeply interested in the amendment. I do not see the Senator in the Chamber at the present time. I would prefer to have him present. I ask unanimous consent that we may consider the next committee amendment, which is on page 22 of the bill.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On page 22, line 11, after the word "amended", it is proposed to strike out "$2,080,650,000" and insert "$2,331,000,000."

The PRESIDING OFFICER. The question is on agreeing to the committee amendment on page 22, line 11.

Mr. PROXMIRE. Mr. President, do I correctly understand that this is the amendment to provide for the aircraft carrier?

The PRESIDING OFFICER. This is the amendment to which the Senator refers.

Mr. PROXMIRE. I know a number of Senators are interested in this amendment, including the Senator from Pennsylvania, who has left the Chamber temporarily. I do not desire to delay the proceedings, if the Senator wants to proceed to another amendment. Perhaps that would be more expeditious.

Mr. CHAVEZ. There is only one other committee amendment, which is on page 24, at line 9. That amendment relates to the money for the new B–70's.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On page 24, line 9, after the word "things", it is proposed to strike out "$3,225,056,000" and insert "$3,607,409,000, of which not less than $200,000,000 shall be for transport aircraft suitable for the movement of fully equipped troops and combat equipment".

Mr. CASE of South Dakota. Mr. President, I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. The yeas and nays have been requested. Is there a sufficient second?

The yeas and nays were not ordered.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment on page 24, line 9.

The amendment was agreed to.

Mr. RUSSELL. Mr. President, I move to reconsider the vote by which the committee amendment was agreed to.

Mr. SYMINGTON. Mr. President, I move to lay that motion on the table.

Mr. SALTONSTALL. Mr. President, I move to lay that motion on the table.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the motion to reconsider.

The motion to lay on the table was agreed to.

Mr. CHAVEZ. Mr. President, I invite the attention of the Senator from South Dakota to the amendment relating to the National Guard, on page 6. I move that the amendment be agreed to.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On page 6, in line 15, after the word "code", it is proposed to insert a colon and *"Provided*

further, That the Army National Guard shall be maintained at an average strength of not less than 400,000 for the fiscal year 1961: *Provided further*, That $31,700,000 of the funds provided in this appropriation shall be available only to meet the increased expenses necessary to maintain the Army National Guard at the strength provided for in this Act."

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. CASE of South Dakota. Mr. President, I think the amendment should be agreed to. I simply wanted to have a separate vote on the amendment, because I think the Senate should go on record as specifically agreeing to the amendment with reference to the Army National Guard. I do not desire to request a yea-and-nay vote, but I should like to have the amendment voted on specifically, as an expression of the Senate.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment on page 6, line 15.

The amendment was agreed to.

Mr. CASE of South Dakota. Mr. President, I move to reconsider the vote by which the committee amendment was agreed to.

Mr. SALTONSTALL. Mr. President, I move to lay that motion on the table.

The motion to reconsider was laid on the table.

The PRESIDING OFFICER. The clerk will state the remaining committee amendment.

The LEGISLATIVE CLERK. On page 22, line 11, it is proposed to strike out "$2,080,650,000" and insert "$2,331,000,000".

Mr. PROXMIRE. Mr. President, if we are to proceed to a vote, I shall suggest the absence of a quorum. I do not wish to hold up the proceedings. I understand that one Senator has a speech to make.

Mr. STENNIS. There is nothing further.

Mr. PROXMIRE. Then I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. Preseident, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CASE of South Dakota. Mr. President, having asked for a separate vote on this amendment, I merely wish to take a moment to say that I thought this was another case in which the Senate should have the amendment specifically under consideration.

The subject of an aircraft carrier is one which has been discussed a great deal, both in the Congress and out of Congress. A year ago I favored the idea of a nuclear-powered aircraft carrier. Upon reconsideration by the Senate this year, both in debate within the Armed Services Committee and in the Appropriations Subcommittee dealing with the Defense Department appropriations, I was persuaded that the Navy was well advised in proposing that the aircraft carrier be conventionally powered. Nuclear power applied to a submarine has specific advantages which do not necessarily follow in the case of a surface craft like an aircraft carrier. In certain types of "brush" wars, or even in a major war, an aircraft carrier could have advantages. Personally I hope and pray that we may never have a nuclear war. An aircraft carrier offers an opportunity for much greater versatility than a fixed airbase. It provides a mobile base. The small fighter bombers that can be launched from an aircraft carrier may have a range of a thousand miles. I think they should be provided under the conditions we face, and I urge a favorable vote on the amendment.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. CASE of South Dakota. I yield.

Mr. KEATING. I desire to associate myself with the cogent remarks made by the Senator from South Dakota.

Our military leaders have indicated that this aircraft carrier is a must if we are to achieve a balanced fleet. There is abundant evidence that the carrier would play a vital role should we become involved in any kind of a limited war or a nuclear conflict.

It seems to me that in the problems which we face in our national defense the mobility which is afforded by an aircraft carrier is becoming more and more apparent. There was a time, some years back, when I had serious reservations on this question. They are completely resolved now, particularly in view of the strong evidence in favor of the carrier which has been offered by our military experts.

I thus feel that it is highly important that we provide for this aircraft carrier in the context of the need for a modern and balanced defense establishment in these tense times and I support the position of the Senator from South Dakota.

Mr. CASE of South Dakota. I thank the Senator.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment on page 22, line 11.

The amendment was agreed to.

Mr. SALTONSTALL. Mr. President, I move that the vote by which the committee amendment was adopted be reconsidered.

Mr. RUSSELL. Mr. President, I move to lay that motion on the table.

The motion to reconsider was laid on the table.

Mr. CHAVEZ. That completes the committee amendments.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

Mr. THURMOND obtained the floor.

Mr. SYMINGTON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. Does the Senator from South Carolina wish to speak?

Mr. THURMOND. I suggest the absence of a quorum.

Mr. JACKSON. Mr. President, I offer my amendment, which is at the desk.

Mr. THURMOND. Mr. President, I just suggested the absence of a quorum.

The PRESIDING OFFICER. The Senator from South Carolina yielded for a quorum call.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. SYMINGTON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. THURMOND. Mr. President, I offer an amendment.

The PRESIDING OFFICER. The clerk will state the amendment.

The LEGISLATIVE CLERK. On page 11, line 19, it is proposed to strike the figure "$2,525,354,000" and to insert in lieu thereof the figure "$2,527,354,000."

Mr. THURMOND. Mr. President, during the course of the fiscal year the Naval Air Reserve program is experiencing difficulty in remaining within its operating budget, while endeavoring to meet its training commitments. In the face of this, the amount requested in the 1961 budget is approximately $2 million less than the amount requested for 1960. I should like to have the attention of the chairman of the subcommittee.

Mr. RUSSELL. Mr. President, will the Senator yield?

Mr. THURMOND. I am pleased to yield to the Senator from Georgia.

Mr. RUSSELL. The distinguished Senator from New Mexico [Mr. CHAVEZ] was compelled to leave the floor for a few minutes. He asked me to see that the business of the committee was carried on during his absence. I shall undertake to perform that chore.

Mr. THURMOND. The amount requested is $3 million less than the actual expenditures in 1959. This reduction of $2 million for flight operations in 1961 actually means a 20-percent decrease in flight hours for the training of our Naval Air Reserve.

The maintenance and operation of the aircraft assigned to the Naval Air Reserve similarly affects the Marine Corps Air Reserve since the aircraft are jointly assigned.

The Naval and Marine Corps Air Reserve requirements for the fiscal year 1961 stipulate the training of approximately the same number of pilots trained in 1960. The mobilization requirements have not been reduced. In fact the urgency of antisubmarine warfare developments demands increased operations to obtain increased effectiveness in training. This curtailment can only mean a reduction in naval and Marine Corps training and consequently in the mobilization capability of these two programs.

In view of the current emphasis on antisubmarine warfare training for the Naval Air Reserve this reduction in funds will, I understand, be applied to the Naval Reserve R–5D transport operations and to the Marine Corps Reserve jet fighter squadrons.

The Naval Reserve transport capability constitutes the only backup for the Navy's organic airlift in a national emergency. The Naval Air Reserve maintains these airplanes and their reserve personnel in the highest state of readiness. Both aircraft and personnel

are immediately available for mobilization at considerably less than the cost of active squadrons of the Regular Navy. In his statement to the House Armed Services Committee investigating airlift capabilities, Rear Admiral Cooper, representing the Chief of Naval Operations, gave the specifics of these aircraft and indicated that they would be urgently needed by the fleet on D-day.

The Marine Corps depends upon the Reserve jet fighter squadrons for both personnel and aircraft to establish their 4th Air Wing on mobilization.

In the light of the vital importance of these elements of the Naval and Marine Corps Air Reserve and the relatively insignificant funds involved, I urge the passage of this amendment to increase this item by the amount of $2 million.

Taking into account the importance of Polaris and other essential programs, I urge that this be done without compensatory reductions in other areas of the naval budget.

During the past 2 years, 10 Naval Reserve air stations have been disestablished due to the restrictions of operating funds. Unless this amount is added to the appropriations the Navy may be forced to reluctantly disestablish another one. In these perilous times such action is inexcusable and unthinkable.

I said it is only $2 million that is involved. I sincerely hope that the able and distinguished chairman of the Armed Services Committee will accept the small amount.

Mr. RUSSELL. Mr. President, it is always difficult to disagree with the distinguished Senator from South Carolina. He is not only an able member of the Senate Committee on Armed Services, but he is also one of the outstanding Reserve officers of the United States. This matter was considered by the committee and was rejected. I am therefore bound, acting on behalf of the committee, to oppose this appropriation.

I doubt very much that Naval Reserve flying will suffer very greatly if this appropriation is rejected. As the distinguished Senator has said, approximately 10 of the stations have been disestablished, and there has been a considerable reduction in the number of pilots in the Naval Reserve program over the past 2 years.

I wish to point out that the committee has presented the bill to the Senate with an increase of $11,184,000 above the figure that came to us from the other body for the purchase of fuel for the Naval Reserve flying program.

In the light of two factors which I shall now undertake to outline, there will undoubtedly be more fuel available for the pilots over the next year than was available in the current fiscal year.

The first item is the reduction in the number of pilots. The second is the fact that during the course of the hearings the budget estimates for fuel for planes, as submitted by the Department, reflected higher prices than those that are currently quoted. In other words, there has been a reduction in the price of petroleum products since the budget was formulated.

The funds in the bill were added by the committee. They amount to $11 million and nearly $200,000. They will, in fact, purchase more fuel than the Naval Reserve training program had been originally contemplated at the time of the formulation of the budget.

Our committee cannot be accused of being indifferent to the needs of the Reserves and of the National Guard. If there are two elements of the military service that we have undertaken jealously to guard, it is the Reserves and the National Guard, because we realize that they are not always looked upon with the greatest favor by the Regular Establishment.

Much as I regret to do so, I do not believe the committee would be justified in accepting the amendment. Under the procedures, and the fact that the committee rejected the amendment when it was proposed, I hope the Senate will reject the amendment.

Mr. THURMOND. I thank the Senator from Georgia for his kind remarks. I only wish that he could go along with this slight increase of $2 million for the Naval reserve pilot program.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. THURMOND. I yield.

Mr. SALTONSTALL. If the Senator has some more remarks to make, I shall be glad to wait until he has completed his remarks. I merely wish to support what the Senator from Georgia [Mr. RUSSELL] has said. The committee gave this matter careful consideration and rejected a specific amendment on this point. The committee believed that there was a balance in the program between pilots and planes and that there was ample gasoline for the number of pilots and planes available.

Mr. THURMOND. Mr. President, I realize that we want to save every dollar we can. I believe the RECORD will show that last year among all the Democratic Members of the Senate, I stood No. 1 for economy. I certainly do not wish to vote for a single dollar more than is necessary. However, I believe that with world conditions as they are now, and considering the Communist aggression which exists today, we must leave no stone unturned. We must realize that if an emergency arises, we shall have to rely to a great extent on the Reserves. They must be trained. They must have the fuel if they are to fly.

Mr. President, on this subject, I read from page 1728 of part 2 of the hearings:

Senator CHAVEZ. Admiral Beardsley, this question is for you. Colonel Boyer of the Reserve Officers Association testified that the Naval Air Reserve had been cut $2 million prior to the submission of the budget on the procurement of gasoline. That means a 20-percent reduction in Naval Air Reserve training program for pilots. He requested that the funds be provided. Can you give us any comments with respect to this situation?

Admiral BEARDSLEY. In fiscal year 1959 we had a program of Naval and Marine Corps Reserve flying of 436,000 hours. In 1960 this was reduced to 362,000 hours and our program for 1961 is 316,000 hours. So you can see the program as approved in the President's budget which came up here is lower in 1961 than in 1960. In 1961 we also have fewer aircraft. For example, in 1959 we had 973 aircraft for Reserve flying. In 1960 we had 814; in 1961 it comes down to 786. The funds were reduced in the request that came to you here for Reserve flying. The dollars now provided in the bill will result in less flying in the Reserve program in 1961.

Senator CHAVEZ. General Shoup, does that affect you in any way?

General SHOUP. No, sir; not that I know of.

Senator CHAVEZ. I thought that Admiral Beardsley stated it would affect the Naval Reserve and the Marines.

General SHOUP. We are in the same Reserve flying program, but I don't know whether specifically the gasoline part of it—we operate from the Naval Air Stations and are with the Naval Reserve flying program.

Senator CHAVEZ. It will affect them?

Admiral BEARDSLEY. Yes, sir.

Senator CHAVEZ. Thank you. We thank you very much, Mr. Secretary.

Mr. President, this item is for only $2 million for the Reserve pilots in order to do their current flying, so as to be prepared in the event of an emergency. It is an important matter. This is not a large sum of money. I think the Senate would be very wise to provide this small amount of money for the Reserve pilots.

It costs the Government much less to maintain the reservists, who train only a few days out of the month, but who are qualified, and keep in condition to serve their country if an emergency should come.

It is much cheaper to train reservists than it is to maintain an immense regular establishment, although the regular establishment is not too large under present conditions.

I simply call these facts to the attention of the Senate because I feel that in this critical time we should not make any reductions in the Defense budget. This particular item is one which has been reduced by $2 million. The Navy believes it should be increased by $2 million, or to the amount which was appropriated for fiscal 1960.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from South Carolina.

The amendment was rejected.

Mr. JACKSON. Mr. President, I call up my amendment designated "6–15–60—B" and ask that it be read.

The PRESIDING OFFICER. The amendment will be read.

The LEGISLATIVE CLERK. On page 20, line 23, it is proposed to strike the amount "$1,499,102,000", and insert the amount "$1,639,202,000".

On page 20, line 24, strike the period, insert a colon in lieu thereof, and insert the following additional language: *"Provided*, That a minimum of $302,202,000 of which shall be used for modernization of the combat equipment of the Army.".

Mr. JACKSON. Mr. President, I ask unanimous consent that the Senator from Montana [Mr. MANSFIELD] and the Senator from Kentucky [Mr. COOPER] may be joined as cosponsors of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CLARK. Mr. President, will the Senator from Washington yield?

Mr. JACKSON. I yield.

Mr. CLARK. Would the Senator be willing to list me as a cosponsor?

Mr. JACKSON. Mr. President, I further ask unanimous consent that the Senator from Pennsylvania [Mr. CLARK] be joined as an additional cosponsor of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JACKSON. Mr. President, I ask for the yeas and nays on the amendment.

The yeas and nays were ordered.

Mr. JACKSON. Mr. President, the deliberate scuttling of the recent summit conference by the Soviet Premier clearly demonstrated that the Sino-Soviet bloc is not ready to abandon its conquest of the free world. With this refusal to meet and to discuss the world problems, Mr. Khrushchev in effect served notice that cold war pressures and aggressive action against the weaker free world nations would continue unabated. This threat to our security is made clearer with the announcement that Mr. Khrushchev will visit Cuba, where the Communists are taking advantage of the troubled situation to make inroads into the Western Hemisphere.

In addition, the news of today follows the same line, namely, that the Communists are determined to make trouble for us everywhere in the world.

I want to congratulate the Committee on Appropriations and the able chairman of the Subcommittee on Defense Appropriations, the Senator from New Mexico [Mr. CHAVEZ], for reporting a greatly improved 1961 defense program. The committee has done constructive and discriminating work. The program increases recommended by the committee deserve the concurrence of the Senate. In addition, I hope we can still further accelerate Army modernization.

We must continue to deter a general nuclear war by the maintenance of the most invulnerable strategic retaliatory force we can build. But the Soviet leaders may not risk general war; they can continue to make progress in converting the world to communism by the threatened use of force or by the application of force in limited quantities. It is equally important, therefore, that we effectively block these channels for the expansion of communism through the provision of appropriate modern fighting forces, particularly ground forces. Our security requires an effective counter to each of the various techniques of aggression.

Mr. President, in recent years the Soviet Army has modernized and expanded its weapons inventory.

It has sufficient stocks of up-to-date material to equip and to support in combat for extended periods a large modern army. This equipment includes the means for fighting either nuclear or conventional wars anywhere on the Eurasian land mass, including the Middle East. In terms of quality, the Soviets almost equal our most modern equipment; they lag behind us in some items; they have drawn even in others; and they surpass us in still others. In terms of quantity, they overmatch us by a margin of 5 to 1. The really essential difference is that, while both nations have developed many modern weapons and other equipment, the Russians have theirs in the hands of troops, and we do not.

Mr. President, our troops in the critical areas of Korea and Berlin still do not have vital modern equipment, such as the new M14 rifle, when even some of our allies have that equipment.

Because of the high and stable production rates which the Russians have attained, some major items of Soviet army equipment have entered the second modernization cycle since World War II. For example, medium and heavy tanks, armored personnel carriers, trucks, and rocket launchers are now in the second round of modernization.

In the light of this Soviet progress, which is also reflected in the growing material strength of their satellite countries, it is of paramount importance to modernize the equipment in the hands of our U.S. Army troops as rapidly as feasible. The basic requirement here is for procurement funds—appropriations that many of us have advocated for several years.

Army leaders have consistently testified that an annual funding rate of approximately $2.5 billion would appear minimal to insure an orderly program. This amount may well be expressed in three increments—an average of $1.3 billion merely to replace wornout equipment, about $0.2 billion for fixed annual costs, such as transportation associated with production, leaving $1 billion to represent a net gain to Army inventories in the form of modern equipment.

The administration's budget includes $1.3 billion for Army procurement—just enough to meet wear-out costs with nothing left over for modernization. The House added $37 million for modernization. The Senate Appropriations Committee added $125 million, making a total of $162 million.

I have offered an amendment raising this amount to $302,200,000, less than one-third of the amount Army leaders say they require. I have been assured by Army authorities that if $302,200,000 is made available, it will be used to obtain hard, critically needed combat items to include the new M–14 rifle, the new M–60 tank, armored personnel carriers, rockets, antitank and antiair weapons for the combat units. All items will contribute directly to the firepower, mobility, and communication capability of the Army.

These are great sums of money of which I have been speaking. Yet, I must say, there is no cheap road to our goal of national security and world peace. Also, when these sums are viewed within the overall context of our defense requirements, they are relatively small.

Surely, it is obvious that a strong, effective strategic retaliatory force is essential to deter the possibility of general atomic war. However, it is equally obvious that our military preparations must not be so overweighted in this direction that we neglect the need for the strong, combat-ready ground forces which are essential for use in limited-war situations, as well as in general war, should deterrence fail.

My considered judgment is that the modernization of the Army is a top-priority requirement for the safety of the United States, and an obligation that the world's greatest and richest industrial nation owes to the men who wear its uniform on the farthest ramparts of freedom.

With these facts before us, I urgently propose the adoption of my amendment, which would provide an additional $140,100,000 for the critically needed modernization of the Army.

Mr. SYMINGTON. Mr. President, will the Senator from Washington yield?

Mr. JACKSON. Yes, Mr. President, if I may do so without losing the floor. I request unanimous consent for that purpose.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. JACKSON. Then, Mr. President, I yield now to the Senator from Missouri, as he has requested.

Mr. SYMINGTON. Mr. President, I congratulate the able Senator from Washington on his excellent presentation, and specifically for his reference in it to the sadly obsolescent and, in some respects, obsolete condition of our already very small Army.

I also congratulate again, the able Senator from New Mexico [Mr. CHAVEZ], the chairman of the Subcommittee on Military Appropriations, for the thorough and splendid job he did.

However, Mr. President, I would not be honest if I did not say that I do not think this budget is adequate from the standpoint of the security of our country.

In recent years, this country has been spending on its defenses a steadily decreasing percentage of its national income, and thereby has been increasing not only the risk of actual aggression, but also the risk of diplomatic blackmail.

Mr. President, in this connection I ask unanimous consent to have printed at this point in the RECORD an article entitled "Humiliating U.S. Defeat Seen in Visit Collapse—Red Victory Called Serious Threat to Vital Far East Defense Anchor." The article was written by John M. Hightower, and was published this afternoon in the Washington Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HUMILIATING U.S. DEFEAT SEEN IN VISIT COLLAPSE—RED VICTORY CALLED SERIOUS THREAT TO VITAL FAR EAST DEFENSE ANCHOR

(By John M. Hightower)

The United States suffered a humiliating and costly defeat today in the collapse of President Eisenhower's scheduled visit to Tokyo.

The Soviet-Chinese Communist bloc won a victory of menacing proportions.

It was the second time in exactly a month that a great international event has gone against the wishes of Mr. Eisenhower and along lines charted by the international Communist leadership. At Paris May 16 Soviet Premier Khrushchev killed the Big Four summit conference in its first meeting, leaving Mr. Eisenhower and his British and French allies to survey the wreckage of their hopes for some improvement in East-West relations.

Today's debacle in Tokyo is potentially more damaging to the United States and its

allies, and in the long run poses a greater threat to the balance of United States-Soviet relations, and therefore to world peace, than did the breakdown in Paris.

IMMEDIATE PROBLEM

The immediate problem before Mr. Eisenhower and Japanese Prime Minister Kishi, in fact, is how to handle the situation to minimize the injury to United States-Japanese relations and to the free world political position and defense structure throughout the Far East.

The great difference between the May 16 breakdown at Paris and the June 16 disaster in Tokyo is this:

The explosion of the summit conference coupled with Mr. Khrushchev's violent personal attacks on Mr. Eisenhower forced the Western allies closer together and strengthened their resolve to resist Soviet threat and bluster. But the cancellation of Mr. Eisenhower's trip to Tokyo threatens to undermine a vital anchor point of the system of anti-Communist alliances in the Far East.

Mr. Kishi's government, being compelled to confess its inability to maintain order, appears now to have no choice except to resign, which is what the riotous left-wing students have been demanding.

Mr. Kishi himself, it was noted here, said he would not quit or dissolve the parliament until a pending new United States-Japanese security pact is ratified this weekend. The ratification process will be completed automatically so long as parliament remains in session.

PACT MAIN TARGET

The security pact rather than Mr. Eisenhower's visit has been the prime target of leftwing and Communist opposition. By holding parliament in session, Mr. Kishi has the power to win the form of a victory on the issue of its ratification but it may prove to be an empty victory unless new political forces come into play in Tokyo now that the visit has been canceled.

In the present circumstances opponents of the new security pact appear to have gone a long way toward undermining the United States-Japanese alliance and discrediting the whole military-political arrangement between Washington and Tokyo. It is not only the form of a treaty but also the broad political accord which it represents that is virtually important.

The Communists did not create the anti-treaty, anti-Eisenhower furor in Japan. That grew originally and over a period of months from the emotional attitudes created by Japan's defeat in World War II and by the resolute determination of the United States itself during the occupation years to convince the Japanese people they should never have anything to do with war again.

RESENT U.S. BASES

U.S. officials say they were convinced by the millions. For years they have disliked the presence of U.S. forces in their country and they particularly resented the formation of a new pact with the United States which could continue American bases in Japan for at least another 11 years.

Mr. SYMINGTON. Mr. President, to the best of my knowledge, not one informed military expert believes the present budget is adequate.

Even if the Congress now adds to this budget, there is no assurance it will be spent.

On the Senate floor on May 23, I presented specific areas of great deficiency in our national defense.

These included: Airborne alert capability; modernization of our ground forces; continuation of manned aircraft development through the B–70 program; antisubmarine warfare capability; accelerated space development—Midas, Samos, and Discoverer; and accelerated procurement of strategic missiles—Atlas, Titan, Polaris, Minuteman, Hound Dog, and Skybolt.

These increases were presented for consideration to the Defense Appropriations Subcommittee, on which I sit as an ad hoc member. Some were approved. Some were not.

I shall now discuss, very briefly, some of the items for which adequate funds were not, in my judgment, provided.

Despite the obvious greater chance of limited conflict than nuclear war, despite the obsolescent and, in some cases, obsolete characteristics of our ground forces, and despite growing tensions all over the world, the increase recommended by the House for all Army modernization was $37 million, less than one-tenth of 1 percent of the proposed defense budget.

This amount was increased by the Senate Appropriations Committee by $125 million, about three-tenths of 1 percent of the military budget.

It is not enough based on possible trouble around places such as Korea, Formosa, West Berlin, and many others where our ground forces are facing the Communists.

Soviet Russia has over 12 times as many combat divisions as this country; and data from the Army and from the National Intelligence Community show we are outmanned, outtanked, and outgunned by the Soviet armies. Their divisions are modern. Most of ours are not.

But in a period of increasing international tension, with the importance of adequate ground forces steadily increasing, this administration is actually reducing the funds available for procurement of modern weapons and equipment.

The House increased them by $37 million; and the Senate Appropriations Committee added $125 million, or a total increase of $162 million.

This year the Army told the Congress it needed at least $928 million for the initial step in a phased, long-range modernization program.

My amendment would increase the funds for a specified list of priority items for Army modernization by $800 million, or $638 million above the bills as reported by the Senate committee.

Mr. President, at this time I am not offering the amendment to correct that deficiency.

Directly related also to our capability to deter, and if necessary handle, small wars, is the status of that great fighting organization—the U.S. Marine Corps. In view of the situation in which the world finds itself today, what possible justification can there be for causing this combat force to decline steadily in personnel strength?

Only a few years ago, there were 215,000 men—all volunteers—in the Marine Corps. This year, its strength has slipped to 175,000; and the Budget says the Marine Corps should remain at that figure.

Mr. DOUGLAS. Mr. President, will the Senator be willing to yield?

Mr. SYMINGTON. Mr. President, the Senator from Washington [Mr. JACKSON] has the floor. I shall yield if he approves.

Mr. JACKSON. Mr. President, I ask unanimous consent that, without my losing the floor, the Senator from Missouri may yield to the Senator from Illinois.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. SYMINGTON. Very well; I am glad to yield.

Mr. DOUGLAS. Is it not true that on two occasions the Congress appropriated funds for a 200,000-man Marine Corps; and is it not also true that the administration refused to spend those funds and refused to carry out the intent of Congress?

Mr. SYMINGTON. Not only is that true, but the administration spent at least some of the money for purposes other than the ones for which the money was appropriated.

I thank the Senator from Illinois for his contribution.

Mr. President, I have recommended, and I now recommend again, that this be raised to a fiscal year 1961 end-strength of 200,000.

In response to my inquiry as to the significance of this increase, the Chief of Staff of the U.S. Marines has written me as follows:

> With a Marine Corps of 200,000 it is estimated that each of the Marine divisions with all elements activated could be maintained at 100 percent strength; the 3 Marine air wings at 90 percent strength and combat support forces at 95 percent strength. A Marine Corps so manned could meet all initial commitments including mobilization in event of a general war.
>
> With a Marine Corps of 175,000 the 3 Marine divisions can be maintained at 90 percent of their authorized strength, the 3 Marine air wings at 80 percent and combat support forces at between 65 and 70 percent strength. A Marine Corps of 175,000 is at the minimum strength necessary to perform its cold and limited war missions.

This increase in Marine personnel strength calls for $40 million over and above the amount requested in the budget. It would be divided into $34,500,000 for the military personnel account, plus $5,500,000 for the Marine Corps operations and maintenance account.

It seems to me incredible, the way the world is, that we, nevertheless, here on the floor talk about the budget being adequate when we talk about support forces of our Marine Corps at a strength, according to its Commandant, of between 65 and 70 percent of that authorized.

I have an amendment I would submit on this score, which I shall discuss later.

As to overall deterrent power, there are many actions which I believe should be taken.

Today I stress what appears the most urgent of these actions—airborne alert capability.

As Khrushchev rapidly increases his operational long-range nuclear missiles, we should establish an air alert for our chief deterrent force—the planes of the Strategic Air Command.

If we do not, it is entirely possible that in a short time the Soviets will be in a

position to destroy our capacity to retaliate against nuclear attack.

In any case, of one thing we can be sure. The Communists will use their growing relative strategic advantage at the bargaining table when they call the next conference, as they did at the last conference.

The cost of a minimum necessary air alert—$396.8 million—is less than one-third of 1 day's current annual income of the United States.

And it might be the difference between an all-out attack and no attack.

It is by far the greatest single increase to our deterrent strength we could make at this time, because the B–52 force represents the greatest strategic strength we now have, and will have, for some time to come.

During recent years, airbase dispersal and certain ground alert procedures have enhanced the SAC capability.

But they are not sufficient to cope with the increasing threat which faces the United States.

A sizable airborne alert capability offers the best and only real assurance for survival of our strategic retaliatory capability, because only an airborne force can be invulnerable to a "no warning" ICBM attack.

Last year, the Congress expressed its concern about the possible urgent need for an airborne alert by writing language into the Defense Appropriations Act, as follows:

SEC. 512. Upon determination by the President that such action is necessary, the Secretary of Defense is authorized to provide for the cost of an airborne alert as an excepted expense in accordance with the provisions of R.S. 3732 (41 U.S.C. 11).

Mr. President, that is analogous to the case of a man who is willing, provided somebody is attacking his home, to give his wife credit to go down to the hardware store and buy a pistol the next day.

Despite the fact we know the Soviet ICBM potential has been steadily increasing, this provision has not been used. If and when needed, regardless of any language, nobody will be able to snap his fingers and obtain it.

Some of the equipment and trained personnel needed for an airborne alert would take 18 months to obtain.

What we are doing today is agreeing that we do not need to be prepared for an air alert. We may as well recognize that fact.

If it were decided before the next conference that an air alert was necessary, how would this language make it possible to have that alert?

It was decided by Secretary Gates in Paris a few weeks ago to declare a worldwide alert because the situation looked rather serious. Would it not have been better to have had a relatively small number of aircraft in the sky, as a routine matter? I might add it would be impossible to get the needed kind and amount of airborne alert for months after it was decided we wanted it.

Therefore, I believe the money should be appropriated now to develop an air-alert capability of a relatively small percentage of our Strategic Air Force—not over one-fourth.

My amendment would add $396.8 million to be used for this capability, but I do not offer it at this time for reasons which will soon be clear, if they are not already clear.

This total would be divided, as specified in the language of the amendment, into $332.2 million for procurement, $28 million for personnel, and $36.6 million for operations and maintenance.

The $332.2 million would provide for aircraft engines and aircraft spare parts in the fiscal year 1961 so as to attain an onshelf capability to conduct the operation from January 1962 on.

Anybody who knows anything about the procurement of aircraft engines knows how long it would take, from the standpoint of leadtime, to get the engines for an air alert, which, to the best of my knowledge, all the air experts seem to think we need now.

The largest single item among the thousands of items in this procurement is 160 engines.

The $28 million would provide funds for increased crew personnel, plus maintenance and support personnel.

The $36.6 million would provide the necessary funds for the training of this increased personnel.

It is a mystery to me how we can have trained personnel available at the snap of the finger in case we decide we need an air alert.

The Strategic Air Force is the keystone of our deterrent capability. There is now no other measure which can be taken to render this force invulnerable to surprise Soviet long-range ballistic missile attack.

We hear a lot about the Polaris, and we hear a lot about the Minuteman, and we hear a lot about the Titan and the Atlas. I saw a speech the other day which stated that the maximum number of missiles of those types that could be fired in retaliation of a surprise attack would be one Atlas.

That is another reason why an air alert is so necessary.

Even though Mr. Khrushchev is clearly embarked on his present course, he must be apprehensive that his threats to Berlin could again awaken the American and Western European Governments to their danger, as Korea did, and lead them to make appropriate preparations.

It is for us to see that this apprehension becomes a reality.

As I have said for years, and repeated in my last speech, it is past time for an aroused nation to face and act upon the daily increasing risks confronting us as the result of growing Soviet power.

It is now clear that the Soviets have gained operational capability ahead of us in the ICBM field and will continue to have that advantage over a period of years.

If I sent my amendment to the desk and offered it, I would be asking that the Congress appropriate $900 million over and above the budget request for acceleration of the Atlas-Titan, the Minuteman, the Hound Dog, and the Skybolt programs. Acceleration in the development of these weapons systems is essential if we are to develop and maintain an adequate strategic retaliatory strength, with land-based and air-based missiles.

The Soviets have 450 to 500 submarines. They are credited with more submarine missile launching capability than we have. Therefore, the antisubmarine warfare mission is one of the major jobs in the Navy. Unfortunately, also, the Navy has major deficiencies in this area. Antisubmarine warfare capability should be increased on a high priority basis.

I would recommend an increase of $465 million over and above the budget request for building up our capability in this field and, normally, I would also introduce an amendment for that purpose.

This money would provide additional attack submarines, specialized aircraft, sonobuoys, torpedoes, mines, depth charges, and a wide range of electronic equipment.

Mr. President, my initial request was to add $3½ billion above the defense budget for fiscal year 1961.

The bill now before the Senate includes provisions for some of the $3½ billion—such as money for the B–70, for the Polaris, and for space satellites.

The amendments I have ready would provide for the following additional amounts above the budget: $800 million for Army modernization—$638 million above Senate bill; $465 million for antisubmarine warfare—$370 million above Senate bill; $396.8 million for airborne alert—$396.8 million above Senate bill; $40 million to increase the marine personnel strength—$40 million above Senate bill; $900 million for acceleration of the development and procurement of strategic missiles—$1,103 million above Senate bill.

These increases would amount to $2,547,800,000 above the Senate bill. They total $2,601,800,000 above the budget request.

Mr. President, as an ad hoc member of the subcommittee of the Appropriations Committee, I became aware of the fact that the members of the committee did not desire to increase further the total bill or to add the money for these items in accordance with the recommendations I made. In the full Committee on Appropriations I presented some of these items to my distinguished colleagues, but my proposals were decisively defeated. Therefore, I have reluctantly come to the conclusion that inasmuch as the chairman of the committee and the leadership of both parties do not approve of the budget additions I have recommended there would be little use in taking the time of the Senate to go through the motions of offering these amendments at this time.

I say that with great respect for the Members of the Senate who do not agree with me on this matter. I am sure they are completely sincere in their position. I feel they, in turn, wish me to be frank about the way I feel about the serious deficiencies in the budget.

Mr. President, for the reasons I have given I shall not request a yea and nay vote on the items I have mentioned.

Last year I offered an amendment to help a resolution to modernize the U.S.

Army, and it nearly passed. The amount was $233 million and the vote was 43 to 48. This year the distinguished Senator from Washington [Mr. JACKSON] has offered an amendment to add $140 million to the modernization money provided. The House added $37 million for modernization, and the Senate Appropriations Committee added another $125 million.

Mr. President, as the situation around the world continues to deteriorate it is incredible to me that this body should believe we should exercise the right to draft our youth into uniform in peacetime, out of the cities and off the farms, when these young men do not desire to be drafted, and should not be willing at the same time to give them the best equipment and the best training, so as to afford them the best opportunity to return to their homes.

Mr. President, for those reasons I urge the Senate to agree to the amendment recommended by my able colleague from Washington, who has studied this matter carefully, and with whom I am in complete agreement as to the necessity for the money.

Mr. PROXMIRE. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Wisconsin?

Mr. JACKSON. Mr. President, I thank the Senator from Missouri for his able support of the pending amendment.

I am glad to yield to the Senator from Wisconsin.

Mr. PROXMIRE. Mr. President, I commend the Senator from Washington for a very persuasive and concise argument in favor of his amendment. I must confess I am not persuaded entirely, but the Senator has done a fine job. There are some questions I should like to ask.

Mr. JACKSON. I will yield for the purpose of persuading the Senator.

Mr. PROXMIRE. That is the reason why I desire to ask questions, to see if I can be persuaded.

The Senator from Washington raises a point which I raised a little earlier with the Senator from Mississippi, when he was discussing modernization and what the committee had done.

As I understand the situation, the Senator set forth $2.5 billion as the minimal amount of modernization which should be accomplished, and said that $1.3 billion was required simply for replacement. He seemed to take off from that point. The Senator said the House provided only $37 million; is that correct?

Mr. JACKSON. $37 million in the way of new equipment for modernization.

Mr. PROXMIRE. That is exactly the point I had in mind. When I discussed this matter with the Senator from Mississippi he said that replacement constitutes modernization. When we replace a wornout jeep with a new jeep, we modernize in the process of replacement. When we replace any kind of equipment we do not buy the old type, but we buy the newest type. Is this correct or not?

Mr. JACKSON. The Senator's understanding is correct. We are getting replacements for existing equipment, but we need, in addition, a long series of items which relate to new weapons systems. I can cite some of them, which are over and above replacement items.

Mr. PROXMIRE. The replacement part can be considered, to the extent that the bill does provide for replacement with newer, better, and more efficient equipment?

Mr. JACKSON. That is correct.

Mr. PROXMIRE. Very well. As to the type of equipment, the Senator from Mississippi informed me the committee went along with the first priorities. It seems to me they stopped at something like the land-to-land missiles.

The Senator from Washington listed some new rifles which had been purchased, and a number of other items of equipment which are listed by the Senator from Washington on page 3. Is it the position of the Senator from Washington that none of these weapons have been purchased, or simply that inadequate numbers of them have been purchased?

Mr. JACKSON. If the Senator will permit, I shall put it this way, as an illustration: The new rifle is the M–14, to replace the M–1, the old World War II rifle. Based upon the budgetary request, it will take 20 years at the present scale of budgeting to provide the existing 14 regular Army divisions, plus the Army Reserve divisions and the Army National Guard, with the M–14 rifle. This will give the Senator an example of the slowdown which will occur if we follow the budgetary figures.

Mr. PROXMIRE. I hope the Senator will permit me to interrupt on that particular item.

Mr. JACKSON. Yes.

Mr. PROXMIRE. If we proceed on the basis proposed by the Senator from Washington, could this modernization be accomplished in three or four years?

Mr. JACKSON. I do not know the exact time required, but we could speed up modernization, because the Army will have flexibility to use the funds for that purpose. There is not enough new money to accomplish modernization at a rapid enough rate.

Mr. SYMINGTON. Mr. President, will the Senator yield to me, for clarification of that point?

Mr. JACKSON. I yield.

Mr. SYMINGTON. I say to my good friend from Wisconsin that prior to the time General Taylor resigned he stated that the Army was in desperate shape from the standpoint of lack of modern equipment and that it would take $15 billion to modernize. General Taylor asked that the modernization be completed in a five-year period, with $3 billion a year being provided for five years. Later, of course, General Taylor had an opportunity to detail his proposal in the book he wrote, "Uncertain Trumpet," which to me is one of the most important books written about our security in some years.

As the Senator knows, there has been nothing like $3 billion a year provided for modernization of the Army. There was not that much provided this year, last year, or the year before, and there is nothing like that amount planned for the next year.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. JACKSON. If the Senator will permit, I should like to complete the colloquy with the Senator from Wisconsin, and then I shall be happy to yield to the Senator from Pennsylvania.

I wish to point out another item to the Senator. The bill as it now stands, as it comes from the committee, provides some 260 of the M–60 tanks. The amendment I have offered would add 300 to that list and would provide the ammunition, which is another item.

Then we have the new weapons system which is very vital—namely, the Davy Crockett rocket—which of course involves the delivery of tactical nuclear warheads to support the troops in the field. This is a weapons system which can be operated by two men, and which can deliver a lethal blow with a nuclear warhead.

There are other new weapons systems that will be brought in. My main point is this: We have reduced our regular infantry divisions from 20 to 18, to 15, and now down to 14 divisions. We said at the time that we shall have a small striking force, but the force will be a modern mobile striking force. I submit that we have not moved at a satisfactory rate to provide for a truly modern striking force.

I indicated a little while ago that the news out of the Far East points up once again the Communist tactic to engage in the limited probe, the limited thrust; namely, the limited conflict. It does us no good to talk about a great stockpile of thermonuclear and nuclear bombs and massive delivery systems if we cannot cope with this nibbling process. I submit it is in this area that the Soviets will continue to wage their greatest effort. The sum total of nibbles may well mean the loss of the free world, which, of course, we want to avoid by providing the proper kind of national security posture.

Mr. PROXMIRE. As I understand, the minimal amount required, according to the Senator from Washington, is $2.5 billion, although the Senator from Missouri [Mr. SYMINGTON] has said that General Taylor has indicated $3 billion a year would be required to do the job in 5 years, is that correct?

Mr. JACKSON. The Senator is correct. General Taylor testified, incidentally, before the Subcommittee on National Policy Machinery the day before yesterday, and once again pointed out the need for a setup in the modernization program. He certainly has no ax to grind. He is retired from the Army. He is interested only in providing the kind of defense posture that the Nation needs.

Mr. PROXMIRE. It seems to me it would be fair to say that the committee has suggested an appropriation that goes about halfway or a little more than halfway. Perhaps that estimate is wrong, but I understand that $1.5 billion has been requested for the Army. The Senator from Washington, however, says

that only $1.3 billion of this is replacement and defines only the increment as being modernization.

Mr. JACKSON. The last estimate that we had submitted by the Army in response to requests made, as I recall, before the Senate Armed Services Committee, when General Lemnitzer testified with the Secretary of the Army as to the money needed for modernization, was an amount aggregating about $900 million. The amount of new obligational money that will be available under the bill as it now stands without my amendment aggregates approximately $160 million. My amendment would bring that amount up to $320 million, or about one-third of the new money that is needed for modernization.

Mr. PROXMIRE. I see. What I have been concerned about is whether it is fair to take what I think is an arbitrary position in saying that a certain amount represents only replacement, and that if modernization is desired, we must appropriate more than that amount. Replacement is not modernization. It is in a different category.

Mr. JACKSON. Replacement is modernization to the extent that we are getting a similar type of equipment that is newer and will last longer. But like everything else in this age, in which science plays such an important part in the field of national security, new weapons systems are being developed and new tanks are being developed, as an example.

Mr. PROXMIRE. Now I think I am getting near to the answer I seek. Is it true that only $167 million will be applied to new weapons, and that the replacement will be a replacement of an M–1 rifle with a new M–1, but not with an M–14 rifle? Is that the situation?

Mr. JACKSON. The new rifles which will be obtained by reason of the committee amendment which was adopted will amount to about 120,000 of the new M–14 rifles. I believe I have stated the amendment correctly. My amendment, however, will make possible a step-up of that effort.

Mr. PROXMIRE. How big a step-up?

Mr. JACKSON. It all depends on how the Army will use the appropriation. I assume it will give the rifle a fairly high priority. If we do not step up production of the rifle, we will not even get the M–14 rifle into the hands of our regular divisions, let alone the Ready Reserve divisions of the Army and the similar high priority divisions of the National Guard.

Mr. PROXMIRE. Is the Senator from Washington saying that when the Army replaces rifles it does so with an old-style rifle and not with a new-style weapon, and that an appropriation of $1.3 billion will not buy new modern equipment but will buy old style equipment?

Mr. JACKSON. No; I say, subject to correction by the chairman of the subcommittee, that the budgetary amount of $1.3 billion will not buy more than a very limited quantity of the M–14 rifles. There have been only a limited number manufactured. The committee added $125 million, which would provide for an additional 125,000 M–14 rifles.

Mr. PROXMIRE. The Army is then following a policy of buying what might be called obsolete or old equipment?

Mr. JACKSON. No, it is not buying more M–1 rifles, but the point is that it must put its money, when it is limited, into replacement items that are wearing out on a basis of priority. Obviously when it has a limited amount of funds and there are tanks that no longer operate, the money is used in the purchase of tanks.

Mr. PROXMIRE. Therefore, $1.3 billion, plus the $167 million, will be used entirely to buy equipment which is new in style and new in every other way, but will not constitute the kind of new weapons system that is needed.

Mr. JACKSON. The $162 million, as the budget now stands, will provide for new weapons systems. The other money that the Senator from Wisconsin referred to will be used to replace the existing systems with newer versions of the same equipment that is up to date.

Mr. PROXMIRE. I thank the Senator.

Mr. CHAVEZ. Mr. President, will the Senator yield?

Mr. JACKSON. I yield.

Mr. CHAVEZ. I believe the Senator from Washington has lost a nibble of $300 million in his argument. Instead of $1.3 billion, the figure is $1.644 billion that is included in the 1961 budget in the Army buying program for modernization and replacement.

All of the procurement money is set aside to purchase new weapons. I hope, as the Senator himself stated, that whenever it replaces a truck, it will get a better one and one that is up to date, and that when the Army buys a gun, it will buy the best available at the time.

Mr. JACKSON. The Senator is, of course, referring to a carryover of $336 million. Let us analyze that situation. Only $175 million of the $336 million, as the chairman of the subcommittee knows, has been placed in reserve, as a high authority in the Army testified. The rest of that $336 million is subject to obligation, that is, it has been set aside but has not been formally obligated.

Mr. CHAVEZ. The Army had not even obligated some 1958 funds until December of last year, so it has a backlog of money.

Mr. JACKSON. I also call the attention of Senators to the fact that the backlog carryover for the Air Force amounts to $1 billion, and for the Navy it amounts to $1,200 million. There is always a carryover, as Senators know. Some of it is ready to be formally obligated, but the Army's carryover of $336 million I submit, is less than one-third of the total amount of the carryover for each of the other two services.

Mr. President, I believe that our responsibility is to make sure that adequate funds are made available, so that there will be adequate pressure to push the modernization program at a faster rate.

Mr. CHAVEZ. Yes; that is what the committee has tried to do. However, the Senator should not attempt to give them two or three hundred million dollars more, which they are not going to use anyway.

Mr. JACKSON. I have commended the chairman for the very able work he has done. What I am trying to do with the addition of this extra money is to put on some pressure for the apportionment of more funds than has been done in the past for the modernization of the Army.

Mr. CHAVEZ. The budget estimate for Army procurement of equipment and missiles was $1,337 million. The Senate committee recommends an appropriation of $1,499,102,000. This is an increase of $162,102,000.

Not included in this are unobligated balances of $336,900,000 from fiscal year 1960, making a total for the Senate available for obligations for Army programs of about $1,836 million. Not included also are estimated reimbursements from off-the-shelf sales to the military assistance program amounting to $120 million. This would bring the total available to $1,956 million. However, the estimated unobligated balance carried over into 1962 amounts to $149.9 million, so that the total Army procurement program for fiscal year 1961 amounts to $1,806,100,000.

The committee believed that this sum was sufficient to recommend for the next fiscal year.

Mr. JACKSON. As I pointed out, though, the money the chairman has referred to is a carryover and is in the process of being formally obligated. It is set up in allocations, other than the $175 million, which was put in reserve.

Last year we thought we were performing substantially the same modernization of the Army, but, when we got through, as I recall, we ended up with $43,600,000 that was left for Army modernization. That was for the fiscal year 1960.

Mr. RUSSELL. The Senator is in error. He is talking about what they actually spent. They had a great deal more than that. The distinguished Senator from Missouri [Mr. SYMINGTON] led the fight, and we all rallied round and appropriated around $400 million.

Mr. SYMINGTON. It is $382.6 million.

Mr. RUSSELL. Yes. We have no way of making the executive arm of the Government spend the money. They had the money. They put $164 million in some kind of foreign aid military program which I have never completely understood, although I have had it explained to me by a wide variety of experts. One hundred and sixty-four million dollars was lost in that deal. There is a great deal of money that has been left over. The Senator is correct in saying that only $175 million of it has been put in reserve. The other money might as well be put in reserve, because they have used $43.6 million. They have said they would spend it for this purpose or that purpose.

That is why I am opposed to further increasing this item. We are saying now that we are disappointed with the progress of the spending for the Army modernization program. We are allowing substantially the same $162 million above the budget estimate. We are saying, "We hope you will spend it and

reach back and get these other funds that have been already appropriated, and spend them for Army modernization."

I think our hope is vain. They will not spend all of it. At least we have endeavored to show the attitude of Congress toward the Army modernization program.

Mr. JACKSON. Mr. President, I should like to respond to what the distinguished Senator from Georgia, the able Chairman of the Committee on Armed Services, has said. Last year we appropriated $382,600,000 above the President's budget request for 1960.

Mr. RUSSELL. I did not recall the exact sum. I used the round figure of $400 million. I appreciate the Senator's giving the exact figure.

Mr. JACKSON. $175 million has been held in reserve during fiscal 1960. $164 million—the amount the able Senator mentioned a minute ago—was used to cover things which did not materialize. This is either the fault of the Department of Defense or the Bureau of the Budget. That leaves a balance of $43,600,000 available for Army modernization. Those are the figures I obtained from the Army.

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. JACKSON. I yield.

Mr. CASE of South Dakota. The junior Senator from South Dakota certainly cannot be charged with seeking to increase the budget in the defense field or anywhere else above what he is convinced is necessary. However, I am impelled under present circumstances to support the purpose of the amendment offered by the Senator from Washington. I am not satisfied with the amount, and I want to talk to him about it in a moment.

When the U–2 plane came down in Russia, events were set in motion which changed the entire military posture of the United States. On May 13, when the Senate was debating the military construction authorization bill, I pointed out that that bill carried a $160 million authorization for construction overseas.

I pointed out:

> The necessity, the importance, and the relative priority of some of that construction will be affected by what has happened in the past week. It has made the bill to some extent out of date.

I pointed to the questions that were arising in the various countries where we have military bases, and said:

> But, Mr. President, it must be obvious to anyone who gives that suggestion a second thought that this declaration of readiness on the part of the United States to go to the defense of any of our friends or allies does not remove the fears that have been generated or quench political fires which can be fanned by elements in some of those countries adverse to the government in power.

I said that "some of the authorizations in the bill for military construction abroad cannot be considered as very firm today." I said that on May 13. I continued:

> It authorizes limited military housing for Japan. But if Japan begins to define what can be done with, on, or from the bases on her soil, naturally the question arises as to how much new construction should be undertaken there.
>
> Is it sound for Congress to authorize the building of additional military housing in Japan if we are to be confronted with a statement by the Japanese Government that the use of the bases there which those housing units would support cannot be used for purposes which are determined upon by the Government or in accord with what we thought was understood at the time the base agreements were reached?
>
> The tenure of the Japanese bases is involved in the ratification of the new treaty now pending in the Japanese Diet. It would be naive to assume that the debate on the ratification will escape questioning on the use of the bases. The values to Japan will be discussed pro and con. I believe that eventually the treaty will be ratified both there and here in the Senate, but there could be some clarification of its provisions before this happens and this might take a little time.

That seems in the nature of an understatement today.

Mr. JACKSON. I commend the distinguished Senator from South Dakota for the statement he has again called to our attention. I remember several years ago when a similar prediction was made with reference to our bases in North Africa. We who serve with the Senator on the Military Construction Subcommittee know of his wise counsel and advice in connection with our policy on bases overseas and some of the serious situations we face in connection with the uncertain political problems in some of those countries.

Mr. CASE of South Dakota. I appreciate the Senator's comment. I pointed out a month ago that much of that $160 million worth of military construction which we were authorizing overseas probably would not be used, and that some adjustments would be made in its use. It is because I believe the military picture or the military posture is changing very considerably and very rapidly, but in ways which it is difficult to assess, that I am inclined to support the amendment offered by the Senator from Washington.

How much of the $160 million worth of oversea construction we authorized will be utilized or usable now, it is difficult to estimate. However, I see the very definite possibility that our military forces might be called upon, in ways which did not seem likely a month ago, or which we could not have predicted before the U–2 incident. If we could have counted firmly on the bases we have overseas for the purposes we had in mind when we entered into the base agreements, the situation would be one thing. But with the growing uncertainty about the use or availability of the bases at times when we might want them, the picture has been changed.

For that reason, I pointed out on the 13th of May that the authorization should be considered as somewhat flexible; and if the money or the authorization might not be used for what was indicated then, and especially if Congress should not be in session, there should be an understanding that there would be flexibility. I said:

> But recognizing the nature of this year and the hope of everyone to avoid special sessions, I venture the opinion that the Congress in January will not be too critical if some of the authorizations carried in this bill are not exercised and if some appropriations based hereon may be reprogramed within the general purposes that have been justified.

Considering the developments which are now before us, it seems to me it would be prudent to make it possible for the Department of Defense to use some money for modernization, and to modernize more rapidly, perhaps, in the Army than a month ago could have been argued with quite the same force or validity.

When the Secretary of the Army appeared before the Committee on Appropriations on a reclama, he pointed out:

> The Army does not agree with the committee statement—

That is, the House committee—

> that the bill will provide $207.6 million more for modernization than in the President's budget. By utilizing the $120 million in proceeds from the military aid sales, the committee used again an asset which was already considered in establishing the funding level for procurement of equipment and missiles, Army, in the President's budget.

That $120 million was to have been achieved by the sale of shelf items which the Army cannot replace in kind. Then Mr. Brucker went on to point out that there was an estimate or an assumption on the part of the House committee that there would be some procurement practice savings and some jeep slippage savings which would result in additional modernization. But he said:

> If these assumptions do not materialize, the bill will provide only $37,102 million above the President's budget in procurement of equipment and missiles, Army.

The Senate committee, in its deliberations, added $125 million for modernization; and the $125 million plus $37 million make the $162 million to which, as I understand, the Senator from Washington has referred.

I ask the Senator from Washington, If it should happen that the $50 million could be obtained in slippage, is it not possible that his figure is at least $50 million higher than it would need to be to encompass the program he has in mind?

Mr. JACKSON. If it is true that $50 million could be so obtained, but the problem is that the modernization effort in the Army has been slow in comparison with that of the adversary we may have to face, or its agents. I do not foresee any immediate contact with the Soviet forces; but we know that the Soviets are putting modern arms into the hands of their agents and their satellites. It is the rate of modernization which is so disturbing.

The Senator from South Dakota very properly calls to the attention of the Senate the problem of our overseas bases and the need to have greater mobility of equipment. Some of the items on which the Army is working—the various light pieces of equipment—are made of light metals and can be moved overseas by airlift.

These are some of the modernization efforts about which the Army is deeply

concerned. It is in that area, as an example, that I think we can help greatly.

I call the attention of the Senate to the need to step up production of the Davy Crockett weapons system, which will have a higher firepower, a power in excess of many artillery units which were available in the Korean war and World War II.

Mr. CASE of South Dakota. I may say, in concluding my remarks on this subject, that I believe events are forcing policies and forcing some adaptations. I hope we can provide enough mobility to the Army so that it may accomplish some of the tasks which it might have without forcing us to go to the employment of strategic weapons. I would rather see our Armed Forces take care of some situations with conventional weapons than to use strategic weapons.

I recognize that we cannot ask an army which is not modernized, which is not mobile, to handle incipient situations quickly enough and effectively enough if we do not give it the tools with which to do the job.

Mr. JACKSON. The Senator from South Dakota is absolutely correct. The basic thinking of the Army is, of course, the modernization of equipment which is capable of coping with a conventional conflict, or if conventional weapons fail in limited situations, then full employment of nuclear weapons.

Mr. CASE of South Dakota. I had hoped that the Senator from Washington might feel that the amount of his amendment could be reduced by $50 million so as to give credit for the possible slippage. I would prefer to see his amendment reduced by that amount, because I think there is some chance of recovering that amount along the line the House contemplated, and which the Secretary of the Army indicated might be accomplished.

In any event, the purpose of the Senator's amendment is, I believe, abundantly justified by the situation which has developed. There may be some difference as to the amount.

Mr. JACKSON. I am grateful for the Senator's comment and support.

Mr. SYMINGTON. Mr. President, the able Senator from Washington [Mr. JACKSON] has been conducting hearings before his Subcommittee on National Policy Machinery. Last February, among other persons, he had as a witness Mr. Robert C. Sprague, who called himself, in his prepared statement before the subcommittee, a conservative Republican who knew something about the economy because he was Chairman of the Federal Reserve Bank in Boston. Incidentally, Mr. Sprague also became chairman of the Gaither Commission. He made the following statement, in which I believe there is a good deal of prophecy with respect to the economy:

> We seem to have accepted a policy limitation that we are not going to put more than about $40 billion a year into our military effort. In 1957, when the Soviet GNP was $20 billion less than it is now, their effort approximately equaled ours.
>
> There is no solid basis to argue that the Soviet economy will not continue to grow at its present rate. We cannot assume that they won't continue to plow at least 25 percent of their GNP into military effort as they have been doing for the past 8 to 9 years. And they will still have enough left to meet minimum domestic needs and wage economic warfare abroad.
>
> If, for the 10 years ending in 1967, Russia continues to increase her military position by 6.5 percent per year, while ours remains fixed at $40 billion per year, then we will obviously fall far behind in relative military strength.
>
> It takes two to make peace, but only one to make a fight. We did not and do not want this contest with the Soviet Union. But Soviet policies leave us no alternative. We must either outperform them in the cold war, which includes as an essential element adequate military preparedness, or pay the price. And the price is defeat, perhaps in war if the military balance swings too far against us, perhaps without war. I do not think Mr. Khrushchev wants war if he can avoid it. No sane man would. Rather, he wants to establish a dominant power position, so that he can have peace—on his terms.
>
> Now, let us examine our response to the Soviet challenge. We are using less than 10 percent of our gross national product for all national security purposes, and the percentage is declining. Per capita disposable income—the amount we have left after paying taxes—is at an all-time high of nearly $1,900. It probably is $1,900 this quarter. It has risen about $325 (measured in 1958 prices) during the last decade. If we were to devote only one-tenth of this increase to national security purposes, it would permit an increase of over $5 billion per year in our programs for national security.
>
> We can see that the idea that an increase in spending for survival will bankrupt us is, to put a plain word on it, silly. The question is whether we are willing to use a small fraction of our increased wealth for the defense of our way of life.
>
> All of us know how the total budget has always been prepared—except in shooting wars. First, a budget ceiling is determined. This rests upon a judgment about national income, taxes and Federal debt, and the most recent levels of Government expenditures.
>
> Once the total budget ceiling is set, the more or less fixed costs of domestic programs are subtracted. What is left is available for national security. Only in time of shooting war do we begin by asking "What do we need?" The rest of the time we tailor the defense program to fit the budget. The ceiling is usually an arbitrary judgment figure.
>
> The point I am trying to make is that, whatever this country really needs to do, this country can do.

That testimony was given last February before the committee of which the able Senator from Washington is chairman.

Based on existing world conditions, highlighted in this afternoon's newspapers, that testimony would seem to have been based on keen foresight.

I congratulate the Senator from Washington on his position; and I hope his amendment will be agreed to.

Mr. JACKSON. I thank the Senator from Missouri.

Mr. CANNON. Mr. President, will the Senator from Washington yield?

Mr. JACKSON. I yield.

Mr. CANNON. In order to clarify the record in connection with some of the figures concerning the modernization of our Army, I should like to ask the Senator from Washington a few questions.

Mr. JACKSON. Certainly.

Mr. CANNON. Is it not true that we are prepared, under the terms of the appropriation bill now before the Senate, to vote on approximately $1.5 billion of new obligation authority for the Army, and that that amount includes a procurement program of essentially the same scale as that which has prevailed through the past few years—that is to say, without the amendment now proposed?

Mr. JACKSON. That is correct.

Mr. CANNON. Is it not also a fact that General Taylor, General Lemnitzer, and others testified that the Army needs approximately $1 billion more, each year, than it has been receiving—approximately $1 billion a year in addition to the previous level of appropriations to the Army thus far—in order to enable it to match, in terms of modernized equipment, the quality of the arms of the potential aggressor?

Mr. JACKSON. That is correct; and 60 percent of the equipment in the hands of our Regular Army today is either of Korean war vintage or World War II vintage or of vintage prior to World War II, and that ratio is even higher in the case of Army Reserve units and National Guard units.

Mr. CANNON. Is it not also a fact that the Army requested, this year, an additional $928 million, of which $162 million has now been allowed in this bill, insofar as the modernization program is concerned?

Mr. JACKSON. That is correct. I am not sure exactly what amount the Army requested, but I believe that is correct.

Mr. CANNON. Approximately $928 million, I believe—just short of $1 billion.

Is it not also a fact that, although, last year, the Army requested $1.2 billion for the fiscal year 1960, which it said would provide only 50 percent of its requirements, it was voted $382 million; and only approximately $43 million of that amount was made available and was used in the modernization program?

Mr. JACKSON. The Senator from Nevada is absolutely correct.

Mr. CANNON. So we are now in the position that the Army has been very greatly curtailed, as regards the modernization program, as regards the amounts which all the informed witnesses have testified are necessary?

Mr. JACKSON. The Senator from Nevada is correct. The net effect of the efforts to add additional funds has been a very limited amount of money actually obligated for new modernization.

Mr. CANNON. I do not see how we can prepare for an extended increase in the tensions of the cold war by having our Army prepared to go into the field, as the Senator from Washington has stated, with equipment of Korean war vintage or World War II vintage or of vintage prior thereto.

A few months ago I had occasion to visit a number of our Army installations along the Iron Curtain in Europe. I was very much impressed with the standard of training and the morale of our Armed Forces there at that time; but I was very much embarrassed to find the type of equipment they were provided with, as compared with the type of equipment directly across the border from our units, which are standing on the alert.

Let me ask the Senator from Washington whether it is not a fact now that the amendment proposed by him and by other Senators would provide only $302,202,000 of the $1 billion requirement for Army modernization?

Mr. JACKSON. That is correct.

Mr. CANNON. In other words, if the amendment is agreed to, we shall still have only $302 million of the $1 billion amount which General Taylor and General Lemnitzer have testified is necessary as an annual amount in order to provide the needed level of Army modernization; is that correct?

Mr. JACKSON. Yes; and the Senator from Nevada has put his finger directly on the point. We are talking about the rate of modernization. The Soviets have done a prodigious job, in comparison with our effort, in modernizing their ground forces, since World War II.

Mr. CANNON. I thank the Senator from Washington.

I believe that if we restored the full amount, it would be a rather cheap price to pay, because certainly we must be greatly concerned with the nature of the equipment of our Armed Forces in this period of cold war tensions.

Mr. JACKSON. The Senator is entirely correct, and I thank him very much for his helpful questions and comments.

Mr. MARTIN. Mr. President, will the Senator from Washington yield to me?

Mr. JACKSON. I yield.

Mr. MARTIN. Mr. President, I rise in support of the amendment submitted by the Senator from Washington, and identified as "6–15–60–B," because of the great need for modernization of our present Armed Forces, especially our Army.

A very serious situation confronts us, as regards keeping our Armed Forces abreast of those of other nations, insofar as modernization is concerned.

Our Army forces, deployed about the free world on the Sino-Soviet perimeter, are outnumbered, many times over, by the powerful Communist forces which are arrayed against them. Our Army outposts are backed up in reserve by the three division airborne forces of the Strategic Army Corps—more popularly known as Strac. Let us consider the need for modernization in this one important part of our Army.

This force has the planned capability of moving into action as rapidly and as decisively as modern military thought can provide, to reinforce our outposts and stamp out brushfire attacks before they can develop into the holocaust of a general nuclear conflagration.

Strac's limited manpower has been welded into units of unparalleled efficiency by arduous exercises and maneuvers which have taken them literally from the steaming tropical jungles of Panama to the frigid areas of the Arctic wastelands.

Strac to support our outposts, must have the ability to deploy rapidly by strategic airlift on the shortest possible notice. This Congress wisely seems to have made provision for this airlift, by funds voted by the other body of Congress and recommended by our own Appropriations Committee.

Strac, then, is well organized, is splendidly trained, its strategic transport has been provided; but the basic soldier's equipment, his weapons, have not been procured in sufficient, modernized quantities, because of a lack of funds.

Today, it is not enough to airlift or drop men, rifles, machineguns, mortars, and bazookas, as was done in World War II. It is imperative that vehicles and heavy weapons also be at least air transportable.

I have very great admiration for the efficiency of that force, as regards the matter of transport. But it is equally important that we provide modern arms to our troops, to be available for their use after they are transported.

Our troops, even in a minor brushfire attack in the vast reaches of Asia, will be faced by well-trained, implacably indoctrinated enemy soldiers armed with every modern military device that Soviet technology can provide. The benefits of Soviet military science have gone, not only to the Soviet European soldier, as such, but also have been extended gratuitously to augment the growing military power of the Red Chinese and the North Koreans, to say nothing of the growing military might of the Viet Minh. Requirements of the battlefield of the future make it imperative that our forces have with them the modern equipment they need to fight, survive, and win.

On the battlefield itself, tactical mobility, overwhelming firepower and effective communications will be of equal importance. The opposing forces will in all probability have equality in firepower through employment of the nuclear weapon. The final decision will, thus, probably go to the force which not only avoids the opponents' fire, but also utilizes its own, effectively and in time, at the point of decision. Modern combat forces will have to be able to locate, observe, and destroy an equally fluid enemy force. Strac, then, must not only have its own modernized tactical vehicles, both ground and air, which can operate under the most unusual of conditions of climate and terrain, but must also have modern, built-in equipment enabling the troops to locate critical targets, and to send and receive information and orders required for timely, effective, and destructive attacks. It is, in my opinion, mandatory that Strac have its own modern, self-contained tactical mobility and communications.

In this session of Congress, we have heard much of airlift. But the airlift is useless unless there is a means to transport the necessary equipment with this splendidly trained, efficiently organized group of American fighting men. We must place in their hands the weapons they need, to protect themselves, the United States, and the free world. To me, it does not make sense to provide the men and the transport, but to deny the basic need of the Army; namely, the modernized tools of the trade.

I have gone through two world wars which have stressed the importance of modernization. In those two world wars, our forces were not sufficiently modernized; and we cannot again face the possibility of going into a major war without having modern weapons in the hands of our Armed Forces at a time when their adversaries would be equipped with modern weapons. So it is extremely important that our Armed Forces have modernized equipment.

I wish to commend the Senator from Washington for his amendment and his sponsorship and able presentation of it.

We have heard about the need for an airlift, which is very outstanding, but we must have the weapons to go with that airlift.

To fail to appropriate additional funds for Army modernization is illogical and unwarranted. Therefore, we must support additional funds for procurement by the Army.

Mr. JACKSON. I thank the Senator for his very able support.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. JACKSON. I yield to the Senator from Pennsylvania.

Mr. CLARK. I have listened with great interest to the colloquy which has been going on between the Senator from Washington and a number of our colleagues in the past 45 minutes. The thought that impresses me most is why the Senator from Washington is asking for only $140 million in the light of the facts which he himself has developed and which other Senators in colloquy have developed. Is that not too small an amount?

Mr. JACKSON. The Senator from Washington tries to be realistic about these things in proposing a figure the Senate might adopt. The Senator from Washington realizes that the amount involved here, together with the funds previously allowed, will still be less than one-third of that which the Army has indicated it requires. The amount should be more than this. The Senator from Washington has merely tried to achieve a figure the Senate might accept, and which would be of some final help in modernizing our ground forces.

Mr. CLARK. I should like to ask the Senator a further question. Does he think the Army could effectively spend more than $140 million additional for modernization if it had authority to do so from higher up?

Mr. JACKSON. There is no question about it. The Congress has been quite generous in making funds available. A big part of the problem has been the apportionment of the funds after the money has been appropriated. That has been the big problem.

Mr. CLARK. There are members of the Armed Services Committee who are of the view that, even if the Army wanted to, it could not spend this amount of money. I take it the Senator from Washington is not in accord with that view.

Mr. JACKSON. As least this much is true: There will be an election in November, and there will be a new administration that may have a different point of view. This would be true, I understand from reading the newspapers, even in the case of a Republican being elected in November. I shall not enter

into a partisan discussion, but I think there are differences of opinion within both political parties on the question of the magnitude of the effort required. I noted with interest the comments of the Governor of the State of New York on the subject of national defense, as one example.

Mr. CLARK. The Senator has no doubt that if the Army were turned loose, it could spend usefully, this $140 million additional for modernization, without difficulty. Is that correct?

Mr. JACKSON. I think $140 million is a prudent figure. I would not want any of the services turned loose to spend money willy-nilly. The point I am trying to make is that the figure is a reasonable one, particularly in light of the world situation today, and it could be wholly inadequate if the world situation were to deteriorate more rapidly.

Mr. CLARK. I respect my colleague's judgment, and I shall join in his effort, even though it occurs to me it might not be enough.

I should like to ask the Senator if both the Rockefeller brothers report and the Gaither report, made a couple of years ago, advocated far more extensive spending for Army modernization than would be permitted even if the Senator's amendment were approved.

Mr. JACKSON. I know the Rockefeller Brothers Fund report advocated a substantial increase. I think it recommended about a $3 to $6 billion amount over and above the present budget.

Mr. CLARK. Of course, we did not see the text of the Gaither report, but it was leaked out to the Washington Post, and the Washington Post account indicated that the Gaither committee, too, felt that far more money should be spent for the modernization of the Army.

Mr. JACKSON. There have been rumors that the Gaither committee called for a substantial expenditure.

Mr. CLARK. We had introduced into the record the statement of Mr. Sprague, who was a member of the committee, along this line.

Mr. JACKSON. He was chairman.

Mr. CLARK. I shall detain the Senate only a moment longer. Last year, by a close vote of 43 to 48, we rejected an amendment proposed by the Senator from Missouri [Mr. SYMINGTON] which, as finally modified on the floor, would have added $233 million for Army modernization. I think every thoughtful Senator will agree that the situation today on the world scene is far more dangerous to the security of the United States than it was a year ago.

Mr. JACKSON. The Senator from Washington would like to inject at that point that the danger, particularly, of a limited conflict, a limited thrust, a limited probe, is greater than before. I think this is the significant factor we must take into consideration when we consider making a proper evaluation of the budget.

The situation in Japan is but one example of the problem we face in the Far East, as is the problem we have next door to us, in Cuba, and elsewhere. We cannot deal with these problems, I submit, Mr. President, by thinking only in terms of intercontinental ballistic missiles and how many thermonuclear warheads we have, which deal with the possibility of a general conflict and provide the only kind of retaliatory system we must have to deter a general nuclear war.

Mr. CLARK. The Senator is correct. I know he did not mention the islands of Formosa and Matsu. None of us can know what the President of the United States is going to do if those islands are attacked and a landing attempt is made. If the President should decide to go to the defense of those islands, we shall need help from the Army and Marine Corps. I hope that will not happen, but it is one possibility.

Mr. JACKSON. The Senator from Washington listed a long series of areas that could be involved, such imminent areas of trouble as Laos and Indochina, and the troublesome situation in the Middle East. One could go on at great length to call to the minds of the Members of the Senate the great number of commitments we have made diplomatically around the world.

Mr. CLARK. One final point, and I shall be through. My good friend from Washington, with his equable disposition and impartial attitude, is far less partisan than I am. I am confident we are going to have a Democratic President in the next election, and I think I know the four or five individuals from whom he is going to be selected well enough to know that the day he comes into office he is going to make abundantly clear to the Defense Department that he wants every nickel made available spent for the modernization of the Army and equipment. We have only 6 months more of this budget-minded administration to put up with. We Democrats should be forging now the tools with which our President of the United States will be able to make our country secure.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. JACKSON. I yield to the Senator from South Carolina.

Mr. THURMOND. I should like to commend the Senator from New Mexico, chairman of the subcommittee, and the members of his subcommittee for including in this appropriation bill $162,102,000 for modernization of the Army.

I wish to say, however, that in my opinion this is inadequate. There is no question about the fact that we are now passing through a critical period of world history. We must be prepared. Our Army must be prepared to fight a limited war. We are more likely to have a limited war or a war of limited aims than we are to have an all-out war.

Mr. President, I rise to support the so-called Jackson amendment, of which I am a cosponsor, to increase the amount appropriated for the Army modernization program by $140,100,000.

Mr. President, the importance of maintaining a strong deterrent force cannot be overemphasized. It is essential to maintain a military force which is capable of fighting both limited and general wars in any section of the globe. I do not find myself alined with those who would greatly reduce the quantity of our military personnel. Those who advocate such reductions are apparently guided by the belief that any future military conflict will be one of major proportions in which rockets and missiles will perform a role of overwhelming importance and any sizable number of ground troops will be of little or no importance. I cannot share this view. It is my opinion that the disastrous consequences of an armed conflict of major proportions is recognized by military and political leaders throughout the world, both in the Western Alliance and in the Communist countries; therefore, it is essential that material which is vital, not only to a war of major proportions, but to one of limited degree, be available in sufficient quantity and current in development.

Grave danger lies in our self-satisfaction that military retaliatory forces are a sufficient deterrent. We are in danger of planning more retaliatory defense forces around weapons of today. The administration's budget request of $1.3 billion for Army procurement illustrates the genuineness of such fear for the figure is only sufficient to meet wearout costs, with nothing left over for modernization.

It is essential that a forward-looking program of Army modernization be accelerated and maintained. In testimony before the Military Subcommittee of the House Appropriations Committee in January of this year, Secretary of the Army Wilber M. Brucker, stated that it will take from 3 to 7 years to get the basic items—rifles, machineguns, tanks, and armored carriers for the Army.

Mr. President, in some of the most critical areas of the world, including Korea and Berlin, American soldiers still do not have this vital modern equipment. This includes equipment such as the new M–14 NATO rifle. The Army had requested $14 million over the budget request for the purchase of 120,000 such rifles in the 1961 defense appropriations bill. The amendment offered by the Senator from Washington [Mr. JACKSON], myself, and other Senators will go far in supplying the funds necessary for the acquisition of this vital weapon.

Mr. President, it is imperative that the Army of the United States do more than meet the minimum requirements of equipment replacement. Ours is a time when no warning period will exist in the event of armed conflict, and accelerated programs for weapon production and modernization after the outbreak of hostilities is a thing of the past. Many major items of equipment employed by the Soviet Army have entered the second modernization cycle since World War II. This includes medium and heavy tanks, armored personnel carriers, trucks, and rocket launchers. By comparison, the Army has requested, in addition to budget figures, $17,700,000 for 600 M–13 armored personnel carriers, $45 million for 300 M–60 main battle tanks, and an overall figure of $93,700,000 for the modernization of combat vehicles and ammunition generally.

Mr. President, the administration's budget figure of $1.3 billion for Army procurement would have been insufficient for any substantial degree of modernization. Recognizing this fact, the House

has added $37 million, and the Senate committee an additional $125 million, making a total of $162 million. The amendment offered by Senator JACKSON, myself, and others, would raise this amount to $302,202,000. The appropriation of this figure is absolutely essential if any substantial degree of modernization is to be accomplished in the present fiscal year. Even this figure represents less than one-third of the amount Army leaders have testified that they require; however, this amount will enable the Army to obtain the more critically needed combat items which will contribute directly to the combat capability of the Army.

Mr. President, the adoption of this amendment is imperative for the continued safety and defense of our Nation and of the entire free world.

Mr. President, I congratulate the able and distinguished Senator from Washington for the magnificent fight he has made today for this important amendment, which in my judgment should be agreed to by the Senate. I urge the Senate to take favorable action upon this essential amendment.

Mr. JACKSON. Mr. President, I thank my distinguished friend from South Carolina for a very fine statement on this subject.

Mr. President, I now yield to the Senator from Vermont [Mr. AIKEN].

Mr. AIKEN. Mr. President, today the American people and their Armed Forces are confronted with a situation completely different from any before in our history.

The battlefields of World War II have been silent for 15 years.

In Korea, the guns have been still for 7 years.

Yet, we are not living in a world at peace, but in an era of a tense and delicately balanced armed truce which is being almost continuously probed and threatened by the aggressive actions of totalitarian governments.

Joining with the other nations of the free world community to meet this global Communist threat, we have committed our national security and our military forces to a concept of collective security, based on a system of world-girdling military alliances.

In so doing, we Americans have pledged again "our lives, our fortunes, and our sacred honor."

However, the great historical difference is that we have renewed this pledge not only to maintain our own independence and freedom, but to insure the security, integrity, and independence of free nations everywhere against the threat of communism.

The living guarantee of our pledge to the free world and the visible symbols of our determination to stand shoulder to shoulder with our friends against the common enemy, are the military forces of the United States, and particularly the U.S. Army.

Wherever they are deployed about the world today—in troubled Korea, Berlin, or in the NATO shield in Western Europe—our Army troops are greatly outnumbered by the powerful Communist forces which they face.

To counteract this numerical superiority our forces must be provided with the best weapons and equipment which this Nation can furnish.

This is also true for those Army units here in the United States which would go to the aid of our forces overseas, should such be necessary, or which might be employed to suppress threatening situations endangering our national interests or our allies.

Unfortunately, it appears that our troops today are not so equipped.

Over the years, I have observed with growing concern the inflexible pattern of the administration's defense budget, and the continuing refusal of the administration to use those funds properly authorized by the Congress for the modernization of the Army.

Because of these actions, coupled with the increasing cost of new weapons and equipment, the U.S. Army today is forced to accomplish its assigned missions with weapons and equipment which are, to a large degree, obsolete.

In the climate of world conditions wherein the United States must discharge its international responsibilities, such a condition is morally untenable.

I say this because the recent actions and statements of Mr. Khrushchev and the Chinese Reds have made the nature of this climate clear to all of us.

These circumstances clearly establish the urgent requirement to modernize and produce the equipment and weapons which the Army should have in its hands and which already have been developed by our rapidly expanding technology and our extensive past investments in Army research and development.

I cannot emphasize too strongly that, remarkable as these new prototype weapons may be, they do not represent combat capabilities until they are in the hands of our troops in sufficient numbers.

ICBM's, atomic missile-launching submarines, great bombers, and other glamorous weapons capture the imagination with the potential of their fantastic destructive power.

Also, they overshadow the very real fact that the U.S.S.R. has had an almost continuous modernization of its ground forces in effect since World War II.

Moreover, the products of this program have been extended to the satellite states and to augmenting the growing military power of Red China.

During recent years there has been a strong tendency for the executive branch and the Congress to go overboard on the side of glamor, forgetting the fact that if war does come it will likely be the men of the Army that will bear the brunt of the fighting and do most of the dying.

No American soldier should ever go into battle with his chances for survival greatly reduced because of obsolete or inferior weapons and equipment.

There is a vital need for qualitative superiority of our Army forces in the light of the overwhelming quantitative advantages accruing to the Red Chinese-Soviet bloc through their massive modernized armed forces.

If we should permit our overall effectiveness in ground combat capability further to deteriorate to the status of permanent inferiority, the worldwide position of the United States could be eroded to the ultimate loss of our position and our eventual isolation.

Our pledge to the free world would be but an empty and dishonored gesture under such circumstances.

While we hope and pray for the success of disarmament conference and progress toward our goal of a peaceful world, we know that such a happy event lies far in the distant future.

We cannot, in clear conscience, expect the men in the Army to face a numerically superior potential enemy with any less than the best in modern equipment.

To do so, is to invite increased cold war tension and possible aggression.

The professional military leadership of our Army, who are responsible for its success or failure in war, have presented to the appropriate committees of the House and of this distinguished body, a priority list of arms and equipment whose procurement is essential during the coming fiscal year to overcome the growing obsolescence of Army materiel.

The price tag on this list is less than one and a half percent of the total defense budget.

This appears to be sound military judgment, representing the essential needs of the Army.

I therefore urge that the Senate give serious consideration to the approval of this priority list by authorizing the necessary funds for the Army to initiate procurement of the items thereon during the coming fiscal year 1961, even though it may be necessary to reduce the amount for more glamorous but unproved items of defense.

I support the amendment offered by the Senator from Washington.

Mr. JACKSON. I appreciate the statement of the able Senator from Vermont.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. JACKSON. I yield.

Mr. JOHNSON of Texas. Will the Senator from Washington yield at this time to the Senator from New Mexico [Mr. CHAVEZ]? I wonder if the Senator from Washington would be willing to modify his amendment to reduce the amount of the increase to $90 million with the understanding that the chairman of the subcommittee would accept that amendment?

Mr. JACKSON. The Senator from Washington would be willing to accept such an amendment, which was suggested earlier by the junior Senator from South Dakota [Mr. CASE], and which would mean that the total amount provided would be $252,202,000 instead of $302,202,000.

Mr. CHAVEZ. I will accept such an amendment, and will fight for it.

Mr. JACKSON. I am glad to hear the Senator from New Mexico state that he will fight for the amendment, and I know he will fight vigorously for it. I believe the debate today indicates that the Senator agrees the Senate feels strongly on the subject.

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. JACKSON. I yield.

Mr. CASE of South Dakota. A while ago I proposed an amendment or suggested one to the Senator from Washington. I would like to know if the amendment now proposed is the one I suggested to the Senator from Washington?

Mr. JACKSON. The Senator from South Dakota gave me an amendment, which I have in my hand now. It has the same effect as the suggestion which has been made by the distinguished chairman of the subcommittee, the Senator from New Mexico [Mr. CHAVEZ].

Mr. CASE of South Dakota. I appreciate the statement of the Senator from Washington.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Texas? The Senator from Washington has the floor.

Mr. JACKSON. Mr. President, I ask unanimous consent, in line 2 of the pending amendment to modify it by striking out "$1,639,202,000", and inserting in lieu thereof "$1,589,202,000"; and in line 5, by striking out "$302,202,000" and inserting in lieu thereof "$252,202,000."

The PRESIDING OFFICER. Is there objection to the request of the Senator from Washington to modify the amendment?

Mr. JAVITS. Mr. President, reserving the right to object—and I shall not object—I thought I would have the privilege of voting on the yeas and nays for the amendment. I merely wish to express my support of the amendment. I think the Senator from Washington is doing exactly as he should in accepting the suggestion of the chairman of the subcommittee, and I withdraw my reservation.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senator may modify his amendment accordingly, notwithstanding the fact that the yeas and nays have been ordered.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The Senator from Washington has the floor.

Mr. JACKSON. Mr. President, the Senator from Michigan [Mr. HART] requested me to yield a while ago prior to the modification of the amendment. I yield to him at this time.

Mr. HART. Mr. President, I should like to ask whether there would be objection to having printed in the RECORD at this point a statement which I have prepared.

Mr. JACKSON. Mr. President, I ask unanimous consent that the request of the Senator from Michigan [Mr. HART] be agreed to.

The PRESIDING OFFICER. Without objection, it is so ordered.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HART

In recent years our country has been fortunate in the caliber, experience, and stature of the uniformed heads of the U.S. Army. I refer especially to that distinguished soldier-statesman-scholar, Gen. Maxwell D. Taylor, and his eminent successor, Gen. Lyman L. Lemnitzer.

As Army Chief of Staff, General Taylor fought to achieve an adequate modernization program for the Army to combat the growing obsolescence of its equipment. On assuming office last year, General Lemnitzer has carried on this fight with equal vigor. Time and again these officers have emphasized the growing power of the Soviet armies and the fact that they have undergone an extensive and continuing equipment modernization program since the end of World War II. As a result, today the vast majority of the 175 active line divisions of the Soviet Army are largely mechanized or tank divisions, equipped with the most modern tanks, armored personnel carriers, and self-propelled artillery and missiles. Moreover, the benefits of this Soviet modernization effort have also been extended to augment the growing military power of Red China. During Khrushchev's visit to Peiping last year, following his tour of the United States, the Chinese Communist army paraded before him in late model Soviet T–54 tanks—the standard tank in the Soviet Army—as well as in other Soviet vehicles.

In Europe, the mobile defensive strength of our 7th U.S. Army is built around the striking power of its 2 armored divisions, its 3 armored cavalry regiments, and the organic armor of its infantry divisions which must bear the major burdens of battle should a Communist onslaught be launched.

The troops of the 7th Army are the most highly trained and combat ready major force that our Nation has ever fielded in peacetime. The 7th Army is the keystone in the NATO defensive system which extends across Western Europe. In East Germany facing the 7th Army and the allied armies of NATO, there are more than 20 Soviet first-line divisions, organized into a powerful, completely mechanized and armored force, as well as the substantial ground forces of the puppet East German state. Also to be counted are the Eastern European satellites of the Communist Warsaw pact, also well-equipped with up-to-date Soviet-supplied materiel.

Under these conditions it is essential that our Army be provided with the best modern materiel available. The modernization needs of the Army, as they have been expounded by General Taylor—as well as General Lemnitzer—embrace the entire spectrum of firepower, mobility, and communications. It is my understanding that armor brings all of these essential ingredients of success in modern ground warfare together in their most efficacious form, especially on a nuclear battlefield. However, this can only be true if our armored units have on hand in adequate numbers the most modern armored weapons and equipment relative to those enemies they may be called upon to face. As I read the considered military judgment of the Army's professional leaders, such is not the case today.

Thus, the Army has requested additional quantities of the new M–60 main battle tank and the new M–113 armored personnel carrier. The M–60 tank has a greatly increased operating range and more powerful gun than the current interim tank with which our troops are, for the most part, equipped. The M–60 tank is superior to the comparable Soviet tank in mobility, operating range and firepower, and has the capability of destroying any known armor which could appear on the battlefield in the foreseeable future.

The M–113 armored personnel carrier will provide the Army with a much improved, lighter, more mobile vehicle, with greatly increased operating range. The importance of adequate numbers of these carriers to enhance the battlefield mobility and protection of our infantry troops, cannot be overemphasized.

The Army has developed fast-moving tactical concepts for a greatly stepped-up tempo of operations on the battlefield, so as to both increase the effectiveness of our ground fighting forces and to conserve the lives of our troops in the accomplishment of their missions.

To make these tactical concepts meaningful, new self-propelled weapons are urgently required to provide the fire support for fast-moving armored and mechanized units and to move and keep up with these units in combat. The new 105 mm. and 155 mm. self-propelled artillery requested by the Army will provide lighter, more mobile, close fire support, with greater range and effectiveness in support of the dispersed formations moving rapidly about the combat zone. The new self-propelled 175-mm. gun will provide a new, highly mobile weapon with the additional range necessary to attack long-range Soviet artillery. This may be especially important in those operations where the employment of nuclear weapons may be neither militarily feasible or politically permissible.

To tie all of these new means of combat power together, the Army has also asked for new signal communication and battle area surveillance means which are essential for the command and control of mobile fighting forces.

These describe only a major segment of the total modernization requirements stated by our highest Army leadership over the years. There are other items on their priority list which are essential in the professional judgment and military wisdom of General Taylor and General Lemnitzer. It is men like these who bear the heavy burden of responsibility for the success or failure of our ground arms in battle. It is up to us to assist them in carrying this load. And I am grateful to the distinguished chairman and the able members of the Appropriations Committee and the Military Subcommittee for having recommended a step up in providing the best tanks, mechanized equipment, and other means requested. If we provide the money needed our Army can gain and maintain qualitative superiority anywhere against the massive, modern forces of the Sino-Soviet Communist empire. I believe adoption of the amendment of Senator JACKSON will bring our defenses further into position of strength; will permit us more confidently to say we have met our heavy responsibility. The distinguished majority leader, as he often does, eloquently made the basic point: if we step up our military strength and it is not needed all we lose is money; if we fail to maintain our strength, we may lose our freedom and our lives. In these words Senator LYNDON JOHNSON has put this whole, complex question into dramatic focus and I commend him for having made this basic understanding easy.

There are, in addition, two further aspects of this defense appropriation measure and the Jackson amendment upon which I should like to comment. First, there is a special aspect of the Army's modernization program which needs emphasis, not only because of its importance to defense but also because of its impact on an important segment of our economy. The second comment relates to the broader questions which persist because of the economic impact of our national defense effort.

In January of this year the operations research office of Johns Hopkins University released some previously classified material on the Army's production base. The core of the production base, of course, is the machine-tool industry. No industry has had a more mercurial life than this one. The onslaughts of World War II and the Korean conflict placed tremendous demands on the industry with commensurate buildups in capacity, only to be followed by subsequent valleys of decline. In Michigan, as in the

other centers of machine-tool fabrication, we have lived through this experience as a mixed blessing. What is one day an opportunity to serve and to grow becomes the next a struggle to survive. Now comes this new report with its astounding implications for national security and for this industry.

According to this report, "more than 40 percent of the Army's tools are overage now. At current procurement and disposal rates, 80 to 85 percent will be overage in 1963." The report goes on to say that "only 4 percent were bought since 1954. Few of the tools can use the advanced controls, high-power inputs, or improved cutters now available. Except for recent purchases for that purpose, few machine tools can meet the standards required in modern weapons production." The report points out that private industry, upon which the Army must depend during emergencies, has even older and more obsolete machine tools in use. It concludes: "Without corrective measures it is probable that the United States will enter the next emergency with inadequate metalworking resources, as it did in 1940 and 1951—more and more American machine-tool builders are either affiliating with, distributing for, buying into, or establishing foreign operations. They are going abroad in order to compete and exist. Continued long enough, this trend can seriously diminish U.S. capabilities and skills in a critical sector."

The recommendations of this report point clearly to the needs for modernization. Replacement of wornout, overage, and obsolete tooling is absolutely essential. To do this "the modernization program should be supported with a minimum of $175 million over a 5-year period." This would provide for "between 1,500 and 2,500 new machine tools annually in addition to the regularly budgeted funds." In addition, the replacement program "should be supported with a minimum of $20 million a year for 3 years in addition to regular funds."

Taking such action is demanded by realism. We live in too perilous a world again to be caught short in such a basic area.

An interesting recommendation of this Johns Hopkins report relates to the disposal of overage tools. It urges that "the Army should consider school needs, estimated at 100,000 units, and foreign aid in its disposal planning."

I have recently had some correspondence on this question with the Defense Department which I submit for inclusion in the RECORD at this point:

ASSISTANT SECRETARY OF DEFENSE,
Washington, D.C., June 8, 1960.

Hon. PHILIP A. HART,
U.S. Senate.

DEAR SENATOR HART: This is in further reference to your letter of May 23, 1960, forwarding the comments of Mr. E. H. H. Graf of the Detroit Broach & Machine Co., relative to Government machine-tool policy.

Mr. Graf's letter is certainly a thought-provoking one. At the outset we want Mr. Graf to be assured that the machine-tool industry and its products are more important today in the viewpoint of the Department of Defense, than ever before in history. The lessons learned from the machine-tool shortages in World War II and during the Korean emergency are vivid in the memories of our production staff. We in the military are doing everything within our power to guard against this ever happening again.

In order to do this we are doing everything possible to have on hand the machine tools and related production equipment needed to produce the modern weapons which would be used in a future emergency.

Of course Mr. Graf's reference to the Joint Chiefs of Staff deciding that machine tools should be dumped on the market is a great oversimplification of their role in this matter. It is true, however, that military planning to carry out the strategic concepts of the Joint Chiefs provides for the most modern weapons that we can furnish the military services. Unfortunately many of our older machines held over from World War II and Korea cannot efficiently or economically produce the weapons of tomorrow or even today. The number of machines needed to support our mobilization plans is also smaller. As an example behind the reason for this, it is obvious that missiles with their greater destructive power would not be needed in numbers approaching the manned aircraft of World War II. As a consequence we cannot afford to keep tools to make obsolete weapons for which there are no longer requirements and at the same time buy the new types of machines now needed and which are not in our inventories. These are the reasons why our machine-tool excesses have been larger than usual in recent years.

Mr. Graf's suggestion that we rebuild our excess machines and sell them, or give them to friendly foreign nations is being given further study. We already have programs to sell, at a nominal price, or to give production equipment to these countries and a not inconsiderable number of machines are disposed of in this way. It is quite true, however, that only the better machines are generally selected. At present we have no program of rebuilding excess machines for this purpose. The provision of production equipment to our allies has two aspects and two different Government agencies are involved. Aid for military purposes is the responsibility of the Department of Defense and is handled by the Assistant Secretary (International Security Affairs). We have already placed Mr. Graf's proposal in the hands of the appropriate staff members in that Office. There would be many details to be worked out in the conduct of such a program such as its funding and administration, the handling of the actual rebuilding work and the terms and conditions under which the rebuilt machines would be made available. These deliberations will take some time. You may, however, assure Mr. Graf that his proposal is being given the consideration which it deserves.

The provision of production equipment as well as other forms of assistance, for economic improvement is a function of the International Cooperation Administration. Tools which are excess to the needs of the Department of Defense can, and are already being, made available to that agency. To receive consideration of furnishing rebuilt excess tools to friendly foreign nations for economic improvement Mr. Graf's proposal should be forwarded to the International Cooperation Administration.

The other major point made by Mr. Graf dealing with more liberal tax depreciation rate for tax purposes is outside of the scope of activity and responsibility of the Department of Defense. It is a matter for the Internal Revenue Bureau. We understand that the Office of Civil and Defense Mobilization is currently studying this problem.

We trust that the foregoing provides you with the information that you desire. If we can be of further assistance to you at any time we will be happy to do so.

Sincerely yours,

THOMAS C. WERBE, Jr.,
Deputy Assistant Secretary of Defense (Supply and Logistics).

This exchange grew out of some very interesting and constructive suggestions made to me by Mr. E. H. Graff, of the Detroit Broach & Machine Co. relative to Government machine-tool policy. I believe this correspondence is further evidence of the enormous economic implications which actions taken in the national defense have on our internal economy and our foreign relations, and I include a letter from Mr. Graff at this point in my remarks:

ROCHESTER, MICH., *April 12, 1960.*

Hon. PHILIP A. HART,
U.S. Senate Building,
Washington, D.C.

DEAR SENATOR HART: I am writing to you today for the purpose of calling to your attention some facts which I believe you to be already aware of. The subject is broad. I can't possibly go into it in detail here. However, following are the highlights.

I note comment from time to time that the next war, when and if it comes, will be of short duration and therefore will be over before our weight in producing machine tools, etc., can have any bearing on the outcome. I further note, to follow this to conclusion, that the Joint Chiefs feel that machine tools should be arbitrarily dumped on the market if they have no use in a short war. When tools are declared surplus by the Joint Chiefs, it is mandatory that they be sold.

I also note comment that the machine tool industry, from Government viewpoint therefore, is considerably less important than in the past. I call to your attention that in my opinion as an individual, and this opinion is as an indvidual and not as a vice president of a machine tool company, we as a people are not looking at all the facts. I feel that too many half-statements are made these days, by too many people, and that too few people take the trouble to look into these half-statements, but rather are led along the lazy path of complacency and conformity.

First, I think it follows that a strong machine tool industry makes for progress in all countries, and I think it follows that our Government should support it, not by subsidy but rather by improved tax legislation permitting replacement of obsolete equipment.

Second, I believe that Russia has pretty well proven that its machine tool industry must prosper in order for it to progress as a country. And it is apparently willing even to give direct concessions to the industry to make it formidable in world markets, as well as at home.

As you know, other European manufacturers are definitely after markets abroad, even to the extent of setting up service facilities in foreign lands. I further point out that here at home we don't want anyone, Government or otherwise, paying us for "not raising pigs." We think that our industry should be strong for the country's good and for its continuing progress.

The President suggests greater emphasis on "exports." How can we do the export job if all our efforts must go to holding our own here in a rather cyclical industry. Machine tool companies, for the most part, are individualists. We don't want handouts. If we had favorable depreciation laws, we would be strong and we would get over to Europe and spend our own money to do it. We would get back to basic selling and we would sell Asia, Africa, and South America our products, and this seems to me to be basic sense. We would sell competitively and more often than not, we would be successful since we have a reputation second to none when it comes to production equipment.

In other words, I don't think we should worry too much about fancy statements by fancier economists. I think there is a basic thing that has to be done. That is, we have to become Yankee peddlers, as were our grandfathers. These rules govern all business. True, we might not be able in the face of duties, common market countries, etc., to get as much of the world's business as we would like, but we certainly could do 25 percent better than we are doing now, and that's a sizable amount of money. We would need other things, true, such as Export-Import Banks, credits, etc. But let's just stick to the basic things, now, like

going out and peddling our wares. Better mouse traps for which the world will, I am sure, pay better money. Sooner or later the production of the world must equalize as living standards increase. At that time we'll all be reasonably equal. But what of now?

Now for the moment, back to the dumping of machine tools owned by the services on our home market. Would it not be a good idea to put these tools in shape, not perhaps into new condition, but reasonable shape, and use them all over the world to help our allies? Sell them, yes. But if necessary, give them to India, Africa, South America, or wherever it was wise and to our advantage. By doing this we create business at home and help our neighbors in the bargain.

Consider, please, that if the Government were to dump on the market 50 continuous broaching machines at approximately 5 cents on the dollar, that is about what they are going for, this would be equal to the total production of all broaching machine companies in this particular type of machine for 6 years.

As you can see, the subject is broad and my comments must necessarily be sketchy. Surely it would be reassuring to me and to many of our people to know that you were thinking about these matters. And if you feel that any of my suggestions has merit, I would certainly appreciate your pursuing it further. I would be very happy to have any comments you would care to make, at any time.

Sincerely,

E. M. H. GRAF.

Finally, Mr. President, last week, the administration acknowledged the growing seriousness of this economic impact when it announced a revision in the Office of Civil and Defense Mobilization's defense manpower policy No. 4. It announced that effective July 6, 1960, a more effective means of encouraging contract set-asides in areas where there is persistent unemployment will be provided.

I include the policy change at this point in the RECORD.

JUNE 6, 1960.

EXECUTIVE OFFICE OF THE PRESIDENT, OFFICE OF CIVIL AND DEFENSE MOBILIZATION—DEFENSE MANPOWER POLICY NO. 4 (REVISED)

(DMP No. 4 (revised). Effective: July 6, 1960)

Subject: Placement of procurement and facilities in areas of persistent or substantial labor surplus.

I. Introduction

Success of the defense program depends upon efficient use of all our resources, including manpower and facilities, which are preserved through practice of the skills of both management and workers.

A primary aim of Federal manpower policy is to encourage full utilization of existing production facilities and workers in preference to creating new plants or moving workers, thus assisting in the maintenance of economic balance and employment stability. When large numbers of workers move to already tight areas, heavy burdens are placed on community facilities—schools, hospitals, housing, transportation, utilities, etc. On the other hand, when unemployment develops in certain areas, unemployment compensation costs increase and plants, tools, and workers' skills remain idle and unable to contribute to our defense program.

II. Purpose

It is the purpose of this Defense Manpower Policy No. 4 to direct attention to the potentialities of areas of persistent or substantial labor surplus, hereafter referred to as labor surplus areas, for the placement of procurement contracts or the location of new plants or facilities, and to assign responsibilities to specified departments and agencies of the Government to carry out the policy stated below.

III. Policy

It is the policy of the Federal Government to encourage the placing of contracts and facilities in areas of persistent or substantial labor surplus, with first preference being given in areas of persistent labor surplus, and to assist such areas in making the best use of their available resources in order to achieve the following objectives:

(a) To preserve management and employee skills necessary to the fulfillment of Government contracts and purchases;

(b) To maintain productive facilities;

(c) To improve utilization of the Nation's total manpower potential by making use of the manpower resources of each area;

(d) To help assure timely delivery of required goods and services and to promote readiness for expanded effort by locating procurement where the needed manpower and facilities are fully available.

IV. Implementation

By virtue of the authority vested in me by Executive Order No. 10480, as amended, and Executive Order No. 10773, as amended, and to carry out the purpose and policy objectives set forth above, the following assignments of responsibilities are made to the specified departments and agencies of the Government:

A. The Department of Labor shall:

1. Classify areas having a persistent or substantial surplus of labor, under standards to be established by the Secretary of Labor.

2. In cooperation with the States and labor surplus areas, provide labor market data and related economic information in efforts to assist in the initiation of industrial expansion programs in these areas.

3. Identify skills which are in surplus supply within such areas and make this information available to firms requiring such skills and interested in establishing new plants and facilities.

4. Identify occupations and skills for which labor will be needed by new or expanding industries, and in collaboration with other governmental agencies make assistance available to area institutions and manpower users in developing on-the-job apprentice or other training programs for developing skills of the work force.

B. All procurement agencies shall:

1. Use their best efforts to award negotiated procurement contracts to contractors who will perform a substantial proportion of the production on those contracts within labor surplus areas, giving first preference to contractors performing in persistent labor surplus areas, to the extent that procurement objectives will permit; provided, that in no case will price differentials be paid for the purpose of carrying out this policy.

2. Where deemed appropriate, set-aside portions of procurements for negotiation at prices no higher than those paid on the balance of these procurements exclusively with firms which will perform or cause to be performed a substantial proportion of the production on these contracts within labor surplus areas, giving first preference to firms in persistent labor surplus areas; provided further that firms which will perform in areas not meeting the minimum size qualifications for classification by the U.S. Department of Labor shall be eligible for participation in set-asides if these firms submit a certificate issued by the U.S. Department of Labor that a persistent or substantial labor surplus exists in the area in accordance with standards and procedures prescribed by the U.S. Department of Labor.

3. Assure that firms in labor surplus areas which are on appropriate bidders lists will be given the opportunity to submit bids or proposals on all procurements for which they are qualified. Whenever the number of firms on a bidders list is excessive, there will be included a representative number of firms from labor surplus areas.

4. In the event of tie bids or offers on any procurement, award the contract to the firm which will perform in a labor surplus area, other things being equal, giving first preference to firms in persistent labor surplus areas.

5. Encourage prime contractors to award subcontracts to firms which will perform a substantial proportion of the production on those subcontracts in labor surplus areas, particularly in areas of persistent labor surplus.

6. The preferential actions described in this policy shall be in addition to other such actions to which firms may be entitled because of performance in substantial labor surplus areas, such as additional preference under the Buy American Act.

7. Cooperate with other agencies listed herein in achieving the objectives of this policy.

C. The Department of Commerce shall:

1. In cooperation with State development agencies, the Department of Defense, the General Services Administration, and the Small Business Administration assist manufacturers in areas of persistent labor surplus in obtaining Government procurement business by (a) providing such firms with timely information on proposed Government procurements; (b) maintaining current information on the manufacturing capabilities of labor surplus area firms with respect to Government procurement and disseminating such information to Federal procurement agencies.

2. Urge firms planning new production facilities (where Federal assistance or interests are involved) to consider the industrial location advantages of labor surplus areas.

3. Provide technical advice and counsel to groups and organizations in labor surplus areas on planned industrial parks, industrial development organizations, expanding tourist business and available Federal aids.

D. The Small Business Administration shall:

1. Make available to small business concerns in labor surplus areas all of its services, endeavor to insure opportunity for maximum participation by such concerns in Government procurement, and give consideration to the needs of these concerns in the making of joint small business set-asides with Government procurement agencies.

E. There is hereby created within the Office of Civil and Defense Mobilization a Surplus Manpower Committee:

1. This Committee shall be chaired by the Deputy Assistant Director for Manpower of the Office of Civil and Defense Mobilization and shall include representation from the Department of Defense, including the three Military Departments, Department of Commerce, Department of Labor, General Services Administration and Small Business Administration.

2. The Committee shall advise the Director of the Office of Civil and Defense Mobilization and its member agencies on policies, procedures and activities in existence or needed to carry out the purpose of this policy.

3. When an entire industry, which sells a significant proportion of its production to the Government, is generally depressed or has a significant proportion of its production units located in areas of persistent or substantial labor surplus, the Committee may make appropriate recommendations relative to that industry in lieu of recommendations relative to specific geographical areas. In such cases, after notice to and hearing of interested parties, the Director of the Office of Civil and Defense Mobilization

will give consideration to appropriate measures applicable to the entire industry.

F. The regional directors of OCDM shall, with the advice and assistance of the regional Civil and Defense Mobilization Boards, recommend actions considered desirable to further carry out the purposes of this policy, to the Chairman of the Office of Civil and Defense Mobilization Surplus Manpower Committee.

G. All Federal departments and agencies shall give consideration to labor surplus areas, particularly to persistent labor surplus areas, in the selection of sites for Government-financed facilities expansion, to the extent that such consideration is not inconsistent with essential economic and strategic factors that must also be taken into account.

H. All agencies assigned responsibilities under this policy shall submit such reports on their activities as may be required in connection therewith to the Office of Civil and Defense Mobilization, and shall submit such additional information as may be necessary.

I. All existing notifications of labor surplus areas issued by the U.S. Department of Labor pursuant to Defense Manpower Policy No. 4 continue in force. Notifications Nos. 38, 39, 53, 57, and 58, dealing with the placement of procurement with the textile, shoe, apparel, shipbuilding, and petroleum and petroleum products industries, are continued in effect to the extent that they are not inconsistent with this revised policy.

This revised policy shall take effect on July 6, 1960.

LEO A. HOEGH,
Director, Office of Civil and Defense Mobilization.

The list of illustrations need not be continued. The problem is widespread. It affects industries of all kinds, widely scattered regions of the country, virtually every sector of the economy. Just as our security against enemy attack is the objective of the appropriations we are now considering, Mr. President, my plea is that we look inside as well as outside; that we find new ways to manage our national security program so that it contributes to our economic stability. While we prepare to meet the threats of aggression, we must also keep our industry and manpower skills balanced. If we can do this we will be better prepared, as well, for the day when we can implement a plan for peace.

Turning to the broader question of the economic impact of national defense, I want to emphasize again that the size of this appropriation and the rate of technological change in weapons requirements which it embraces have unprecedented effects on our country's industry and its workers and their families.

Last year I introduced Senate Resolution 150 calling for the creation of a select committee to undertake a comprehensive study and review of this problem. Since that time, several of the committees of the Senate have held hearings which have touched upon this problem in some of its aspects. Each of them has made a valuable contribution to our understanding of this new and unprecedented condition in which we find ourselves, where appropriations in the order of $40 billion plus for national defense appear a normal aspect of our national life for a period as far as we can see.

For example: In January, the Subcommittee on Defense Procurement of the Joint Economic Committee held hearings on "the impact of defense procurement."

In February, the Armed Services Committee held hearings on procurement practices.

In April, the Subcommittee on Government Procurement of the Senate Select Committee on Small Business held hearings on "negotiated and sole source procurement." Later that month they also published their "Case Study in Subcontracting by a Weapon System Contractor."

In May, the Armed Services Committee continued its hearings on procurement practices.

In June, the Subcommittee on National Policy Machinery of the Government Operations Committee started hearings on policy questions extending into this subject.

Perhaps the most specific reference to this problem is contained in the report of the Special Committee on Unemployment which was made to the Senate on March 30 of this year. I submit for the RECORD a section of that report entitled "Government Procurement Policies":

"3. GOVERNMENT PROCUREMENT POLICIES

"The impact of defense spending on the Nation's economy is greater than that of any other single item in the Federal budget. Any study of unemployment would be incomplete without consideration of this factor because the magnitude of the defense budget and the rate at which large sums are spent affect not only the armament industries but nearly every other industry in the country.

"Defense procurement is difficult to coordinate with the rest of the economy because its amount and scope are constantly changing.

"The emergence of the United States as the leading power in the Western World has given our armament obligations unprecedented importance. The historic pattern of peace followed by disarmament has been broken by events beyond our control, and it is clear that national security programs, including international assistance, will continue to receive extraordinary emphasis. These programs involve not only the allocation of manpower for the Army, Navy, and Air Force, but the maintenance of a complex industrial production base, adequate stockpiles of strategic materials, and research and development in space, atomic energy and other fields.

"The magnitude of our commitments is unprecedented. For the past 8 years national security expenditures have amounted to more than $40 billion a year—almost 10 percent of our gross national product—and are likely to continue at this or a higher level. Expenditures of this dimension have an obvious impact on such diverse aspects of our economy as tax and monetary policy, development of natural resources, allocations for domestic needs within the Federal budget, and the development of new patterns of international trade. Nowhere, however, is the impact more apparent to the average citizen than in the area of employment and unemployment, as industrial producers shift to meet the rapidly changing needs of our military planners.

"The increasingly rapid rate of technological change in the methods and weapons of modern warfare has caused disruption and dislocation within our industrial base and has created serious problems of industrial reorganization, unemployment, and obsolescence of facilities and equipment. Our guns, airplanes, and missiles have often become obsolescent while still in production, or even while under development. It may almost be said that we are disarming all the time, and some of the economic problems related to disarmament are already upon us.

"The Regulus II missile and the F-108 long-range interceptor aircraft were discontinued as obsolescent even before they were deployed. Discontinued items such as these involve substantial commitments of facilities and manpower in many regions of the country—facilities and manpower which are unlikely to find their way quickly into other uses.

"At least two questions are raised. Is it possible to change the procurement system to avoid costly and painful dislocation and disruption while maintaining our national security? Could a larger share of the $40 billion spent annually for national security be put into areas of our Nation which most need the stimulation of greater economic activity?

"Employment shifts

"Officials of the automobile industry in Michigan testified before the committee on the effects of the change from wheeled vehicles to aircraft in military requirements. According to this testimony, General Motors employed 33,000 persons on defense work in Michigan in mid-1953. By the end of 1959 the company employed fewer than 1,700 on defense work. The Michigan Employment Security Commission estimated that in 1953 there were 200,000 persons in the State working on defense contracts. The figure today is less than 40,000.

"Employment in the aircraft industry dropped from about 800,000 workers in 1954 to 61,500 in August 1959, as the Air Force moved more and more into missiles.

"The missile industry itself is subject to sudden changes. When the Air Force canceled the Navaho missile project in July 1957, 6,300 employees of North American Aviation, Inc., were laid off in the Los Angeles area. The cancellation of the Regulus II had similar impact, and cancellation of the Jupiter missile program is expected to affect 10,100 Chrysler Corp. employees. The economic hopes of Denver are tied to the performance of the Titan missile developed by the Martin Co. there:

" 'Denver's stake is that about 9,000 regional residents are now employed by Martin alone—as against virtually none 4 years ago—and many thousand others are employed by subcontractors and by the construction firms which are building the huge launching complexes on the prairies.

" 'In other words, the city's prospects for material growth and progress have by now been largely pinned not only to the defense program, but to this one aspect of it—the development of the intercontinental missile.'

"This potential dislocation of large numbers of people raises the question of why Denver was selected. Could the job have been performed at other facilities, in urban centers which would not have to expand to furnish the home and community needs of new employees?

"Changing manpower requirements

"Technological change in military hardware has other effects on our manpower picture. Fortune magazine described the problem this way:

" 'All these changes in military requirements have touched off a vast upheaval in production and procurement techniques. Intensive production has been substituted for extensive production. Instead of large numbers of planes, the military is buying smaller numbers of very high-performance and high-cost units. Electronic equipment accounts for some 25 percent or more of the cost of the average military plane today, for example, and the proportion of engineers and other nonproduction employees to total aircraft employees has been rising steadily, from 27 percent in 1953 to 35 percent today.'

"These shifts are in line with long-range changes which have been taking place in the total industrial manpower picture. In areas of heavy defense manufacturing, they inevitably cause unemployment problems.

"Effect on business conditions

"The rate of defense spending appears to exert substantial influence on the economy as a whole. In the Fortune magazine study quoted above, the rate of defense spending was related to the recession which started in 1957:

" 'To be sure, defense is not the greatest force or prop in the U.S. economy, as is sometimes assumed. The cutbacks in the

second half of 1957 did not cause the recession. But they did contribute to its severity.'

"A report issued by the Secretary of Defense on June 1, 1959, showed that the level of defense spending in the first half of 1957 was almost $1.5 billion less than in the first half of 1956. During the second half of 1957, contracts for supplies, services, and construction were trimmed an additional $1 billion. During the first half of 1958, the rate of defense spending was increased by $5.4 billion, and has continued at about that rate.

"Testifying before the Joint Economic Committee of the Congress in February 1958, Assistant Secretary of Defense W. J. McNeil said that "the stepped-up placement of defense orders should have an important psychological impact on business" and that "the order placement would result in a gradual increase in spending which would have at least a stabilizing effect in defense industries."

"Military installations

"The Department of Defense maintains many establishments such as arsenals, shipyards, forts, bases, etc., in various parts of the country.

"In many instances, a Defense Department installation is the main source of income for a community, and many support-services financed by local governments and private enterprise grow up around the Military Establishment. A Department of Defense decision to cut back or close an installation can seriously disrupt the economic life of a community.

"F. E. Hernandez, mayor of Leesville, La., testified at hearings in Baton Rouge on the effects of such a decision on his community. In November 1955, the Army notified the State of Louisiana, the city of Leesville, and Vernon Parish of its intention to make Fort Polk, located in Leesville and Vernon Parish, a permanent installation. To support the installation, Leesville assumed bonded indebtedness of $500,000 to provide schools, roads, sewers, etc., while Vernon Parish undertook a similar program underwritten by a bond issue of more than $2 million. A number of private investing firms built housing developments in the Fort Polk area. On June 20, 1959, the Army announced its intention to close Fort Polk. As a result of the closing, Mayor Hernandez testified, more than half the peak population of 15,000 has left the area. In spite of this exodus, unemployment in the area has reached an all-time high. In November 1959, continuing claims for unemployment compensation numbered 3,314, compared with 1,777 in June 1959, before Fort Polk closed. Real estate values have been destroyed—90 percent of investment housing is vacant—and Leesville and Vernon Parish have been left with their heavy bonded indebtedness.

"Similar community dislocation occurred when the Army closed an arsenal near La Porte, Ind. Employment in the county dropped from 19,000 in 1958, to 12,500 in 1959, a decline of more than 30 percent. The closing caused wholesale disruption of the area's social structure as well as serious personal hardship.

"Existing policies

"Three governmental policies which have an impact upon the operation of our domestic economy have emerged since the Korean conflict. The first is the policy of procuring materials by negotiated rather than competitive bidding. This new policy has resulted in a radical shift in procurement away from competition based upon price. The Office of the Secretary of Defense reported that 86 percent of military procurement in 1958 was accomplished through negotiated bids. According to testimony presented to the House Committee on Appropriations on Department of Defense appropriations for 1960, 73 percent of this procurement, or $16 billion out of a total procurement of $22 billion, went to 100 companies.

"A second policy was developed in recognition of the trend to negotiated bids. The Small Business Act of 1958 encouraged the Department of Defense to channel procurement orders to small business firms. Extensive administrative apparatus has been devised to implement this policy, but in 1958 only 4.6 percent of the total contracts for major hard goods and services was awarded to small businesses.

"TABLE 7.—*Net value of military procurement actions for supplies, services, and construction by fiscal years*[1] *1957, 1958, and 1959*

"[Amounts in thousands]

State	Fiscal year 1957		Fiscal year 1958		Fiscal year 1959		Percent of total U.S. population
	Amount	Percent	Amount	Percent	Amount	Percent

"[1] See 'Notes on Coverage,' below.

"[2] Includes all contracts awarded for work performance in the United States, including its possessions, the Commonwealth of Puerto Rico, and other areas administered by the United States regardless of location of the procuring office.

"[3] Includes contracts of less than $10,000, all contracts awarded for work performance in the Commonwealth of Puerto Rico, U.S. possessions, and other areas administered by the United States, contracts which are in a classified location, and any intragovernmental contracts entered into overseas.

"[4] Net value of contracts of $10,000 or more for work in each State and the District of Columbia. Data on Alaska and Hawaii, which became States in January and July 1959, respectively, are shown separately for the 1st time in this report.

"[5] Less than 0.05 percent.

"NOTES ON COVERAGE

"It is emphasized that data on prime contracts by State do not provide any direct indications as to the State in which the actual production work is done. For the majority of the contracts with manufacturers, the data reflect the location of the plant where the product will be finally processed and assembled. Construction contracts are shown for the State where the construction is to be performed. However, for some contracts with large companies with more than 1 plant, and for contracts with service, wholesale, or other distribution firms, the location is usually the address of the contractor's main office.

"More important is the fact that the reports refer to prime contracts only, and cannot in any way reflect the distribution of the very substantial amount of material and component fabrication and other subcontract work that may be done outside the State where final assembly or delivery takes place.

"The report includes definitive contracts, and funded portions of letter contracts and letters of intent, job orders, task orders, and purchase orders on industrial firms, and also includes interdepartmental purchases, made from or through other governmental agencies, such as those made through the General Services Administration. The data include upward or downward revisions and adjustments of $10,000 or more, such as cancellations, price changes, supplemental agreements, amendments, etc.

"The report does not include that part of open-end or indefinite quantity contracts that has not been placed under specific purchase order, nor does it include that part of project orders (i.e., production directives to Government-owned and operated facilities) which has not yet been translated into contracts with industrial firms.

"The contract value data shown in this report differ from obligations data in Department of Defense fiscal reports on procurement and construction because (1) this report includes contract awards for services while the fiscal reports exclude obligations for this purpose; (2) contract data do not include obligations for project orders issued to military-owned and military-operated establishments, such as navy yards, unless and until those funds are used to finance contracts with private business firms or with other Government agencies; and (3) this contract report is limited to transactions within the United States whereas the fiscal reports include obligations on a worldwide basis.

"Source: Office of the Secretary of Defense, Dec. 10, 1959.

"A third policy, devised by the Office of Defense Mobilization in 1953 and revised in 1954 and 1955, is an attempt to give areas with substantial labor surpluses priority in the awarding of defense contracts. This policy directs the Department of Defense to place contracts with suppliers in labor-surplus areas, provided that prices are no higher than those obtainable elsewhere. Testimony at the committee's hearings showed, however, that little or no defense work had been acquired by local industries in many labor-surplus areas. Table 7, which shows the distribution of military procurement contracts among the States, reveals how little correlation exists between the awarding of contracts and the concentration of unemployment. West Virginia, which has consistently suffered one of the highest unemployment rates in the Nation, has received only one-tenth of 1 percent of total military procurement contracts for each of the last 3 fiscal years.

"It is undoubtedly difficult to make the labor-surplus preference system work. Military equipment needs must be balanced with local industrial capability in the face of fluctuating employment levels. The introduction of the weapons system of procurement has further complicated the problem. Under this system, most of the authority for coordinating and supervising the complex components of modern weapons is given to a single prime contractor.

"SUMMARY

"The problems raised by the committee's review of the effect of Government procurement policies on unemployment may be summarized as follows:

"1. Serious dislocation has occurred in arms-producing industries such as aircraft, automobile, and shipbuilding as a result of inevitable changes in military strategy and defense planning. These dislocations occur on both an industrial and a geographic basis.

"2. The military and scientific research programs of the Federal Government are producing demands for new skills and have the effect of accelerating the dislocation of unskilled workers.

"3. Fluctuations in the rate of defense spending appear to have an influence on the general economy and particularly on activities closely related to defense spending.

"4. Changes in the deployment of forces (forts, bases, air warning stations, arsenals, etc.) create special hardship in affected communities.

"In general, the military procurement system raises many questions about costs; the role of competition; the effect of the weapons system concept; the role of small business; the problem of labor surpluses, especially those caused by curtailed defense activities; and the duplication of facilities and equipment in various parts of the country. The committee recommends that an appropriate committee of the Senate study our military procurement and deployment policies, their effect upon employment stability and unemployment, and measures to ease unemployment which results from these policies."

That special committee, in one of its major recommendations, No. 6 to be specific, urged a study by an appropriate committee of the impact of military procurement and deployment policies upon employment stability and unemployment, and consideration of measures to ease resulting dislocations.

Unfortunately, Mr. President, the problems of which I speak are not diminishing and show no likelihood of diminishing in the future. We have had several recent illustrations. The Army announced less than a month ago award for the new M–60 tank. It was greeted with joy in my State because the production would be located there. It was greeted by my able colleague, Senator WILLIAMS, from Delaware, with something other than joy, because the production of this tank was being moved from his State.

My distinguished colleagues from Florida, in the last month, had occasion to brush with this problem when the National Aeronautics and Space Agency awarded a contract to a west coast firm for the second stage of the Saturn missile, at a cost differential near $20 million. The lower bidder, Chrysler Corp., builders of the successful Jupiter and Redstone missiles, had proposed fabricating the missile in Florida on a site adjacent to the missile engine plant and near Cape Canaveral where the missile will be tested.

Our colleague in the House of Representatives, Congressman CHARLES A. VANIK, this week has illustrated the kinds of dislocations that may result from the application of the Budget Bureau's Directive 60–2.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. JACKSON. I yield first to the Senator from Minnesota, and then I shall yield to the Senator from Massachusetts [Mr. SALTONSTALL].

Mr. HUMPHREY. Earlier today I asked the Senator from Massachusetts if he would yield so that I might join him in his support of the original amendment, and indeed now in the modified amendment. I have long felt that the program of modernization of the Army was a very essential part of our defense program, and I wish to commend the Senator from Washington for his initiative in the matter. This program is somewhat the same as the one that was advanced by the Senator from Missouri [Mr. SYMINGTON] last year. Both of those distinguished Senators have performed a great service in this effort to expand our modernization program.

Mr. President, I ask unanimous consent to have placed in the RECORD prior to the adoption of the amendment a brief statement that I have prepared.

The PRESIDING OFFICER. Without objection, it is so ordered.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HUBERT H. HUMPHREY

The intense public interest in the recent events in Japan, and the relationship of the United States-Japanese treaty to the current agitation shaking the Japanese Government, causes me to reflect on the whole question of the planning of American military bases and commitments.

First of all, I shall read a brief statement which I made this morning in comment on the withdrawal of the Japanese invitation to the President:

"SENATOR HUBERT H. HUMPHREY: STATEMENT ON KISHI GOVERNMENT WITHDRAWAL OF INVITATION TO PRESIDENT EISENHOWER

"It appears to have been a wise decision that President Eisenhower will not visit Japan. Some days ago I expressed concern over the President's visit and urged that unless absolute guarantees as to his personal safety could be given by the Kishi government, the President should not go.

"The developments in Japan may well result in the collapse of the Kishi government and the coming to power of a government much less friendly to the United States.

"It appears to me that ratification of the American-Japanese Security Treaty should await action by the Japanese Government. For our Government to take the initiative might further complicate the situation and add to the troubles of the Kishi government. If the Kishi administration can secure ratification of the treaty and survive, then ratification by the Senate would be a constructive move.

"All of the rioting in Japan cannot be accounted for by Communist agitation. These riots appear to be less anti-American than they are anti-Kishi government—a domestic political disturbance which could mount to the proportions of a revolution. Except for the demonstration involving Mr. Hagerty, American property and American nationals have not been attacked. The attack has centered on the Japanese Parliament and Government officials.

"The whole subject of American military oversea bases needs constant review. In some areas American bases tend to strengthen the forces of law and order and democracy. In other areas, the establishment of a base can be made a major factor in domestic politics and can play into the hands of extreme left-wing and pro-Communist elements.

"Yet, we must recognize that to withdraw from an American base simply because of Communist agitation would only feed the appetites of Moscow and Peking, and encourage a rather negative neutralism among other nations.

"However, dependence on fixed oversea bases needs to be under constant review, not only because of their inherent vulnerability to political attack, but because of rapid changes in military technology. With such developments as the Polaris missile submarine, the rocket and missile cruiser, and the intermediate and intercontinental rockets and missiles, fixed bases may very well have less value militarily in the near future.

"Every military installation should be judged not only in terms of the needs of the military, but more significantly in terms of the impact on the political structure of the host country. It should be remembered that President Eisenhower has had his most enthusiastic and favorable reception in India where there are no American bases, no military alliances. Our relationships with India have been based on mutual trust and respect, with an emphasis on economic and technical assistance.

"In other words, there must be coordinated planning at the very highest levels, to insure that military planning contributes basically to the overall foreign policy objectives of the Nation."

Let me be quite clear—the American Government should not decide its policy or oversea military bases as a result of action by Communist-led mobs.

But on the other hand, we must recognize that the presence of fixed American bases—or indeed of fixed bases of any kind—can present the most complicated and difficult of political and economic problems.

Base by base, and country by country, a thoroughgoing review of the value of our military bases should be constantly in progress. Always there should be kept in mind the question: Does the existence of this particular military base contribute to or lessen the American effort in foreign policy, on balance.

Yet, while we remain constantly alert to the inherent limitations of fixed oversea bases during this era of rapid political change, America should always remember that no man, no nation, is an island. We are all a part of the whole. The bell does ring for us whenever a bit of the free world is assaulted.

Thus, the alternative to a program of fixed oversea bases in the long run must not, cannot, be permitted to become, a "fortress America" withdrawal to fixed bases on our own territory.

The great debate which has been going on so intensively among scholars and military planners in the United States as to the priorities of military spending has now shifted to the floor of the U.S. Senate. I,

for one, support a program of stepped up modernization of the Army, and expanded and modernization of our naval forces.

Typical of many thoughtful observations by American scholars in this field is a quotation by Oscar Morgenstern, who is among other things, professor of political economy at Princeton University, a consultant to the Atomic Energy Commission, and was an associate of and coauthor with the late Dr. John von Neumann of the classic work, "The Theory of Games and Economic Behavior." I believe that Dr. Morgenstern's comments are relevant to the discussion of the military appropriations bill. Here is what he says, in his book "The Question of National Defense":

"There is no getting away from it: The technological development of the last few years and the perfections in weapons delivery, by missiles fired either from the ground or from the air make all fixed military installations of any size anywhere in the world obsolete. Such is particularly the case for the heavy, strategic force of retaliatory power, the form of military organization we are primarily concerned with at this point. This is also true of our conspicuous and well-advertised missile bases here and abroad. This will apply furthermore to the planned future hardened bases, even to the still distant Minuteman installations.

"Holding our main retaliatory force at sea makes the greatest immediate contribution to the defense of the country; it protects the force proper and it frees the country thereby from direct and indirect effects of a possible attack on this force itself."

The debate over fixed and mobile bases has also reached the British Parliament, and I believe it will be interesting and instructive to quote briefly from the comments made recently by several Members of Parliament of both major political parties, addressing themselves to this question.

From remarks in the floor debate on defense appropriations made by Mr. Julian Critchley, of the British House of Commons, on March 1, 1960:

"The Minister of Defense said yesterday that he had received a postcard from the United States which he quoted. If I may, I will quote it again. It said:

" 'Move deterrents out to sea
Where the real estate is free
And where they are far away from me.'
(Official Report, Feb. 29, 1960; vol. 618, c. 859).

"Copies of that postcard should be in the pocket of every one of us this afternoon."

During that same debate, on February 29, 1960, the following statement was made by Mr. George Brown on the floor of the House of Commons:

"But it has always been clear to me that a fixed-site missile was an invitation and not a deterrent, that a liquid-fuel rocket vulnerable to a near miss could not be a possibility for us. I have always thought that fairly clear."

It is interesting to note that since this debate, Great Britain, on the recommendation of Mr. Harold Watkinson, Minister of Defense, has canceled its Blue Streak 2,500-mile liquid-fuel, fixed base ballistic missile program.

On the same date, February 29, Mr. John Litchfield said the following on the floor of the House of Commons:

"Another charge which has been mentioned is, strategically speaking, the shrinking in our oversea bases, a process which has already gone a long way and which looks like it is going a little further. That is why I am so glad that there are several references in the white paper to the importance of mobility. If we can get our forces on a basis of true mobility and flexibility, we shall have gone a long way to overcoming the serious strategic effect of the loss of bases which, for one reason or another, we have had to give up."

Also on that date, Mr. J. Grimond remarked the following on the floor of the House of Commons:

"I served under the honorable and gallant member for Worthing, Sir O. Prior-Palmer, during the war, and I have served opposite him in this House. He is a great expert on defense, and I will touch upon a few of the things he said during the course of my speech.

"First, I was extremely glad to hear him say that he is against the establishment of fixed nuclear weapons in this country. Second, I was also glad to hear him say that he is against the setting up of bases in countries whose future is uncertain, which bases often become hostages, and seem ultimately to dictate policy rather than serve it."

On March 1, the following remarks were made on the floor of the House of Commons by Sir J. Smyth:

"The dispersion and mobility of our deterrent weapons need improving. Obviously, if our potential enemy knows exactly where the deterrent weapons are, the effect of the deterrent itself is not so great."

On that same date, Sir A. Spearman spoke as follows on the floor of the House of Commons:

"I believe our influence in the world in the future will depend upon our economic strength, upon our possession of mobile forces to carry out our commitments and, above all, on our contribution to NATO."

And on March 1, Mr. Hugh Gaitskell asked the following question in the House of Commons:

"Why did the government take so long to realize the drawback of the fixed land-based liquid fuel missile? It is surely obvious that on grounds of vulnerability, on the ground of protection of the civilian population, there was everything to be said in favor of a mobile rocket."

I believe, Mr. President, that these few excerpts from the debate in Great Britain illuminate the rather striking shift in thinking on the nature of an effective deterrent to all-out war.

An ever-mounting emphasis on two words—"mobility" and "dispersal"—is found in almost every thoughtful statement concerned with the defense of our Nation against nuclear attack.

I raise these points today because we in the Congress now considering the military appropriations bill have a rare occasion to participate in the planning of our basic military structure, an opportunity for those of us whose principal interest is the advancement of American foreign policy to point out the relevance and the importance of considering military planning as only part of our overall foreign policy thinking.

Finally, I should like to read a statement from a recently published British book, "Defense Policy and Strategy," by Air Vice Marshall E. J. Kingston-McCloughry, a statement which reflects the thinking of an officer with long experience in the Royal Air Force, and who served as chief operations planner at the headquarters of the Allied Expeditionary Air Force for the invasion of Normandy during World War II.

"The mobility of these (aircraft) carriers will be greatly increased, particularly as they become nuclear powered, and this may well prove them less vulnerable than shore bases to attack by ballistic rockets. They could make a nation less dependent on foreign bases, a specially important consideration now that the United Kingdom has lost much of its influence in the Middle East. Already carriers can contribute in deterring an enemy from attacking a belligerent's homefront so long as there is at sea a powerful force ready to retaliate. Such a force would doubtless help to deter an enemy from beginning hostilities with nuclear weapons. On the other hand, the degree of offensive potential represented by the aircraft carrier is likely to draw attack by an enemy who see their destruction as of first importance. It seems, at least, that some very promising weapons for the protection of the aircraft carrier are under development. It also is reasonable to suppose that those very qualities which give the aircraft carrier its deterrent and offensive character, dispersal, mobility, and power of evasion, will contribute in no little measure to its own defense."

The emphasis on the value of aircraft carriers from an officer whose whole career has been spent in an air force which operated from fixed bases is of particular importance as we consider the defense appropriations bill. For in the efforts of some of us to rapidly increase the mobility of our deterrent force—to insure that we have a survivable second-strike force—we must not forget that the large aircraft carriers with their long-range strike aircraft and Polaris type submarines are increasingly important components of such a force.

My views on the need for modernizing and strengthening our conventional forces, for providing them also with greater mobility and heavier striking power, so that we can deal with less-than-all-out war have been frequently expressed. I support the proposal of the Senator from Washington. It represents sound policy. Suffice it to say also, at this time, Mr. President, that the size and caliber of our carrier striking forces is an important measure of the ability of our Armed Forces to deal with conventional attack. The strike carrier is a dual-purpose weapons system, which is useful as part of the deterrent either to all-out war or to conventional attack. I support the inclusion of the carrier funds in the current bill.

I conclude with the hope that as the Senate considers this tremendous expenditure of public funds represented by the defense appropriations bill, we will all give the most careful consideration to the scientific and political developments which have been taking place throughout the world in recent months, and which have made obsolete much of the thinking on basic military strategy of the past decade.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. JACKSON. I yield to the distinguished majority leader.

Mr. JOHNSON of Texas. I asked unanimous consent that the amendment of the Senator from Washington be modified as requested, notwithstanding the order for the yeas and nays. Has the amendment been agreed to?

The PRESIDING OFFICER. It has not.

Mr. JOHNSON of Texas. I ask unanimous consent that it be agreed to.

Mr. SALTONSTALL. Mr. President, before action is taken on the modified amendment, I would like to make a statement. I have waited 2 hours to do so.

Mr. JOHNSON of Texas. I yield to the Senator from Massachusetts.

Mr. SALTONSTALL. I wish to insert in the RECORD at this point figures which show what we are doing.

The budget figures for Army procurement are $1,337 million.

With the unobligated balances from previous years the Army could contract for $1,524 million.

Less amount of contractual items not contributing to Army modernization, $360 million.

This left $1,164 million for Army modernization. The committee, under the leadership of the Senator from New Mexico [Mr. CHAVEZ], increased this amount by $162,102,000, to a total of $1,326,102,000, for modernization of equipment.

In addition, there is a certain amount of military assistance program reimbursements, which may or may not amount to about $120,000. What the figure is no one can tell until it actually comes in.

So there was made available by the committee $1,326,102,000, plus these MAP reimbursements.

The Senator from Washington has added $140,100,000 to what the committee did, making a total of $1,466,202,000, plus the MAP reimbursements. He has now modified that amount by $50 million less. So that the net amount that we are now voting for on Army procurement modernization is $1,416,202,000, plus whatever the MAP reimbursements may amount to.

I wish to make these figures clear, because the Senator from New Mexico is accepting the amendment of the Senator from Washington, and I wish to make it clear that the Army has practically $1,416 million available for modernization of its weapons.

Mr. JACKSON. Mr. President, I merely wish to clarify one point. My amendment has been reduced by $50 million from the amount which was initially proposed. It was done at the suggestion of the distinguished Senator from South Dakota [Mr. CASE]. I wish to express my thanks to him for his support of my original amendment and his suggestion of a modification that not only was helpful but acceptable to the committee.

Mr. CASE of South Dakota. I thank the Senator very much for his remarks.

Mr. JACKSON. I yield to the Senator from New Hampshire.

Mr. BRIDGES. Mr. President, we have heard a great deal said about the modernization of the Army. The bill came to the Senate with a $37 million increase by the House of Representatives over the budget for the purpose of modernization. The House also provided that the money received from the sale of surplus material equipment to our allies would go into procurement for modernization which, however, the Army had anticipated in its original figures. What did the Senate do? I heard the Senator in committee bring it up and say that we should provide more for the modernization of the Army. I was in favor of it and therefore voted for the sizable increase the committee made.

I believe that the Committee on Appropriations acted wisely and well in its consideration of every subject, straight down the line. Efforts were made to increase appropriations for various items. We added various items. We added a carrier. We added the Bomarc. We put in the B–70's. In the matter of Army modernization we provided for an increase over the House of $125,000 thus making an increase of $162 million over the budget. I believe we were very fair. Personally I feel we should support the committee rather than, at the last minute during the debate in the Senate, be railroaded into increasing these appropriations. It is only fair that the committee be supported.

Apparently, from the word I have received, there is going to be an overwhelming majority that will vote for this amendment, and perhaps for other increasing amendments.

I believe the committee acted wisely and soundly, after hearings. The action of the committee is fully justified, and the Senate, with all due respect to the junior Senator from Washington, should support the committee and should not accept the amendment the Senator from Washington has offered even in modified form.

Mr. JACKSON. I merely wish to state that in my earlier remarks—and I do not believe the Senator from New Hampshire was present at the time—I praised at length the work of the committee and the work of the able chairman of the subcommittee. I said that the Committee on Appropriations had done a fine job in connection with the Defense appropriation bill. We can have honest differences of opinion as to certain items with respect to which we believe we can improve the bill. I yield the floor.

Mr. RUSSELL. Mr. President, I have had some little acquaintance with this issue and in dealing with it. I did not attend all the hearings before the Committee on Appropriations, but I did undertake to read the hearings, and to familiarize myself with the questions that were at issue.

The question of the modernization of the Army is not a new one in the Senate. We have been wrestling with it for the past 4 years, to my certain recollection.

I was a few minutes late getting into a meeting of the Committee on Appropriations, and when I came into the hearing the Senator from New Hampshire, as he correctly has stated, was raising the issue of the modernization of the Army. A Senator who was sitting by me—I have forgotten who it was—asked me what I thought about it. I said that we had been whipsawed on this issue for several years. I said we had appropriated funds for the modernization of the Army above the budget estimate, but that the funds had not been expended.

Time and again the committee and the Senate have been put in the position of being blamed for increasing the appropriations for defense or increasing the total budget—they have never pinpointed it by calling it defense—without increasing the armed might of the United States in any degree, because those who handle the appropriated funds have refused to expend the money.

For that reason, I favored a nominal increase above the budget. I made the motion to increase the amount by $125 million over and above what was carried in the House bill. I did it with full knowledge of the fact that there had been carried over from the previous year approximately $340 million of appropriations which had not been expended. Of that amount, $175 million had been impounded or reserved, or whatever the Budget Bureau does to funds appropriated by Congress. They had not even been earmarked or allocated for expenditure. So I did not desire to make a large appropriation, and increase the blame on the Democratic Congress for being prodigal spenders, because I knew by doing so we were not going to increase the armed might of the United States to any considerable degree.

I regret that we have found it expedient to accept this increase, not because the money could not be properly expended, but because it never will be expended. I ask Senators to watch this prediction. Congress will be blamed for prodigal appropriations when the moneys have been impounded.

Mr. President, I wish to refer to one or two things which were discussed by the Senator from Washington. I do this without any desire or intention to be critical of the Senator from Washington. The Senator has rendered one of the greatest public services I have seen in recent months by the hearings he has conducted with relation to the operation of the executive branch in planning for the national defense. The hearings have been marked by dignity and good judgment.

However, the Senator did not give the Senate the full picture concerning some of the figures he used. It is queer, but when we exceed the budget estimate the increased amount of the appropriation probably will not be spent. I know all of it will not be spent. The Army will issue a release as to what it will spend the money for, and the amount that can be used. But when the budget estimates are sent to Congress they are stamped "Secret."

The Senator from Washington referred to 300 tanks. I must say, in defense of the Committee on Appropriations, that I would not have the American people believe that that is the entire number of tanks provided for in the budget. Three hundred is the number of tanks which the Army intends to purchase with the increase the Senate committee made above the budget estimate. The Senator from Washington meant that, of course, but his statement was not clear.

Mr. JACKSON. The Senator from Georgia is correct.

Mr. RUSSELL. I appreciate the Senator's affirming it.

In addition to budget estimates being stamped all over with "Secret" in the original budget—I never have known just how far to respect that classification in a matter like this when the Army gives out what we put in, although we did not break it down and earmark it in committee and keep secret what was done—there is in the budget as it originally came to Congress more than twice that many tanks which will be in their program for next year. So we are making some progress in the modernization of our tank program.

The Senator from Washington likewise referred to the 120,000 new, smaller caliber rifles which have been made uniform, I understand, by all the NATO powers. I am not altogether happy about that rifle. I remember hearing a great deal during the war to the effect

that the 30-caliber equipment of the U.S. Marines and Army forces in the Pacific was much more lethal than the 25-caliber Japanese rifle. However, we have now adopted practically that caliber rifle in the new automatic gun.

Anyway, there is a large number of those rifles in the original budget stamped "Secret," in addition to 120,000 which the Army said they would acquire with the $162 million which is over and above the budget estimate. I say that not because I am content with the rate of progress of the modernization of our Army. But I do so in order that the American people will not think we are entirely negligent in our procurement program. I also do not want the American people to get the false impression that Congress is entirely derelict in attempting to measure up to its constitutional responsibilities to provide for the armed services of the United States.

I hope that the predictions of the distinguished Senator from Washington as to what will happen next year in the allocations of these funds will come to pass; but for the time being I am frank to say that I believe by increasing the funds we have subjected ourselves to increasing blame for vast appropriations without substantially increasing the armed might of the United States.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the yeas and nays, previously entered, be vitiated.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, for a good many years, we have lived in a world made tense by the threat of totalitarian dictatorship bent on imperialistic expansion. This tension has been heightened by the exploring progress in the technology of destruction, and by the vast military strength, in all types of forces, maintained and increased by the source of this threat—the Communist bloc.

It is obvious that there is no cause for relaxation in the tension to which I refer. On the contrary, numerous recent events have had the effect of giving grounds for tension and concern to increase.

To illustrate my point, I need only mention the Soviet Premier's action in deliberately torpedoing the summit conference in Paris in this past May, followed by his violent, abusive, personal attacks—without any precedent on the part of a responsible chief of state—upon the President of the United States. Providing an ominous echo, there have been the missile-rattling threats of the Soviet Minister of Defense.

Aside from the actions of the Communists themselves, there have been the occurrences of recent months in Korea and Japan and Turkey. The unrest in these countries, which occupy key strategic locations on borders of the free world, provides cause for concern over the possible effect upon the stability of government in those critical areas—and therefore cause for concern over the possible effect upon the stability of the free world's ability to maintain a solid, effective and unbroken front against the incursions of communism.

As the leader of the free world, the United States has major responsibilities. To meet those responsibilities in the light of the difficult and threatening conditions which exist, we have created a framework of international agreements for mutual defense. We have subscribed wholeheartedly to the principle of collective security. In support of those agreements and that principle, we have sent our military forces overseas, to share with our allies the vital task of maintaining a constant guard along the Iron and Bamboo Curtains.

The part played in this task by U.S. Army units is especially important. They provide the nucleus of the free world forces which stand ready to oppose any aggression by the massive, modernly equipped ground forces of the Communist bloc. It is these free world forces to whom the people of allied countries look to preserve their territory from being overrun—to be defended, not liberated.

Now, what is the condition of these American forces upon which so much depends? Their individual members make up the most highly qualified, thoroughly capable Army which this country has ever mustered in time of peace. From this, we may all take pride. When we consider their arms and equipment, however, the same pride is not so justified. Our soldiers wear the uniform of the richest, most technically proficient, most scientifically advanced and most highly industrialized nation in the world. Yet it is a regrettable fact that in many key items, due to the lack of availability of funds for modernization, their weapons and material are badly worn through age and use, outmoded by advances in design, or available in less than satisfactory quantities.

This situation can be condemned on a number of grounds.

In the first place, it is unthinkable that American soldiers should be asked to fight with munitions which are in many cases inferior to those in the hands of their potential enemies.

In the second place, the numerical superiority of the Communist forces under arms makes it imperative that our own forces be at least the Communists' equal in quality.

Third, there is the effect upon the peoples of allied countries. For them to adhere to the common cause with maximum strength, they must be able to feel that there is justification for hope that this cause can prevail.

Finally, if our forces are to achieve their primary objective—which is to deter war—they must have the means which convince a would-be aggressor that his attack would be doomed to fail.

In sum, it is self-evident that reason, national self-interest, and the success of the collective security effort all dictate the thorough and speedy modernization of the weapons and equipment of the U.S. Army. Any one of these reasons would be sufficient in itself. Together, they provide a weight of evidence which cannot possibly be disregarded.

The PRESIDING OFFICER. The question is on agreeing to the amendment, as modified, of the Senator from Washington.

The amendment, as modified, was agreed to.

Mr. WILLIAMS of Delaware. Mr. President, I offer an amendment on behalf of myself and my colleague [Mr. FREAR].

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. At the appropriate place, it is proposed to insert the following:

Provided, however, That none of the funds appropriated in this Act shall be used except that, so far as practicable, all contracts shall be awarded on a competitive basis to the lowest responsible bidder.

Mr. WILLIAMS of Delaware. Mr. President, a similar amendment has been approved by the Senate on previous occasions. I have talked with the chairman of the Subcommittee on Defense Appropriations about it, and I understand he is agreeable to accepting it.

The amendment merely provides that, so far as practicable, all contracts made under the bill shall be awarded on a competitive basis to the lowest responsible bidder.

On numerous occasions the Comptroller General has called the attention of Congress sharply to the fact that many such contracts have been awarded on a negotiated basis, when in reality they could very well have been awarded on a competitive-bid basis. In many cases even when bids are solicited they are not always awarded to the lowest bidder.

We all recognize that some parts of the defense procurement cannot be placed on a competitive-bid basis; for instance, contracts for the development of new missiles or other new weapons. Procurement of these new weapons must be handled on a negotiated basis.

However, many articles are standard items, and they can be purchased on a competitive-bid basis. Therefore, I believe that in the interest of saving hundreds of millions of dollars annually, the amendment should be approved.

Only the other day, I called the attention of the Senate to the fact that the Defense Department had bought 272,000 standard-sized screws. The screws were produced for 5½ cents apiece by the manufacturer. Yet under a negotiated contract with the Air Force, the Air Force contracted to buy some 272,000 screws at a cost of $1 apiece. The Air Force thus paid $272,000, under a negotiated contract, for an article which the contractor itself had produced as a standard article for about $15,000.

Mr. President, such a waste of money is indefensible. The Comptroller General has strongly criticized this procedure, and evidence has been presented on many occasions that if the Defense Department would solicit competitive bids and award contracts to the lowest responsibile bidders, an estimated $1 billion a year could be saved. That amount would either provide $1 billion more for

defense, or could be passed on as a saving to the taxpayers.

As another example, the Chrysler tank plant at Newark, Del., recently lost a contract; yet its bid was $50,481 lower than that of the Detroit division which was awarded the contract. This is an indefensible waste of the taxpayers money and it should be stopped. I think that in all instances the lowest responsible bidder should be awarded the contract. I think the taxpayers are entitled to that protection and when this procedure is not followed it raises grave questions as to the propriety of the negotiations.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. JAVITS. The Senator from Delaware has introduced a bill on this subject, and I, together with my colleague from New York [Mr. KEATING], have introduced a similar bill.

If the Senator will allow me to do so, I should like to join with him in offering the amendment. At least, it is a step forward in a very trying area. We have insisted that even in the case of negotiated bids there is room for competition, and there ought to be competition. I am delighted to see the Senator from Delaware pursuing this line.

I hope it will be very clear, from the record, that negotiated bids also are included in the amendment which the Senator is offering.

Mr. WILLIAMS of Delaware. That is correct, it is intended that they be included. I appreciate your support.

Mr. President, I ask unanimous consent that the names of the senior Senator from New York [Mr. JAVITS], the senior Senator from Illinois [Mr. DOUGLAS], and the junior Senator from Wyoming [Mr. MCGEE] may appear as cosponsors of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. KEATING. Is the wording of the Senator's amendment so clear that it includes competitive negotiations?

Mr. WILLIAMS of Delaware. It is. That is the intention of the amendment, and it is being made clear that this is the legislative intent. The amendment includes the words "except that, so far as practicable, all contracts shall be awarded on a competitive basis to the lowest responsible bidder."

It has been pointed out, and very properly so, that certain items purchased by the Defense Department cannot be purchased on other than negotiated terms. So we have provided discretionary authority, for cases where new weapons are being bought. Competitive bids would not be practicable in the development of a new missile for instance.

Mr. KEATING. As the Senator from Delaware knows, I have sponsored legislation and have testified before the Committee on Armed Services on this subject. It is my feeling that wherever possible, open competitive practices should be engaged in with regard to Government contracts. Such a policy is in keeping with our free enterprise system and the need to insure economical utilization of taxpayers' dollars.

I think that if the words "so far as practicable" are included in the amendment, that is something which leaves enough leeway so as not to hamper anyone in the field, and yet achieve the objective we seek.

I also recognize the fact that in many of these programs it is necessary to negotiate contracts. Nevertheless, it is very important that they not be negotiated with any single firm, but that many may have the opportunity to negotiate. That is the philosophy behind the legislation I have proposed in this field. Therefore, I support the Senator's amendment wholeheartedly, and I ask unanimous consent that I also may be joined with him as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROXMIRE. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. PROXMIRE. I, too, join in complimenting the Senator from Delaware. This is a very important amendment, in view of the fact that in fiscal 1959, as I understand, out of $22,700 million of procurement, by the Defense Department, $19.6 billion was negotiated, and only $3 billion was subject to competitive bids. I may point out that this is a far smaller share——

Mr. STENNIS. Mr. President, I rise to a point of order.

The PRESIDING OFFICER. The Senator from Mississippi will state it.

Mr. STENNIS. The Senate is entirely out of order.

The PRESIDING OFFICER. The Senate will be in order.

Mr. PROXMIRE. Mr. President, I may point out that this is a far smaller share of procurement in competitive bidding than a very few years ago, and competitive bidding in Government contracts has been steadily declining. I may also state that of the negotiated bidding, the share of small business was only 11.8 percent, whereas the competitive bidding was approximately 47.5 percent.

This amendment is a very good one; and I hope the Defense Department will recognize that it is a very good amendment and should be adopted.

Mr. President, I ask unanimous consent that my name be added as a cosponsor of the amendment.

Mr. WILLIAMS of Delaware. I thank the Senator for his support.

The PRESIDING OFFICER. Without objection, that will be done.

Mr. ALLOTT. Mr. President, will the Senator from Delaware yield to me?

Mr. WILLIAMS of Delaware. I yield.

Mr. ALLOTT. I thank the Senator from Delaware for yielding.

I have joined him before in sponsoring similar amendments; and I endorse this principle now, as I have done wholeheartedly in the past.

For the reason that I believe the sense of the Senate is now fairly well determined, I shall not speak further at this time; but I ask that my name be added as a cosponsor of the amendment.

Mr. WILLIAMS of Delaware. Mr. President, I request that the name of the Senator from Colorado be added as a cosponsor.

The PRESIDIING OFFICER. Without objection, it is so ordered.

Mr. WILLIAMS of Delaware. I appreciate the Senator's support; and I know that he, too, has worked hard toward having the Defense Department exercise sound business practices in their procurement program.

The adoption and the proper enforcement of this amendment will save the taxpayers millions of dollars annually.

Mr. BRIDGES. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. BRIDGES. I should like to join the Senator from Delaware in supporting and sponsoring the amendment, and I ask that my name be added as one of its sponsors.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BRIDGES. Mr. President, I have always advocated the principles of the amendment.

I wish to obtain the floor in my own right, a little later. But at this time I desire to compliment the Senator from Delaware for submitting the amendment, and I join in supporting it.

Mr. WILLIAMS of Delaware. I welcome the support of the Senator from New Hampshire.

Mr. CASE of South Dakota. Mr. President, I suggest the facts on the purchase the Senator mentioned be referred to the Justice Department and that action be instituted for fraud against the Government.

Mr. WILLIAMS of Delaware. The particular case to which I have referred has been referred to the Department of Justice, both on the basis of the report by the Comptroller General and on the basis of my own statement in regard to it.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware.

Mr. WILLIAMS of Delaware. Mr. President, I promised to yield first to the Senator from Illinois [Mr. DOUGLAS].

Mr. DOUGLAS. Mr. President, I am very glad to join the Senator from Delaware in supporting this amendment, because I believe it lays down correct principles.

Nevertheless, I think it proper to state that we should not expect too much from the amendment, which provides that competitive bidding shall be used "so far as practicable." That provision is an escape hatch which can be used by the armed services, just as they do in the case of the present law. For example, the present act provides that:

> All purchases and contracts for supplies and services shall be made by advertising, except that such purchases and contracts may be negotiated by the agency head without advertising if—

And then comes a series of approximately 10 exceptions. So there is ample law at the present time.

As a matter of fact, by an Executive letter President Truman, in transmitting that law to the various armed services

in 1948, said these escape hatches should not be used as a means of destroying the purposes of the law.

Nevertheless, as we have pointed out over and over again, the armed services have disobeyed the principle of the law—so much so, that 86 percent of the dollar volume of purchases is made under negotiated contracts.

I fear very much that this will likewise be the fate of this amendment; and, although I am very glad to support the amendment, we should not think we are disposing of this problem by adopting this amendment. It is valuable as a declaration of a continuing intent by Congress.

In addition, I wish to call attention to a recent report by the Comptroller General of the United States, dated May 19, on the administrative management of the ballistic missile program of the Air Force. His report is caustically critical of the mismanagement of that program; and on page 107 and the following pages he points out that the Air Force refused to permit the Comptroller General to see its records, and claimed executive privilege as against the Comptroller General; and when the records were finally made available, they had been carefully screened, and much material had been removed; and the Comptroller General was then compelled to make a duplicate investigation. I am informed that this cost $125,000, and even then it did not result in making available the material which would have been fully available in the Air Force files; and the results of the investigation were consequently badly delayed.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD an excerpt from pages 107 and 108 of the statement or report by the Comptroller General.

There being no objection, the excerpt from the statement was ordered to be printed in the RECORD, as follows:

ACCESS TO SIGNIFICANT RECORDS DENIED

In contravention to statutory requirements, the Air Force has denied us access to basic information, records, and reports, including reviews by responsible officials of the progress of the ballistic missile program and the steps taken to identify and correct problem areas and delays in the program. These denials were made pursuant to policies and procedures of the Departments of Defense and the Air Force, not because of military security reasons but, instead, on the basis that the records contain "privileged" information which could be withheld by the executive branch of the Government. In our opinion, the information, records, and reports withheld from us are essential to the proper performance of our audits and reviews of the operations of the Department of the Air Force in the management of its ballistic missile program. These restrictions have impeded the progress of our audit and have prevented us from fully discharging our statutory responsibilities to conduct independent and searching examinations in order to report to the Congress and management officials conditions or circumstances which need attention and improvement so as to effectively accomplish the program and prevent the unnecessary expenditure of money, manpower, and material.

Those records which were made available to our staff were not released until they had been screened. This in effect resulted in removal from the official files of any material that the Air Force felt we should not have. This screening, editing, and censoring of information regarding the exercise of powers, the discharge of duties and responsibilities, the conduct of activities and financial transactions, and methods of business leaves us in the position of having to establish our findings, conclusions, and recommendations without access to pertinent facts and information which the Air Force decides to withhold from us rather than on all facts and information in possession of the Department. While the extent to which material had been withdrawn from official files prior to release of the files to us was not determinable by us, we noted instances where it was evident that information of a critical nature had been withheld.

This screening procedure not only resulted in the withholding of an undetermined amount of information but also was very wasteful. Considerable time and effort were required on the part of Air Force and contractor personnel to perform this screening and to forward any questionable material to higher echelons for review as to possible release to us. This in turn caused substantial delays in our review.

Mr. WILLIAMS of Delaware. Mr. President, I thank the Senator from Illinois for his support. I agree fully with him that the amendment does not do the entire job which must ultimately be done if we really correct this abuse. However, that can be done only by the enactment of legislation covering all procurement by the Government and I will continue to work with him toward that objective. It is indefensible for the Department of Defense to continue to purchase so much of its equipment by means of negotiated contracts, rather than competitive bids. It is true that this amendment can only cover the spending of the $40 billion in this one bill.

However, this amendment will be a major step in the right direction; and, at least, it will safeguard the expenditure of the funds provided under this bill which accounts for about one-half of our annual budget. It specifically instructs the Department of Defense to seek competitive bids and award the contracts to the lowest bidders.

I know that a more complete job needs to be done. The Senator from Illinois has sponsored legislation on previous occasions, and in which I have joined, but we have not been able to get our bills adopted.

This amendment being offered here today, while not covering procurement by all agencies of the Government, will cover the buying of the Defense Department. They are the largest buyers in Government and they have been the worst violators of this sound business practice.

Mr. LAUSCHE. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. LAUSCHE. Mr. President, today I have been in committee meeting, and have not previously been able to be on the floor.

But no class of mail which I receive today exceeds in volume the mail in which complaints are made about the expenditures and the purchasing activities of the Department of Defense, particularly as regards its procurement practices.

So I should like to join the Senator from Delaware in sponsoring this amendment; and I ask unanimous consent that my name be added as one of its sponsors.

Mr. WILLIAMS of Delaware. Mr. President, I am glad to have the support of the Senator from Ohio.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LAUSCHE. Mr. President, I do not believe a single Governor in the country would fail to be profoundly alarmed if his procurement officers were making purchases on the basis of negotiated contracts, instead of competitive bids.

Competitive bidding has been accepted as the sound method of doing the public business, for in that way all prospective vendors have a chance to bid, and the awards go to those who make the lowest bids. That system eliminates waste and fraud.

On the other hand, negotiation has a tendency to develop laxity and negligence.

I have been here only 3 years, Mr. President; but each year it has become rather painful for me to hear Senators beg the Department of Defense to use more widely the competitive system of awarding contracts.

So I wish to join my colleagues who have spoken on this subject today.

Mr. CURTIS. Mr. President——

Mr. WILLIAMS of Delaware. I yield to the Senator from Nebraska.

Mr. CURTIS. I thank the Senator from Delaware.

Mr. President, I desire to assure the Senator from Delaware that I support his amendment. The matter to which it relates is so elementary that it does not require detailed discussion. The amendment is businesslike, and I am glad to support it.

Mr. WILLIAMS of Delaware. I thank the Senator from Nebraska for his support. I am confident that our approval of this amendment and its proper enforcement will save the taxpayers millions.

Mr. JOHNSON of Texas. Mr. President, at this time I wonder whether we may have the yeas and nays ordered on the question of the passage of the bill, so that all Senators may know about that.

Therefore, Mr. President, on the question of the passage of the bill, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

The yeas and nays were ordered.

Mr. WILLIAMS of Delaware. Mr. President, I yield the floor.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware [Mr. WILLIAMS].

Mr. HART. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. HART. The junior Senator from Michigan realizes how appealing it is to advocate that all contracts be awarded to the low bidder on a competitive basis. I support the amendment of the Senator from Delaware, provided I have from him his assurance that this phrase,

which already has been criticized, that it be done so far as practicable, leaves open to a conscientious Secretary of the Defense the opportunity, notwithstanding that somebody is a low bidder on a competitive basis, to award the contract to someone else. I know this is not a politically popular twist, but if, in the judgment of the Secretary of Defense, because of a series of awards to the low bidder, there were to be concentrated in a certain region of this country so much of the defense work that, if that region of the country were destroyed by act of God or enemy, we would be in trouble, it could be possible that we would have been so busy saving money by awards of contracts to the low bidder that, all of a sudden, we might discover all the defense business was in California or Michigan or Delaware. If one of those areas went into oblivion, we might have saved money, but it would be at a very tragic cost.

I hope, in our enthusiasm to assure that the Department of Defense will award contracts on low bids, we will not forget that is not, in all cases, the soundest discharge of the public business.

Mr. WILLIAMS of Delaware. I appreciate what the Senator from Michigan has said. However, I want the record to be very clear that, if the amendment is adopted the award must be made to the lowest responsible bidder. The purpose of the amendment is to make sure that contracts will not be passed around to friends in Delaware, Michigan, or in any other State, but will be awarded to the lowest responsible bidder. Under this amendment the Department will solicit bids for all contracts and then award the contract to the lowest responsible bidder except only in those cases where the solicitation of competitive bids would not be in the best interests of the United States, for instance in the procurement of a new type weapon upon which there has been no experience.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware.

Mr. KUCHEL. Mr. President, the explanation which was just given by the Senator from Delaware prompts me to ask if the text of the amendment might at this time be read.

The PRESIDING OFFICER. The amendment of the Senator from Delaware will be read.

The LEGISLATIVE CLERK. At the appropriate place it is proposed to insert the following:

Provided, however, That none of the funds appropriated in this Act shall be used except that, so far as practicable, all contracts shall be awarded on a competitive basis to the lowest responsible bidder.

Mr. KUCHEL. Mr. President, I take it, from the answer given by the Senator from Delaware, that the amendment would not put a pair of handcuffs on the Pentagon in discharging its responsibility for the defense of this country if, with respect to any type of weapon system, it was determined by the proper authorities that competitive bids were not in the public interest. Is that correct?

Mr. WILLIAMS of Delaware. The Senator is correct. It was pointed out by the Defense Department that in connection with some contracts competitive bidding is not practicable. We might use, as an example, the building of the Titan or Atlas. Bids could not have been solicited, in this case because there had been no experience in that line. But when the awarding of contracts is desired for standard products, and there are available several sources of supply, the amendment provides that there must be solicitation of bids, and the contract must be awarded to the lowest responsible bidder.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware.

The amendment was agreed to.

Mr. BRIDGES. Mr. President, the perils this Nation and the free world face today make this the most important legislation to come before the Senate in this session.

First, I want to say that the bill as reported to the Senate is the result of close study under the dedicated chairmanship of the senior Senator from New Mexico [Mr. CHAVEZ].

The bill as reported is a sound bill. It is a balanced bill. It is a bill that is responsive to the defense needs of this Nation and the free world.

STAGGERING AMOUNT

The amount of the bill is $40.4 billion in round numbers—a staggering amount. It is about $1 billion more than the House approved. But it is needed.

Perhaps the day will come when we will not have to spend such huge sums for defense. But that day is not today, and it will not be tomorrow.

I am aware that there are those who think we should spend even more. My answer to that is this: The bill as reported goes far enough, without going too far. There has to be a limit, even in the field of national defense. Our defense program has to be one we can sustain. The committee bill offers such a program.

PARTICULAR ITEMS

Now I want to mention just a few items in the bill—items I am glad are included.

I am glad the bill includes $293 million, the budget estimate, for a conventionally powered aircraft carrier. The aircraft carrier can play a vital role in limited, as well as nuclear war. It has great striking power plus mobility. Both capabilities are extremely important.

For a similar reason, I am glad the bill includes $203 million over the budget estimate for more Polaris submarines.

I am also pleased that the committee has added $285 million to the bill for development of a complete B–70 weapons system.

By its action today the Senate has approved $252,202,000 for Army modernization above the budget request of $1,337 million for Army procurement. In addition, the Army will have available, under the Senate bill, all amounts of military assistance program reimbursements, estimated at $120 million.

Another important provision in the measure contains language saying that not less than $200 million of aircraft procurement money will be for transport aircraft suitable for the movement of fully equipped troops and combat equipment. We must be able to get troops armed with modern weapons and equipment to trouble spots in a hurry.

I want to mention just one other among the many items in this legislation of which I think all of us are in strong support. That is an additional $50 million above the House figure for maximum acceleration of the reconnaissance satellite program, Samos. We must have this program quickly to prevent surprise attack and to provide vital intelligence.

I intend to support the committee bill, and I hope my colleagues in the Senate will do likewise.

In conclusion, Mr. President, I ask unanimous consent to have printed in the body of the RECORD at this point in my remarks a brief statement on the progress that has been made by our Nation's Department of Defense in the past 7 years.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE DEPARTMENT OF DEFENSE—1953–60

During the past 7 years, the Department of Defense has assisted the President in carrying out his original pledge "to give our Nation maximum safety at minimum cost." In achieving this objective, we Republicans have followed a steady, carefully planned course which avoided the waste that can be caused by groundless fears or by complacency.

In the reorientation of our military policy, emphasis was placed on maintaining flexible forces capable of countering any aggression, from limited emergencies to all-out nuclear war, and on taking full advantage at all times of the revolutionary advances in weapons technology.

In 1953, our strategic retaliatory forces consisted of propeller-driven B–36's and some medium-range B–47's. Today the B–36's have been replaced by B–52 jets, and supersonic B–58's are augmenting our B–47 striking power. After the feasibility of light-weight nuclear warheads became evident in early 1954, thousands of smaller land- and carrier-based aircraft also acquired a nuclear capability, and the development of long-range ballistic missiles assumed new promise.

The American people can be justly proud of the achievement of their scientists, industrialists, and Armed Forces in the ballistic missile field. Within the short span of 3 years, the Thor and Jupiter 1,500-mile missiles were brought from drawing board to operational availability. For the 5,500-mile Atlas, the time span was 5 years, and our programs call for Polaris-armed submarines to become available in 1960, advanced Titan missiles in 1961, and the second generation Minuteman in 1963. These programs, together with the retaliatory forces now in existence, assure the continued effectiveness of our strategic deterrent.

Similar substantial progress has been made in all other phases of our defense effort. In early 1953, no guided missile system was operational; today, surface-to-air and air-to-air missiles have many times increased the effectiveness of our air defense effort on land and at sea, and our ground forces with their surface-to-surface missiles have achieved unprecedented striking power. A new age in

ship propulsion was inaugurated in 1955 with the commissioning of the *Nautilus*, and nuclear power is being used since then whenever combat advantages justify the additional cost. The Army's new Pentomic divisions reflect the adjustment of its tactical doctrine to the nuclear age, and the Marine Corps perfected new vertical envelopment techniques for amphibious landings. Never have our Armed Forces experienced as radical a change in the art of warfare and never has their adjustment to such changes been more rapid.

The 2,500,000 men and women in the Armed Forces are backed by a revitalized Reserve Establishment, readier than ever before in our history for an emergency, and abroad over 40 nations are being assisted with arms and equipment, supporting with our help about 5 million ground troops, 2,500 combatant ships, and 30,000 aircraft, and making available for our use some 250 strategically located bases. This global cooperative effort provides a shield without which the free world could not pursue its vital programs for social and economic progress.

The policies and programs carried out during the past 7 years have given the United States a Defense Establishment ready to meet the challenge of any aggressor at any time. Current policies and programs assure the safety of our country in the years ahead.

Mr. BRIDGES. Mr. President, on the issues which have been discussed, whether it be the B–70, the Polaris submarine, the aircraft carrier, the modernization of the Army, satellites, or any other subject, the subcommittee rose to great heights and acted very nearly unanimously on very important issues. I think the chairman of the subcommittee is to be complimented. I want to pay a tribute to him and to all the members of the subcommittee, particularly the Senator from Massachusetts [Mr. SALTONSTALL], who is the ranking minority member of the subcommittee, for working so closely on the bill. I have never seen the committee produce a better bill, and I hope it will not be further amended.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. DOUGLAS. Mr. President, on behalf of myself and the Senator from Pennsylvania [Mr. CLARK], I send amendments to the desk, and ask to have them stated.

The PRESIDING OFFICER. The amendments offered by the Senator from Illinois, for himself and the Senator from Pennsylvania, will be stated.

The LEGISLATIVE CLERK. It is proposed, on page 3, line 20, to strike out the amount "$605,146,000" and insert the amount "$639,646,000".

On page 3, line 25, it is proposed to strike the period, insert a semicolon in lieu thereof, and insert the following additional language:

Provided further, That the strength of the Marines at the end of fiscal year 1961 shall be not less than 200,000.

On page 12, line 23, it is proposed to strike the amount "$174,796,000" and insert the amount "$180,296,000".

The PRESIDING OFFICER. Does the Senator from Illinois desire that the amendments be considered en bloc?

Mr. DOUGLAS. Yes.

Mr. President, I am very happy that the distinguished Senator from Pennsylvania [Mr. CLARK] is a cosponsor of this amendment.

I think this is the best investment in national security which we could make, because the added $40 million would give us, at the end of the next fiscal year 25,000 more fighting members of the Marine Corps and would bring our combat units up to strength. I have checked these figures, and I believe them to be approximately correct.

Mr. President, we are properly concerned, of course, about the possibility of a ballistic missile attack by the Soviet Union upon us. This is a real danger. However, what is more likely to occur is a series of probing operations by the Communists on the outskirts of the free world. If we do not have adequate conventional ground forces, we are likely to find the free world being nibbled away. Great Britain has been reducing its ground forces very markedly in recent years. The French divisions are tied down in Algeria.

We in turn have, unfortunately, decreased our ground forces in recent years. The Army a few years ago consisted of 15 old-fashioned divisions, but this has been reduced. I noticed the statement was made today that the Army has 14 divisions. I cannot believe those are fully equipped and manned divisions ready to take the field. I think there is a good deal of padding in that figure, beyond question.

The Marine Corps has been reduced from a strength of 215,000 men. It is true that in times past Congress has twice declared it wanted to have the Marine Corps increased in strength to 200,000 men, and has appropriated funds which would have accomplished this purpose. This has been in the form of a mandate. It is true, however, that each time the administration has refused to carry out the mandate of the Congress.

A general feeling of frustration creeps over all of us in dealing with the administration in these matters. We appropriate money for more adequate national defense. We lay down a mandate. Then the administration disregards it. It is then said, "Why not abdicate, and let the administration run the show?" I do not think that is really the proper thing to do. We in Congress have a responsibility, also. I think we should try to provide the administration with sufficient funds and with a mandate, so that the administration may disregard it at its peril.

I think, under the Constitution, the President does not have the right to disregard the direct injunction of the Congress in these matters. I think he is acting unconstitutionally. I should like to see the issue tested in the courts, but apparently this is not to be done.

I think we should give a mandate to the President about the size of the Marine Corps, exactly as we have given a mandate with regard to competitive bidding on contracts rather than the negotiation of contracts.

We shall have a new administration in January. I hope it will be a Democratic administration. If it is a Democratic administration, I think it is probable that the mandate of the Congress will be carried out and not disregarded, and that we will have, therefore, a more effective and stronger Marine Corps if we will only give the word. I am sure this is highly desirable for the welfare of the country.

Mr. President, I hope very much that our good friend from New Mexico will accept the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Illinois.

Mr. CHAVEZ. Mr. President, no one is more sympathetic with or partial to the Marines than is the chairman of the subcommittee, but General Shoup, the commanding general of the Marine Corps, did not make very much of a showing in favor of an increase. It was General Shoup who convinced us he did not need more marines.

I am a marine at heart. My boy was a marine for 54 months, serving in the Pacific. Only 14 of the 72 assigned returned and he was one of the 14. We are thankful to the good Lord for that.

Nevertheless, I think this is not the time to do as the Senator suggests. There are several reasons. We have provided everything General Shoup said he wanted. He wanted no more. He is the one who convinced us.

The full committee acted on the proposal, and the full committee took the action now before the Senate. I do not feel justified in accepting the amendment. I would rather have a mandate from the Senate. I do not feel that I can accept the amendment and take it to conference.

Mr. DOUGLAS. The Senator would not vote against the amendment if it were submitted to the vote of the Senate, would he?

Mr. CHAVEZ. Of course I would not.

Mr. DOUGLAS. The Senator encourages me, then.

Mr. CHAVEZ. As I say, I prefer to have a mandate from the Senate.

Mr. DOUGLAS. Mr. President, I ask for the yeas and nays on the amendment.

The yeas and nays were not ordered.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. DOUGLAS. I am glad to yield to the Senator from Montana.

Mr. MANSFIELD. I express the hope that the distinguished chairman of the subcommittee will give very serious consideration to accepting the amendment and taking it to conference, because it implies the action we have taken several times before.

Mr. CHAVEZ. I believe the Senator from Massachusetts [Mr. SALTONSTALL] has some remarks to make with regard to the amendment. I will make a decision after the Senator speaks. He may convince me.

Mr. SALTONSTALL. Mr. President, as one who has the highest regard and respect for the Marine Corps, as one whose son was a member of the Marine Corps, as one who has attended many Marine Corps banquets and has always been a supporter of the Marines, I hesitate to take a position against what the Senator from Illinois proposes; but I feel compelled to point out that last year the President emphasized very, very strongly

that he could not accept any Department of Defense appropriation bill which carried a mandatory requirement that the strength of the Marines or of the Army should be increased to any certain number.

The amendment which the Senator from Illinois has offered states in perfectly clear terms that there shall not be less than 200,000 marines at the end of June next year. I point out that to provide for the amendment which the Senator has offered there will be required $47,995,000 in addition to the amount in the budget request.

I know the Senator from New Mexico feels that this problem can perhaps be worked out in conference. I know the Senate adopted such a provision in the bill last year. I know, however, the strong feelings of President Eisenhower against a mandatory provision with relation to the strength of the Armed Forces.

I point out that although I think the amendment will be taken to conference, I, as one of the conferees, will do my utmost to see that the mandatory provision with relation to the strength of the Marines—the requirement that the strength be 200,000 men by June 30, 1961—is eliminated from the bill.

From the testimony which has been given to us, there will be an average Marine Corps strength for the year of 187,000 men. In his testimony before the committee, General Shoup did not ask for the additional personnel. General Shoup said, as was pointed out this morning—I think by the Senator from Illinois or by the Senator from Missouri—that not all of the units would be filled up, but that by eliminating some of the Shore Establishment, by eliminating some of the establishment at embassies, and so on, there would be an increase of two battalions of Marines who would be available for immediate frontline duty.

General Shoup also testified that although he would like to have more equipment, he was satisfied with what was provided and he thought the Marine Corps procurement was proceeding at a satisfactory rate.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. SALTONSTALL. I yield to the Senator from Pennsylvania.

Mr. CLARK. I should like to inquire of my friend, who is much more knowledgeable about the details of this problem than I, whether I did not hear clear testimony on the floor of the Senate from the Senator from Washington earlier today that as a result of the Marines being held down in strength—I think to 175,000 men—they would have only 90 percent of their combat troops available and only 68 percent of their combat support troops available, and consequently the three divisions of Marines would not be adequately manned and staffed for what I fear will be a pressing and almost immediate call to action, because of the very unsettled situation in the Far East?

Mr. SALTONSTALL. While I cannot give the exact percentage figures, I believe the Senator from Pennsylvania is not far from correct in what he has stated as to the percentages of the full Marine divisions.

General Shoup testified, I believe, that he had sufficient Marines at the present time short of a general conflict. If there was a general war and the Marines were called, he would have enough to get started but he would have to replenish his forces within the first 3 or 4 months.

Mr. CHAVEZ. May I quote the general's exact words from page 177 of the hearings? General Shoup said:

> We can do with the three combat division wings; we can put them into combat; we have the materiel and the manpower to keep them there for a considerable time. But then if, at that time and during that process, general war should occur we do not have anybody left in our posts and stations to do that other mission of handling Marine Corps mobilization which we are supposed to be ready to do.
>
> That is just exactly the holiday we have. That is exactly the risk we take by not having the 25,000 Marines.
>
> I suppose the logical question is, Is that an overpowering risk?
>
> I would like to point this out—that in my opinion, from my study of all the budget and all the hearings and everything, all the information I can get, to me it is an obvious conclusion that general war is not planned for fiscal year 1961.
>
> If it is planned, then I say openly that we ought to take the whole Defense Department, including me, out to sea and sink them, because there is nothing in any of these budgets that indicates that a general war is going to start in fiscal year 1961.
>
> If it is not going to start, then the Marine Corps can do all of the missions it has to do. If it is going to start, we cannot do it without 25,000 more Marines.

Mr. JOHNSON of Texas. Mr. President, will the Senator from New Mexico accept the amendment?

Mr. CHAVEZ. Yes, I will accept it and take it to conference.

Mr. DOUGLAS. I thank the Senator very much.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Illinois [Mr. DOUGLAS].

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. JAVITS. Mr. President, before the third reading of the bill, I wish to call attention to a section of the report which deals with small business procurement, and which states in its opening statement:

> The share of Department of Defense procurements being awarded to small business concerns in the form of prime contracts has developed into a serious situation. The percentage share of military prime contracts has spiraled downward from a high of 25 percent in fiscal year 1954 to 16 percent in fiscal year 1959. This affords a sad commentary on the effectiveness of the small business program of the Department of Defense.

Mr. President, that statement is a sad commentary, and it very materially affects my State and very materially affects other States which are in the same situation as we are. The whole balance of defense contracts has now shifted from the eastern part of the country to the west coast. We have been up and downhill upon this subject, and we admire the Californians for having been able to corral so much of this business. We are going to try to emulate them all we can.

But there is an area in which the East need not be neglected as it has been, and that is in the area of small business, especially in the area of subcontracting. It seems to me that when the committee feels moved to note a serious situation created in this field, those of us who have been disadvantaged and whose States have been seriously disadvantaged in respect to the defense contracts, have a right to draw attention to that condition and to demand of the Department of Defense that it do an infinitely better job than it has been doing, and to make the same demand of every other agency of Government that has to do with the allocation of procurement contracts to small business.

The committee goes on to suggest a very practical course in that regard. It suggests two things. First:

> Sole source procurements made with funds appropriated under this act should be kept at a minimum.

In other words, the maximum amount of subcontracting should be engaged in. I think it is up to those of us from States like my own to emphasize and underline the importance of the directive contained in the committee's report to the Defense Department. The State of New York pays almost 20 percent of the tax bill of the United States, and yet its share of defense contracts has slid down to about one-half of what it was.

As I have said, in a competitive situation, it is our job to sharpen our pencils and do a better job than we have done previously, but certainly in the area of subcontracting, where small business such as we have in New York, can be advantaged rather than disadvantaged, we have a right to demand of the Department of Defense better performance than the committee itself finds has been given in respect of this legislation.

The second suggestion made by the committee is:

> Determined effort should be made to increase the participation of qualified small companies in the vast area of research and development contracts.

On that score I call attention to the fact that section 9 of the Small Business Act of 1958 has a very material provision in it to enable small business to compete for research and development contracts, a provision which has been sadly unused. It provides that small businesses may combine, notwithstanding the antitrust laws, in order to get research and development contracts, and it gives the Attorney General authority to allow such combinations to take place, and, indeed, to keep an eye on them so he may withdraw his permission in the event that he finds that the privilege is being abused.

I have just obtained facts which show that there are only two pooling groups for research and development, and neither of them has a contract. One is in Denver, Colo., and involves 3 companies and 262 employees. The other is in Albuquerque, N. Mex., with 4 companies and 90 employees. There are eight other small business production pools,

and I am informed that none of these has contracts.

To some extent, of course, it is the fault of the small business concerns themselves, but we have charged at least two agencies of the Government—the Department of Defense and the Small Business Administration—with seeing that business gets a fair break in respect of Department of Defense procurements, of which we are constantly reminded.

There are expenditures of $22 billion a year, enough to change the climate for small business throughout the United States completely; and the committee itself finds that this job is not being done.

I have taken these brief few moments on the floor to register my demand, in which I hope Senators from other States like my own will join me, to register a demand that the Department of Defense get on the job and to do so at least in the way that the committee has suggested, considering the vast range of tools that we have, including the tools of the Small Business Act of 1958, which the Congress has made available, and considering the fact that this report represents in my view the manifest will of the Congress in this field.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

Mr. SALTONSTALL. Mr. President, I should like to speak very briefly. First I ask unanimous consent to insert in the RECORD statements on nine of the important matters that we have discussed today. They refer to Midas, Samos and Discoverer; the B–70 bomber; Army modernization; airborne alert; the aircraft carrier; airlift modernization; antisubmarine warfare; Polaris submarines; and Bomarc–F–106.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

MIDAS, SAMOS, DISCOVERER

For the Midas early warning satellite, the Samos reconnaissance satellite, and the Discoverer space research vehicle development programs the President's Budget contained $41 million, $199.9 million, and $15.1 million respectively. In addition, there are $60 million in the procurement account for application to these three programs, without allocation of that amount by program.

In the April 6 defense revision, the administration added $26.4 million to the Midas project and $35 million to the Discoverer project. The totals under the revised budget, therefore, were $67.4 million for Midas, $199.9 million for Samos and $50.1 million for Discoverer.

To these amounts the House added research and development funds of $10.2 million for Midas, $33.8 million for Samos, and $10 million for Discoverer.

The Senate committee did not approve the House add-on for Midas or Discoverer, but instead provided language in the bill authorizing transfer of up to $150 million to accelerate missile or satellite programs in the discretion of the Secretary of Defense.

In view of the suspension of further U–2 aircraft reconnaissance flights, the committee deems it of utmost urgency to accelerate to the maximum degree development of the Samos reconnaissance satellite program. Accordingly, we approved the $33.8 million added by the House and increased this by $50 million more. With the funds provided in the budget an operational capability was anticipated in calendar year 1963. The additional $83,800,000 provided by the committee may make it possible to attain operational capability fully a year earlier by increasing the number of Samos test launches and by accelerating the program.

B–70 BOMBER

While the President's budget provided $75 million for continued development of the B–70 manned bomber, these funds would only permit construction of two prototype airframes. By reprograming funds, the Air Force plans to apply $15 million develop the bomb-navigation system.

Gen. Thomas D. White, Air Force Chief of Staff, informed the Defense Appropriations Subcommittee that the two-prototype program is in trouble because of a shortage of about $20 million which are needed to keep the contractor on schedule. The subcommittee was also told it would require $285 million additional to the budget amount to permit the full B–70 weapon system development. The committee has allowed the full amount which will make possible an estimated first flight date of December 1962 and a first wing equipage date of August 1966.

Our present military forces consist of a mix of missiles and aircraft and it appears we will need to maintain a mixture of weapons in the foreseeable future, although the ratio of planes to missiles may change. Each weapon system has its advantages and disadvantages, which compels us to acquire both to meet the variety of threats which face us. Moreover, a variety of weapons for use in counterattacking an enemy greatly complicates his defense system.

For example, an airplane can be recalled; a missile cannot. If the alarm sounds indicating an enemy attack but this later proves to be false, the airplane can be diverted from its assigned target and its payload of bombs will not be dropped. With ballistic missiles, once shot, that is it.

A missile can be used once; manned aircraft over and over again.

Manned aircraft can obtain intelligence and damage assessment information essential to planning subsequent strikes. They also can attack mobile targets, which ballistic missiles cannot.

Aircraft can carry larger and greater yield weapons as well as multiple weapons; ICBM's at present can carry only one warhead and it is of relatively small yield compared to the payload of a bomber. Should nuclear weapons be banned at some future time, the load-carrying capability in terms of TNT of bombers assumes greater importance. Under such conditions missiles would be a very expensive means of delivering TNT against an enemy compared with the bomber.

Manned aircraft can seek out, discriminate, and attack targets with no sacrifice in accuracy and effectiveness; and they offer a greater range of flexibility in choice of targets. Furthermore, the pilot can use judgment when confronted with unexpected conditions, to disregard targets already destroyed and to use his weapons on alternate targets. In short, he has the ability to observe, think, and make unrehearsed decisions.

It is conceivable an arms control agreement may be reached, covering ballistic missiles, nuclear weapons, and space weapons. In such a situation, the manned bomber force may be our primary defense system. Therefore, we must continue with manned bomber development.

Piloted aircraft are useful in cold-war situations whereas ICBM's and IRBM's would have little application. The manned bomber force may be employed on a graduated scale without an irrevocable commitment to combat.

For these and other reasons, the committee was persuaded we should go full speed ahead on developing the B–70 bomber. This aircraft is being designed to travel its full range at mach 3, roughly 2,100 miles per hour. It represents a major aeronautical breakthrough, transcending the heat barrier. We were told that, in time of stress, a B–70 on alert over the polar regions could be over Moscow before an ICBM launched from the United States could reach the Russian capital.

The B–70 is expected to have good penetration capabilities, primarily because of its speed and altitude, and this would be enhanced by countermeasures, decoys, and air-to-surface missiles.

The B–70 is designed to carry several large bombs or a great many very small ones.

It is possible the B–70, designed with the crew far removed from the engines, may be adaptable for nuclear propulsion. It is also possible the B–70 could be used as a first stage space vehicle booster, from which space vehicles could be launched in midair rather than from the ground.

The maneuvering ability, speed, and large load-carrying capacity of the B–70 offers potential as an antisatellite weapons carrier and perhaps as a long-range platform for air-defense missiles.

The B–70 has potential as a rapid strategic airlift craft or as a mach 3 transport aircraft.

For all these reasons, the committee deemed it advisable to proceed with full development of the B–70 subsystems as well as the airframe so that the advanced aircraft would be available several years earlier than the budget contemplates. The House did not change the budget request of $75 million for the B–70.

ARMY MODERNIZATION

For procurement of modern equipment for Army troops, the Senate committee provided $162,100,000 more than the President's January budget request of $1,337 million and $125 million more than the House allowed.

The committee feels quite strongly that our troops should have the most up-to-date, effective armament and equipment available. There are thousands of items of equipment needed by our pentomic Army. The committee did not undertake to specify priorities among these many items for that is more properly an administrative function. The committee does, however, feel the Army should review its priority list to be sure the most urgent items are at the top of the list so that our troops will have in hand the most effective weapons with which to defend themselves and our country. The overwhelming sentiment of the committee is that the Army should divest itself of marginal procurement programs, some of which cost millions of dollars and do not provide commensurate increases in our military posture. The best defense is still the offense—and we should not indulge in glamor weapons at the expense of more urgent needs.

To understand the Army modernization picture better, it may be helpful to review the situation for the record. The Army testified that, except for $360 million of nonmodernization items, the entire amount in the Army procurement account is to buy new rifles, new vehicles, new missiles, new aircraft, and so on for the troops. Army witnesses told the Senate Defense Appropriations Subcommittee that the $1.337 billion in the President's budget, together with other financial resources of the Army, would finance an Army procurement program of direct obligations, or contracts, in fiscal year 1961 of $1.524 billion.

Of this amount, as I mentioned earlier, $360 million is for nonmodernization items,

leaving a total of $1.164 billion for Army modernization provided in the Budget figure. By adding $162,102,000 of cash to the budget, the Senate committee provided a total of $1.326 billion for Army modernization in fiscal year 1961. In addition to the cash, the Army will receive reimbursements from the military assistance program for off-the-shelf sales which the Army will not have to replace. Estimated at $120 million in fiscal year 1961, these reimbursements will also be available for purchase of modern equipment for Army troops.

It may also be helpful to clarify the action of the Senate committee on Army modernization with that of the House. The Senate committee added $125 million in hard cash to the House amount for Army procurement. According to the House committee report, $207,600,000 was added to the budget for Army modernization. But, at the same time, the House made a 3-percent overall cut in Army procurement, amounting to $42,498,000; made a $120 million cut directing the Army to retrieve that amount from MAP reimbursements; and made a further cut of $8 million in the jeep program. The net effect, therefore, of the House action on Army modernization was to add $37,102,000 to the budget request. As I stated earlier, the Senate raised this amount by $125 million to a total of $162,100,000 above the budget.

Airborne Alert

In the President's budget for fiscal year 1961 were $85 million to buy spare engines and other spare parts in preparation for a continuous airborne alert should it become necessary.

The House added $115 million for this purpose, to fund continuous flight of a greater portion of our long-range heavy bomber fleet which would be immune from surprise attack and which could then counterattack an enemy.

Not one of the military witnesses testified a continuous airborne alert is needed at this time, although their opinions varied as to when such alert might become necessary and as to how fast we need to stockpile parts and train crews for the assignment.

Gen. Thomas D. White, Air Force Chief of Staff, testified that Gen. Thomas S. Power, commander in chief of Strategic Air Command, had asked permission for an active airborne alert, but that General White said to get the spares, the fuel, the personnel so that it could be ordered at any time.

General Power, in fact, told the subcommittee: "I do not consider it is necessary to undertake a full-scale flying airborne alert program today. What I have asked for and recommended is the earliest capability so that it may be initiated when it is required."

Inasmuch as the continuous airborne alert is not a requirement at the moment, the committee decided the $85 million in the budget would suffice for fiscal year 1961, in conjunction with authority of section 512(b) of the appropriation bill which permits the President to incur a deficiency should the need for airborne alert arise later.

I wish to emphasize that, under this authority, the President is in no way obstructed should he deem it necessary to initiate continuous airborne alert at any time. He is empowered to incur whatever costs are involved and then to come to Congress later for replacement funds. We, therefore, deleted the $115 million added by the House.

Aircraft Carrier

The committee approved the Navy's highest priority shipbuilding request, $293 million for the construction of a new attack aircraft carrier of the *Forrestal* type, an item the House disallowed.

The attack carrier is the heart of naval striking power. It plays an extremely important role in limited warfare and constitutes an important addition to our nuclear war capability. To accommodate the modern jet aircraft phasing into the fleet, we must have carriers with large flight decks, with modern steam catapult equipment and with up-to-date arresting gear. The new carrier funded under the Senate bill will have all the latest equipment available to make it the most efficient and effective fighting carrier.

As to propulsion, the committee was persuaded that nuclear power did not offer advantages to the carrier that it does to submarines, which now are all construction with atomic-powered engines. Therefore, the committee agreed to the budget request for the $293 million conventional carrier.

Airlift Modernization

One of the programs of concern to the committee is modernization of the MATS airlift fleet to provide transport for Army troops and equipment. For fiscal year 1961, the budget requested $70.4 million for 25 C–130B cargo aircraft for Tactical Air Command and $50 million to finance design competition for a new long-range jet cargo aircraft for the MATS fleet.

Air Force witnesses informed the Defense Appropriations Subcommittee it would be 5 years before the new cargo aircraft would be available. The problem is how best to modernize the transport fleet in the meantime.

The committee added $200 million to the budget figure, earmarking this amount for transport aircraft suitable for the movement of fully equipped troops and combat equipment. This amount is $50 million less than the House figure for airlift modernization, but it is $50 million more than the Department of Defense requested in its reclama to the Senate.

For several years the airlift problem has been a vexatious and perplexing one, and, frankly, it is disappointing to me that the Air Force has not been able to settle on a suitable interim aircraft pending operational availability of a cargo aircraft of new and appropriate military design. I am sure I speak for all the committee when I say we will view with displeasure the accumulation of additional MATS aircraft which fail to meet Army airlift requirements.

Antisubmarine Warfare

The President's budget submitted in January requested a total of $1.865 billion for antisubmarine warfare, which was reduced under the April 6 defense revision by $114 million for two nuclear attack submarines which were dropped from the ship construction program of the Navy. This left a total of $1.251 billion for antisubmarine warfare.

The House added $321 million to the April 6 revised budget, consisting of $171 million for three nuclear attack submarines; $50 million for two destroyer escort vessels; and $100 million for ASW research and development.

Inasmuch as the Senate committee had concurred in the enlarged Polaris submarine program provided by the House, we did not believe that so many nuclear attack submarines were needed, and accordingly, we reduced the House amount by $57 million for one submarine. In addition, the Senate committee struck out the $50 million for the two destroyer escorts, but we accepted $41.886 million of the research and development add-on of the House, deleting $58.114 for that program.

I for one would like to urge the Navy to prosecute its research and development of antisubmarine equipment and techniques because this is an area of critical importance to our defense. Properly spent, the funds in the Senate committee should permit substantial progress in what is admittedly a frontier-of-science field.

Polaris Submarines

The Senate committee concurred in the House action adding $241 million to the Polaris submarine and missile program. This will fund construction of five submarines and procurement of long leadtime items for seven additional submarines, plus the full complement of Polaris missiles and other necessary equipment.

The President's original budget requested funds for building three Polaris submarines and long leadtime items for another three submarines. This was later augmented by the administration in a revised program of three fully funded Polaris submarines and long leadtime items for nine others. In prior years funds were provided to construct a total of nine Polaris submarines.

The additional $241 million for two fully funded submarines approved by the committee will move up the operational availability of these two ships by several months.

It is anticipated the results of the summer Polaris test programs will be quickly evaluated so that they may be applied to the accelerated Polaris shipbuilding and missile program.

Bomarc—F–106

For our defenses against manned aircraft and air-breathing missiles, the Senate committee restored the $294 million cut made by the House in the Bomarc B surface-to-air missile program. Our committee also added $75 million to equip two Bomarc squadrons on the west coast which are already under way. By its action, the House eliminated the administration's Bomarc B operational squadron program, although it permitted continuing Bomarc B research and development.

It should be recalled that the administration had voluntarily reduced the entire Bomarc program in its April 6 air defense revision, at the same time stepping up the fighter-interceptor program in a move to provide greater air defense against enemy bombers 2 years earlier than possible under the original Bomarc program.

The revised air defense plan projected a 9-squadron, 10-site Bomarc B program, including 2 sites in Canada and the remainder in the Northeast portion of the United States to protect our dense population and valuable industrial complex there. The revised plan contemplated 28 launchers and 30 missiles per squadron.

Needed to complete the Bomarc B research and development program are $50 million and to complete the operational squadron program $40.4 million of new money in fiscal year 1961.

The House not only knocked out the $40.4 million but cut deeper by $253.6 million, meantime allowing the $50 million research and development request. In place of the Bomarc B air defense program, the House added $215 million for 50 F–106 fighter-interceptor aircraft.

The Air Force Chief of Staff, Gen. Thomas D. White, told the Senate Defense Appropriations Subcommittee that to substitute fighter-interceptor aircraft for Bomarc B would give the Nation less defense capability at greater cost. We were advised that, to replace the Bomarc B program would require, not 50, but some 200 F–106 aircraft at a cost of $538.8 million—and even this would not give us the capability of the 9-squadron, 10-site Bomarc B program.

The testimony further disclosed a 200-fighter-interceptor program would require additional bases at an estimated cost for construction and operation of $25 to $40 million and 5,500 additional personnel. We were told the first F–106 delivery would be more than 1 year after the planned first deployment of Bomarc B. In addition, we were told that to proceed only with research and development now, with the idea of going into production later, would delay the program by about 3 years and would add almost one-half billion dollars to the present program cost.

Confronted with this appraisal by our chief military advisers of the Air Force the committee decided to restore the Bomarc B operational program and to deny the funds for 50 F–106's substituted by the House.

Mr. SALTONSTALL. I have one more comment to make. This morning the majority leader in his speech referred to the bill we have discussed today and said that it provided $1,581 million above the budget for 12 programs. Then he listed the programs. I should like to point out that he is entirely correct in saying that these amounts are above the formal budget submission.

However, during the course of the discussion of the budget before the House Appropriations Committee, Secretary Gates appeared and offered what was in substance a revised budget on certain figures.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. SALTONSTALL. May I finish? Then I shall be glad to yield. The revised budget raised the amount requested for 5 of the 12 items which the majority leader discussed. He was entirely correct in saying that there was not a formal revised budget in the strict sense, but that this was a revision of the figures submitted.

Mr. JOHNSON of Texas. If the Senator will yield, I should like to point out that I agree with what the Senator says. Secretary Gates did do that, but in doing that he violated not only the intent but the actual letter of the law, in my judgment. Certainly the Senator from Massachusetts does not condone such action, because he was the author of the language in the committee report, which I read, and which called attention to the necessity of complying with the deficiency statutes.

Mr. SALTONSTALL. I do not question that this was an informal method of procedure.

Mr. JOHNSON of Texas. The Senator does not condone it, does he?

Mr. SALTONSTALL. I do not.

Mr. JOHNSON of Texas. I hope we will say to those responsible that we have a budget act, that they should not violate it, and that they should not slip in through the back door with a letter.

Mr. SALTONSTALL. Instead of the committee bill being $1,581 million above what the administration was willing to put into the budget, it is actually $1,119 million, or $462 million less than the $1,581 million. I say that because in his statement Secretary Gates asked the House to appropriate more than that for these five items which amounted to $462 million above the actual amount of the budget that was formally submitted.

Mr. JOHNSON of Texas. I agree with what the Senator has said. However, I refer the Senator to page 44 of the report and the table on that page entitled "Comparative Statement of Appropriations for 1960 and Estimates and Amounts Recommended in the Bill for 1961." He will see there the increases or decreases made by the Senate. They are compared with what? Are they compared with side-door letters, notes, memorandums? No. They are compared with the budget estimates.

I believe that Congress intended to have the Budget Director submit estimates. I do not believe we should fall into the very loose practice of a member of the executive department, one occupying the high position of Secretary of Defense, going to the Budget Director and saying, "I know that the official estimate is $100, but I will sign a pink slip or a letter and ask for money anyway." I think we ought to put it on the line and be honest about it. If the administration wants the money and needs the money and finds it necessary to have the money, and the Secretary of Defense feels it is justified, and the Budget Director feels it is justified, and the President approves, let us have the official budget sent to us, instead of these letters; and instead of having the Secretary of Defense coming to the chairman and saying that he is going to submit a letter.

I call attention to page 4 of my statement of this morning. Mr. MAHON, the chairman of the House Appropriations Subcommittee said:

Will a formal budget submission be made by the Director of the Budget with respect to the Air Force program which was submitted about 10 days ago—

If not, why not?

Mr. SALTONSTALL. The only statement I have to make is that I assume it was too late to do it at that time.

Mr. JOHNSON of Texas. I should like to read the rest of that statement.

Will a formal budget submission be made by the Director of the Budget with respect to the Air Force program which was submitted about 10 days ago and with respect to this program which you have presented, both of which you advise have the official approval of you as Secretary of Defense and the approval of the President?

What did Secretary Gates say? He said:

Well——

That is all he said. He said:

Well——

Mr. LINCOLN. I can answer that, Mr. Chairman, if I may. I talked to the people in the Bureau of the Budget before I came up here and Mr. Stans would prefer to have it the way we set it up now, by the Secretary writing a letter to you.

That is going around the Bureau of the Budget. That is not the way to do it. It is giving a false impression to the people about what happened. They hold a private conversation down there. They do not send a budget estimate up on it. They send a little private letter up. They come up with a letter.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. SALTONSTALL. I invite the attention of Senators to the fact that there are really two ways by which the administration may change its budget, which as the Senator knows, is made up almost 9 months before it is submitted to us. The first is by making a statement before the committee of the changes in amounts that should be made, to correct the figures. The second is on reclamas.

When the Senate committee considered these matters, it had before it the increase made by the House, of about $1,500 million. Then it had the Defense Department request for restoration of $1,100 million of the House reductions. That is another method by which the administration can submit its figures.

Mr. JOHNSON of Texas. I wish to point out that the Secretary of Defense testified on April 6 of this year, and it was April 16 before the letter was written. Therefore, there were 10 days from the time of the testimony until the receipt of the letter, in which time a budget estimate could have been made up. That is the way it could have been handled if it had been desired to handle it in the legal and honorable way it should have been handled. The Senator does not deny that what I have read from the testimony before the House Appropriations Subcommittee is correct and is quoted from the hearings, does he?

Mr. SALTONSTALL. If the Senator says so, I agree with it.

Mr. JOHNSON of Texas. I do not ask the Senator to agree with it. I have the testimony.

Mr. SALTONSTALL. I do not question the Senator's statement.

Mr. JOHNSON of Texas. I have the testimony. The Senator may read it. Has the Senator read it?

Mr. SALTONSTALL. No; I read it in the Senator's speech.

Mr. JOHNSON of Texas. The point I wish to make is that I think this is fiscal hocus-pocus. The Senator from Massachusetts wants to do something about it, because, as I recall, he wrote the language that I read on page 3 of my statement. I will read it again, so that the Senator may follow it:

The committee is emphatic in its belief that this deficiency should not again occur without the committee being promptly informed in accordance with the statutes on deficiencies.

The Senator from Massachusetts is the author of that language. I am supporting the Senator. Last year he wrote that language and said that this thing should not occur again. This year it occurs again. The Senator from Texas is thereupon criticized, and the Senator from Massachusetts tries to explain this thing. I say to the Senator that they are going to continue to do this so long as they have him defending them. What is the good of writing in the report last year that the Budget Bureau must submit estimates, if they then ignore that language by doing what they have done? The Senator rises on the floor and explains it for them. I say it is fiscal hocus-pocus. The Bureau of the Budget should not do it. The Secretary of Defense should not do it. The President ought not to let either one of them get by with it.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. SALTONSTALL. I do not deny for a moment that it is not the proper way under the law and the Constitution to submit a budget. I merely say that of

the figures which the Senator presented, showing 12 items totaling $1,581 million above the budget, $462 million had been acceded to by the administration.

Mr. JOHNSON of Texas. Did I not say that?

Mr. SALTONSTALL. No.

Mr. JOHNSON of Texas. I said:

It should be noted that the administration itself belatedly recognized some of the shortcomings of its defense program. Despite repeated attacks on the so-called parochial views of those patriotic military leaders who had testified to the deficiencies of the program as they saw it—and despite repeated statements that acceleration was either impossible or unnecessary—in April of this year the administration did endorse a number of program increases. Of course, it was specified that any increases had to be offset by decreases in other programs, so that there would be no increase in total defense expenditures.

In other words, they did not want to admit they were wrong on the budget, but they said, "We will slip you a private letter saying we are wrong. We will let the Secretary of Defense say we want it, and that the President and the Budget Director agree that it is all right for us to have it, even though the law says it must be done with a budget estimate."

Mr. SALTONSTALL. Mr. President, will the Senator further yield?

Mr. JOHNSON of Texas. I yield, with pleasure.

Mr. SALTONSTALL. The revised figures submitted by the administration were, after all the pluses and minuses $119,400,000 less than the original budget estimate. Seven of the 12 items which the Senator mentioned were increased by the committee over the January budget and the revised request, but 5 of those items were increased by the administration in its revised request and the committee simply concurred in the administration increases.

Mr. JOHNSON of Texas. I understand some deletions were made; for example, the deletion of a couple of submarines, in order to pay for the Polaris.

I shall summarize and conclude by saying that I wholeheartedly agree with the wisdom and foresight of the Senator from Massachusetts when he included in the committee report a demand, which was very emphatic, that the Department follow the Budget Act. When the Department refuses to follow it, I think Congress ought to call their attention to it and say, "We put that requirement in last year's report, and we do not want to have to call your attention to it every few days. You who administer the law ought to set a good example by following the law."

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. SALTONSTALL. When the Senator says he approved of any action of mine, I am pleased and proud. I did write the language, and I believe in it.

Mr. JOHNSON of Texas. I usually approve of the Senator's actions. He is one of the finest Members of this body, as all who serve with him agree.

Mr. SALTONSTALL. I thank the Senator from Texas.

OBSERVATIONS ON ADDRESS DELIVERED IN THE SENATE BY SENATOR KENNEDY ON JUNE 14, 1960

Mr. DIRKSEN. Mr. President, I desire to make a few observations on the address delivered by the distinguished junior Senator from Massachusetts [Mr. KENNEDY] in the Senate on June 14. I called his office and ascertained that he is detained by rather important business as one of the overseers of Harvard University.

Since this is not a very testy or tart address that I am about to make, I shall reserve the rest of it for later. However, I believe that before the occasion gets too far into the past, I should make some observations about it.

The Senator from Massachusetts entitled his address "A Time of Decision"; that is to say, he was deciding what must and should be done. In an address of this kind, obviously there must be a central theme. I have gone over the address quite carefully; and in my humble and feeble way, I have tried to isolate that theme. I think I can compress it into a single sentence. That sentence is this:

First, tell the world that we have deteriorated on every front. Second, tell the world that this administration is incapable of dealing with foreign policy. Third, set out a program in which it is set forth that there must be more of everything, for everybody, everywhere. There must be more of everything that is already being done.

The Senator from Massachusetts was kind enough to include the American people. For them, there must obviously be more sacrifices, more taxes, more generosity, and more debate.

The Senator from Massachusetts said that in the field of defense there must be more missiles, more submarines, more nuclear power, more bases, more warning devices, and, generally, more of everything.

The Senator said that for limited wars, there must be more tools, better tools, and faster tools.

For NATO, the Senator said there must be more consolidation, more consultation, more strength, more reciprocity, and more good feeling.

For Asia, Africa, the Middle East, and India, there must be a more generous spirit, more and better aid, more and longer planning.

However, I observe that, evidently, the majority party in the House had other ideas when it chopped $790 million from the mutual security program, despite a last-minute entreaty by the President of the United States.

For Latin America, the Senator from Massachusetts said there must be more money, more technicians, more student exchanges, more surplus commodities, and larger scaled operations.

For the Middle East, the Senator suggests a regional resources development fund, which obviously would call for more money; and this should be coupled with more forbearance and more confidence.

The Senator said that for Africa there must be more exports, more factories, more student exchanges, more educated people to operate their schools and their governments.

The Senator said that for Berlin and Germany there must be more hope that Mr. Khrushchev will withdraw beyond the Urals.

On the basis of present actions, Mr. Khrushchev is not likely to smile, as the Senator alleged with respect to the President; he is not likely to frown, as he alleged about the State Department; and he is not likely to do both, as was said of the Vice President. Khrushchev is likely to laugh out loud when he hears that one.

For eastern Europe, and especially Poland, there must be more aid, more tourism, more student exchanges, more teacher exchanges, more effort to cultivate and nourish a state of liberty in any cracks in the Iron Curtain.

Being somewhat of an amateur gardener, I am afraid I would find some difficulty in nurturing a state of liberty under those circumstances.

For Red China and Asia, the Senator from Massachusetts suggests that there be a regional development organization, more communication with Red China, and more assurance that we will defend Formosa. That sounds a little contradictory. Nothing specifically was said about Quemoy and the Matsus.

For the whole wide world, said the Senator, there must be more peace and more arms control.

For our own country, there must be more research, more scientific effort, more and better schools, more economic growth, more progress to meet more pressing needs, and more justice and more opportunity.

Here, then, was the theme of the speech—more of everything that we are already doing.

The most entrancing phrase in the speech was this:

The hour is late, but the agenda is long.

I will agree with the last part of it.

To that, the Senator added:

I do not pretend that it is complete.

So, I for one, eagerly await the rest of the program. Evidently this is the big stick, with a bigger stick to come, as compared with what the Senator referred to as the smaller stick which he believes we now carry.

The $40 billion-plus in the defense appropriation bill which is now before the Senate, and on which we will vote in just a little while, looks like a pretty big stick to me.

An individual swinging a baseball bat can be genuinely effective. Give him a telephone pole, and he will break his back. That is what distresses me.

I subscribe to the Senator's suggestion for increasing the Atlas production. It is a reminder of Atlas of old, carrying the whole world on his back. If we are to undertake this long agenda, which is to become longer, then I breathlessly await the time when the Senator from Massachusetts will take the Senate floor and tell us the rest of the story.

I can only say that we may come dangerously close to impairing or destroying the capacity of this country to carry its responsibilities, and to destroying the last best hope of freedom on earth.

For the distinguished Senator to deliver a major address with a political flavor is entirely proper and quite in order.

But candid comment on his remarks must also be deemed in order.

He chided the present administration for a lack of "fresh ideas" on Berlin and Germany; but I do not find in the address of the distinguished junior Senator from Massachusetts any "fresh ideas," other than a suggestion to persuade Mr. Khrushchev to withdraw behind the Urals.

When the Senator from Massachusetts suggested, as he did, that "we must regain the ability to intervene effectively and swiftly in any limited war anywhere in the world," that would rank with the labors of Hercules, and it also rates some questions.

Is "any limited war," wherever it may arise, our business, especially where it does not involve some substantial American interest?

Is a limited war "anywhere in the world" to be taken as an occasion for the United States to intervene?

Mr. President, I repeat also what I have said on other occasions on the floor of the Senate, namely, such constant downgrading of our strength and the continuing effort to tell the world of our deterioration in strength, I regard as a reflection upon many persons and agencies who have demonstrated their dedicated spirit and their devotion to an America that is strong and is prepared to meet its commitments.

Consider the bill on which we are to vote very shortly— a bill with appropriations of more than $40 billion of the taxpayers' money, to provide for the security of our Nation. How did that bill get here?

Well, Mr. President, I have served for a long time on the Appropriations Committees of the House and the Senate, and I know how those appropriation bills get here.

First, the civilians and those in uniform worked patiently and painstakingly over a long period of time to develop a balanced defense. They are worked with trained budget officers; and then all of them pooled their efforts and pulled at the task, all together.

Then came the consideration by the Commander in Chief. Mr. President, if anyone has dedicated his life to this country and its security, that man is President Eisenhower.

Then came the scrutiny by the National Security Council; and then came the scrutiny by the Budget Bureau—and very properly so.

Then came the patient labors of the members of the Armed Forces Appropriations Subcommittee of the House Appropriations Committee, who for years have taken testimony and have labored earnestly and with high skill and competence to provide what in their judgment was needed.

I think GEORGE MAHON, of Texas, the chairman of the subcommittee, is one of the best informed men in government on this subject; and this bill did not reach this legislative stage and did not reach this floor until he and his associates in the House of Representatives, who gave weeks and weeks to the task, and heard literally scores and scores of witnesses, had a chance to examine into it, and then determine whether they thought it was adequate to the survival and the security of this country.

Then the bill went to the full Appropriations Committee of the House of Representatives. I served on that committee, and I was proud of it, and I am proud of those who serve on it today. They take seriously their responsibilities, their duties, and their fidelity to this country.

Then the bill was considered and passed by the House, itself.

Then the bill came to the Subcommittee on Armed Forces Appropriations, of the Senate Appropriations Committee; and the members of that subcommittee dealt with it. There it was dealt with by men such as LEVERETT SALTONSTALL. Is there any question about his interest in the survival of our country? There the bill was dealt with by men such as STYLES BRIDGES. Is there any doubt about his interest in the security of this country? There the bill was dealt with by men such as DENNIS CHAVEZ, who labored faithfully with such problems in the House of Representatives when I served there, and has continued to labor faithfully with them here in the Senate. Is there any doubt about his fidelity to our country? In that subcommittee the bill was labored with by members such as MARGARET CHASE SMITH, of Maine. Is there any doubt about her devotion to the perpetuity of this country and its institutions? Every one of the members of that subcommittee has an intense and passionate loyalty and devotion to our country and its institutions and their preservation; and that loyalty and devotion bring out their very best.

So this bill could not come here until they had finished with it and, thereafter, until the full Appropriations Committee of the Senate had finished with it. Then, at long last, the Senate must work its will on the bill.

I ought also to include among those I have mentioned the very distinguished and able senior Senator from Arizona [Mr. HAYDEN], under whose chairmanship it was my privilege and pleasure to serve on that committee.

Through all those stages this bill was in the incubation process; and then the end result was delivered here—a bill which calls for appropriations of more than $40,300 million.

If that is "a little stick," well, Mr. President, I have another name for it.

The bill has been the subject of constant and undiminished efforts by distinguished Senators who are on this floor today, and whose devotion to the survival of the Nation and to the maintenance of its leadership is beyond any question.

So, at last, the bill is here.

But the distinguished junior Senator from Massachusetts [Mr. KENNEDY] said we need more of everything, for everybody, everywhere.

Mr. President, I ask you, can this Nation, with its vitality and its durability and strength, undertake that kind of program without finally breaking its economic back?

The theme of the address by the junior Senator from Massachusetts was more of everything for everybody, everywhere—including the American people, and—I repeat, because there will be more for them—more taxes, more burdens, more sacrifices, more generosity. I want to know from what source all those are finally going to come.

I believe I can conclude these brief remarks—because I will take up the cudgels again on this matter—by saying that the distinguished junior Senator from Massachusetts might well have concluded his speech with the dying words of the great German dramatist, Goethe, who, as he lay on his deathbed, said, "More light."

I wish there had been more light, less generality, and some better regard for the economic capacity of this Nation to undertake this agenda.

Yes, Mr. President, the time is short, as the Senator from Massachusetts said, and the agenda is long; and I am waiting for him to spell out the rest of it before we get through.

Mr. SCOTT. Mr. President, will the Senator from Illinois yield?

Mr. DIRKSEN. I yield.

Mr. SCOTT. All of us heard the speech made recently by the distinguished junior Senator from Massachusetts. I should like to ask the distinguished Senator from Illinois whether he will make a comment on the first and second points of that speech.

The first point of the speech stressed the fact that we should proceed "by stepping up our development and production of the ultimate missiles that can close the gap and will not be wiped out in a surprise attack—Polaris, Minuteman, and long-range air-to-ground missiles."

And the second point was——

Mr. DIRKSEN. But there was more in the first paragraph than that.

Mr. SCOTT. Yes, there was much more than that, and it is in the RECORD.

The second contained much more than I shall cite; but the relevant point I wish to cite here is that the distinguished junior Senator from Massachusetts said:

> We must regain the ability to intervene effectively and swiftly in any limited war anywhere in the world, augmenting, modernizing, and providing increased mobility and versatility for the conventional forces and weapons of our Army and Marine Corps.

There is a great deal more in this speech, but it refers to increasing our military strength and our military capabilities.

At a time when we on the Senate floor are engaged in a detailed consideration of what this country needs in its military budget, it is, in my own personal opinion, extremely regrettable that we do not have the advantage of the leadership of the distinguished junior Sen-

ator from Massachusetts, who has told us what the next President of the United States ought to do, but who, unfortunately, for reasons of which I have no knowledge, is unable to guide us today with this necessary leadership on the part of the next President of the United States, whoever he may be.

Can the Senator from Illinois advise me how the distinguished junior Senator from Massachusetts feels with regard to the various proposals, amendments, and suggestions which have been made on the floor today to do the very things which the junior Senator from Massachusetts says need so much to be done? We need light, we need leadership, we need guidance, we need advice, and we need the leadership for which the Senator from Massachusetts has pleaded.

Could the Senator from Illinois please help us by indicating what the unfortunately absent junior Senator from Massachusetts would do on this, the biggest bill which comes before us, this $40 billion bill, if, for the mutual benefit of all the rest of us, he did happen to be here today?

Mr. DIRKSEN. I would not know. All I can say is that, as a humble seeker for light and knowledge the better to serve my country, when I next see the Senator from Massachusetts I shall sit at his feet and wait for his suggestions on the points he makes.

Mr. GORE. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield to the distinguished Senator from Tennessee.

Mr. GORE. The able Senator from Illinois has listed the programs of which the junior Senator from Massachusetts has said this Nation would require more in the coming decade of growth and challenge. I wonder, since the able Senator from Illinois has spoken critically and derisively in this regard, which of these programs the distinguished minority leader thinks our Nation will need less of in the coming 8 years.

Mr. DIRKSEN. Mr. President, that is one of those rather trappy questions that I simply do not propose to answer. I took a speech that was delivered on the floor and, as I have always done, I tried to find the central theme. I tried to find the core. I have not demeaned the Senator. I have only stated what I found in his speech, and I paraphrased it, in that sense, "More of everything, for everybody, everywhere, all the time," and then related it to a very practical situation: How long can we do it before we break the back of the very country that is charged with leadership in freedom's crusade in this rather benighted world?

Mr. GORE. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. GORE. I congratulate the Senator upon his capacity to go to the heart of the question. He has listed the programs of which the junior Senator from Massachusetts has stated the future of America will require more. I have asked him a simple question, which, if he will permit me to suggest, goes to the heart of his criticism, and that is: Of which of these programs does the minority leader think we shall need less? Wherein is the junior Senator from Massachusetts wrong in the programs he is advocating?

Mr. DIRKSEN. As soon as he returns and shows some specifics instead of generalities which embrace all the blue waters of the seven seas and every country and every continent on the face of the earth, I shall be prepared to tell him, and to tell the Senator from Tennessee, where I think I would cut down and where I might increase.

Mr. GORE. Will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. GORE. Does the Senator think, during the next 8 years, in the challenge that faces America, we shall need more education, more technological progress, and more research and development?

Mr. DIRKSEN. Yes.

Mr. GORE. Then, the Senator from Illinois agrees with the junior Senator from Massachusetts?

Mr. DIRKSEN. He does not do anything of the kind.

Mr. GORE. He just said he did.

Mr. DIRKSEN. He did not say anything of the kind.

Mr. GORE. Did I correctly understand the able Senator to say that America, in the next 8 years, will need more education, more technological progress, more research and development?

Mr. DIRKSEN. Yes, but——

Mr. GORE. That is what the junior Senator from Massachusetts said.

Mr. DIRKSEN. Wait a minute. I would like to have the specifics. When the Senator talks about more education, I know what the implication is. How much Federal money are we going to dole into a program to construct schools everywhere in the country? That is the obvious implication. And the first of these bills is already in conference. This is the "more" program.

What did we have last year? We had a proposal for antistream pollution. Did they take the administration's program? It was doubled both as to time and money. That is "more."

I believe in helping distressed areas. I introduced the first bill on that subject. I introduced the second bill on it. But that is not what counts. The first bill called for $53 million. The second bill called for $80 million, and it had the approval of the President. The Senate increased it to $389 million.

I ask the Senate, How long can we carry on in that fashion, no matter what the need may be, and still have a virile, efficient, effective country that can do the job with which it is charged in the free world? Those are the implications, and I am just waiting for the distinguished junior Senator from Massachusetts to come and lay it all out; and then, of course, I shall be the chooser.

Mr. GORE. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. GORE. Do I correctly understand the distinguished minority leader to say he favors more, but not much more?

Mr. DIRKSEN. Mr. President, I do not propose to get into any semantic jamboree with the distinguished Senator from Tennessee, because I have heard those semantics before, and find that they add up to exactly nothing.

Mr. GORE. Will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. GORE. If the Senator does not wish to engage further in colloquy, I shall, of course, desist; but I must observe that the distinguished minority leader has seemed to cast doubt, insofar as his views are concerned, upon the capacity of the United States to provide more of the essential programs which the junior Senator from Massachusetts outlined as necessary for America to achieve its destiny of greatness.

Mr. DIRKSEN. Well, that is a rather ear-filling statement, Mr. President, which does not mean too much to me. I have dealt with the fiscal affairs of this Government in a pretty direct way for 25 years or more. I try as best I can to evaluate the kind of burden, the kind of load, we can carry and still function efficiently.

I shall terminate this speech now, Mr. President. I am here on the Senate floor, and I am ready, whenever the distinguished junior Senator from Massachusetts is here, to have him quiz me, and then I shall quiz him, on the package of generalities which envisions carrying the burden of the whole wide world. I am not going to let the Senator from Tennessee be a substitute for the junior Senator from Massachuseets. He was making a political speech on this floor. I interpret it as best I can. If I do it incorrectly—if I do him an injustice—whenever he is here he can tell me. He can read my remarks in the RECORD. Then he can assail or attack, and I do not have the slightest objection. I assure Senators I shall be here. Then there will be the next reply.

I was not going to let that speech get away, Mr. President, with some of its reflections upon the President, upon the Vice President, and upon the State Department, particularly in the whole foreign field, as when the Senator said the President sought to do this job with Khrushchev with a smile, the State Department with a frown, and Vice President NIXON with both. Let it be said, the junior Senator from Massachusetts has never confronted him. That might be an entirely different story.

I have spoken my piece. I am prepared to speak the next piece when the time comes.

DEPARTMENT OF DEFENSE APPROPRIATIONS, 1961

The Senate resumed the consideration of the bill (H.R. 11998) making appropriations for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass? On this question the yeas and nays have been ordered, and the clerk will call the roll.

Mr. GOLDWATER. Mr. President, I shall take only 1 moment to express my deep appreciation to the chairman of the subcommittee and to all the members of the subcommittee for the affirmative and correct action they took with

regard to the B–70 program. It was my pleasure to testify before the committee on this item. Speaking as an American, as a Senator, and as a reserve member of the Air Force, I think the committee is to be commended by all of us for having taken this much-needed and very desirable step.

Mr. COOPER. Mr. President, I was glad to join with the distinguished junior Senator from Washington [Mr. JACKSON], to increase the appropriation by the sum of $140 million, for the modernization of the Army.

We rely greatly today on our retaliatory forces—our Strategic Air Command, and our missiles—to deter aggression, and to protect the security of our country, and its people.

The Appropriations Committee should be commended for renewing the B–70 bomber program. This advanced bomber, capable of an 8,000- to 10,000-mile range, and speed of 1,500 miles an hour, will add immeasurably to the strength and the defenses of our country, and paradoxically, it will be our strength—a strength that the Soviet Union knows will bring its destruction if it should attack—that will influence the Soviet Union to the goal we seek—disarmament with inspection, and peace.

Nevertheless, Mr. President, we must be prepared to resist aggressions of all kinds. It is essential that we maintain our conventional forces, at a high level of effectiveness, equipped with the best and most modern arms. And I am speaking more particularly now—without derogating the importance of any arm of our military service—of our ground force. In Berlin, and at many key and critical places throughout the world, it is our ground forces which would stand the first shock of attack. The least we can do is to see that their men are equipped to defend themselves as they defend our country and all of us.

The House, and now the Senate Appropriations Committee, have added funds to equip the Army with modern rifles, tanks, missiles, and other essential arms. The $90 million, which the committee has agreed to accept, in place of the $140 million proposed by Senator JACKSON'S amendment, in which I joined, will provide a total of $250 million additional funds for the modern equipment and training of the Army.

In 1953 I served as a member of a special subcommittee of the Armed Services Committee to investigate the charge that our forces were not properly armed in Korea. Our investigation disclosed that at times, our troops in Korea did not have sufficient ammunition of particular types such as artillery shells and grenades.

Surely this must never happen again. The funds made available by the bill for the equipment of our ground forces are essential to our security.

I am glad also that we have insisted that our Reserve components, the National Guard, and the Army, Navy, and Air Force Reserves be maintained at strengths of 400,000 for the National Guard and 360,000 for the Reserves. Our Reserve components which the Defense Department testified are at their highest level of effectiveness, are made up of men who want to serve, who are willing to defend this country, and they are an actual part of the Armed Forces and of the defenses of the country.

Mr. President, in the few years since the Korean war, we have built the strongest military forces in the history of the Nation. From zero, we have developed in 7 years a formidable long-range missile strength. From zero, we have developed in the same time a space program, which in every aspect, except a launching engine, is superior to that of the Soviets. Our strength has thus far deterred war. We do not need to downgrade our strength, or the men and women who, as members of the Armed Forces, protect us and freedom. We need to support them—to continually improve our military strength. This bill, I believe, moves strongly in that direction. I am glad to vote for it.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass? On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Arizona [Mr. HAYDEN], the Senator from Minnesota [Mr. MCCARTHY], the Senator from Missouri [Mr. SYMINGTON], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] is absent because of illness.

I further announce that the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Michigan [Mr. MCNAMARA], and the Senator from Wyoming [Mr. O'MAHONEY] are necessarily absent.

I further announce that, if present and voting, the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Arizona [Mr. HAYDEN], the Senator from Missouri [Mr. HENNINGS], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Minnesota [Mr. MCCARTHY], the Senator from Michigan [Mr. MCNAMARA], the Senator from Wyoming [Mr. O'MAHONEY], the Senator from Missouri [Mr. SYMINGTON], and the Senator from Texas [Mr. YARBOROUGH] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Maryland [Mr. BUTLER] is absent because of illness.

The Senator from New Hampshire [Mr. COTTON] is necessarily absent.

The Senator from South Dakota [Mr. MUNDT] and the Senator from Kansas [Mr. SCHOEPPEL] are absent on official business.

The Senator from Maryland [Mr. BEALL] is detained on official business. If present and voting, the Senators from Maryland [Mr. BEALL and Mr. BUTLER], the Senator from South Dakota [Mr. MUNDT], and the Senator from Kansas [Mr. SCHOEPPEL] would each vote "yea."

The result was announced—yeas 85, nays 0, as follows:

So the bill (H.R. 11998) was passed.

Mr. CHAVEZ. Mr. President, I move that the Senate insist on its amendments and request a conference with the House of Representatives thereon, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer (Mr. MCGEE in the chair) appointed Mr. CHAVEZ, Mr. RUSSELL, Mr. HILL, Mr. MCCLELLAN, Mr. ELLENDER, Mr. ROBERTSON, Mr. STENNIS, Mr. JOHNSON of Texas, Mr. BYRD of Virginia, Mr. SALTONSTALL, Mr. BRIDGES, Mr. YOUNG of North Dakota, and Mrs. SMITH, conferees on the part of the Senate.

AUTHORIZATION TO FILL TEMPORARY VACANCIES IN HOUSE OF REPRESENTATIVES — ABOLITION OF CERTAIN TAX AND PROPERTY QUALIFICATIONS, AND ENFRANCHISEMENT OF PEOPLE OF DISTRICT OF COLUMBIA

Mr. JOHNSON of Texas. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on Senate Joint Resolution 39.

The PRESIDING OFFICER laid before the Senate the amendments of the House of Representatives to the joint resolution (S.J. Res. 39) proposing amendments to the Constitution of the United States to authorize Governors to fill temporary vacancies in the House of Representatives, to abolish tax, and property qualifications for electors in Federal elections, and to enfranchise the people of the District of Columbia, which were, to strike out all after the enacting clause and insert:

That the following article is hereby proposed as an amendment to the Constitution

of the United States, which shall be valid to all intents and purposes as part of the Constitution only if ratified by the legislatures of three-fourths of the several States within seven years from the date of its submission by the Congress:

"ARTICLE —

"SECTION 1. The District constituting the seat of Government of the United States shall appoint in such manner as the Congress may direct:

"A number of electors of President and Vice President equal to the whole number of Senators and Representatives in Congress to which the District would be entitled if it were a State, but in no event more than the least populous State; they shall be in addition to those appointed by the States, but they shall be considered, for the purposes of the election of President and Vice President, to be electors appointed by a State; and they shall meet in the District and perform such duties as provided by the twelfth article of amendment.

"SEC. 2. The Congress shall have power to enforce this article by appropriate legislation".

And to amend the title so as to read: "Joint resolution proposing an amendment to the Constitution of the United States granting representation in the electoral college to the District of Columbia."

Mr. JOHNSON of Texas. Mr. President, I move that the Senate concur in the House amendments.

Mr. JAVITS. Mr. President, will the Senator yield at that point?

Mr. CASE of South Dakota. Mr. President——

Mr. JOHNSON of Texas. I yield to the Senator from South Dakota.

Mr. CASE of South Dakota. As I understand, the amendment to which we are asked to agree is an amendment submitted by the House of Representatives which would adopt one feature of the three-pronged joint resolution, the constitutional amendment which was earlier passed by the Senate, to survive, namely, that dealing with a vote for presidential and vice presidential electors. Is that correct?

Mr. JOHNSON of Texas. That is my understanding.

Mr. CASE of South Dakota. I should like to speak for a few moments upon the joint resolution.

Mr. MANSFIELD. Mr. President, is the resolution before the Senate and, if so, is the Senator from South Dakota about to make a speech on a reservation of objection?

Mr. JOHNSON of Texas. Mr. President, I will yield the floor if there is any question.

Mr. CASE of South Dakota. Mr. President, the joint resolution which comes before us with a House amendment marks a long way down the road toward extending the right of suffrage to the people of the District of Columbia. In December of 1952 the then President-elect of the United States, Dwight Eisenhower, sent word to me that he would like to have me come to New York in order to discuss some legislative matters affecting the District of Columbia.

The prospect was that I would be chairman of the Committee on the District of Columbia of the Senate. Among subjects discussed was the possibility of getting the right to vote for the people of the District of Columbia. The President spoke very feelingly upon the fact that he believed taxation without representation was contrary to the principle of our country. He said he felt there was something basically wrong if we taxed people and did not give them the right to vote. He thought there was something basically wrong if we drafted their sons for military service and did not give them the right to vote.

During the preceding 2 years I had been a member of the Committee on the District of Columbia and had been accorded the honor by the then chairman of the committee, the late Senator Neely of West Virginia, and the majority leader of that day, Senator McFarland of Arizona, of piloting the so-called home rule bill through its consideration by the Senate in January of 1952.

So I was very glad to accede to the suggestion of the President that we devote some energy to the possibility of getting suffrage for the District of Columbia.

During 1953–54 we passed a home rule bill. We also passed a bill giving the people of the District of Columbia the right to vote for delegates to national conventions. The matter of voting for President and Vice President called for a constitutional amendment. We gave some consideration to it but, of course, that was a proposal which would have to go to the Judiciary Committee.

My interest in the subject has continued throughout the years. The interest of the President has continued throughout the years. On various occasions he has continued to express an interest in this goal.

Early in this Congress the distinguished Senator from Maryland [Mr. BEALL] introduced a constitutional amendment proposing that the citizens of the District of Columbia be given the right to vote in presidential elections. The junior Senator from South Dakota introduced a similar constitutional amendment.

In the amendment which I proposed I suggested that the District of Columbia be given three delegates to the House of Representatives with a like number of electoral votes for President and Vice President, in that way preserving the traditional basis upon which a State has votes in the electoral college.

Early this year, when the District of Columbia Committee reported the so-called home rule bill, I offered that constitutional amendment as an amendment to that home rule bill, in fact as a substitute for the home rule bill. Watching the course of these proposals through the years had convinced me that there was little practical possibility of getting home rule, as such, through both Houses of Congress in the same Congress.

Also I knew that every home rule bill which had been presented in the previous 10 years had included a provision to recognize the basic constitutional provision that Congress is given the exclusive legislative jurisdiction for the District of Columbia.

Believing that the people of the District of Columbia should have an effective voice in the Government which governs them, namely, Congress, plus the appointive power of the President, I came to the conclusion that the practical thing to do was to press for a constitutional amendment which would give them a voice in the electoral college for the election of President and Vice President, and, if possible, delegates in the House of Representatives.

So I introduced the constitutional amendment on the floor as a substitute for the home-rule bill on the floor of the Senate. The most important result was the interest which developed. Many Members of the Senate said to me, "We would like to support that kind of measure as an independent proposal."

The most helpful interest developed was the interest that was taken by the distinguished Senator from New York [Mr. KEATING]. Not only did he say he believed that that constitutional amendment should be adopted at that time, but, as a member of the Committee on the Judiciary, he took an earnest and unrelenting interest in the subject. When the distinguished Senator from Tennessee [Mr. KEFAUVER] arranged to hold hearings on the subject, it was the Senator from New York [Mr. KEATING] who took up the cudgels for the constitutional amendment in a most effective fashion.

The outgrowth of that effort was the reporting of a proposed constitutional amendment to the Senate, built upon the language that had been proposed by the Senator from Maryland [Mr. BEALL], the Senator from New York [Mr. KEATING], and myself. That proposal was reported to the full Committee on the Judiciary by the Kefauver subcommittee.

Mr. KEATING. It reported it to the full committee. However, it was on the floor that the amendment was added.

Mr. CASE of South Dakota. Yes. Then there came before the Senate a proposal to deal with the problem of the election of Members of the House of Representatives in case of an emergency which incapacitated a majority of the Members of the House from acting at any time. The Senator from Tennessee [Mr. KEFAUVER] was in charge of that amendment when it came to the floor.

The Senator from Florida [Mr. HOLLAND] proposed an addition to that proposed constitutional amendment. His proposal was an amendment for the abolition of the poll tax in Federal or national elections. That was agreed to.

So, then the distinguished Senator from New York [Mr. KEATING] performed the master stroke of presenting the District of Columbia amendment which had been reported by the Kefauver subcommittee to the full Judiciary Committee. It drew wide support and was agreed to by more than the two-thirds required for a constitutional amendment.

I believe that is an accurate reflection of the record, and the course that this matter has taken. As we adopted the amendment in the Senate, it provided for both representation in the House of Representatives and representation in the electoral college for the voters of the District. The three-pronged resolution then passed by the required two-thirds

vote for a constitutional amendment, and it went to the House of Representatives.

The Senator from New York, the Senator from Maryland, and I and others testified before the House Judiciary Committee urging action upon this particular proposition to provide suffrage for the voters of the District of Columbia in the election of President and Vice President. We also urged delegate representation in the House of Representatives.

Of course, under the Constitution, the House of Representatives is the judge of its own membership. In its wisdom the Judiciary Committee of the House of Representatives reported a constitutional amendment to the House of Representatives in a form which left only the provision for the election of presidential electors for President and Vice President by the District of Columbia.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. CASE of South Dakota. I yield.

Mr. JAVITS. I think it is very sad that even this very minimum point in the constitutional amendment, which it was said when the matter was debated would be approved very promptly in a year or two, has now been completely dropped out of the bill so far as the poll tax is concerned. I think it is sad. I shall not contest the matter here. Of course, I shall support what is before us. I intend when we next have an opportunity, in the next Congress, again to put before the Senate the opportunity to support a bill to eliminate the poll tax. It appears that that is the way to do it, because it only takes a majority vote to do it.

I should like also to join with the Senator from South Dakota in the fine things he is saying about my colleague from New York [Mr. KEATING], which are very richly deserved. I agree with the Senator from South Dakota that the junior Senator from New York acted with the greatest wisdom and celerity in seizing the opportunity which was before us and in supporting the excellent measure which the Senator had himself authored and in bringing into being something so deserving for the people of the District of Columbia.

I enthusiastically join the Senator from South Dakota in extending congratulations to my colleague [Mr. KEATING], who I think in his first 2 years in the Senate has, through this particular effort, already performed a very signal service, very easy to identify and fix for the people of the District of Columbia, who will be so proud to have this opportunity to exercise the right of suffrage.

I know that all of us will throw our weight, in our respective States, behind the ratification of the amendment by the State legislatures.

I regret exceedingly that any of the little bit we were going to do about civil rights in the bill has been canceled. I myself pledge, as I know many other Senators will also do, my best efforts to have passed a bill to eliminate the poll tax, because I am convinced that this is the way to do it.

Mr. CASE of South Dakota. I am glad to have the remarks of the distinguished Senator from New York. He has been a battler for everything connected with suffrage and civil rights. I, too, regret the dropping of the other two proposals in the triple-pronged constitutional amendment as it passed the Senate. However, we are approaching the end of the session, and we all recognize the practical situation which exists. I regret particularly the dropping of the provision for a Delegate in the House of Representatives. However, so far as the Senator from South Dakota is concerned, I recognized that in that particular matter, since the House of Representatives itself was concerned with it, we should respect their wishes in that particular.

I might also observe that it is my personal opinion that the Congress could, by an ordinary act of Congress, without requiring a constitutional amendment, provide for a Delegate to the House of Representatives, if the Congress so desired, at any particular time.

Mr. JAVITS. Mr. President, will the Senator further yield?

Mr. CASE of South Dakota. I yield.

Mr. JAVITS. I, too, wish to emphasize that just as my colleague [Mr. KEATING] took advantage of the opportunity in his committee and on the floor, I think we and all the people of the District of Columbia must be eternally grateful to the distinguished Senator from South Dakota, who authored this idea, which seems to be exactly the proper compromise, neatly adjusted to getting through Congress, and I hope, through the State legislatures.

I think both names add additional credit, two very luminous minds having been joined in this action.

Mr. CASE of South Dakota. I thank the Senator from New York for his remarks. I want to emphasize also what the Senator from New York has said with respect to the activity of Senators in securing prompt ratification by the legislatures of their respective States.

I hope every Senator will take note of that. If the amended measure now passes the Senate, as I expect it will, and goes to the States, I hope there will be prompt ratification.

I conclude my own direct remarks by saying that this action will mark the Eisenhower administration as having sponsored and encouraged the greatest extension of suffrage of taxpayers throughout areas where the United States has jurisdiction. First of all, there was the legislation giving to the people of the District of Columbia the right to vote for delegates to the national political conventions. Second, there was the adoption of Alaskan statehood. Third, there was the adoption of Hawaiian statehood.

With this action, every step will have been taken which could be taken by Congress and by the administration to get before the country a constitutional amendment to give to the people of the District of Columbia the right to have some voice in the Government under which they live. This is a proper step to be taken for the seat of the Government of the United States.

I hope that the consequence of this step will not be lost on the peoples throughout the world. It has been a reproach to our profession of democratic principles that people in the Capital City of the United States can be taxed, and yet have no vote. This amendment can lead to the end of that travesty. I hope the joint resolution will receive the unanimous vote of the Senate at this time and then be ratified by three-fourths of the States before the next year of presidential elections rolls around.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. CASE of South Dakota. I yield.

Mr. RANDOLPH. I express personal appreciation to Senators of the minority, including the Senator from South Dakota [Mr. CASE], the Senator from Maryland [Mr. BEALL], and the Senator from New York [Mr. KEATING], who have so assiduously advocated the vote for the residents of the District of Columbia who have no bona fide residence in other States.

There is valid reason for participation in the franchise of freedom—I call it that rather than just "the ballot"—whereby the citizens of this jurisdiction will in the relatively near future, we believe, possess not only the right but the responsibility to vote for President and Vice President of the United States.

It is not inappropriate to state here again that the platforms of both major parties have spoken out again and again affirmatively for this desirable ideal. I should like to leave the thought—and I know it is shared by Senators who believe as we who are speaking tonight believe—that this is not a partisan issue in any sense. I came to the House of Representatives in 1933, and I believed then that the citizens of this jurisdiction should vote for the President and Vice President of the United States. My Democratic predecessor, Senator Neely, mentioned by Senator CASE, was a valiant champion of this cause.

Sons and daughters born here of parents living in the District of Columbia have been unable to establish citizenship franchise rights in the States, and these young men and young women who grew to manhood and womanhood and assumed the stature of voting age were denied the privilege to participate in the process of the dialogue of democracy within this Republic.

I again compliment the Senator from South Dakota; and in my way—it has been a continuing way—I am glad to have fostered with legislative bills and vigorous support the principle contained in this result.

Mr. CASE of South Dakota. Mr. President, I am one of those who admired the work of the distinguished Senator from West Virginia in the House of Representatives when he was chairman of the Committee on the District of Columbia. I know from the record of the years the long, conscientious, and earnest interest of the Senator from West Virginia in establishing justice and suffrage for the people of the District of Columbia.

When I mention that record, I think it is not inappropriate also to say that the predecessor of the Senator from West Virginia, the late Senator Matthew Neely, was one of the most effective

champions of extending suffrage to the people of the District of Columbia. He was chairman of the Committee on the District of Columbia when I first came to the Senate. It was largely his leadership that originally interested me in activity along this line. It was through his courtesy that I presented a bill to the Senate in 1952, when I was the ranking minority member and Senator Neely was the chairman of the Committee on the District of Columbia. I wish he might have lived to see this day.

Mr. CASE of New Jersey. Mr. President, will the Senator from South Dakota yield?

Mr. CASE of South Dakota. I yield to the Senator from New Jersey.

Mr. CASE of New Jersey. I desire to add my voice of commendation and appreciation of the Senator from South Dakota, who has for so many years kept the fire burning on this issue. It is to the credit of the Senator from South Dakota, the Senator from New York [Mr. KEATING], and the Senator from Maryland [Mr. BEALL], and the Senator from West Virginia [Mr. RANDOLPH], that without any possible personal advantage to themselves they have continued to work on this issue. It is incredible that this action was not taken a hundred years ago.

However, these aims are not accomplished unless people take up the work and do it—people who are interested in the problem for its own sake.

As a plain citizen of this country, I express my appreciation for the wonderful work that all those Senators have done.

Mr. CASE of South Dakota. Those words, coming from the distinguished Senator from New Jersey, are deeply appreciated. He has long been recognized as a leader in civil rights and a leader in fighting for the principles of sound government.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. CASE of South Dakota. I yield.

Mr. KEATING. I express my gratitude to the distinguished Senator from South Dakota, my colleague from New York [Mr. JAVITS], the Senator from New Jersey [Mr. CASE], and the Senator from West Virginia [Mr. RANDOLPH], for the kind remarks which they have just made.

This was sort of a tripartite movement, joined in by the distinguished Senator from South Dakota, the distinguished Senator from Maryland [Mr. BEALL], who has had a long interest in this problem, and me.

I am also well aware of the deep and prolonged interest which the distinguished Senator from West Virginia has had in this problem.

The wording of this amendment, with the exception of the matter I shall mention in a moment, was very much patterned after the amendment prepared by the distinguished Senator from South Dakota, which was offered in connection with the bill for home rule.

Mr. President, this proposed constitutional amendment should restore to the people of the District of Columbia some measure—but certainly not a full measure—of democracy. The amendment certainly represents an advance over the present un-American condition imposed on the residents of the Nation's Capital, but it still falls far short of what I feel we should do.

Anyone who bases his decision on logic and reason, anyone who is inspired by the American heritage of freedom and liberty, must be less than enthusiastic about the prospects of allowing District of Columbia residents the right to participate in the selection of the Presidents and the Vice Presidents, our national leaders.

Under these circumstances, although I shall support the joint resolution, I must express my concern because of the fact that this historic step in the development of our democratic institutions has been marred by the "take it or leave it" attitude with which this limited amendment has been presented to us. As is so often true when District of Columbia problems are before us, we have relegated this important measure to consideration during the twilight hours of the day, in the twilight weeks of the session.

These circumstances raise to tremendous heights—and, I believe, undeserved heights—the significance of procedural and parliamentary factors. They prevent a fair consideration of the amendment on its merits. They preclude any effort to liberalize the amendment, except at the risk of jeopardizing its ultimate approval.

Mr. President, I very much regret these circumstances. The amendment which was approved here, which was cosponsored by my distinguished colleagues and myself, would have remedied the plight of the residents of the District of Columbia, by giving the District of Columbia the same representation in the electoral college and in the House of Representatives that the District of Columbia would enjoy if it were a State. Even this amendment could have been reasonably improved upon, because it will be recalled that it did not specifically provide that the Representative of the District of Columbia in the House of Representatives should have the right to vote in the House, and it did not give a voice in this body to the residents in the District of Columbia.

Unfortunately, the House of Representatives has proceeded in the direction of cutting down, rather than building up, the relief which we approved for the District of Columbia.

The amendment, as approved by the House of Representatives, eliminates completely the provisions for representation in that body, and limits the representation of the District of Columbia in the electoral college to a maximum of three, regardless of the population of the District of Columbia. However, Mr. President, inasmuch as the District of Columbia, under the present method of apportionment, would be entitled to either four, or possibly five, members of the electoral college if the District of Columbia were a State, the House amendment in effect would make a three-fourths citizen or a three-fifths citizen of every resident of the District of Columbia. This concept of "fractional" citizenship is a new one, which to me is abhorrent.

Of course, Mr. President, we are here dealing with a proposed constitutional amendment which, if ratified, would not likely be changed for a long period of time; and of course three-fourths citizenship or three-fifths citizenship is better than no citizenship at all. Therefore no Member who has at heart the interests of the District of Columbia could vote against the amendment, particularly in view of the circumstances with which we are faced and the realization that at this time the question is either this or nothing at all.

However, Mr. President, I can only voice my sorrow because of the fact that we have missed this opportunity to bestow full citizenship rights on our fellow Americans, the residents of the District of Columbia.

I thank the Senator from South Dakota for yielding to me.

Mr. CASE of South Dakota. Mr. President, I thank the Senator from New York for his remarks and for his valiant service in connection with this entire subject, both in the Judiciary Committee and on the floor of the Senate.

Mr. HOLLAND. Mr. President, as Senators will remember, the joint resolution, as passed by the Senate, and as it went to the House of Representatives, contained, in addition to a proposed constitutional amendment dealing with the subject now before the Senate, two other provisions. The first was a constitutional amendment proposed by my distinguished colleague the Senator from Tennessee [Mr. KEFAUVER]. It provided for the prompt filling by the Governors of the several States of any vacancies in the membership of the House of Representatives, in the event an atomic catastrophe were to remove one-half or more of the membership of that body. In the second place, that joint resolution included an amendment which I have been sponsoring for approximately 11 years, and in that sponsorship I have been joined, and am honored that I have been joined, by many outstanding and extremely able Senators, such as the late Senator George, of Georgia; the Senator from Virginia [Mr. BYRD], who more lately has withdrawn from that sponsorship; the late Senator Hoey, of North Carolina; the Senator from Arkansas [Mr. MCCLELLAN]; the Senators from Louisiana [Mr. ELLENDER and Mr. LONG]; and numerous others who come from the same region of the country from which I come, and whom I have regarded over the years, and still regard, as among the finest Americans ever to serve in the Senate.

That amendment, which they and I have sponsored for some 11 years, proposed once and for all to remove the payment of a poll tax as a prerequisite to voting in an election in which a President, a Vice President, a Senator, or Members of the House of Representatives were being elected—that is to say, in Federal elections.

Mr. President, for 11 years we have tried to get that amendment before this body. We finally got it before this body

during consideration of the so-called Kefauver amendment, some months ago.

The RECORD will show that that amendment received an overwhelming vote of approval from the Senate; the amendment was adopted by largely more than a two-thirds vote, and with a very large attendance of Senators, representing the 50 States of the Nation. But notwithstanding that fact, and because of the peculiar situation existing in the House of Representatives—which I do not criticize, and on which I make no comment at this time—it was thought best by the advocates of the District of Columbia amendment to drop the poll-tax amendment and to drop the amendment so ably sponsored by the Senator from Tennessee [Mr. KEFAUVER], and to confine this amendment to the one subject matter of granting to the citizens of the District of Columbia the right to participate in the election of Presidents and Vice Presidents.

I have talked at some length with the distinguished sponsor of this amendment in the House of Representatives, the Representative from New York, Mr. CELLER; and I am fully satisfied that the course he adopted was one which he felt compelled to adopt because of the situation existing in the House of Representatives. I call the attention of the Senate to the remarks of the distinguished Representative from New York, Mr. CELLER, as they may be found on pages 12556–12557 of the CONGRESSIONAL RECORD for June 14, covering the consideration by the House of Representatives of this particular amendment, which is now being debated in the Senate. I shall refrain from reading the generous and much too kindly adjectives which Representative CELLER applied to the present speaker; but I shall now read into the RECORD the other portions of his statement:

> The bill, Senate Joint Resolution 39, which passed the Senate particularly contained the provision for the abolition of the poll tax. The senior Senator from Florida, Senator HOLLAND, was the sponsor of the poll tax repeal. He has assured me that in the interest of getting at least the vote for the District in national elections he would yield on his amendment. If he does not make this sacrifice there might not be any bill passing the House. The Senator graciously yielded on his amendment. I hope that he will press for the poll tax repeal in the next session. I pledge every possible help to him in that repeal. I shall do all and sundry to support such repeal on the House side as he will on the Senate side.

I have never wanted to adopt any obstructive tactics when a good constitutional amendment, or one that was thought to be good by a great majority in the House and the Senate, was pending. I have never been willing to adopt a so-called dog-in-the-manger policy.

I advised Mr. CELLER I would not attempt to place the poll tax amendment on this particular measure because, under the circumstances which he related to me, and which I confirmed from others, and which prevail in the House, that would have meant the defeat of both amendments.

So I have abided by, and I now abide by, my statement, and Representative CELLER assures us that he will abide by his statement, as it appears in the RECORD, that he will do all and sundry on the House side in the next session to support repeal of the poll tax.

I understand from the distinguished Representative from New York that he will join with me in an early introduction of that measure again in the House of Representatives, in the form in which we passed it last year, as I shall again introduce it in the Senate.

Mr. KEATING. Mr. President, will the distinguished Senator from Florida yield to me?

Mr. HOLLAND. I yield to my colleague, the Senator from New York.

Mr. KEATING. I neglected to say, when I was speaking earlier, that I deeply regret that the amendment sponsored by the distinguished Senator from Florida was dropped in the other body. I have assurances that it will receive early consideration in the next session. This assurance was given by the chairman of the House Judiciary Committee. Certainly, if any Member of that body can give such an assurance, he ought to be able to do it.

While it has always been my position that this purpose could be accomplished by statute, I certainly shall support the distinguished Senator from Florida, because we all know that the constitutional amendment route commands considerably more support than does the statutory route.

I commend the Senator from Florida for the very assiduous way in which he has dealt with this problem and the great effort which he put forth here to attach his amendment to legislation on a somewhat unrelated subject.

Mr. HOLLAND. I appreciate the kindly remarks of the Senator from New York.

Mr. President, to hurry on to the statement I expected to make, I wish to make it very clear that I am not entirely sold on the amendment which is before the Senate, although I propose to vote for it. The reason why I am not entirely sold on it was stated by the Founding Fathers, and I think that there is a grave question as to whether the position they stated at that time is not yet true. That position was that, based upon the experience they had had in other cities, each lying in a State of the Union where the Capital of the young United States of America had been for a time located, they felt that it was sounder to have the Capital in an area where it could be insulated from the continued pressure of an electorate and of a citizenry which, clothed with all of the powers of an electorate elsewhere, would be pressing for local improvements, pressing for local measures, pressing for construction of buildings, and for other measures not justified by the state of the economics in the Nation, and otherwise resorting to pressure which would be more acutely felt by Senators and Representatives of that young Government because of the fact that they were surrounded by the citizens of the site of the Capital.

Mr. EASTLAND. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield to my friend from Mississippi.

Mr. EASTLAND. Does the Senator think this joint resolution should go to the Judiciary Committee for study?

Mr. HOLLAND. I think if there were any prospect of its being passed upon with any degree of expedition, that would be a good course. My experience with the poll tax amendment, after it had been subjected to three hearings, after the record had been printed three times, after a subcommittee had reported it three times to the able Committee on the Judiciary, approvingly, after we found we could not get any action at all before the Judiciary Committee leads me to think it would at least be a debatable question as to whether it would be wise to submit the measure to that committee.

Mr. EASTLAND. Has not the House shown we were right? What did it do with the amendment? It kicked it out.

Mr. HOLLAND. The Senator from Mississippi speaks with a little heat on this question. Perhaps he does not have the experience in this field that the Senator from Florida has had. The Senator from Florida, as a member of the State senate of his own State, helped to knock out the poll tax requirement as a prerequisite to voting in all elections—not merely Federal elections, but all elections. He found, from actual experience, how good results came to his State by the immediate participation of more white citizens in greater numbers, and by the gradual participation by Negro citizens, who, up to that time, had been banned from participation not only by the poll tax requirement, but by the requirement of white primaries.

I mention to my friend that we also abolished, a little later, but in connection with the same movement, the requirement of white primaries.

The Senator from Florida has stated repeatedly to all his friends in the Senate that he and every other student of government in his State has found that we have had purer politics and sounder government, and a government nearer to the people, than we had before, when, by the device of the poll tax, too frequently, in some counties, a few of the court house officials were able, by paying the poll tax for others, particularly impecunious persons, to dominate elections.

Mr. JOHNSTON of South Carolina and Mr. EASTLAND addressed the Chair.

Mr. HOLLAND. I agreed first to yield to the Senator from South Carolina. Then I shall yield to the Senator from Mississippi.

Mr. JOHNSTON of South Carolina. I believe the Senator stated that the poll tax in Florida had been repealed.

Mr. HOLLAND. I did. We repealed it in 1937, and we found immediately a great surge forward in participation by the poor white people. We found a gradually increased participation by the colored people of our State.

Mr. EASTLAND. Has not that question been decided?

Mr. HOLLAND. That question has long been decided in our State. The Senator from Florida simply has a conviction that it would be a sound thing to have the question submitted to the States of this Union to see whether or not three-fourths of them would favor that proce-

dure; and in the five States remaining where, by the poll-tax device, citizens are precluded from voting, if they were encouraged to vote, he believes sounder and cleaner government would prevail in each of those five States.

The Senator from Florida is devoted to each of those five States. His mother came from one of them. He has fought continuously and diligently for the interests of each of the five States. He will continue to do so.

That does not mean the Senator from Florida will always agree with his distinguished friends from those States, because he thinks that by the policy of repression, in this vital matter of inviting citizens to participate freely in voting, these States have failed to achieve their maximum potentialities.

I ask Senators to look at the population growth figures, the figures with respect to progress, the figures in the field of education, the figures in the field of selective service. It will be found, I think that those figures are completely irrefutable. I fear that those States have stood in their own light in this matter.

The Senator from Florida is not angry about the situation.

Mr. EASTLAND and Mr. JOHNSTON of South Carolina addressed the Chair.

Mr. HOLLAND. I will yield in a moment.

Mr. EASTLAND. We have heard all of those words.

Mr. HOLLAND. I think Senators are courteous enough to permit me to complete my statement.

Mr. EASTLAND. The Senator makes a very convincing argument. Why does the distinguished Senator not offer an amendment to carry out his proposal?

Mr. HOLLAND. Notwithstanding the interference and interruption by his distinguished friend, the Senator from Florida still thinks eventually that the poll tax will be repealed, and that the same States which, up to now, have failed to repeal the poll tax will then say, "We have received great advantage from the repeal of the poll tax, and we find we have cleaner government and purer government as a result of the repeal."

Mr. President, I agreed to yield first to the Senator from South Carolina.

Mr. JOHNSTON of South Carolina. Is it not true that although the State of Florida repealed the poll tax and my State of South Carolina repealed the poll tax, this is a matter for the States rather than the Federal Government to handle?

Mr. HOLLAND. Undoubtedly it is. Undoubtedly it was. There comes a time, however, if we are to regard as at all worthwhile the rights of people to participate in elections for President, Vice President, Members of the Senate, and Members of the House of Representatives, when there ought not to be any distinction merely because there is a State line between my State and the adjoining fine State of which I am very fond.

My amendment does not apply to elections for Governor, or courthouse officers, or school officers.

In my opinion we should not have a distinction which provides that citizens of one State are precluded from voting if they have not paid $2, $4, or whatever the fee may be, and citizens of my State may vote freely, regardless of whether they have been able to pay or have sought to pay that particular tax.

Has the Senator concluded his questioning?

Mr. JOHNSTON of South Carolina. The only point I make is that I believe this is a question for each State to determine. My State repealed the poll tax, but I will not undertake to force some other State to repeal the poll tax. I think each State has a perfect right to regulate its own affairs.

Mr. HOLLAND. That is undoubtedly true, so long as the Constitution remains as it is. The Senator is completely correct. However, there is no greater recognition of the doctrine of States rights than reliance upon the principle of the Constitution that before a fundamental change such as is proposed shall be made the proposal must be submitted as a constitutional amendment to the jury of the States. That is the rule established by our forefathers. That is the way we proceeded, when the amendment to give women the vote was proposed. That is what we provided when we voted for many changes in the Constitution.

The Senator from Florida, exactly as he is willing now for the States to pass upon this particular proposed amendment in issue—though he has some doubts about its wisdom—is very strongly in favor of the submission of the poll tax amendment. The Senator from Florida does not wish to have the RECORD show that he has abandoned his longtime conviction.

The Senator from Florida does not wish to adopt an obstructionist tactic under which, as a result of forcing his amendment upon the joint resolution, no action upon either will be taken in this Congress.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. HOLLAND. I promised to yield to the Senator from Mississippi next, and then I shall yield to the Senator from Arizona.

Mr. EASTLAND. Mr. President, the distinguished Senator is making a very fine argument. Why does the Senator not offer his proposal as an amendment to the joint resolution?

Mr. HOLLAND. Mr. President, I thought I had made that very clear.

Mr. EASTLAND. What the Senator is now discussing is not even in the joint resolution. It has no bearing upon it. If the Senator is correct in his position, why does he not offer an amendment to the resolution?

Mr. HOLLAND. There are many reasons why I do not do so. The first is that I think it would kill both proposals. The second is that the way the joint resolution comes to us, it is not open for amendment. It is before us for recession and agreement, or else to go to conference.

Mr. EASTLAND. The joint resolution could go to the Committee on the Judiciary to be considered.

Mr. HOLLAND. The Senator from Florida has not been encouraged, by his experience with the Committee on the Judiciary, to think that the committee would be anything but a permanent graveyard for the proposed amendment, if it were referred to the Committee on the Judiciary.

Mr. EASTLAND. Is my friend satisfied with the verdict of the House of Representatives? If it is not a graveyard in this case, what is it?

Mr. HOLLAND. Mr. President, the Senator perhaps came into the Chamber late in the argument.

The Representative from the State of New York has obligated himself, along with the Senator from Florida, to reoffer the proposal in the early part of the next session of Congress. It will be offered in the House and in the Senate. The able Representative from New York has offered to use all means available to him under the House procedures, some of which do not rely upon the Committee on Rules, to bring the measure to a vote in the House.

Mr. EASTLAND. Mr. President, will the Senator yield?

Mr. HOLLAND. I hope the Senator will permit me to finish my thought.

Mr. EASTLAND. I desire to understand my friend.

Mr. HOLLAND. The Senator from Florida feels that rather than to defeat the good purpose of many Senators and many House Members, who wish to submit this particular proposed amendment, he is willing to wait a little while.

The Senator from Florida has waited 11 years, with his good friend the Senator from Louisiana [Mr. LONG], who is in the Chamber. The Senator from Florida is honored to say the Senator from Louisiana was with him when he first introduced this proposed amendment, has remained with him, is still with him, and has repeatedly shown his devotion to this ideal. The Senator from Florida is willing to wait a little longer. We are patient men.

I remember, with respect to the so-called tidelands bill, we waited year after year. We saw the bill vetoed once by a Democratic President. We saw the bill vetoed a second time by a Democratic President. We lacked two votes of having enough votes that time to override the veto in the Senate, as the Senator from Mississippi knows. Finally, a friendly President approved the bill. Then we had to watch the act go to Court. It was in Court a year or two on one phase. Then it was in Court many other years on another phase. It finally came from the Court nearly 14 years after the Senator from Florida started working on it, only a few weeks ago. The decision, while it did not please everybody, at least upheld the major positions of the Senator from Florida throughout the argument.

Mr. CASE of New Jersey. Mr. President, will the Senator yield?

Mr. HOLLAND. Therefore, the Senator from Florida is willing to wait a little while longer on this issue.

I yield to the Senator from New Jersey.

Mr. GOLDWATER. Mr. President——

Mr. HOLLAND. I am sorry. I had agreed to yield first to the Senator from Arizona.

Mr. CASE of New Jersey. If the Senator will permit, this is a very topical question.

Mr. GOLDWATER. The Senator may proceed.

Mr. CASE of New Jersey. Mr. President, probably the reason the aspirations of the other States were not satisfied so completely is that those States did not have the benefit of the argument in court of the senior Senator from Florida, which argument was no doubt very persuasive with respect to his own State.

Mr. HOLLAND. I thank the distinguished Senator, but I am unable to agree with him, because the other three Gulf States, which did not prevail, had very able, very conscientious, and very dedicated representatives who argued with all the wisdom and skill anybody could have.

The decision was based upon historical facts. As the law was drawn and submitted by the State attorneys general of the Nation, and as the law was interpreted by the court, two States could make a clear case.

The Senator from Florida is hopeful that the Congress, in its wisdom, will iron out the difference by drawing the same kind of line for the good States of Louisiana, Mississippi, and Alabama, forgetting entirely the fact that the Senator from Florida did not have the support of the Senators from all those States in connection with his proposal.

Mr. EASTLAND. Mr. President, will the Senator yield?

Mr. HOLLAND. The Senator from Florida would like to see an even line worked out.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. HOLLAND. The point I make is simply this: For 14 years we struggled with the tidelands bill before we obtained a decision. When one is right, I think one should not count time too heavily. I am willing to wait another year. I would rather do that than defeat another good effort in its chance to be submitted to 50 States, and to be decided by the collective wisdom of the people representing those 50 States through their legislatures.

Mr. GOLDWATER and Mr. EASTLAND addressed the Chair.

Mr. HOLLAND. I agreed to yield first to the Senator from Arizona. Then I shall yield again to the Senator from Mississippi.

Mr. GOLDWATER. Mr. President, I think the Senator from Florida is making his customarily convincing argument as to his views.

I am hard put to place my remarks in the form of a question, so if the Senator will indulge me, perhaps I can support him in part of his thesis. I may have to oppose him in others.

At the outset, I am unalterably opposed to the poll tax idea, but I think it is a matter for the States to decide. I do not think it is something that should be influenced by people outside the States. Elections are matters for the States to determine for themselves.

In respect to my feeling in this matter, which is a States' rights feeling, I should like to read a part of the joint resolution that we are being asked to consider tonight:

> A number of electors of President and Vice President equal to the whole number of Senators and Representatives in Congress to which the District would be entitled if it were a State—

Here is an outside controlling factor—

> but in no event more than the least populous State.

I think this provision is consistent with the Senator's argument that we should not have outside controlling influences upon elections in a State or in the District of Columbia, if the District is given this privilege. I suggest that the outside influence that would be exerted upon the District of Columbia would come from the conglomeration of philosophies and ideas of people who populate the District and who originate from different sections of the country. It would also be controlled in respect to the number of electors that it could have by comparison with the least populous State, even though the population of the least populous State might well be, as it is today, well below the population of the District of Columbia.

I am sure the Senator from Florida will agree with me that we hear very liberal Senators argue in the Senate that there should be no control such as is exercised with respect to interstate traffic in money during elections, and no control by outside groups. I myself have been vociferous in the Senate about organized labor acting in the political arena on behalf of Senators and Congressmen when they have no interest in the State at all.

I believe the Senator has been touching indirectly upon a very important part of our entire election procedures in this country. Up to this time in our history I have been concerned about outside influences coming into my own State of Arizona, and while I realize a Senator is elected to represent not only his own State but to represent the people of the United States, nevertheless he is bound to reflect the feelings of his own people more than he would reflect the feelings of the people of a State rather distant from him.

The whole question of outside influence in American politics is an important and rather insidious one. I am very reluctant to discuss this subject, but we have an important election approaching us in 1960. We shall select a President for the next 4 years. I have been very much disturbed about the apparent efforts of forces outside of the United States trying to influence our elections. In my capacity as chairman of the Republican senatorial campaign committee, I abhor these tactics, and I hope that we shall not be influenced by what other governments think of our candidates or of our parties. I think that we as Republicans and Democrats can refrain from insinuating that one candidate might be influenced this way, that way, or the other.

I am prompted to recite to the Senate this evening a UPI Report No. 223 that came off the wire service at 7:40 this evening, because this is typical of what I am trying to relate to the Senate:

> LONDON.—A Democratic combination of Stevenson for President and KENNEDY for Vice President "could beat any Republican tandem," the Soviet newspaper Izvestia said today.
>
> In a dispatch from its New York correspondent, Izvestia said it was still difficult to tell who the Republican nominees would be.

Aside from the fact that I find myself in complete disagreement with Izvestia, as of now the only other candidate concerned has removed himself by some rather intemperate remarks.

But to quote Izvestia further:

> "Many are coming round to the conclusion that NIXON has compromised himself and will not be able to win in November," the analysis said.
>
> "But judging by statements by informed observers the Republican 'smoke room' take little heed of this," the dispatch said. "The entire Government machinery, including President Eisenhower is on NIXON's side."

I could argue with that, too.

> As for New York Gov. Nelson Rockefeller, Izvestia said, "He actively exploits Washington's failures and the decline of U.S. prestige abroad which, as he put it, is at its lowest ever in the postwar period."
>
> "Stevenson and KENNEDY advocate an improvement in relations with the Soviet Union and in the international climate," the dispatch said.
>
> "Almost the entire trade union rank and file, many representatives of modern business circles, and the intelligentsia and farmers are in favor of the Stevenson-Kennedy ticket."
>
> The main stumbling block for the Democrats, Izvestia said, is that there seems to be no unity among them.

The Senator may think the chairman of the Senatorial Campaign Committee is attempting to make a political speech. I am not. I merely hope that our country will not be influenced by what Mr. Khrushchev says, or what Izvestia, or any other publication in the Soviet Union says.

I relate this dispatch tonight only to bring out a little further the strength of arguments that have been voiced by my friends from the South and other conservative sections of the Nation that election problems are primarily problems of the local and State areas, and that the Federal Government should impinge upon them as slightly as possible.

I repeat that I am against the poll tax as I am against segregation, but I do believe that it is a problem of the States and not the Federal Government. I am hopeful that the Senator from Florida will keep up his dedicated fight in the effort that he has launched, with not too much success this year, but possibly success in the future.

Mr. HOLLAND. I thank the Senator from Arizona for his kind remarks. There is nothing further from my mind than to bring a political issue into this debate. I do not happen to be enthusiastic for either the Vice President or for Mr. Rockefeller, but I am sure there are many fine people who are enthusiastic for one or the other of them. I

shall claim the rights of a delegate to the Los Angeles convention a few weeks from now to vote for whomever I think is the best candidate at the time for President. But I think we make a mistake if we let this debate dwell on that subject. While the issue relates to the Presidency and Vice Presidency, if there should ever be a citizen of the District of Columbia distinguished enough in the esteem of his fellow Americans to be nominated for the Presidency or for the Vice Presidency, I see no particular reason why he should not have the electoral support of the votes of his own fellow citizens in the District of Columbia. But let us leave that question for the moment.

There are three matters I would like to mention briefly before I close my remarks. The first is this: It seems to me that during the debate some Senator should remark on a situation which is almost ridiculous if it were not rather serious. I refer to the approach which is now being made in this amendment that completely reverses the attitude of the Founding Fathers with reference to the rights and privileges of citizens or residents of the District of Columbia.

Anyone who has read the minutes of the Constitutional Convention, anyone who has read the Federalist Papers, knows that it was understood that local government should continue in the District of Columbia. Everyone who knows that history knows that local government did continue here for many years, and people in the District continued to elect their mayor, their councilmen, their commissioners, or whatever they were called, their school district members, and their various local officials, just as people do in any other normal American city.

Everyone who has read this history knows that it was the distinct conviction of the Founding Fathers that it would be unwise to give to the residents of the District of Columbia the right to participate in the election of President and Vice President. Why? For the very reason I recited in the beginning, that they would be too close to Congress, would have too good an opportunity to exert pressure, making life miserable for Senators and Members of the House of Representatives, by continuing and assiduous expressions for local objectives. The minutes show quite well that the pressure that had been exerted upon Congress in some of the other cities where for a time the capital had been maintained was the reason for that decision.

Mr. President, times change. The attitude of the citizens of the United States at the present time, the attitude of Senators and Members of the House at this time, may well be different on this subject from the attitude of the Founding Fathers. However, I want the RECORD to show, because it is an interesting observation, and I think people should ponder it a little, that the Founding Fathers very definitely and devotedly felt that the residents of the seat of Government, the residents of the District of Columbia—not then established, when the Constitution was written, but later established—should not have the right to participate in the selection of the President and Vice President, but should have the right of local self-government. They did have it for many, many years, as every Senator knows. So it is interesting, and I wanted this observation to be a part of the RECORD of this debate, and to observe that in the judgment of those who are suggesting the amendment at this time that there is a purpose completely variant and completely opposite and contradictory to the expressed purpose of the Founding Fathers in this matter, at the same moment that we are withholding local self-government from the District.

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. CASE of South Dakota. That is a very interesting observation. I think along with it there should be noted the fact that at the time the Founding Fathers were writing the Constitution, there were very few States. There were Thirteen Original Colonies, and I do not recall what the electoral vote of the respective States was to be. Certainly the electoral vote of the first States was much less than that of the present 50 States, with 435 Representatives and 100 Senators, a total of 535. The provision in the amendment limiting the electoral vote of the District to that of the least populous State would mean that it would not have more than three. Certainly 3 votes out of 535 is a very small proportion, and the impact would be much less, proportionately, than it could possibly have been at the time the Constitution was adopted.

Mr. HOLLAND. I thank the Senator for his comment. Of course it is needless for me to remind the Senator, because he knows it already, that when the electoral representation of the District of Columbia is being recorded, it is being credited for having two Senators, which it does not have and will not have.

In addition, the amendment as now submitted does not require the very careful and meticulous separation of citizens that would be required if we had to find out who were really entitled to vote in the District of Columbia in these elections, because we all know that several hundred thousand residents maintain their legal residence and their right to vote back in their own States.

For example, in the office of the Senator from Florida, where there are 12 employees, all of them except 1, as I recall, now maintain their residence in Florida, casting their votes in Florida, and several of them have families—wives or husbands or other members of their families who also cast absentee ballots.

Therefore, no one can pretend for a moment that the area of the District of Columbia is comparable, on the question of citizenship of those who live here with, for example, the citizenship and the residents in the State so ably represented by the Senator from South Dakota [Mr. CASE], where those who live there are residents and voters by a great preponderance, certainly 98 or 99 percent.

So one of the improvements of the amendment that comes back from the House is in this very matter. The representation of the District of Columbia in the electoral college is placed much more nearly in accord with the merits of the situation than was the case with the one against which the Senator from Florida voted.

Another change which the Senator from Florida thinks is desirable is with reference to the provision which permitted the election of delegates to the House of Representatives and, what made it worse, submitted to Congress itself the question as to what power to give those delegates, whether full power or not. The Senator from Florida was utterly opposed to that proposal, because it would put pressure in the maximum degree against the men and women sitting in the Senate and in the House. The Senator from Florida is glad that that provision was omitted in the draft of the resolution which comes back from the House of Representatives.

Mr. President, the sole purpose of my making these remarks was to say just this: I shall vote for the amendment. I will do so with some misgivings, because I realize it runs counter to the wisdom of the Founding Fathers, who wanted to insulate Congress against the type of pressure and type of influence which may be exercised against Members of Congress, if this amendment is adopted.

We have come a long way in the school of democratic government and democratic living. It is not for me to say that that may not be a proper change in the philosophy of our Government. The people eventually will determine that question through the action of their State legislators. I have some misgivings on that subject. That was the first thing I wanted to say.

The second was that by no means shall I desist from continuing to offer the poll tax amendment. I think it is fundamental in this country that citizens who otherwise are qualified should have the right to vote for their President, their Vice President, and those who represent them in the Senate and in the House of Representatives. I believe that cleaner government and purer government will come with the recognition of that right, in which I very strongly and profoundly believe.

I shall be back in the Senate, offering that amendment early in the next session. I hope the Senate will, without being annoyed by too much other discussion, be given the chance to vote. I am sorry I have had to take this long. I appreciate the colloquys with distinguished Senators.

It is my own very firm conviction that in the case of the poll tax amendment, those who believe in the civil rights program, which in some of its particulars I strongly disagreed with—that is the one which has been voted—will find in five States that most of the enforcement which it is believed will occur under the terms of that act will be defeated by the nonpayment of the poll tax by persons who otherwise would be qualified. I

want the RECORD to show that, because that is what I firmly believe. I believe that if Senators and Representatives realized that fact, and if they realized that the right to vote of vastly more persons than the total population of the District of Columbia is affected by the poll tax amendment, there would have been a different attitude long since expressed toward that amendment.

In closing, I thank the Senate for its vote on that amendment this year. I hope that that vote will be followed by an even greater vote of approval next year. With all my heart, I believe we will not have any real solution of the problems which formerly related to all the Southland, but which do not now relate to all of it, unless, as one feature of such solution, we adopt the provision that poll taxes may no longer be used as a method and means of preventing persons who are otherwise qualified from going to the polls to vote for their President, their Vice President, their Senators, and their Members of the House of Representatives.

Mr. President, I yield the floor.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BEALL. Mr. President, I ask for the yeas and nays.

The yeas and nays were not ordered.

Mr. JOHNSTON of South Carolina. Mr. President, if there is not to be a yea-and-nay vote, I desire the RECORD to show that I shall vote against the amendment.

Mr. EASTLAND. Mr. President, I desire the RECORD to show that I am against the joint resolution. I ask for a yea-and-nay vote.

The yeas and nays were not ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas that the Senate concur in the amendments of the House. [Putting the question.]

In the opinion of the Chair, two-thirds of the Senators present and voting having voted in the affirmative, the motion is agreed to.

Mr. CASE of South Dakota. Mr. President, I move that the Senate reconsider the vote by which the amendments were agreed to.

Mr. KEATING. I move to lay that motion on the table.

Mr. EASTLAND. Mr. President, I ask for the yeas and nays on the motion to lay on the table.

The yeas and nays were not ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from New York to lay on the table the motion of the Senator from South Dakota to reconsider the vote by which the amendments were agreed to.

The motion to lay on the table was agreed to.

HOUSING ACT OF 1960

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1638, S. 3670.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 3670) to extend and amend laws relating to the possession and improvement of housing and the renewal of urban communities, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the bill.

Mr. DIRKSEN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Illinois will state it.

Mr. DIRKSEN. I should like to ask the majority leader a question before he leaves the Chamber. As I understand, the housing bill has just been made the unfinished business. I do not know about major amendments; however, I understand the distinguished Senator from Pennsylvania [Mr. CLARK] has an amendment.

Mr. CLARK. I have one amendment, but I have discussed it with the majority leader, and he and I are in accord.

AMENDMENT OF SMALL BUSINESS ACT

Mr. PROXMIRE. Mr. President, on behalf of myself, the Senator from Indiana [Mr. CAPEHART], the Senator from Alabama [Mr. SPARKMAN], the Senator from Arkansas [Mr. FULBRIGHT], and the Senator from Michigan [Mr. HART], I introduce, for appropriate reference, a bill to amend the Small Business Act.

The bill contains parts of several bills introduced earlier in this Congress and other recommendations and suggestions which have been made to improve the Small Business Act.

I desire especially to thank the Senator from Alabama [Mr. SPARKMAN], the Senator from Michigan [Mr. HART], the Senator from Arkansas [Mr. FULBRIGHT], and the Senator from Indiana [Mr. CAPEHART] for the contribution which they have made to the bill. The bill contains many provisions which are derived from suggestions made by them.

Although the bill is being introduced late in the session, I think its chances of passage are excellent. The Subcommittee on Small Business of the Committee on Banking and Currency —I am the chairman of the subcommittee—has considered all elements of the bill and bills in other forms. I feel quite certain that the committee will be ready and willing to give favorable consideration to the bill.

Hearings were held last summer by the Subcommittee on Small Business of the Banking and Currency Committee covering the substantive provisions of this bill.

The bill would increase by $75 million the authorization for the revolving fund for the Small Business Administration's regular business loan program. Under projections furnished me by the SBA, this $75 million increase in the revolving fund would allow them to operate their regular business loan program until well into fiscal 1962.

The bill would also provide for greater participation by small business in Government procurement. Improvement in this field is very important because the percentage of small business participation in Government procurement has steadily declined. For the first 9 months of fiscal 1960 small businesses received only 15.7 percent of the total defense procurement as compared to 16.6 percent of the total defense procurement during fiscal 1959. In 1954 small businesses received 25.3 percent.

I would remind the Senate of a Government purchase which I brought to the attention of the Senate on Monday. In this case the State Department made a purchase of furniture for our Embassy in Venezuela from a firm headed by the son of Secretary of Commerce Frederick Mueller. A small business got a Government contract; but unless one's father happens to be a member of the President's Cabinet, the chances for small business to furnish supplies to the Government are rapidly disappearing. Unless a small businessman has a good and generous friend in Government, his chances of getting a negotiated contract are mighty small.

Consider these facts. The total defense procurement program in fiscal 1959 amounted to $22,744 million. Of this amount, 86 percent, or $19,655 million, was negotiated. The small business share of these negotiated contracts was about 11.8 percent, or $2,317 million.

On the other hand, of the competitive contracts, only 14 percent of the procurement, or $3,089 million, was competitive. The small business share of this competitive amount was $1,466 million, or 47.5 percent.

I am concerned over the fact that an overwhelming amount of procurement contracts are entered into by negotiation rather than formal advertising. Statistics show that 86.4 percent of the total defense dollar awards are made through negotiation. I am concerned also that a very large percentage of these negotiated contracts is negotiated with a sole source, hence effective competition is lacking. Competition is an ingredient which I feel is absolutely necessary since it has been shown over and over again that competition in Government procurement results in savings to the Government and, in most cases, results in the delivery of a better product.

Figures furnished to the Congress by the Department of Defense show that in the past fiscal year new procurements, excluding intragovernmental and modifications of existing contracts, totaled $16,247,263,000; of this amount, $8,237,830,000, or 50.7 percent are negotiated with a sole source. Another report issued by the Department of Defense shows that in fiscal 1959 of the $22,591,800,000 net value of military contracts awarded, $16,681,300,000, or 73.8 percent was awarded to 100 companies. Breaking this down to an even more interesting figure, only 20 companies re-

ceived 50.6 percent of the total procurement dollar.

Just this week, the senior Senator from Illinois made an extremely significant and persuasive speech on this very issue. He pointed to a series of specific, documented abuses. The taxpayers, and small business, too, lost as a result of these noncompetitive practices of the Department of Defense in obtaining procurements. Fantastically high and greatly excessive costs to the Federal Government, plus a drying up of opportunities for small business, resulted.

Mr. President, the explanation given for this trend is the complexity of new weapons and the exigencies of time. I cannot believe that the lessening of effective competition, which the negotiation method of procurement brings about, is desirable, or that in most cases competition would lengthen the time of delivery of needed weapons.

Mr. President, once again I desire to call attention to a very brief portion of the report of the Appropriations Committee on the Department of Defense appropriation bill. Earlier, the distinguished senior Senator from New York [Mr. JAVITS] called attention to it. But I believe it espectially pertinent to refer to it again at this point. I shall read three brief paragraphs of the committee's report which reflect its concern in regard to the policies of the Department of Defense in not having more concern for proper procedure in connection with the handling of this matter. I read now from page 40 of the report of the Senate Appropriations Committee on the Department of Defense appropriation bill, 1961; it is Report No. 1550:

SMALL BUSINESS PROCUREMENT

The share of Department of Defense procurements being awarded to small business concerns in the form of prime contracts has developed into a serious situation. The percentage share of military prime contracts has spiraled downward from a high of 25 percent in fiscal year 1954 to 16 percent in fiscal year 1959. This affords a sad commentary on the effectiveness of the small business program of the Department of Defense.

Determined effort should be made to increase the participation of qualified small companies in the vast area of research and development contracts.

Sole source procurements made with funds appropriated under this act should be kept at a minimum.

Mr. President, the bill we are introducing will, it seems to me, help very greatly by requiring the Department of Defense to refer contracts of any substantial size to the Small Business Administration, so it can set up a screening process and can do its very best to protect small business and to see to it that small business is given the greatest possible opportunity.

Mr. President, I believe that competition would stimulate delivery and also add incentive to competing companies to provide better products. I hope the time will never come when we in this country shall have to abandon the principle of full and free competition through equal opportunity.

This concentration of Government procurement dollars in a mere handful of companies and the tremendous use of sole-source negotiation by the Department of Defense should be of great concern to everyone in the country; but it is of particular concern to those of us who are devoted to the task of securing for small business a just share of the Government procurement dollars. The drift away from advertised procurement is particularly harmful to small business, since small business receives only 11.8 percent of all negotiated awards, as compared to a very creditable 47.5 percent of advertised awards.

I am convinced that too much emphasis is being placed by the Department of Defense on negotiation with a sole source, because it is the easiest method for the Department to use. It is not permitting small business to participate to the extent it rightfully should in our defense effort, and both the country and the small business community suffer from this lack of full participation.

It is understandable that some of the large and more complex procurement contracts which the Department of Defense enters into cannot be performed by small business. One of the most effective ways to obtain a fairer share of Government procurement for small businesses is to provide for participation by them, to a greater extent, in subcontracting.

Of course, here is where small business can play an important part, even in connection with the large contracts for important weapons systems.

The bill provides that the Small Business Administration shall promulgate a small business subcontracting program. Under this program, all prime contracts for Government procurement over $1 million and all subcontracts over $500,000 would contain provisions requiring the prime contractor to consult with SBA and to furnish SBA with information and records concerning the contract, when requested to do so by SBA. This will permit SBA to negotiate with these contractors on behalf of small businesses.

The bill provides for publication—

The bill provides for publication—and, Mr. President, this feature is also very important; it was proposed by the distinguished junior Senator from Michigan [Mr. HART], and we have received from small businesses many complaints that they do not know when such contracts are available—in the daily U.S. Department of Commerce "Synopsis of the U.S. Government Proposed Procurements, Sales, and Contract Awards," published by the Department of Commerce, of all military procurement actions over $10,000 and all other procurement actions over $1,000. Procurements which for security reasons are of a classified nature, perishable subsistence supplies, public utilities, and emergency procurements when the time for bidding is insufficient to permit publication are excepted. This provision will permit small businessmen to have notice of a more complete list of what their Government is buying. Large corporations can afford to retain Washington representatives to furnish this information to them. The small businessman generally cannot afford to do this. I believe that a comprehensive publication in this daily synopsis of Government procurements will be of great benefit to small businessmen.

The bill will also amend the program of grants for studies, research, and counseling in small business problems, by providing that a corporation formed by two or more eligible entities will be eligible to receive a grant. Testimony at the hearings brought out that such a corporation in some States would be in a position to be able to enlist the various talents, financial assistance, and other facilities of other agencies within a State in implementing the purposes of the grant. The bill also provides that the SBA may require, as a condition to a grant, that an additional amount not exceeding the amount of the grant, be furnished from sources other than the SBA. However, if the grant or any portion is used to counsel individual small business concerns, an amount equal to the amount of the grant must be provided. I believe these amendments will improve this program.

The bill would simplify the reporting requirements of SBA by requiring an annual report to the President and the Congress, instead of the semiannual report presently required. The SBA would be able to include in this report the material it now reports quarterly regarding its progress in liquidating the assets and winding up the affairs of the Reconstruction Finance Corporation.

Finally, the bill would require the Attorney General to make a yearly report on any activities of the Government which may adversely affect small business in the antitrust field. The bill would eliminate certain quarterly reports that the Attorney General makes under the Defense Production Act.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 3689) to amend the Small Business Act, and for other purposes, introduced by Mr. PROXMIRE (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Banking and Currency.

Mr. SPARKMAN. Mr. President, will the Senator from Wisconsin yield to me?

The PRESIDING OFFICER (Mr. BARTLETT in the chair). Does the Senator from Wisconsin yield to the Senator from Alabama?

Mr. PROXMIRE. I yield to the distinguished Senator from Alabama, who deserves more credit for this bill than does any other Member of the Senate. He is chairman of the Select Committee on Small Business. He has conducted a number of hearings. Many of the suggestions come from him.

Mr. SPARKMAN. Mr. President, I shall be brief; but I desire to compliment the Senator from Wisconsin on his very fine presentation in so short a time.

I was particularly pleased to hear him say that some of the practices of some branches of the Government, particularly the Department of Defense, which consistently engage to an excessive extent in procurement by means of negotiated contracts, rather than by means of competitive bidding.

As the Senator from Wisconsin knows, throughout the years we have contended most vigorously for competitive bidding, and have stated again and again that if competitive bidding is used, small business will be taken care of.

Mr. PROXMIRE. That is correct; and I believe it particularly timely that this bill is being introduced so soon after the passage of the Department of Defense appropriation bill, in connection with which the Appropriations Committee took the unusual course of instructing the Defense Department that the funds appropriated should, wherever possible, be made available for expenditure under contracts awarded on a competitive basis, and, wherever possible, should be made available to small business. Here is an opportunity for us to make specific provision of administrative procedures for carrying out that policy and for making that opportunity available.

Mr. President, I yield the floor.

HOUSING ACT OF 1960

The Senate resumed the consideration of the bill (S. 3670) to extend and amend laws relating to the possession and improvement of housing and the renewal of urban communities, and for other purposes.

Mr. SPARKMAN obtained the floor.

Mr. JOHNSON of Texas. Mr. President, will the Senator from Alabama yield to me?

The PRESIDING OFFICER (Mr. MUSKIE in the chair). Does the Senator from Alabama yield to the Senator from Texas?

Mr. SPARKMAN. I yield.

Mr. JOHNSON of Texas. Mr. President, I have talked with the minority leader and to the ranking minority members of the committee, the Senator from Indiana [Mr. CAPEHART], and the Senator from Connecticut [Mr. BUSH]; and I have consulted with the chairman of the subcommittee, the Senator from Alabama [Mr. SPARKMAN], and with the Senator from Pennsylvania [Mr. CLARK], who has an amendment to offer.

I wonder whether it would be agreeable to Senators to enter into a unanimous-consent agreement that there be 30 minutes on amendments, with the exception of the amendment of the Senator from Pennsylvania [Mr. CLARK]; that there be 1 hour on the Clark amendment; and that there be 2 hours on the bill, all to be equally divided.

Mr. DIRKSEN. Mr. President, will the Senator from Texas yield?

Mr. JOHNSON of Texas. I yield.

Mr. DIRKSEN. I would have no objection to that arrangement, provided I can now inquire of the chairman of the subcommittee with respect to the item of the bill which sets certain goals. If that could be eliminated from the bill, and could be presented as a separate bill, and could be put on the calendar, then, at our convenience, we could discuss that matter; and I believe that would modify the situation very materially.

Mr. LONG of Louisiana. Mr. President, what item of the bill is it?

Mr. SPARKMAN. The Senator from Illinois said it is the provision pertaining to setting goals.

It is rather difficult to handle this question in such a brief manner as this. I know there has been considerable opposition aroused to this provision of the bill, which simply provides that—and it is in the first part of the report—that each year the President shall deliver to Congress a message in which certain housing goals will be set.

Mr. JOHNSON of Texas. Mr. President, I modify my request to an hour's debate on the goals amendment, as well as the Clark amendment, a half hour on all other amendments, and 2 hours on the bill.

Mr. DIRKSEN. Mr. President, I have just discussed this subject with the Senator from Alabama. He seemed to be agreeable to considering the goals amendment as a separate proposal. I have no objection if it is considered that way, but it is a bone of contention in this bill, and it should be considered as such. If it is not, there will be a good deal of discussion on that item, because it seems to me quite offensive. I think, therefore, 1 hour should be allowed on it.

Mr. JOHNSON of Texas. I have modified my request accordingly.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request of the Senator from Texas?

Mr. JOHNSTON of South Carolina. Mr. President, I am not objecting, but I am calling to the attention of the majority leader this question: When are we to recess or adjourn? If we are to proceed with consideration of the bill, without limitation, I think we shall get through quicker, but if we are to recess and take the bill up tomorrow, there should be a time limitation.

Mr. JOHNSON of Texas. We will see how we get along. I do not know how many amendments will be offered. I understood there would be no controversy except on about two amendments. If we have incorrectly estimated the situation, we can adjust ourselves accordingly.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request of the Senator from Texas? The Chair hears none, and the order is entered.

The unanimous-consent agreement was subsequently reduced to writing, as follows:

UNANIMOUS-CONSENT AGREEMENT

Ordered, That effective upon the adoption of this agreement, during the further consideration of S. 3670, except as to a proposed amendment each by Mr. CLARK and Mr. SPARKMAN relating, respectively, to contracts for additional housing units, and a national housing goal, upon which there shall be a limitation of debate of one hour each, to be divided and controlled as below; debate on any amendment, motion, or appeal, except a motion to lay on the table, shall be limited to thirty minutes, to be equally divided and controlled by the mover of any such amendment or motion and the majority leader: *Provided*, That in the event the majority leader is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the minority leader or some Senator designated by him: *Provided further*, That no amendment that is not germane to the provisions of the said bill shall be received.

Ordered further, That on the question of the final passage of the said bill debate shall be limited to two hours, to be equally divided and controlled, respectively, by the majority and minority leaders: *Provided*, That the said leaders, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, motion, or appeal.

Mr. SPARKMAN. Mr. President, I shall be very brief in the presentation of this bill. I believe we can pass it without too much time being consumed. I do not think there is too much controversy. I have a very brief explanation of it.

Mr. President, S. 3670 is an original bill reported by the Committee on Banking and Currency after extensive hearings and full consideration of over 25 bills introduced in both sessions of the 86th Congress. The provisions of this bill are derived primarily from the several bills which were considered and from recommendations made by the Subcommittee on Housing following the report of its study of mortgage credit.

This bill does not contain legislative proposals designed to solve all of the Nation's housing problems. To that extent, it is less than many members of the committee believe to be desirable. On the other hand, it continues several housing programs which would otherwise expire, and its supplements authorizations for programs which are now dormant because funds are exhausted. In addition, it contains many proposals for perfecting existing law.

Among the principal provisions of the bill are the following:

Title I would require the President to announce national housing production goals and would stimulate uses of new materials and techniques in residential construction through research activities in the Housing and Home Finance Agency and the Federal Housing Administration.

Section 201 extends the FHA home repair and improvement program for 1 year.

Section 204 increases the FHA general insurance authorization by $4 billion.

Section 206 permits the FHA to insure multifamily projects secured by buildings in which individual units are owned separately from the whole. This type of ownership is called "condominium."

Section 301 increases by $25 million the authority to appropriate funds for direct loans to provide housing for the elderly.

Section 302 amends three programs of housing for the elderly to encourage the inclusion of health, social, and recreational facilities.

Section 401 increases the capital grant authorization for the urban renewal program by $350 million.

Section 501 increases by $150 million the Federal National Mortgage Association special assistance fund which is subject to presidential allocation; and increases by $25 million the special assistance fund for the purchase of cooperative loans insured by the FHA.

Section 503 increases the college housing loan authorization by $500 million.

Section 504 increases the public facility loan authorization by $100 million.

Section 505 continues the direct home loan program administered by the Veterans' Administration for 1 year and continues the provision in existing law which increases the loan fund by $150 million annually.

Section 506 continues the farm housing program for 2 years and authorizes increases in the loan fund up to $74 million.

There have been statements in the press that this bill has been tailored to meet Presidential objection in advance. Such reports are without foundation. As far as I am personally aware, there have been no veto threats. In my opinion, this bill was developed in the Committee on Banking and Currency in the conviction that its provisions are necessary at the present time and that certain other necessary proposals should be considered separately or could be postponed until the next session of Congress. It is my personal view that S. 3670 is sound legislation and should be approved by the Senate, by the House of Representatives, and by the President.

I mentioned that $500 million is provided in this bill for college housing. The college housing program has been one of the most popular and effective programs that we have devised.

Every State in the Union, with the exception of one, have colleges and universities whose applications for loans have been approved. Wyoming is the only State wherein a college has not received a college housing loan. I am advised, however, that Casper College in Wyoming has an application pending, and it is hoped funds may be reserved for the college very soon.

Mr. President, I ask unanimous consent to have printed in the RECORD a list of colleges whose applications have been approved heretofore.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

College housing program—Approved loans Apr. 30, 1960

Institution	Amount of loan	Housing accommodations	Other facilities
Alabama:			
The Marion Institute	$150,000	100 men	
Spring Hill College	586,000	168 men, 6 faculty	
The Alabama Polytechnic Institute	614,000	182 men, 100 women	
Howard College	2,150,000	321 men, 342 women	
Tuskegee Institute	2,000,000	897 men, 154 women	
St. Bernard College	273,000	104 men, 2 faculty	
Jacksonville State Teachers College	280,000	176 men	
Alabama A. & M. College	250,000		Student center.
Troy State College	367,000	214 men	
The Alabama Polytechnic Institute	1,979,000	240 student families	
Marion Institute	265,000	116 men	Dining (500).
Florence State College	1,365,000	226 men, 60 women	Student union—dining (600).
Troy State College	235,000	144 men	
Birmingham Southern College	278,000	32 student families	
Howard College	110,000	16 student families	
University of Alabama-Medical	1,555,000	64 student families, 64 faculty	
Huntingdon College	225,000		Student center.
Alaska: University of Alaska	1,170,000	102 men, 39 women, 12 student families, 12 faculty.	
Arizona:			
Arizona State College (Tempe)	400,000	144 men	Dining.
University of Arizona	400,000	152 women	
Arizona State College (Flagstaff)	500,000	168 men	
University of Arizona	2,199,000	364 men, 356 women	
Arizona State College (Tempe)	2,493,000	300 men, 450 women	Dining.
Arizona State College (Flagstaff)	427,000	168 men	
University of Arizona	1,108,000	350 men	
Arizona State College (Tempe)	896,000	150 men, 144 women	Dining (294).
Arizona State College (Flagstaff)	475,000	62 student families	
Arkansas:			
Ouachita Baptist College	75,000	48 men	
State A.M. & N. School	581,000	128 men, 124 women	
Henderson State Teachers College	347,000	30 student families, 10 faculty	
Hendrix College	265,000	102 men	
Ouachita Baptist College	294,000	100 men	
University of Arkansas	2,917,000	404 women, 100 student families	Dining (1,450).
Hendrix College	325,000	100 women	
Arkansas State Teachers College	350,000		Student center.
Henderson State Teachers College	252,000		Student union.
University of Arkansas-Medical	2,316,000	195 men, 120 women, 95 student families, 2 faculty.	
Arkansas State College	577,000	264 men	
Harding College	500,000	60 student families	
Arkansas State Teachers College	325,000	116 men	
Arkansas Polytechnic College	550,000	13 student families	Student union—dining.
Little Rock University	322,000		Do.
Ouachita Baptist College	200,000		Dining (400).
Philander Smith College	800,000	100 men, 120 women, 6 faculty	Student union—dining.
University of Arkansas	878,000	100 student families	
Arkansas Polytechnic College	286,000	102 men	
Do	350,000	100 women	
John Brown University	400,000	136 men	
Arkansas Agricultural and Mechanical College	925,000	268 men, 128 women, 30 student families	
Ouachita Baptist College	625,000	100 men, 76 women	
Arkansas State Teachers College	765,000	126 men, 124 women	
Henderson State Teachers College	1,136,000	152 men, 152 women	
University of Arkansas	1,672,000	432 men	
California:			
Menlo College	520,000	128 men, 8 faculty	
University of San Francisco	1,478,000	374 men	Dining.
Whittier College	350,000	90 women	
LaVerne College	200,000	50 women	
University of Santa Clara	375,000	150 men, 3 faculty	
University of Southern California	660,000	304 men, 52 student families	
Do	2,150,000	226 men, 227 women	Do.
Occidental College	1,308,000	107 men, 136 women	Dining (350).
College of the Pacific	1,522,000	400 women	Dining (400).
University of Redlands	350,000	96 men	
Whittier College	500,000		Student union—dining (500).
Mount St. Mary's College	850,000	160 women	Dining.
Loyola University of Los Angeles	718,000	180 men	
College of the Holy Names	1,209,000	166 women, 64 faculty	Commons (600).
University of San Francisco	948,000	96 faculty	Dining (120).
Menlo College	500,000	100 men, 6 faculty	Student center.
College of Notre Dame	435,000	100 women	Dining (250).
LaVerne College	367,000	66 women	Dining (256).

Total (1,035)	1,010,830,000	138,549 men, 95,020 women, 12,054 student families, 2,413 faculty.	

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the RECORD at this point a second list of colleges which have loan applications now pending.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Pending applications, college housing program, as of Apr. 30, 1960

	Federal funds
Alabama:	
Athens College	$175,000
The Alabama Polytechnic Institute	1,725,000
Troy State College	180,000
Walker Junior College	196,000
Sacred Heart College	400,000
Arkansas:	
Arkansas State College	1,500,000
Arkansas Polytechnic College	669,527
Arkansas State College	1,200,000
Agricultural, Mechanical & Normal College	2,991,000
California:	
California Western University	1,123,000
University of California (Davis Campus)	2,000,000
University of California (Los Angeles Campus)	2,500,000
Loyola University of Los Angeles	900,000
University of California	1,500,000

Pending applications, college housing program, as of Apr. 30, 1960—Continued

	Federal funds
Colorado:	
Adams State College	$1,934,000
Colorado State College	2,125,000
Colorado State University	3,734,540
University of Denver	3,686,420
Colorado School of Mines	2,380,000
Loretto Heights College	1,200,000
Connecticut: University of Bridgeport	900,000
Delaware: Wesley College	317,000
District of Columbia: The American University	1,750,000
Florida:	
Florida State University	3,000,000
University of Miami	1,500,000
University of Florida	500,000
John B. Stetson University	480,000
University of Florida	500,000
Georgia:	
Abraham Baldwin Agricultural College	360,000
Albany State College	435,000
Georgia Institute of Technology	475,000
Georgia Teachers College	900,000
Middle Georgia College	450,000
West Georgia College	540,000
The University of Georgia	3,620,000
Tift College	200,000
Hawaii: Chaminade College of Honolulu	165,000

Pending applications, college housing program, as of Apr. 30, 1960—Continued

	Federal funds
Idaho:	
Northwest Nazarene College	$285,000
University of Idaho	1,363,000
Illinois:	
Northern Illinois University	1,750,000
Mundelein College	1,000,000
Lake Forest College	500,000
University of Illinois	2,150,000
North Central College	200,000
North Park College and Theological Seminary	470,000
Eureka College	440,000
Greenville College	550,000
Indiana:	
Ball State Teachers College	4,235,000
Indiana State Teachers College	1,500,000
St. Francis College	687,000
Indiana State Teachers College	1,650,000
Indiana University	3,750,000
Iowa:	
William Penn College	360,000
University of Dubuque	632,000
Simpson College	330,000
Buena Vista College	128,000
Kansas:	
Kansas State Teachers College	1,000,000
Do	500,000

Pending applications, college housing program, as of Apr. 30, 1960—Continued

Kansas—Continued	*Federal funds*
Kansas State University of Agriculture and Applied Science	$750,000
The University of Kansas	1,300,000
Kansas State College of Pittsburg	650,000
Saint Mary of the Plains College	902,000
University of Kansas	600,000
Baker University	400,000
Bethany College	320,000

Mr. SPARKMAN. Mr. President, I ask unanimous consent that a member of the committee staff, in excess of the numbers that are usually allowed on the floor, may be permitted to attend during the consideration of this bill, in order to be of assistance to the minority.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CLARK. Mr. President, is the bill open to amendment?

Mr. SPARKMAN. I am through, but the Senator from Indiana wanted me to yield.

Mr. CAPEHART. Mr. President, I merely wanted to say that, with a few amendments, this is a quite satisfactory bill. I have a number of amendments.

Mr. President, I offer an amendment that commencing on line 4, page 29, there be deleted all through line 11, substituting in lieu thereof, "by striking out 'June 30, 1961' and inserting 'June 30, 1964'."

Mr. President, this amendment would extend the farm housing loan section to June 30, 1963, but would eliminate the $50 million in the bill, which I think we have discovered, since the bill was written, is not particularly needed for the next year.

Mr. SPARKMAN. I agree with that statement of the Senator from Indiana. We have sufficient funds in the program. The program ought to be extended, but we can run that length of time with the funds already available. I am agreeable to adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Indiana [Mr. CAPEHART].

The amendment was agreed to.

Mr. CAPEHART. Mr. President, I offer another amendment.

Commencing on line 13, page 29, to delete all through line 19 and substitute in lieu thereof "by striking out 'June 30, 1961' and inserting 'June 30, 1963'."

This has to do with farm housing, and relates to commitments or contributions of not to exceed $4 million.

Mr. SPARKMAN. Mr. President, the same situation prevails as to this amendment. I am agreeable to the adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Indiana [Mr. CAPEHART].

The amendment was agreed to.

Mr. CAPEHART. Mr. President, I offer another amendment relating to farm housing. We have discovered, since writing the bill, this provision is not needed at this time.

Commencing on line 21, page 29, delete all through line 2, page 30, and substitute in lieu thereof "by striking out 'June 30, 1961' and inserting 'June 30, 1963'."

That would eliminate $20 million, which is not needed this year.

Mr. SPARKMAN. I am agreeable to adoption of the amendment, Mr. President, for the same reasons.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Indiana [Mr. CAPEHART].

The amendment was agreed to.

Mr. CAPEHART. Mr. President, I offer an amendment on line 4, page 28, to delete "$200,000,000" and to substitute in lieu thereof "$150,000,000".

Mr. President, this amendment would eliminate $50 million from the community facilities section, which we likewise have discovered is not needed for the next fiscal year.

Mr. SPARKMAN. Mr. President, while the administration asked for $100 million, it recognized the fact that the program would run over a period of years. I feel the program can proceed perhaps for 3 years with the $150 million which would be provided by the amendment. I am personally agreeable to the reduction.

Mr. LONG of Louisiana. Mr. President, before the amendment is voted on, I should like to say that this is a program which provides loans to small communities which cannot obtain reasonable financing on the open market. The $100 million has been used up. We were told it would not be needed, but all the money has been used.

The administration has kept the money from being used in a single year, by imposing a budgetary requirement of the Bureau of the Budget that not more than 20 percent of the money could be used in any one year. The administration has simply permitted these small communities to sit by, and has taken a limited number of applications off the top of the pile over a long period of time.

The fact is that the whole $100 million could be used in a single year, if all the applications by small communities were approved, if the communities knew about the program, and if the administration would let the loans go through.

The Bureau of the Budget has imposed a ceiling upon small community loans. The ceiling has been imposed simply by approving about one application a month, rather than processing the loan applications for the benefit of the small communities of the country.

May we have the assurance of the chairman of the subcommittee, the manager of the bill, that if the amendment is agreed to we will not later see a further "watering down" of the program when the bill goes to conference? Have we any assurance that Senators will fight to assure $150 million for the program if the amendment is agreed to?

Mr. SPARKMAN. I think the Senator from Indiana will join me in giving assurance to the Senator from Louisiana that we will fight for the amount in the Senate bill.

Mr. CAPEHART. I certainly will do so. We thought the money was needed; otherwise, we would not have asked for the appropriation.

Mr. SPARKMAN. Mr. President, in this connection, I ask unanimous consent to have printed in the RECORD at this point a table taken from the committee report which shows the various communities throughout the Nation which have applications pending for public facility loans.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Community Facilities Administration public facility loans program—applications on hand as of Apr. 30, 1960

Applicant community	Type of facility	Amount of loan requested

West Virginia:		
Gilbert	Water	193,000
Princeton: Oakvale Public Service District	Sewer	97,000
Grand total (76 applications)		22,865,000

Mr. SPARKMAN. Mr. President, of the $100 million made available in 1955 there remains an amount of $21.8 million. The pending applications total $22.8 million. In other words, the applications pending and the remaining funds available for loans are almost the same. We would add the $50 million in order to extend the program.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Indiana [Mr. CAPEHART].

The amendment was agreed to.

The PRESIDING OFFICER. The Chair inquires at this point as to the use of time. Does the Senator from Alabama yield time?

Mr. SPARKMAN. No time was set, Mr. President.

Mr. CAPEHART. Mr. President, I offer another amendment. On line 5, page 26, delete "$225,000,000" and substitute in lieu thereof "$215,000,000"; and on line 6, page 26, delete "$75,000,000" and substitute in lieu thereof "$65,000,000".

Mr. President, the effect of the amendment would be to reduce the amount of funds available to FNMA for purchase of consumer-type cooperative housing mortgages by $10 million. We have discovered that this amount can be taken out of the bill without in any way reducing the effectiveness of the program.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Indiana.

The amendment was agreed to.

Mr. CAPEHART. Mr. President, I offer another amendment. On line 5, page 18, strike out "$650,000,000" and insert "$600,000,000".

Mr. President, the effect of the amendment would be to reduce the urban renewal capital grant authorization by $50 million, from $350 million to $300 million. Again, it is our best judgment that this is as much money as can be spent in the next fiscal year.

Mr. CLARK and Mr. JAVITS addressed the Chair.

Mr. CAPEHART. I yield.

The PRESIDING OFFICER. Does the Senator from Alabama yield?

Mr. CAPEHART. Mr. President, I have the floor.

The PRESIDING OFFICER. The Senator from Alabama has the floor.

Mr. SPARKMAN. Mr. President, I regret very much to inform my friend from Indiana that whereas I was willing to accept the other amendments, I cannot agree to this amendment.

The reason we were able to get together on the other amendments is that it was determined that we had sufficient money available to project the certain programs which were amended for a period of time. For several years our urban renewal program has been running at the rate of approximately $350 million a year.

Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. SPARKMAN. May I be informed as to whether the unanimous-consent agreement fixing the time was agreed to?

The PRESIDING OFFICER. It was agreed to.

Mr. SPARKMAN. I am sorry. I was under the impression that the Senate would proceed a while, and then we would agree to the time limitation.

Mr. CAPEHART. Mr. President, I believe there are 30 minutes on each amendment.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. SPARKMAN. Mr. President, I yield myself 5 minutes on this amendment.

In the case of urban renewal, we have been running at the rate of about $350 million a year. The amount which we made available for the current fiscal year is $350 million. Commencing July 1, 1960, an additional $300 million will become available.

The administration, it is true, testified before the committee that the funds becoming available on July 1 would be enough to carry the program through the next fiscal year. That may be correct. I do not know.

The very nature of urban renewal is such that we cannot remain current with the amount of money available, but we must be able to plan ahead.

Our principal reason for providing the $350 million in additional funds for the urban renewal program was to make it possible to receive applications, to act upon them, and to plan for the future.

None of the money becoming available on July 1, 1960, will be spent in the fiscal year 1961. We have a financial statement which was furnished to us by the Housing and Home Finance Agency. None of the money will be spent in fiscal year 1961, and therefore the authorization will have no impact upon the budget as such. In fact, the money becoming available will not be spent until fiscal year 1964. This demonstrates how necessary it is to project the program by authorizing additional sums so that it keeps running in an orderly manner.

Mr. President, I read a headline in a newspaper a few minutes ago which stated "Senate Group Approves Giant Housing Bill."

Regardless of what kind of housing bill we approve, the headlines always refer to a "giant bill."

As a matter of fact, the administration proposals, for housing programs is almost identical in the amount of money provided with what the Senate committee reported to the Senate now that these amendments have been agreed to. I hope before we finish consideration of the bill to insert in the RECORD a table with the corrections made for the reductions that have been voted here tonight.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield.

Mr. CAPEHART. We have taken $134 million out of the bill in the last 15 minutes.

Mr. SPARKMAN. The Senator is correct. I think that is a pretty good accomplishment.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield.

Mr. DOUGLAS. I congratulate the Senator from Alabama for standing fast against this wrecking amendment. It is a wrecking amendment in its present form. It would stifle clearing of the slums. It is a typical performance and I hope the Senator from Indiana will not persist in it.

Mr. CAPEHART. Mr. President, I am ready to vote.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield.

Mr. JAVITS. When we discussed the bill in committee, very deep feeling was expressed by me and other representatives of great cities with regard to its provisions, and I think for a sound reason. I appeal to my friend from Indiana, who has been extremely fair in the consideration of the bill, and with whom I have found a delight to work in the committee, upon this ground.

The overwhelming majority of American people live in the great cities of our Nation. My home city of New York and its environs has a population of 12 million, and we probably carry on the most extensive urban renewal program in the United States.

More than 60 percent of the American people live in the great cities now, and it is estimated that within a decade or a decade and a half the percentage will be 80 percent.

We have provided extensive programs for farms and for many other things which benefit rural areas. Since we are the principal source of tax funds which support all these programs, I suggest that there are many things which can be done to benefit a great city. All Senators have been to New York and have seen the miracle which urban renewal has performed—the miracle of transformation—and how much more of it is required. The $350 million which is provided in the bill would give us an opportunity at least to look ahead and to plan ahead with confidence in connection with these vast enterprises which take time in order to develop and progress.

It is the old story of the carrot and the stick. The stick is that we have enormous problems in dealing with our slum areas in the big cities; the carrot is the municipality which has an objective toward which to push. The American Municipal Association feels that $350 million is just about right. The mayors of cities think the amount ought to be a great deal more. My dear friend from Indiana thinks the amount should be a great deal less.

I believe $350 million is a fair amount, and I urge upon all Senators the fact that here is something that we can do for the big cities in a sound, business-like, effective and useful program, and I hope very much that the amendment will not be agreed to.

Mr. SPARKMAN. Mr. President, I yield to myself 3 additional minutes. Before I yield to the Senator from Indiana, may I say that what the Senator from New York has said is true. New York does use, by far, the greatest amount of funds of any State in the Union.

The Senator made reference to the farm States. I wish to call attention to a fact that may be unknown in the Senate. The State that has the largest number of urban renewal projects is not New York, Illinois, or Pennsylvania. It is Georgia. The State with the next highest number of projects, if I am correctly informed, is either Alabama or Tennessee. Pretty much the same pattern goes for public housing. So I urge that no one should think that these programs that are so often buffeted around are merely big city programs. They are

programs that have been made use of in our rural States.

I yield to the Senator from Indiana.

Mr. CAPEHART. Mr. President, I wish to show that it does not make much difference whether the amount appropriated is $350 million or $300 million in order to prove that the able Senator from Illinois [Mr. DOUGLAS] was misinformed; otherwise he would not have said a minute ago that the amendment was a "blockbusting" amendment.

Mr. DOUGLAS. I said it was a wrecking amendment, and I reaffirm my statement.

Mr. CAPEHART. The Senator reaffirms it is a wrecking amendment. Let me give him the fact. The fact is that whether $300 million or $350 million is appropriated, there will be only $20 million of that amount spent in the next 4 years. It will be 1964 before a single nickel is spent, and then the amount will be only $20 million. How can an amendment be wrecking when only $20 million of either a $350 million or a $300 million authorization is to be spent? How can anyone say the amendment would be wrecking when only $20 million will be spent in 4 years? It does not make much difference one way or the other.

Mr. SPARKMAN. Let me say to the Senator from Indiana that when applications are submitted, if there are no funds available, the applicants simply do not get anything. Funds must be available and may be allocated even though the actual expenditure of the funds may be 2 or 3 years in the future. As I stated, the reason we set the amount at $350 million was that that is the rate at which we have been running for several years now.

Mr. DOUGLAS. Mr. President, may I have permission to withdraw the phrase "to wreck the program," in referring to the amendment of the Senator from Indiana, and substitute the phrase "a program of slow strangulation"?

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield.

Mr. CAPEHART. It does not make any difference what it is called; the facts still speak for themselves. Whether the amount appropriated is $350 million or $300 million, only $20 million will be spent in 4 years. It cannot be very strangulating or very wrecking.

I desire to call attention to the fact also that the bill calls for $350 million, but there still remain several hundred million from previous authorizations that have not yet been used.

I yield back my time.

Mr. SPARKMAN. Mr. President, I hope the Senator from Indiana will withdraw the amendment and let the amount stand at $350 million. He knows that we discussed this item in committee, and he knows it was really a compromise figure that was reported.

Mr. CAPEHART. Let us have a voice vote on the amendment.

Mr. JAVITS. Mr. President, will the Senator yield to me?

Mr. SPARKMAN. I yield.

Mr. JAVITS. Is not what the Senator from Indiana has pointed out acid proof that the program is sound, effective, and good, when people like himself and others from big cities say it is the commitment that counts, which enables the cities to plan and do the job, and the expenditure is indeed modest?

Mr. SPARKMAN. I still implore my friend from New York to stop thinking of the program as being one for the large cities. It is a program for the country as a whole. It is as important for the little towns as for the larger ones. If Senators will look at the list of applications, they will observe that it is just as important for the little towns in Alabama that have urban renewal plans as it is for New York City.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield.

Mr. JAVITS. I concur with the Senator in that statement. The reason I emphasize the big city point of view is that there are not too many accomplishments in Congress that benefit the large cities.

Mr. CAPEHART. I yield back the remainder of my time.

Mr. SPARKMAN. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Indiana [Mr. CAPEHART].

The amendment was rejected.

Mr. CLARK. Mr. President, on behalf of myself, the Senator from Illinois [Mr. DOUGLAS], the Senator from Colorado [Mr. CARROLL], the Senator from Michigan [Mr. HART], and the Senator from New York [Mr. JAVITS] I offer an amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 27, between lines 3 and 4, it is proposed to insert a new subsection as follows:

(b) Section 10(i) of such Act is amended by inserting after *"Provided,* That" the following: "the Authority may enter into new contracts for loans and annual contributions after the date of enactment of the Housing Act of 1960 for not more than thirty-seven thousand additional dwelling units: *Provided further,* That".

On page 27, line 4, strike out "(b)" and insert in lieu thereof "(c)".

Mr. CLARK. Mr. President, I yield myself 10 minutes on the amendment. The amendment would authorize an additional 37,000 units of low-rent housing.

This amendment was defeated by a small margin when I offered it in the full committee, and a similar amendment was defeated by a narrow vote in the subcommittee. The amendment was not rejected as a matter of principle, I am sure, because the Banking and Currency Committee has, in recent years at least, consistently supported the low-rent housing program. It was defeated, apparently, because of two arguments which were ill founded.

The first, is that no additional units are needed during the coming year. But the status report which was submitted by the Administration to our committee shows conclusively that additional public housing authorization will be needed—and needed within a matter of weeks.

I ask unanimous consent that there be printed in the RECORD at this point a table showing the status of the low-rent housing program submitted by Mr. Lawrence Davern, who was the Acting Commissioner of the Public Housing Administration prior to the appointment of Mr. Bruce Savage as Commissioner.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Current status of backlog of low-rent housing program applications and program reservations under Housing Act of 1959, as of May 10, 1960

	Reductions and cancellations	Deferred	In active planning
Applications and program reservations pending as of Feb. 1, 1960:			
1. Applications for which program reservations have been approved	----	----	8,574
2. Applications on which action has been deferred pending further study	----	2,637	----
3. Program reservations in active planning	----	----	8,711
4. Program reservations on which action has been deferred at the request of the locality	----	1,612	----
5. Program reservations which at this time are not considered for contracting under the 1959 act	----	5,460	----
6. Inactive applications and reservations (some of these have been withdrawn or canceled)	30,184	----	----
7. Applications on which units applied for have been reduced on basis of market surveys	10,403	----	----
Status as of Feb. 1, 1960, inventory	40,587	9,709	----
Applications received since Feb. 1, 1960	----	----	9,891
Total in active planning	----	----	27,176

Mr. CLARK. Mr. President, this table, which appears on page 158 of the hearings, shows a backlog of 27,176 units in active planning as of May 10. To cover this backlog, plus new applications, there are available a total of 37,000 units authorized in the Housing Act of 1959. Subtracting the 27,176, we have a balance of 9,284 units available for all applications received after May 10, 1960.

This same table shows that during the 100-day period between February 1 and May 10, applications were received for 9,891 units, or approximately 3,000 units a month. If the applications continue to flow in at the same rate—and there is no reason to think that they will not—the balance of 9,824 units available as of May 10 will last about 100 days, or until August 20. Once applications are pending equal to the total authorization available, the agency can either refuse to accept applications or merely file them; it cannot review and approve them.

Unless we can pass a bill providing for low rent housing, 30 days after Congress adjourns for the July conventions the low rent housing program will come to a halt and remain inactive for perhaps a year.

Why, in the face of these figures, did the administration testify that no more low rent housing units need be authorized? I can only suggest that it is because the administration has had such a steadfast policy of opposition to public housing during the entire 7 years of the Eisenhower administration. We have been able to fight off that policy until now. I hope that in the last year of the Eisenhower administration we can continue to fight it off again.

The urban renewal law contains a provision, quite wisely and properly, that no project shall be carried out unless the slum families affected by the renewal can be rehoused in decent housing. But in many communities, there just does not exist an adequate supply of low-rent private housing in good condition and available for displaced families. Unless public housing can be provided, the cities cannot certify that the affected families can be rehoused, and the urban renewal commissioner cannot approve the project.

Mayor Richardson Dilworth of Philadelphia, the eloquent president of the United States Conference of Mayors, who testified before our subcommittee that urban renewal is the greatest single program ever devised for cities, also testified that there is an urgent need and demand for more public housing and that the lack of units frequently slows down the relocation process and thus slows down the entire renewal effort

Mr. President, testimony received by our subcommittee indicates that urban renewal and other governmental programs, including the interstate highway program, force out of their homes each year something over 40,000 families whose incomes are so low that they are eligible for public housing. Where are they to go?

I propose authorization of 37,000 units in my amendment for three reasons:

First, it is the number which the Congress authorized last year.

Second, it approximates the rates of 3,000 units a month at which applications from local communities are being received.

Third, it approximates the estimate of the annual displacement of low-income families through governmental action.

It takes no account whatever of the normal process of putting families out of slum dwellings into public housing. That will have to wait for another administration.

The second argument advanced against this amendment is that if any additional public housing is authorized the President will veto the housing bill, or the House will not agree to a conference.

I for one refuse to be blackmailed to withdraw the amendment, which is clearly in the public interest, by any such threat. I have great confidence in the integrity of the President, and I have a very high regard for the Members of the other body. I do not believe that they would refuse to go to conference. I do not believe that the President would veto a minimum amount for public housing—and let us remember that the bill last year contained that amount of public housing—when the need has been made so clearly obvious to the President, who I feel is a man of compassion and integrity.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. CLARK. I have limited time at my disposal. I shall be glad to yield to the Senator a little later.

Why the President would do any such thing is a mystery to me. The argument of the administration is that the demand for new units does not exist, that the communities will not apply for them, and that if authorized, the authorization therefore would not be used.

If they are right, they do not have to grant any application, and they do not have to use this authority. But if the applications are there, is it not the sensible thing to have the authorization available, so that this great public improvement can go ahead, as it has gone ahead so well since the days of Robert Taft and Alan Ellender and Robert Wagner, who put through the first authorization for $810,000 in the Public Housing Act of 1949? In Mr. Davern's words before our subcommittee, the current authorization will meet all demands upon the program for the fiscal year 1961. If he thinks that is true, it will not do any harm to provide this authorization. If it is not true—and I am sure it is not true—let us give authority for applications so that as the demands come in from all over the country—from small cities and medium cities and large cities—we will have an opportunity to fill the public need.

There is one other reason why Congress should make additional authorizations available. Certainly the administration has succeeded in slowing up this program. Certainly it has succeeded in throttling low-rent housing with redtape. But we have reason to hope that circumstances may be changing. The Senate has just confirmed a new Public Housing Commissioner, Mr. Bruce Savage.

Mr. Savage has stated that he is a strong believer in low-rent housing. Although he is in private life a real estate man, he is convinced from his own experiences that private enterprise cannot meet the needs of the lowest income people for decent housing. Those who know Mr. Savage appear to agree unanimously that he is truly a supporter of the program he is administering, that he is an able administrator, and that he will make a real effort to cut redtape and put new life into a program which has lost so much of its earlier vitality.

I believe we should give Commissioner Savage a chance. I do not believe the Congress should sign the death warrant of the low-rent public housing program, which was inaugurated almost a quarter of a century ago, just after a new Commissioner takes office.

Let us tell him, and let us tell the cities, counties, and towns who desire to proceed with clearing their slums and rebuilding their communities, that the Congress is prepared to support the program as it has in past years—as it did when one of the leading congressional advocates of low-rent housing was that great conservative, Robert A. Taft.

There is still a final reason why we should make this authorization. A new President will take office on January 20th. He will have 6 months of the current fiscal year in his first term of office. I am confident that the new President will be a Democrat. Any Democratic President will immediately want a bill which provides additional units for public housing, because he will have won on a platform which supports it.

I believe that even the Vice President would want to back this program, if we should be so unfortunate as to elect him our President, and would want to go ahead with it.

I believe that Congress should look forward to the day when somebody interested in the program will be in the White House and will want to push the program forward. We should make the authorization available for the new President when he takes office on January 20th, even if we do not use all the applications in the following 6 months, which I am sure we will.

Mr. President, I ask unanimous consent to include in the RECORD as a part of my remarks a breakdown of the figures I inserted earlier regarding project applications which are now pending with the Public Housing Administration, as reported by the PHA and included on pages 159–164 of the record of the hearings of the Housing Subcommittee. They show that communities in 41 States, plus Puerto Rico and the District of Columbia, currently have applications pending for new projects.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Applications and program reservations pending as of Feb. 1, 1960

CVI——811

Mr. JAVITS. Mr. President, will the Senator yield me time?

Mr. CLARK. I yield 5 minutes to the Senator from New York.

Mr. JAVITS. The public housing program which is asked for here is a very modest one and is consistent with what we have done in this program for some years.

I shall not trouble the Senate at this time with an analysis of the figures which have been given by the Senator from Pennsylvania. I shall make two points.

When public housing first came on the scene in 1949, I had the privilege, in the House, of handling the Taft-Ellender-Wagner bill. I had the deep gratification of seeing a sufficient number of my colleagues on the Republican side of the aisle vote for the bill, so that it passed the House. Let history show that the 23 votes which were garnered at that time from the Republican Members of the House were absolutely indispensible, and that the bill never would have passed without them.

At that time many predictions were made to the effect that public housing would bankrupt the Treasury, and computations were made of the astronomical number of billions of dollars the program would cost over a period of years.

More than a decade has passed, and we find the following: About 37,000 units a year of what is called public housing is just about essential to any kind of balanced housing program. We cannot do without them. That figure is just about right. It is just about what fits the need. It is the amount required every year in order to maintain a program that will not in any way jeopardize or embarrass the housing situation generally. Yet it has been an integral part of every housing project, because it is placed where low-rent families can adequately be settled.

In every urban renewal project, it is necessary to take into consideration a fair quotient of low-rent housing. That is absolutely essential in order to make the whole concept of urban renewal compatible, particularly in the large cities, where there are slum problems and a sufficient number of families having below average income.

In all the years the opponents have been voting against public housing—and they have been able and astute men—no one has proposed a substitute acceptable to Congress, and no one has offered a substitute acceptable to the advocates of a balanced housing program. The best the opponents have been able to do over all the years has been to knock down the program, work against it, and vote against it, if they could.

There are two essential facts. First, the program has developed into a reasonably modest approach to the problem. It fits very tidily into the budget. Second, it is the only way it has been found possible to deal with low-income families, especially where so many persons have been displaced by urban-renewal projects. It is a program which is highly desirable in cities and towns in which such renewal projects have taken place.

It seems to me this is a modest enough authorization, and that the people who are the lowest on the scale of housing accommodations are entitled at least to this much consideration by Congress. That has been a tradition in almost every housing bill which Congress has passed.

Mr. President, I hope the amendment will be agreed to.

Mr. JOHNSON of Texas. Mr. President, on this amendment I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. CLARK. Mr. President, do the opponents of the measure wish to use any time?

Mr. CAPEHART. Mr. President, I am against the amendment. It was considered in committee and rejected by the committee. The record speaks for itself. Enough public housing units are now authorized to provide for as many public housing units as can be constructed in the next 12 months. My honest opinion is that no further authorization is needed at the moment; and that will not hurt the program one iota.

I am ready to yield back the remainder of my time.

Mr. CLARK. I yield back the remainder of my time.

Mr. SPARKMAN. Mr. President, will the Senator yield time to me?

Mr. CAPEHART. I yield 5 minutes to the Senator from Alabama.

Mr. SPARKMAN. Mr. President, I am certain the Senator from Pennsylvania knows that throughout the years I have been a friend of public housing. I have supported public housing. As a matter of fact, I was chairman of the Subcommittee on Housing at the time the 1949 act was passed. I have called for public housing many times.

I hope Senators will examine the tables which the Senator from Pennsylvania placed in the RECORD, to see the widespread use of public housing throughout the United States. I say again, as I said a few minutes ago, that this is not simply a big-city program; it is a program for the benefit of the rural States as well as urban areas. The program is widely used in my section of the country, in the Southern States.

The largest single number of projects in any State of the Union is in Georgia. Alabama, if I remember correctly, comes second.

Because I have supported public housing, I do not like to be put in the position of having to oppose the Senator from Pennsylvania when he offers an amendment to provide for 37,000 units. Last year we included 37,000 units, and it was generally believed—although there was no commitment to that effect—that that number would be sufficient to continue the program for 2 years.

I believe the Senator from Pennsylvania, perhaps, would agree with me that the way the present administration has been conducting the low-rent public housing program, the number of units authorized by the Housing Act of 1959 would last for that period of time.

I say to the Senator from Pennsylvania that time after time, I have voted to restore the number of units authorized by the Housing Act of 1949. The Senator will recall that in the committee, when the matter was brought up, I said I was in favor of restoring the 1949 act.

But I believe we need to do some restudying and recalculating because of the amount of money which is involved in the program. If the Senator will wait until next year, I will vote with him to restore the program as provided in the 1949 act.

However, I simply do not believe, as a practical matter, that as close as we are to the end of this session of Congress we should endanger a good housing bill by including 35,000 units of public housing, particularly when the existing unit authorization is, perhaps, in excess of what the present administration will use during the next fiscal year.

Mr. CLARK. Mr. President, will the Senator yield for a question?

Mr. SPARKMAN. Yes; so far as the very short time allotted to me will permit.

Mr. CLARK. There is plenty of time. I ask the Senator from Alabama how many times President Eisenhower has signed housing bills which included public housing authorizations.

Mr. SPARKMAN. I do not know. I think he has done so practically every year. There was one year when we had no public housing.

Mr. CLARK. I believe it was five times.

Mr. SPARKMAN. I believe we have had public housing in every bill, with possibly one exception.

Mr. CLARK. Has the House of Representatives ever refused to go to conference on a housing bill?

Mr. SPARKMAN. Yes.

Mr. CLARK. When?

Mr. SPARKMAN. In either 1957 or 1958.

Mr. CLARK. That was because we did not pass our bill.

Mr. SPARKMAN. I will not say the House refused to go to conference. It failed to get a rule, and the bill came up under a suspension of the rules and failed of passage by 6 votes.

Mr. CLARK. Will the Senator agree that ordinarily the House will go to conference on a housing bill?

Mr. SPARKMAN. Yes; but this bill is not in the conference stage. The House has not passed a bill. This bill would still have to go before the House for a rule.

Mr. CLARK. One final question. I do not know whether the Senator was otherwise diverted when I was making my little talk a few minutes ago. I wish to assure him of the fact that the authorization for public housing will expire on August 20, 1960, according to the administration's own figures. We will have a President in the White House in January. He will not have any other authorization, and there will not be any authorization from August all the way through December. I ask the Senator if he is certain that I am wrong about that.

Mr. SPARKMAN. I believe the Senator from Pennsylvania is wrong, because he is not making any allowance for communities which drop out, or cancel their applications.

Mr. CLARK. Yes, we are.

Mr. SPARKMAN. The Senator knows, does he not, that about one-third of the communities drop out of the program?

Mr. CLARK. I have made allowance in the table I have offered. I am certain the Senator will not say I am wrong when I say that we will have a Democratic President next year.

Mr. SPARKMAN. No. I agree with the Senator on that. That is why I can easily say we will have a good low-rent program next year.

Mr. CLARK. Mr. President, I am prepared to yield back the remainder of my time, if the Senator from Indiana will agree to yield back the remainder of his time.

Mr. CAPEHART. I yield back the remainder of my time.

Mr. WILLIAMS of New Jersey subsequently said: Mr. President, I support the amendment of the Senator from Pennsylvania [Mr. CLARK] to authorize 37,000 more public housing units for the coming fiscal year in the general housing bill now being considered.

In committee we heard a great deal of testimony from the officials of the Housing and Home Finance Agency on the adequacy of the present authorization of 37,000 units, which was passed in last year's act.

I must confess that there is a certain confusion about the number of public housing applications that can be considered "live." When Commissioner Davern testified, he said that although there were applications pending for 67,000 units as of last February, only 27,000 of them could be considered "active."

I do not challenge the accuracy of this estimate, but I would not be surprised to find it on the conservative side. But in any event, authorization for 10,000 units which will have to last for the next 12 months seems extremely inadequate to me.

I think it is inevitable that this small an amount of authorization will discourage many localities from going to the trouble of filing an application when the chances are so slim that they will receive any reservation or commitment. The net result will be to slow a vitally needed program that already is operating at a level vastly lower than the level of actual need of all those who must now suffer with deteriorating substandard housing and slum dwellings.

I would like to say that earlier this year I contacted all the housing authorities in New Jersey with public housing programs and the responses were uniformly positive on the question of whether their applications were "live."

Judging from the response I received, I would certainly say that New Jersey is carrying this program forward as rapidly and enthusiastically as possible. Many of the housing authority chairmen urged a speedup of the program.

For example, Mrs. Robert Newcomb, chairman of the Glassboro Housing Authority, wrote me that:

> We consider our application to be very much "alive," and we do not anticipate any scaling down in the number of the 60 units allowed us. On the contrary, we hope that the obvious need of our borough will persuade the Public Housing Administration to scale the number up.

Mr. Thomas Kovak, chairman of the housing authority of the Township of Edison wrote that they had filed application for 100 units and that—

> It is most certainly "alive" and no scaling down in number of units is anticipated.

He added:

> I should like to take this opportunity on behalf of the members of the Edison Housing Authority to urge you to combat the President's request that there be no additional authorization in this program. If we are to continue to rebuild and renew not only our major cities but also our growing urban areas, housing for low-income families must be provided. It is certainly evident that private enterprise cannot and has not filled this need.

The director of East Orange's housing authority, George Genung, Jr., wrote that the city is undertaking a low-rent public housing program of 300 units to "meet the need which will be created by the displacement from the East-West Freeway and our urban renewal program."

He went on to say that—

> The program reservation in East Orange is very much alive, and very much needed. The only way communities like ours can meet the demand for the rehousing of low income families, displaced by public improvements, is through the public housing program. Therefore, the Federal legislators should realize that this program must be continued as a partnership with the Federal highway and urban renewal programs. If the cities do not have a complete set of tools with which to work, then they will not be able to do a thorough and complete job.

There were many other letters, all of which affirmed that their applications were "live" as far as the local authorities were concerned. There was also one letter of particular interest from W. Russell Laird, chairman of the Franklin Housing Authority, who cited all the delays which that town has had to suffer with its program since 1956 and remarked that the delays "have a catastrophic effect upon public opinion, which plays a far more direct role in small communities than in larger ones."

He added that—

> In the case of Franklin Township, there can be no doubt that the procrastinations over 4 years in granting of these units, together with similar delays on the part of the urban renewal administration, played a major role in the defeat of an urban renewal program badly needed in the community.

Mr. President, I ask unanimous consent that this letter from Mr. Laird be printed in the RECORD, at the conclusion of my remarks, and I will conclude by saying that if the administration truly favors the continuance of this vital program, it should have no objection to accepting this additional authorization

which would permit the public housing program to progress with at least one less obstacle in its way.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HOUSING AUTHORITY OF THE
TOWNSHIP OF FRANKLIN,
COUNTY OF SOMERSET,
New Brunswick, N.J., March 14, 1960.

Hon. HARRISON A. WILLIAMS, Jr.,
U.S. Senate, Washington, D.C.

DEAR SIR: In response to your letter of March 4, in which you refer to our reservation of low rent housing units, and request information as to their status and our expectations with regard to them, we are forwarding the following information:

1. Initial application for these units was made in April 1956, at which time they were planned to be part of the same project as our now completed 50 units. Our request, based on our survey and analysis of need was for a total of 100 units, of which PHA approved 50 units.

Because the need for low cost housing beyond these first approved 50 units was pressing, the authority again requested the additional 50 units in a separate application in March 1957. The authority was informed that additional data with regard to need for these units must be provided. This would have necessitated a new survey of needs, for which funds were not available.

The need for additional housing still being felt strongly by the authority, and in fact increasing with the growth of the community, the request was revived in the early part of 1958. This time the authority was informed that it must wait until construction of the first 50 units was complete and the dwellings provided all occupied. At the time these events occurred in December 1958, the request for additional units was again revived. Now a new series of requests was made for data or documentation not originally requested. After these materials had all been supplied, a reservation for the reduced number of 30 units was made in June 1959.

At this point a new type of delay started. The reservation was made with the provision that the preliminary loan and action on the program could not come until after the passage of the new Housing Act. When the act was passed in September 1959, the authority was informed that still no action could be taken until administrative procedures under the new act had been worked out. When no word had been received by December 1959, as to the granting of the preliminary loan to initiate action on the units, the authority inquired into the nature of the new delay and was informed that still further data were required. In fact, on the basis of the new procedures, the authority had to start all over again with studies of need and local surveys, with the inevitable result of time consuming delays. It must be clear that apart from postponing the concrete response to community housing needs, each such request is a particularly heavy burden for a small authority in a small community.

2. The program has been delayed by the rigidity of requirements on the proof of need—based primarily on 1950 census data, inapplicable in a fast growing area. The delays were considerably aggravated by the lack of clarity of administrative procedures, as well as piecemeal requests for additional data not originally requested. Such delays were protracted by the need to wait for legislation and then administrative procedures.

3. The presently estimated date for entering into an annual contribution contract is June 1960.

4. The authority definitely feels that the reservation is alive, although its enthusiasm and that of the governing body is wearing thin after all the delays. The authority still feels there is need for the originally requested 50 units.

The comments of the authority come out in the above history. Apart from the time lost in which the housing units might have been in use, the work demanded from the local authority becomes quite incommensurate with the size of the project as well as the size of the staff. As you are aware, the law does not permit compensation by the PHA for work done in preparing an application. While this work can possibly be absorbed by large city authorities or municipal staffs, this burden tends to become prohibitive in the case of small authorities in small communities.

It must further be pointed out that these delays have a catastrophic effect upon public opinion, which plays a far more direct role in small communities than in larger ones. In the case of Franklin Township, there can be no doubt that the procrastinations over 4 years in the granting of these units, together with similar delays on the part of the Urban Renewal Administration, played a major role in the defeat of an urban renewal program badly needed in the community.

A final point which should not be lost sight of is the fact that the long drawn out procedures place a great burden on the unpaid members of the housing authorities. This makes it more difficult to obtain new members of the desired quality when replacements are required. It also necessitates a high degree of vision and persistence among the members. This effort could better be applied to continued vigilance with regard to solutions for housing needs in the communities, and to the supervision of the operation of existing programs.

As this matter has been of considerable concern to our authority, we have written at greater length that your questions might seem to require. We hope that you will find the information useful in your investigation.

Sincerely yours,

W. RUSSELL LAIRD,
Chairman.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the amendment of the Senator from Pennsylvania. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from New Mexico [Mr. CHAVEZ], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Rhode Island [Mr. GREEN], the Senator from Indiana [Mr. HARTKE], the Senator from Arizona [Mr. HAYDEN], the Senator from Oregon [Mr. MORSE], the Senator from Montana [Mr. MURRAY], the Senator from Florida [Mr. SMATHERS], the Senator from Missouri [Mr. SYMINGTON], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] is absent because of illness.

I further announce that the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Michigan [Mr. MCNAMARA], and the Senator from Wyoming [Mr. O'MAHONEY] are necessarily absent.

I further announce that, if present and voting, the Senator from New Mexico [Mr. CHAVEZ], the Senator from Rhode Island [Mr. GREEN], the Senator from Indiana [Mr. HARTKE], the Senator from Missouri [Mr. HENNINGS], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Michigan [Mr. MCNAMARA], the Senator from Oregon [Mr. MORSE], the Senator from Montana [Mr. MURRAY], the Senator from Wyoming [Mr. O'MAHONEY], the Senator from Missouri [Mr. SYMINGTON], and the Senator from Texas [Mr. YARBOROUGH], would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Maryland [Mr. BUTLER] is absent because of illness.

The Senator from New Hampshire [Mr. COTTON] is necessarily absent.

The Senator from South Dakota [Mr. MUNDT] and the Senator from Kansas [Mr. SCHOEPPEL] are absent on official business.

The Senator from Arizona [Mr. GOLDWATER] is detained on official business.

If present and voting, the Senator from South Dakota [Mr. MUNDT] and the Senator from Kansas [Mr. SCHOEPPEL] would each vote "nay."

The result was announced—yeas 38, nays 42, as follows:

[No. 219]

YEAS—38

Anderson	Frear	McGee
Bartlett	Gore	Magnuson

Fulbright	Kennedy	Smathers
Goldwater	McNamara	Symington
Green	Morse	Yarborough
Hartke	Mundt	

So Mr. CLARK's amendment was rejected.

Mr. CAPEHART. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. DIRKSEN. Mr. President, I move to lay that motion on the table.

Mr. CLARK. Mr. President, I ask for the yeas and nays on the motion to reconsider.

The PRESIDING OFFICER. Is there a sufficient second? There is not a sufficient second.

The yeas and nays were not ordered.

The question is on agreeing to the motion to lay on the table the motion to reconsider the vote.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. RANDOLPH. Mr. President, I offer, on behalf of the esteemed and devoted junior Senator from Texas [Mr. YARBOROUGH] and myself, amendments relating to the loan guarantee program for World War II veterans.

The PRESIDING OFFICER. The amendments offered by the Senator from West Virginia for himself and the Senator from Texas will be stated.

The LEGISLATIVE CLERK. It is proposed, on page 28, beginning with line 7, to strike out all down through line 16, and insert in lieu thereof the following:

VA DIRECT AND INSURED HOME LOANS

SEC. 505. (a) Section 1803 of title 38, United States Code, is amended—

(1) by striking out in paragraph (1) of subsection (a) the following: "if made before July 26, 1960 (or, in the case of a veteran described in section 1801(a)(1)(B) of this title, before the expiration of 13 years after World War II is deemed to have ended with respect to him),"; and

(2) by striking out paragraph (2) of subsection (a) and inserting in lieu thereof the following:

"(2) If a loan report or an application for loan guaranty relating to a loan under this chapter has been received by the Administrator before February 1, 1965, such loan may be guaranteed or insured after such date."

(b) Section 1811(h) of such title is amended by striking out "July 25, 1960" and inserting in lieu thereof "July 25, 1961".

On page 28, line 17, to strike out "(b)" and insert in lieu thereof "(c)".

On page 28, line 22, to strike out "(c) Section" and insert in lieu thereof "(d) Section".

Mr. RANDOLPH. Briefly, we would extend to February 1, 1965, the home, farm, and business loan guaranty program for World War II veterans. The proposed new termination date on the World War II program will make it coterminous with the loan guarantee program for Korean veterans.

Under existing law, the World War II aid will expire on July 25 of this year. If we do not extend this program, many World War II veterans will lose the opportunity to become home owners.

In 1958 new private housing starts totaled only 1,141,500. In 1959 private housing starts totaled 1,341,500. This truly was a remarkable performance and was sparked in no small degree by the emergency housing program. It is recognized fully that there were other factors in addition to the GI loans which accounted for this noteworthy performance. However, the GI loan program contributed greatly to this record and we can ill afford to terminate such a vital program at a time when there still are 4 to 4½ million unemployed workers. The housing industry, being the second largest in our economy, cannot be allowed to falter. One of the best ways of assuring its continued strength is by continuing the GI loan program.

During several periods of its short history, the GI loan program has felt the impact of a shortage in the supply of mortgage funds available for investment at its statutory ceiling interest rate. In such periods veterans have not had a real opportunity to use their loan benefit. The extension of the life of the program for World War II veterans will afford additional time in which they might utilize the benefit should the tight money situation ease and GI loans again become plentiful. That veterans could use such a period to good advantage is indicated by these data on loan applications and apprisal requests for the first 4 months of this year compared with the same months in 1955, a banner year for GI loans:

	GI home loan applications		VA appraisal requests	
	1955	1960	1955	1960
January	51,917	11,836	75,493	15,385
February	55,621	11,458	104,188	17,899
March	51,141	13,601	111,793	18,760
April	53,667	11,533	105,198	20,274
Total	212,346	48,428	396,672	72,318

Only about 1 percent of the 5½ million veteran home loans have resulted in claims. The claims paid have amounted to only 8 cents on every $100 of the original principal amount of the loans guaranteed. The loss that the Government has sustained has been infinitesimal. About 30 percent of these loans have been fully repaid.

Weighing these factors one upon the other, the conclusion is inescapable that the program must be extended. By continuing this worthwhile benefit for World War II veterans, they will continue to receive recognition for their valuable service at an insignificant cost to the taxpayer. We also provide an important support of the homebuilding industry.

Mr. President, the bill, S. 3275, which proposes an extension of the World War II guarantee program identical to the one proposed in this amendment, was ordered favorably reported by the Senate Committee on Labor and Public Welfare on Wednesday of last week. Since our committee having jurisdiction over this program has already formally approved the substance of the amendments, I believe it timely and necessary to provide the extension included in the housing measure which is now before the Senate.

Mr. President, our great veterans' organizations support the proposed extension. The American Legion, the Amvets, the Disabled American Veterans, and the Veterans of Foreign Wars, have expressed their strong support of the proposal in hearings conducted by our Subcommittee on Veterans' Affairs.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. RANDOLPH. I yield.

Mr. SPARKMAN. Mr. President, the Banking and Currency Committee has jurisdiction over the VA direct home loan program, but the VA guaranteed loan program is under the jurisdiction of the Labor and Public Welfare Committee.

Mr. RANDOLPH. That is correct.

Mr. SPARKMAN. As it happened, the Senator from Texas [Mr. YARBOROUGH] and I introduced, on the same date, bills to extend both programs. We said then we hoped the two bills could be considered by the Senate together.

In the House of Representatives a different situation prevails. The Veterans' Affairs Committee of that body has jurisdiction over both programs. That committee has already reported a bill—I believe it is on the House Calendar now—to provide for the extension of both programs.

We have in our bill a provision to extend the direct loan program. While we would provide for only a 1-year extension it is perfectly reasonable, I think, to add this proposal.

The distinguished Senator from South Carolina will remember that when he was chairman of the subcommittee handling the veterans loan program, we handled it in exactly the same way.

So far as I am concerned, I am willing to accept the amendment.

Mr. RANDOLPH. Mr. President, I compliment the Senator from Alabama [Mr. SPARKMAN] for his leadership in this matter.

There are still well over 9 million World War II veterans who, for one reason or another, have not availed themselves of this aid. Undoubtedly many of them had their plans disrupted by the credit control requirements which were imposed during the Korean conflict. Hundreds of thousands of others who had met their financing needs through conventional or FHA loans are now seeking GI loan financing to acquire larger and better homes as their families increase or their income levels improve.

Mr. CAPEHART. Mr. President, we recommend that the manager of the bill accept the amendment.

Mr. SPARKMAN. Mr. President, while I do not have the figures relating to the veterans guarantee program, I do have a table relating to the applications of VA direct loans, showing the backlogs of applications that are now pending, and I ask unanimous consent to have the table printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Backlog of applications for VA direct loans by VA regional offices as of May 1960

Regional office:	*Backlog*
Alabama	674
Alaska	91
Arizona	85
Arkansas	609
California	544
Colorado	89

Total	28,520

[1] No portion of State eligible for direct loans.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. RANDOLPH. I yield.

Mr. HUMPHREY. I merely wanted to commend the Senator. It is an item in which I have had long interest. I thank the Senator for offering the amendment in behalf of himself and the Senator from Texas [Mr. YARBOROUGH]. I think it is very desirable and will help correct a situation which exists in our part of the country in particular, as I am sure it does all over the Nation.

Mr. RANDOLPH. I thank my friend, and I can enthusiastically attest to his advocacy of this program.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. RANDOLPH. I yield.

Mr. SPARKMAN. As a matter of fact, what the Senator has done with his amendment is make the guaranteed program for veterans of World War II coterminous with the guaranteed program for veterans of the Korean conflict.

Mr. RANDOLPH. Yes. The distinguished Senator is correct.

Mr. SPARKMAN. I commend the Senator from West Virginia for offering this very desirable and worthwhile amendment.

The PRESIDING OFFICER. Is all time yielded back?

Mr. RANDOLPH. Mr. President, I yield back the balance of my time.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the amendment of the Senator from West Virginia [Mr. RANDOLPH]. [Putting the question.]

The amendment was agreed to.

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed as a part of the RECORD a summary prepared by the staff of the Committee on Banking and Currency showing the amounts involved in the different sections of the bill. I make the statement that we have tonight reduced the amount by $134 million, as shown in the summary.

Mr. SPARKMAN. Mr. President, reserving the right to object, I wish to answer the Senator from Indiana.

The Senator from Indiana said that the summary was prepared by the staff of the committee. As a matter of fact, it came from the Housing and Home Finance Agency. Those are the Agency figures, and not the figures of our committee.

Mr. CAPEHART. Mr. President, I stand corrected. The summary was prepared by the Agency.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Indiana?

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

Housing and Home Finance Agency—proposed housing legislation: Comparative summary of amounts provided for grants and loans in administration bills and Senate committee bill [1]

[In millions]

Purpose	Total new authority provided	
	Administration	Senate committee
For grants, HHFA:		
Urban renewal capital grants	----------	$350.0
Housing research	----------	----------
Subtotal, grants, HHFA	----------	350.0
For loans, HHFA:		
Urban renewal, planning advances and temporary loans	----------	----------
Housing for the elderly, direct loans [2]	----------	25.0
College housing, direct loans	----------	500.0
Public facility loans	[3] $100	50.0
FNMA special assistance functions:		
Presidential allocation	[3] 150	150.0
Consumer co-op housing support	----------	15.0
Subtotal, loans, HHFA	[3] 250	740.0
Total, grants and loans, HHFA	[3] 250	1,090.0
For grants and loans, other agencies:		
College housing, direct loans [4]	200	----------
College facilities grants [5]	600	----------
Defense hospital grants [2]	----------	7.5
VA, direct housing loans	----------	150.0
Farm housing:		
Direct loans	----------	----------
Commitments for contributions [2]	----------	----------
Loans and grants for repair and improvement [2]	----------	----------
Total, other agencies	800	157.5
Grand total	1,050	1,247.5

[1] NOTE.—This table reflects reasonable estimates of the budgetary effects of the bill, assuming that amounts authorized are also appropriated, where required. Nothing in the table is to be construed as representing a policy decision or commitment on the part of the Housing and Home Finance Agency or the administration with respect to budgetary recommendations or use of funds in the event the bill is enacted into law. Revised June 15, 1960.

[2] New obligational authority when actually appropriated.

[3] Administration bills would subject authorizations to annual appropriation control. New obligational authority when authorized in appropriation acts.

[4] Represents administration proposal to take care of existing college housing application backlog and to provide transition to new program of debt retirement assistance grants and debt service guarantees. New obligational authority when actually appropriated.

[5] Debt retirement assistance commitments may not be made in amounts in excess of limitations specified in appropriation acts. Excludes new obligational authority and expenditure effect of possible losses in connection with debt service guarantees extended to institutions issuing taxable obligations; proposed legislation would authorize guarantee of such obligations up to $1,000,000,000.

Mr. JOHNSON of Texas. Mr. President, I ask for the yeas and nays on the question of passage of the bill.

The yeas and nays were ordered.

Mr. JAVITS. Mr. President, will the Senator yield me about 3 minutes, so that I may ask a question of the chairman of the subcommittee?

Mr. CAPEHART. I believe the Senator can obtain recognition in his own right.

Mr. JAVITS. Mr. President, I wish to address a question to the Senator from Alabama.

The PRESIDING OFFICER. The Senator from New York is recognized.

Mr. JAVITS. Mr. President, one of the actions taken by the committee in connection with the reporting of the bill before the Senate was to separately consider a bill to create a limited profit mortgage corporation, a so-called middle income housing bill, which adopts a plan very successfully carried on in the State of New York for expanding materially the opportunity for middle income rental housing by making available credit to limited dividend participants, who are getting a limited 6-percent return, on the basis of making available housing in middle income rental limits.

We had a great deal of testimony on the bill from the authorities in the State of New York. This has been an extremely successful program, twice approved by the voters. The amount involved would be $500 million in mortgages allowable, to begin with, and $1½ billion if approved by the President.

The bill is to be reported as a separate bill. In view of the fact that it is a very important housing measure, since middle income housing represents the big gap with respect to housing, I should like to ask the chairman of the subcommittee, who is handling the housing bill, what his intentions are with respect to the middle income housing bill under consideration by the Committee on Banking and Currency?

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. SPARKMAN. As the Senator knows, I expressed an interest in the middle income housing bill during the time it was being considered by the committee. I was very much impressed with the testimony given to us by the people who came from the Senator's State, who had had experience with this type of housing in New York State. I think this is a good program. The Senator knows that I supported this program in the subcommittee. As a matter of fact, the committee reported the bill as a separate bill. I do not remember exactly the vote on the bill, but it was certainly an overwhelming majority vote.

I hope the bill will be reported to the Senate tomorrow, or certainly the next day. It will be on the calendar.

I ask the attention of the majority leader. I earnestly hope that time may be found, before the session of Congress ends, to consider this bill. It should not

require a great deal of time for consideration. I think this is a good program, and it ought to be enacted into law.

Mr. JAVITS. Mr. President, I state to the Senator that I do not wish to jeopardize the program by offering it as an amendment to the housing bill before the Senate. That would not be fair, in view of the confidence vested in the program by the committee. That is the reason I have addressed the question to my colleague.

I understand that my colleague will use his best efforts to see that we obtain action on the bill this session.

Mr. SPARKMAN. I shall be glad to do so.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. JAVITS. I yield to the Senator from Pennsylvania.

Mr. CLARK. Mr. President, I wish to associate myself with the request of the Senator from New York, since I am a cosponsor of the middle income housing bill. I urge my good friend from Alabama to do what he has already said he will do, which is to make every effort to report the bill to the Senate for action this session.

Mr. JAVITS. I thank my colleague. I acknowledge his participation, which I would say was indispensable in getting the bill reported by the committee.

Mr. CLARK. Mr. President, on behalf of the Senator from Illinois [Mr. DOUGLAS], the Senator from New Jersey [Mr. WILLIAMS], the Senator from Michigan [Mr. HART], the Senator from Colorado [Mr. CARROLL], the Senator from New York [Mr. JAVITS], and myself, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On page 27, between lines 3 and 4, it is proposed to insert a new subsection, as follows:

(b) Section 10(i) of such Act is amended by inserting after "Provided, That" the following: "the Authority may enter into new contracts for loans and annual contributions after the date of enactment of the Housing Act of 1960 for not more than twenty-five thousand additional dwelling units: Provided further, That."

On page 27, line 4, it is proposed to strike out "(b)" and insert in lieu thereof "(c)".

Mr. CLARK. Mr. President, I yield myself 2 minutes and then I shall be prepared to yield back the remainder of my time.

Mr. President, this amendment is almost identical with the one which was defeated by a vote of 42 to 38, but it would lower the amount of authorized units to 25,000 instead of 37,000.

I wish to reiterate, for my colleagues who were not in the Chamber when I spoke earlier on the previous amendment, that the administration's own figures show we will run out of public housing authorization on August 20, 1960.

Mr. President, I defy anyone to controvert that fact. I am prepared to yield back the balance of my time.

Mr. SPARKMAN. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from Alabama is recognized for 5 minutes.

Mr. SPARKMAN. Mr. President, I regret very much to have to oppose the amendment offered by my friend from Pennsylvania and other Senators.

I stated a few minutes ago that I have voted consistently for public housing. I remind Senators who are interested in getting a housing program that we are facing a very realistic situation. We have less than 2 weeks until adjournment. In order for this bill to become law, it must clear the House. The House operates under a different system. We know the bill must go before the House Committee on Rules. Even if the bill is passed in a different form it will be necessary to have a conference, and even that would be subject to the control of the House Committee on Rules.

Mr. President, we are confronted with a realistic situation. We have a college housing provision in the bill. The colleges are anxious to have the bill passed. They are hoping for the provision, so that they can be ready for the opening of schools this September.

We have some urban renewal funds in the bill. The towns and cities are hoping for the privilege of putting in their applications and having them considered.

We have a community facilities provision for the little towns throughout the country which need help in getting vitally needed public facilities.

There are a great many other good features in the bill. I say that we should not jeopardize the passage of the bill by putting in something which is almost certain to delay final passage and enactment of the bill.

Much as I dislike to take this stand, Mr. President, I believe the only fair and realistic stand to take is to oppose the amendment.

Mr. CLARK. Mr. President, I yield myself 2 minutes.

It is with the deepest regret I find myself compelled to differ in judgment with my good friend from Alabama, who has been a stalwart defender of all types of housing, including public housing.

Mr. President, I wish to point out three facts to the Members of the Senate.

First, President Eisenhower has signed five separate housing bills, each of which had a public housing authorization in it. Each one of those bills contained more public housing authorization than would be provided by the amendment.

I cannot believe the President would veto the bill simply because it has a minimum amount of public housing authorization, to keep the program going after August 20, through the rest of the coming fiscal year, during 6 months of which time we hope to have another occupant of the White House. I do not believe the President will veto the bill.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. CLARK. I decline to yield at this time.

Second, Mr. President, I am confident the House is not going to blackmail the Senate by refusing to go to conference on a reasonable housing bill, with a reasonable public housing provision in it. So far as I know, the House has never done that before. I do not think it will do it at this time.

This must be a question of judgment as to one of the rights of the Senate as a coordinate body, and I hope the amendment will pass.

I yield back my remaining time.

Mr. DOUGLAS. Mr. President, I ask for the yeas and nays on the amendment.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Pennsylvania [Mr. CLARK]. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from New Mexico [Mr. CHAVEZ], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Rhode Island [Mr. GREEN], the Senator from Arizona [Mr. HAYDEN], the Senator from Oregon [Mr. MORSE], the Senator from Montana [Mr. MURRAY], the Senator from Georgia [Mr. RUSSELL], the Senator from Missouri [Mr. SYMINGTON], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] is absent because of illness.

I further announce that the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Michigan [Mr. MCNAMARA], and the Senator from Wyoming [Mr. O'MAHONEY] are necessarily absent.

On this vote, the Senator from Rhode Island [Mr. GREEN] is paired with the Senator from Georgia [Mr. RUSSELL]. If present and voting, the Senator from Rhode Island would vote "yea," and the Senator from Georgia would vote "nay."

I further announce that, if present and voting, the Senator from New Mexico [Mr. CHAVEZ], the Senator from Missouri [Mr. HENNINGS], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Michigan [Mr. MCNAMARA], the Senator from Oregon [Mr. MORSE], the Senator from Montana [Mr. MURRAY], the Senator from Wyoming [Mr. O'MAHONEY], the Senator from Missouri [Mr. SYMINGTON], and the Senator from Texas [Mr. YARBOROUGH] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Maryland [Mr. BUTLER] is absent because of illness.

The Senator from New Hampshire [Mr. COTTON] is necessarily absent.

The Senator from South Dakota [Mr. MUNDT] and the Senator from Kansas [Mr. SCHOEPPEL] are absent on official business.

The Senator from Arizona [Mr. GOLDWATER] is detained on official business.

If present and voting, the Senator from South Dakota [Mr. MUNDT] and the Senator from Kansas [Mr. SCHOEPPEL] would each vote "nay."

The result was announced—yeas 42, nays 39, as follows:

[No. 220]

YEAS—42

Anderson	Frear	McGee
Bartlett	Gore	Magnuson
Bible	Gruening	Mansfield
Byrd, W. Va.	Hart	Monroney
Cannon	Hartke	Moss
Carroll	Humphrey	Muskie
Case, N.J.	Jackson	Pastore
Church	Javits	Proxmire
Clark	Johnson, Tex.	Randolph
Cooper	Johnston, S.C.	Scott
Dodd	Keating	Smith
Douglas	Kerr	Wiley
Ellender	Long, Hawaii	Williams, N.J.
Engle	McCarthy	Young, Ohio

NAYS—39

Aiken	Dworshak	McClellan
Allott	Eastland	Martin
Beall	Ervin	Morton
Bennett	Fong	Prouty
Bridges	Hickenlooper	Robertson
Brunsdale	Hill	Saltonstall
Bush	Holland	Smathers
Byrd, Va.	Hruska	Sparkman
Capehart	Jordan	Stennis
Carlson	Kuchel	Talmadge
Case, S. Dak.	Lausche	Thurmond
Curtis	Long, La.	Williams, Del.
Dirksen	Lusk	Young, N. Dak.

NOT VOTING—19

Butler	Hennings	O'Mahoney
Chavez	Kefauver	Russell
Cotton	Kennedy	Schoeppel
Fulbright	McNamara	Symington
Goldwater	Morse	Yarborough
Green	Mundt	
Hayden	Murray	

So Mr. CLARK's amendment was agreed to.

Mr. CLARK. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. DOUGLAS. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. BENNETT. Mr. President, on behalf of the Senator from Indiana [Mr. CAPEHART], the Senator from Connecticut [Mr. BUSH] and myself, I offer an amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment offered by the Senator from Utah will be stated.

The LEGISLATIVE CLERK. On page 1, line 4, it is proposed to strike out "Housing Goals";

On page 1, it is proposed to strike out lines 6 through 10;

On page 2, it is proposed to strike out lines 1 through 20; and it is proposed to renumber sections 102 and 103 to be sections 101 and 102.

Mr. BENNETT. Mr. President, the amendment would strike from the bill section 101, headed "National Housing Goal." A parliamentary inquiry, Mr. President.

The PRESIDING OFFICER. The Senator will state it.

Mr. BENNETT. Under the unanimous-consent agreement are 30 minutes allowed on each side on this amendment?

The PRESIDING OFFICER (Mr. MUSKIE in the chair). The Senator is correct; 30 minutes are allowed on each side.

Mr. BENNETT. I yield myself 10 minutes. I hope I shall not need all of that time. Much of the pending bill merely continues existing housing programs. However, the first section in the bill breaks into new ground, and I think it is a dangerous new ground. The section would require the President to do three things annually. First it would require him to make a statement to Congress of the minimum number of housing units that should be started during the year. Second, he would have to give an indication of the manner in which the law will be administered by the executive agencies to achieve the number of housing units specified. Third, the section provides that the President shall report any recommendations for legislative action that the President determines necessary or desirable in order that the construction of such specified number of housing units may be started.

There is a gimmick in the bill which can lull to sleep those who feel that this is not really very dangerous, because the section provides that such report shall not be required in any year if the President determines it is not feasible to provide the information, and reports such fact, together with the reasons, to the Senate and the House prior to January 20.

Mr. President, we are opening the door to a basic new principle in housing which is that the President must determine every year how many new houses will be built in the United States. If we open that door, we can amend the bill a year from now and take away the power of the President to decline to make that decision, and we can make it mandatory.

This is known as the national housing goal section. It could be called the ouija board section, or the crystal ball section. It could remind us of the days in Rome when that great empire was governed by the augurs, whe read the entrails of fowl and attempted thereby to foretell the course of history.

The section would require the President, if he is to make an accurate determination, to guess in advance how many couples will be married, how many families will suddenly discover that they have added one more child and have outgrown their home, how many houses will burn down, how many wives will get tired of living in the city and decide they want to move out of an apartment and to the suburbs, and then require a new house. There are a great many other determinations.

I do not believe there is a man living who can accurately predict the number of new houses the American people will need in a year.

Suppose the President is required to do this, and he undertakes to do it. Suppose he overshoots the mark. What do we do with those houses once they are built? How do we pay the builders? Do we appropriate public money to supply the cash necessary to pay the men who attempted to meet the President's goal? How do we decide whether these houses are to be built in New York or Utah or Mississippi? How are we to decide whether they are to be $12,000 houses or $35,000 houses?

Left to themselves, the people make those decisions. They set the pattern, the location, the prices. Theirs is the motivation for deciding whether they want a new house this year. However, under the pending bill the President must either ignore all these things or he must make a bold guess as to how all these factors will affect the economy, plus the general prosperity, and many others, and then decide how many houses shall be built.

A provision in the bill states that he must give to Congress an indication of the manner in which the law will be administered by the executive agencies to achieve the number of housing units specified. I assume that could be interpreted to require a number of agencies in Government to use their efforts to fill up the houses that might be built and not needed.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. BENNETT. I yield.

Mr. CURTIS. Does the Senator mean that we would abandon the principle that the people of the sovereign States shall decide when they want to build houses and how many houses they want to build, and that the houses are no longer to be individual property?

Mr. BENNETT. They are going to be individual properties, I assume, but the President will say that the United States must spend, for example, $1,500,000 on housing. If we do not build them, if they cannot be built in any other way, the excessive agencies must step in and see that they are built. If that does not work, the President must recommend to Congress new legislation which will make up the deficit.

This is the kind of thing that is really taking us into new fields, not only in housing but in the whole principle of government.

Perhaps there are Members of the Senate who, if they come to the Presidency, will have the answers to questions like that. I have never known a man whom I would trust with that responsibility. The Government should not operate on this kind of basis and should not be operating housing programs against a fixed determination made in advance by an executive who cannot possibly have the answer to all the questions that will determine the reasons for building the houses.

Mr. ROBERTSON. Mr. President, will the Senator yield?

Mr. BENNETT. I yield.

Mr. ROBERTSON. The Senator from Utah will recall that I joined him in committee in opposition to this provision in the bill, on the ground, as I stated, that it is impractical and unworkable and that it puts the President into an entirely new field. He must determine how many new houses should be built in a given year, which he cannot possibly do. In addition, he must say how they are to be financed, how they are to be purchased, and how they are to be paid for. I hope very much the Senate will support the amendment and take this provision out of the bill.

Mr. BENNETT. I could carry this thing further. I conclude by asking, even if the President were smart enough or lucky enough to guess the number of houses that would be purchased in the

year in which he is required to set a number, how the executive agencies could administer such a law and carry the responsibility and come out right on the nose? That is implicit in this provision, as well as the President's ability to guess right.

Mr. President, how much of my 10 minutes remain?

The PRESIDING OFFICER. The Senator has 2 minutes remaining.

Mr. BENNETT. I will reserve the remainder of my time. I yield 5 minutes to the Senator from Illinois.

Mr. DIRKSEN. Mr. President, this is the most amazing proposal I ever heard of in connection with any proposed legislation. That goes back for 25 years. I will prove it to the Senate. I will read the first sentence of section 101:

> The program of the President as expressed in his annual message to the Congress shall—
>
> Shall—
>
> include statements and recommendations concerning a residential construction goal.

We would say to the President, "When you come before a joint session of Congress with your state of the Union message, you shall by law have included therein a statement on housing."

The framers of the Constitution did not do it. In the Constitution they said that the President from time to time should give information on the state of the Union. They did not tell the President to put something in his message about housing.

Leave that provision in the bill, and what will happen? We could then pass a bill saying that the President shall, from time to time, include in his state of the Union message statements and recommendations on veterans' legislation. Then the next year we might say that the President shall include statements and recommendations on school legislation.

What we will be doing will be trying to write a state of the Union message, not a national housing goal, in the bill. If we follow that precedent, we will have destroyed the constitutional power of the President. That is the ultimate end of it.

Do we want a veto of the bill? If I were sitting at 1600 Pennsylvania Avenue, I would not have to know anything else that is in the bill except that. The minute I read the first sentence, I would say to myself, "Congress is trying to tell me what to tell them in January when I go before them for a joint session. I will not permit the legislative branch to usurp executive authority by telling me what I shall say and what I shall not say."

Mr. President, that is one of the most offensive things I have ever seen in a legislative proposal. If the Senate allows it to remain in the bill, I would bet a part of my right arm that the bill will not have the ghost of a show of getting by the Presidential power of disapproving it and sending it back. Then, as the Senator from Alabama said, any legislation in the housing field will have been jeopardized.

It is not necessary to look any further than the first sentence, because what is sought to be done is to tell the Chief Executive what he must write into his state of the Union message. That is the fundamental issue that is involved.

Mr. BUSH. Mr. President, will the Senator from Utah yield me 3 minutes?

Mr. BENNETT. I yield 3 minutes to the Senator from Connecticut.

Mr. BUSH. I strongly support what the Senator from Utah and the Senator from Illinois have said. I think this is a highly offensive section of the bill. I tried to have it removed from the bill in the subcommittee and in the full committee, but I was unsuccessful.

I think the Senator from Illinois has correctly stated the danger which this language carries with it. However, it also opens up another danger. If the President is to be called upon to tell Congress how many housing units should be started, when are we going to ask him how many automobiles are to be built, or how many refrigerators are to be built? Shall we rely on the President of the United States to tell us what the economy should do, and then say that the Government should get behind this program, and in some way or other, which is not set forth, but in general language, insist that legislation be passed, which will require the Executive fiat to be put into action, which will affect the goal which he is required to submit at the very beginning of the year?

This is in complete defiance of the law of supply and demand. It is in complete defiance of the free economy which this Nation has had in recent years, particularly in the last 8 years.

I agree with the Senator from Illinois that this language should be stricken from the bill. I urge the Senator from Alabama, as I have before in the debate, to remove it from this bill and place it in a separate bill, so that the housing bill will not be imperiled. Otherwise, I think the bill has very much to commend it. I ask the Senator from Alabama again to reconsider. I ask him to take out this language and put it in a separate bill, so that it may be considered on its own merits.

I take this occasion once more to protest the business of introducing big omnibus bills and throwing together a number of unrelated items which merely come under the subject of housing, when actually they relate to problems which should be considered separately, in separate bills.

Of all the items which should be considered in separate bills, the first section of S. 3670, section 101, is the worst. I urge the Senator from Alabama to take it out and place it in a separate bill. I will then join him in any way I can to get it before the Senate.

Mr. DIRKSEN. Mr. President, on this amendment I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. BENNETT. Does the Senator wish to speak in support of the amendment?

Mr. HUMPHREY. I wish to speak in support of title I of the bill.

Mr. BENNETT. My amendment is to strike out that particular section of the bill.

Mr. HUMPHREY. I am happy to announce that I oppose the amendment.

Mr. BENNETT. The Senator must get time from the Senator from Alabama.

Mr. HUMPHREY. I am not a prejudiced individual. I will take time wherever it is available.

Mr. SPARKMAN. Mr. President, I yield myself 5 minutes.

Mr. President, I submit that a careful reading of the bill will show that none of the things which have been pictured here are actually provided for in the bill. The language does not say that these recommendations must be included in the President's state of the Union message. The President submits several messages to Congress, one of which is the economic report. As a matter of fact, to my way of thinking, that is where these recommendations should be reported.

In the Full Employment Act of 1946, Congress created the Economic Council of the President. The Joint Economic Committee of Congress told the President what to report on.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. SPARKMAN. I will yield briefly.

Mr. DIRKSEN. The language in the bill relates to the President's annual message to Congress.

Mr. SPARKMAN. The President submits several annual messages.

Mr. DIRKSEN. Those are not annual messages.

Mr. SPARKMAN. I may say to the Senator from Illinois that I would have no objection to changing the language so that it would simply read "shall annually present to Congress."

Let me state some of the background of this proposal. I hope the minority leader will not leave the floor.

Mr. DIRKSEN. I shall not.

Mr. SPARKMAN. On February 3, 1960, James C. Hagerty, press secretary to the President, issued a press release which announced the appointment of a commission for the purpose of studying and recommending goals. That commission is headed by Dr. Henry M. Wriston, former president of Brown University, now president of the American Assembly.

The Vice Chairman of the Commission is Frank Pace, chairman of General Dynamics Corp. Mr. Pace formerly was Secretary of War.

I shall read the names of the other members of that committee, because I think it is a distinguished group, and we ought to remember them:

Dr. Henry M. Wriston; Frank Pace, Jr.; Dr. James R. Killian; Gen. Alfred Gruenther; Federal Judge Learned Hand; Dr. James B. Conant; Colgate W. Darden, of Virginia; George Meany; Erwin D. Canham, president of the U.S. Chamber of Commerce; Clark Kerr; and Crawford H. Greenwalt.

I submit that that is a distinguished committee which the President has appointed for the purpose of preparing and reporting goals. What are the goals? Here is what Dr. Wriston said—this is a quotation from Business Week:

> Wriston hopes for a book of manageable proportions that will hit hard on the vital issues, including such hotly controversial areas as defense, housing, and education.

That is the statement of the Chairman of the distinguished Commission which was created by the President of the United States to set goals.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. SPARKMAN. I will yield after I have completed my statement. The President said:

> The President is asking the panel to develop a broad outline of national objectives and programs for the next decade and longer, and hopes that in the process the Commission will set up a series of goals in various areas of national activity.

That was the statement of the President of the United States. That is the assignment which was given to the distinguished Commission created by the President of the United States.

If I had the time, I could read statements to the effect that Housing and Home Finance Agency officials, including Mr. Mason and Mr. Zimmerman, have at times referred to goals. Mr. Zimmerman set a target of 1,200,000 housing starts for 1960.

We are not asking that the President form a plan. As a matter of fact, we say he shall do it so far as he determines it to be feasible. So far as he deems it to be feasible, we ask him to tell us the number of starts which ought to be made during a year. There is no requirement that he tell us what priced housing shall be built; where it shall be built, et cetera. There is no requirement that he state how much Government financing will be required, or things like that. He is merely asked to set a goal. Goodness knows, in the economic report such goals are set in various lines of activity.

The Senator from Connecticut knows that in our committee we try, year by year, to provide, in the field of housing, legislation which may result in construction of the number of housing units required for the new families, required because of demolitions and required to replace the houses torn down because of the construction of highways and other Federal activities.

The PRESIDING OFFICER. The time the Senator from Alabama has yielded to himself has expired.

Mr. SPARKMAN. Mr. President, I yield myself 5 more minutes.

The PRESIDING OFFICER. The Senator from Alabama is recognized for 5 additional minutes.

Mr. SPARKMAN. Mr. President, we try to help. In this case, all we are asking is some leadership and assistance from the Executive. Let the Executive take that leadership in his economic report, and let Mr. Mason, the Administrator of the Housing and Home Finance Agency, when he submits his report to the economic committee, each year, say, "We believe there should be a certain number of starts each year, and certain steps must be taken."

Mr. President, in February of this year, Mr. Zimmerman, Commissioner of the Federal Housing Administration, lowered the required downpayment to the lowest level it has ever been. He did so because the number of housing starts had dropped and dropped; and he knew that his action would stimulate construction and would result in an increase of housing starts. Only recently, two member banks of the Federal Reserve System lowered their rediscount rate. They did so because they knew a stimulus was needed.

This provision does not contain anything new or anything revolutionary. We are merely saying that in view of the exploding population the Nation has, requiring an increasing number of new houses every year, there should be more planning than there has been thus far, and the entire load should not be placed on the shoulders of Congress; Congress should receive some help from the executive branch.

Mr. BUSH. Mr. President, will the Senator from Alabama yield?

Mr. SPARKMAN. I yield to the Senator from Connecticut.

Mr. BUSH. I thank the Senator for yielding.

I am glad to call attention to the commission to which the Senator has referred. It is headed by Dr. Wriston. No better American than he could be found to head such a commission.

Mr. SPARKMAN. I agree with the Senator.

Mr. BUSH. Yes; I was sure the Senator from Alabama would agree.

I say it would be better to wait until the Congress hears from that commission, composed of the very distinguished men the Senator has named, and others. Let us hear from the commission, and let us examine its report. It will make its report before very long.

Mr. SPARKMAN. The President has said we should have these goals.

Mr. BUSH. No; the President has said we should have a commission to consider the question.

Mr. SPARKMAN. And to set up the goals.

Mr. BUSH. It seems to me the wise thing for the Senate to do is to wait until it can see what the very distinguished and competent members of the commission have to say on the question of national goals. I think that is the sound approach.

But it seems to me it is foolish to talk about particular national goals and the other things called for by the bill, and, in that connection, to issue a mandatory direction to the President, so as to require that he say how many housing units shall be started and what the Government should do in order to be sure that those units are completed.

I think the lack of confidence in this part of the bill is reflected in the proviso which is to be found at the end, which states that such a report shall not be required if the President determines it is not feasible. I believe that is an indication of the lack of confidence in clauses (1), (2), and (3) of section 101.

Again I beg the Senator to delete this part of the bill, so as not to imperil the bill.

Mr. SPARKMAN. But the Senator from Connecticut himself offered the amendment to the effect that the President shall not be required to do it unless he determines it to be feasible.

Mr. BUSH. Well, I would do anything to get away from the mandatory language which was in the bill.

I am glad the Senator from Alabama reminded me that I offered the amendment. It was accepted by the committee.

Mr. SPARKMAN. That is correct.

Mr. BUSH. I regard that as a compliment to those of us who proposed this part of the bill.

Mr. SPARKMAN. Mr. President, in order that the RECORD shall show what we intended, in lieu of all the statements which have been attributed to the committee, I ask unanimous consent to have printed at this point in the RECORD the part of the committee report on the bill which deals with the housing goals, under the subhead "National Housing Goal."

There being no objection, the excerpt from the report (No. 1575) was ordered to be printed in the RECORD, as follows:

TITLE I—HOUSING GOALS, RESEARCH, AND ADVANCED CONSTRUCTION TECHNOLOGY

NATIONAL HOUSING GOAL

Section 101 would require the President, in furtherance of the National Housing Policy, to transmit an annual report to the Senate and the House of Representatives containing (1) a statement indicating the minimum number of housing units which should be started during the then current calendar year, or such year and the next following calendar year, in order to be consistent with the program of the President; (2) an indication of the manner in which the law will be administered by the executive agencies to achieve the number of housing units specified under clause (1), and (3) any recommendations for legislative action that the President determines are necessary or desirable in order that the construction of such specified number of housing units may be started.

The section further provides that this report shall not be required in any year if the President determines that it is not feasible to provide the information specified in clauses (1), (2), and (3) above.

Thus, the President would not be required in any year to submit any or all of this specified information, if he determines that it is not feasible to do so. In this event, he must report his determination, together with the reasons for the determination, to the Senate and the House of Representatives.

The committee believes that until minimum annual housing goals are agreed upon, there can be little hope for achievement of the volume of housing production and the stability of housing production essential for the orderly growth of the country.

Existing law gives Federal agencies many discretionary powers, and these powers are used to influence annual housing production. This applies particularly to the Federal Housing Administration, the Veterans' Administration, the Federal National Mortgage Association, the Federal Home Loan Bank System, the Federal Reserve System, the Public Housing Administration, and the Urban Renewal Administration.

Having such discretionary powers and such great influence upon housing production, it must be assumed that these powers are now exercised with some purpose or plan, and with some estimate of the consequences. The committee assumes that the heads of executive agencies now use their discretionary powers with some thought about the annual volume of housing production, or, with some goal in mind.

Section 101 merely proposes that this goal be publicly stated by the President, that the propriety of the goal be debate in the Congress, in financial and building circles, in the press, and by the people. Agreements reached through such open and democratic processes

can become the objective for necessary changes in law and for the exercise of executive discretion granted by law. Furthermore, the public will be aided in fixing responsibility for the adequacy of enabling legislation and for the adequacy of its execution.

Such policies as (1) the marketing and purchasing prices of the Federal National Mortgage Association, (2) the downpayment schedules, interest rates, and other terms of FHA and GI loans, (3) the volume of borrowings permitted through the Home Loan Bank System and the Federal Reserve System, (4) and many other executive decisions affecting the supply and distribution of home loan capital, should not be determined in a vacuum. They should be determined with a view toward their consequences, and with a view toward achieving some minimum volume of housing production consistent with the need for housing and with general economic stability.

In this connection, the President has appointed a Commission on National Goals. The Chairman of this Commission, Dr. Henry M. Wriston, has said that housing is one of the vital subjects to be included in the work of the Commission, and the President has expressed the hope that "the Commission will set up a series of goals in various areas of national activity."

The Housing Act of 1949 contained a declaration of national housing policy, which stated in part as follows:

"The Congress hereby declares that the general welfare and security of the Nation and the health and living standards of its people require * * * the realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family, thus contributing to the development and redevelopment of communities and to the advancement of the growth, wealth, and security of the Nation."

The committee believes that section 101 is a logical and necessary extension of the national housing policy expressed in the Housing Act of 1949, and that this proposal is consistent with the program of the President as expressed by the establishment of the Commission on National Goals.

Mr. SPARKMAN. Mr. President, I also ask unanimous consent to have printed at this point in the RECORD section 1022 of title 15 of the United States Code. It tells the President exactly what to report on in his annual message dealing with the economic conditions in the country. It spells that out specifically—1, 2, and 3; and that is the law today.

There being no objection, the section of the code was ordered to be printed in the RECORD, as follows:

§ 1022. Economic Report of the President; coverage; supplementary reports; reference to Congressional Joint Committee.

(a) The President shall transmit to the Congress at not later than January 20 of each year an economic report (hereinafter called the "Economic Report") setting forth (1) the levels of employment, production, and purchasing power obtaining in the United States and such levels needed to carry out the policy declared in section 1021 of this title; (2) current and foreseeable trends in the levels of employment, production, and purchasing power; (3) a review of the economic program of the Federal Government and a review of economic conditions affecting employment in the United States or any considerable portion thereof during the preceding year and of their effect upon employment, production, and purchasing power; and (4) a program for carrying out the policy declared in section 1021 of this title, together with such recommendations for legislation as he may deem necessary or desirable.

(b) The President may transmit from time to time to the Congress reports supplementary to the Economic Report, each of which shall include such supplementary or revised recommendations as he may deem necessary or desirable to achieve the policy declared in section 1021 of this title.

(c) The Economic Report, and all supplementary reports transmitted under subsection (b) of this section, shall, when transmitted to Congress, be referred to the joint committee created by section 1024 of this title. (Feb. 20, 1946, ch. 33, § 3, 60 Stat. 24; Aug. 2, 1946, ch. 753, title II, § 226, 60 Stat. 838, June 18, 1956, ch. 399, § 1, 70 Stat. 289.)

AMENDMENTS

1956—Subsec. (a) amended by act June 18, 1956, which substituted "not later than January 20 of each year" for "at the beginning of each regular session (commencing with the year 1947)".

1946—Subsec. (a) amended by act Aug. 2, 1946, which struck out "within 60 days after" preceding "the beginning of each regular session" and inserted in lieu thereof "at".

EFFECTIVE DATE OF 1946 AMENDMENT

Section as effective Aug. 2, 1946, see note set out under section 72a of Title 2, The Congress.

Mr. HUMPHREY. Mr. President, will the Senator from Alabama yield to me?

Mr. SPARKMAN. Mr. President, how much time remains under my control?

The PRESIDING OFFICER. Twenty minutes.

Mr. HUMPHREY. Will the Senator from Alabama yield 10 minutes to me?

Mr. SPARKMAN. Yes; I yield 10 minutes to the Senator from Minnesota.

The PRESIDING OFFICER. The Senator from Minnesota is recognized for 10 minutes.

Mr. HUMPHREY. Mr. President, this argument may appear to be rather academic and theoretical. But, in fact, it is a basic argument between two points of view in regard to how to operate the government.

The argument presented tonight by our Republican friends is an indication of exactly what is wrong today with this country—in Japan, at the summit, and everywhere else where there is trouble—namely, the refusal to plan. We need to take planning out of the doghouse and put it into the White House; that is where it belongs. The Republican Party has refused to plan for the economic development of this country—I did not say "dictate"; I said "plan," which means to cooperate and to work together with the institutions of our communities and our economy and our political system, in order to have a better America with some semblance of progress and order.

What does this provision really suggest? First of all, it is thoroughly constitutional, because in section 3 of article II of the Constitution, the Founding Fathers provided—when speaking of the President and his responsibilities and authority—

He shall from time to time give to the Congress Information of the State of the Union.

I remind my distinguished friends of the right, of the Republican Party, that an annual message by the President is not merely one message. Under our system, there are many presidential annual messages; and it would be much better if those who now are so worried about planning would pay some real attention to the President's annual messages. The Constitution requires the President to give information.

The Constitution further provides that the President shall "recommend to their consideration"—speaking of the Congress—"such measures as he shall judge necessary and expedient," over and above the requirement that he shall report, from time to time, to the Congress information relating to the state of the Union.

Mr. PASTORE. Mr. President, at this point will the Senator from Minnesota yield for a question?

Mr. HUMPHREY. I yield.

Mr. PASTORE. Does not the Senator think it would be much more palatable if, instead of the language used in the first three lines the bill merely provided that the President shall annually make recommendations concerning residential construction?

Mr. HUMPHREY. I thoroughly agree.

Mr. PASTORE. Because I am afraid it is an impingement on the prerogatives of the President for the Congress to tell the President what program he shall have. I believe he should be free to have whatever program he wants to have. I believe the word "program" in that sentence is very undesirable.

Mr. HUMPHREY. The distinguished Senator has indicated that the first sentence should be revised; and I would suggest the change of wording which the Senator from Rhode Island has just now suggested.

Mr. STENNIS. Mr. President, at this point, will the Senator from Minesota yield?

Mr. HUMPHREY. I yield.

Mr. STENNIS. In regard to the point the Senator raised, let me read from the portion of the Constitution which the Senator himself read. In speaking of the President, the Constitution provides: "and recommend to their consideration such measures as he shall judge necessary and expedient."

Certainly we have no right mandatorily to provide by statute anything about what the President must recommend. The word "He," not the words "the Congress," is the key word to that provision.

Mr. HUMPHREY. May I say, most respectfully, that the power to legislate is the power of the Congress. We have established the authority for providing what the President shall recommend to Congress. Let me refer to Public Law 304, 79th Congress, to which the Senator from Alabama has referred, known as the Employment Act of 1946.

Section 3, subsection (a), reads:

The President shall transmit to the Congress within sixty days after the beginning of each regular session (commencing with the year 1947) an economic report (hereinafter called the "Economic Report") setting forth (1) the levels of employment, production, and purchasing power obtaining in the United States and such levels needed to carry out the policy declared in section 2.

The Senator has been talking about the President being called upon to lay out a housing program. The Employment Act of 1946 calls upon the Presi-

dent to lay out a total economic program, including purchasing power, that shall provide for maximum employment, production, and distribution, all the way down the line.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. HUMPHREY. Yes.

Mr. DIRKSEN. I will show how specious the Senator's reasoning is. The so-called joint economic group is a creature of the Congress. That merely says the President's report shall be transmitted to the Congress. It says nothing about what the President shall write into his annual message to the Congress, and that is a different thing. Congress created this body; Congress provided for the transmittal of the report—an altogether different thing.

Mr. HUMPHREY. The Senator has his point of view. May I say it is not necessarily a divine edict.

Mr. DIRKSEN. Yes; I know.

Mr. HUMPHREY. It is subject to human frailty. I suggest to the Senator, if he will read section 3, subsection (a) of the Employment Act of 1946—and if he does not have it, I shall be happy to transmit it to him——

Mr. DIRKSEN. I do not need it.

Mr. HUMPHREY. The President is required—to use the inflection of the Senator from Illinois—is required—to do not one, not two, but three things. Then there is established a Council of Economic Advisers, which is required to follow the mandate of the Congress of the United States.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. HUMPHREY. Not at the moment. I shall come back to the Senator in a second.

I will tell the Senate why it is said this proposal is bad. The Republican Party and the administration do not plan. That is why the fiscal condition of the country is in a mess. The administration does not plan. That is exactly why our agricultural program is in a mess. There have been no goals. There has been no real positive statement. That is why our educational program is in trouble.

In a world in which we are faced with a power that is today humiliating and embarrassing us around the world, that is planning the use of every bit of its energy, resources, and manpower, I suggest the least we can do is ask the President of the United States to plan, to make some suggestions to the Nation, in light of the tremendous resources on which he can draw, and to give us information as to what the administration has in mind in the field of housing.

If the President finds it is not feasible, if he finds the information would be inconclusive, that it would be undesirable, he is not required to do it. But I submit no insurance company would tolerate a chief executive for 1 hour who would not give a planning message on the program for the next year. No corporation official that heads a corporation would be permitted to remain on the payroll for 1 year if he did not lay down a promotion, sales, and advertising program, a program of goals. Regrettably, we have to remind the President to plan. This should not be necessary, but unfortunately it is.

I submit that when in the state of the Union message the President says that we have to find out what we are for—and that is what the Commission on National Goals is—there is something lacking.

I might add, for the edification of my friends on the other side of the aisle, in this joyful moment, that the President even had to ask for a commission to find out what the Republican Party was for. He asked for a statement of purpose of the party.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. LONG of Louisiana. Is it not true that the administration in 1946, under Harry Truman, actually asked for the Employment Act and asked that the President be required to send a message to Congress on ways that full employment could be maintained? The President has the responsibility and the duty to enforce the administration of the laws. This is merely a case of asking him for not merely what the President would submit in his message, but to submit a program which, if he does not think it feasible, he can disregard. All a Republican President would have to do is say it is not feasible.

Mr. HUMPHREY. That is correct. In the Budget Act which set up the Bureau of the Budget, Congress instructed the President to prepare a budget. He sends to the Congress an annual budget message. The purpose is to outline the goals of the American Government through the fiscal policies of the Government.

All we are doing here is saying that in the field of housing we shall make better progress if the Executive outlines its programs and goals. Who said this? The late Senator Robert Taft.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. SPARKMAN. I yield 1 additional minute to the Senator from Minnesota.

Mr. HUMPHREY. We have the Housing Act, which came from the late Senator Robert Taft. That act embraces goals in housing, as laid down by the Congress. There is no reason why the President cannot lay down the goals as the executive branch desires. It has contacts with the Labor Department, the Department of Commerce, the Council of Economic Advisers, and the Housing and Home Finance Administration. Who else is in a better position and more supplied with the facts to lay down a program for housing than the President of the United States? Or do we want only the labor movement or the homebuilders or the chamber of commerce or the Congress to lay it down? I think, most respectfully, a cooperative arrangement is desirable.

The PRESIDING OFFICER. The time of the Senator from Minnesota has expired.

Mr. HUMPHREY. I am sorry not to have time to yield to my delightful friend from Illinois.

Mr. SPARKMAN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. SPARKMAN. Would an amendment to section 101 be in order at this time?

Mr. DIRKSEN. Mr. President, it cannot be amended, under the order for the yeas and nays.

The PRESIDING OFFICER. The Chair will state that when all time has been yielded back on the amendment, or has expired, a perfecting amendment may be offered.

Mr. SPARKMAN. In that event, Mr. President, it will be my purpose to offer an amendment along the lines suggested by the Senator from Rhode Island a few moments ago, because it was never intended that this would be any part of the President's state of the Union message. I suggest that it read as follows: "The President shall annually make recommendations to the Congress concerning the residential construction goal."

Mr. BENNETT. Mr. President, may I inquire how many minutes I have left?

Mr. DIRKSEN. Mr. President, may I be recognized?

The PRESIDING OFFICER. The Senator from Utah has propounded an inquiry.

The Senator from Utah has 15 minutes remaining.

Mr. BENNETT. I will yield 2 minutes to the Senator from Illinois, and more, if he wants more time.

The PRESIDING OFFICER. The Senator from Illinois.

Mr. DIRKSEN. Mr. President, there is confirmation of the point which I made. The distinguished chairman of the subcommittee now wants to amend it so that the President shall submit it annually. I made the point that this went to the President's state of the Union message and that we were trying to tell the President what to include in that message.

If we can do it once, we can do it for every subject which comes within the whole field of human endeavor.

With respect to my distinguished and beloved friend from the land of sky-blue waters, he does get lost a little in the labyrinth of his own passionate and exuberant verbosity, because he has been constantly arguing about a statute. So has the distinguished Senator from Alabama. I have been arguing about the Constitution of the United States, which provides for the state of the Union message to the Congress, and that is quite a different thing.

I hope we shall take this language out once and for all.

I will say to my friend from Minnesota, when he brings Republican politics into this, that I am not yet ready, as a Republican, to go down the Socialist planning road—period.

Mr. President, I yield back the remainder of my time.

Mr. HUMPHREY. Mr. President, will the Senator yield me one-half minute so that I may respond?

Mr. LAUSCHE. Mr. President, will the Senator yield me 3 minutes?

Mr. BENNETT. Mr. President, I am happy to yield 3 minutes to the Senator from Ohio.

Mr. LAUSCHE. Mr. President, it seems to me that the Congress, by the provisions contained in the bill, contemplates usurping a power which clearly ought to be left with the President. We ought to keep in mind the separation of the powers of the President and of the Congress.

Mention has been made of the fact that the President should be the leader. The President may want to lead in a different manner from what the Members of Congress think he ought to lead. He may think that the course which the Congress desires to follow is inimical, rather than helpful, to the country.

I think everyone who has studied the Constitution will recognize the fact that the Constitution intended that the President should be free from the domination of the Congress.

There are some who are of the belief that the housing program has not proceeded with adequate speed in conformity with the thinking of the Congress. The President, having in mind the interests of the people and of the country, may feel as deeply exactly the opposite. His judgment may be completely contrary.

What the provision intends to do is to subtly and cleverly tell the President, "You have to subscribe to this program," even though in a campaign he might have said, "We have gone too far." Subtlety is implied in the provision when it is said to the President, "If you do not think it is right, do not send in the recommendation." If the President should do that, it will be said, "He has been told to make a recommendation, and he has refused to do so."

We may have a Democrat in the White House next January. I ask Senators, "Will you seek to repeal the provision at that time?" If the Republicans win the election, will it be said, "We forbid you to make a recommendation in the annual message on housing." If Senators oppose them at that time, what logic will there be for the position to be taken?

I say to Senators, this represents nothing but a usurpation of power by the Congress, which power was given by the people of the Nation to the President.

The PRESIDING OFFICER. The time of the Senator from Ohio has expired.

Mr. ALLOTT. Mr. President, will the Senator from Utah yield me 2 minutes?

Mr. BENNETT. I yield 2 minutes to the Senator from Colorado.

Mr. ALLOTT. Mr. President, I rise to discuss one phase of this matter which has not been discussed. I rise because this may affect the vote.

I refer to the perfecting amendment the Senator from Alabama has said he will offer.

I concur heartily in what the Senator from Rhode Island, the Senator from Ohio, the Senator from Mississippi, and other Senators have said. I wish to invite the attention of Senators to article II, section 3 of the Constitution, which provides—

> He shall from time to time give to the Congress Information—
>
> Not on the state of the Union, but—
>
> of the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient.

I invite the attention of my colleagues to the fact that this is not limited to an annual message to Congress. This is limited to any message the President sends to the Congress.

I underscore and emphasize the fact that if we attempt to dictate to the Executive, even by the proposed perfecting amendment the Senator from Alabama says he intends to offer, as to what he shall say in any of his messages to Congress, we are indeed attempting to usurp his power. In addition, in my opinion, we shall be writing an unconstitutional provision of law, which may be thrown out completely.

Mr. STENNIS. Mr. President, will the Senator yield me 2 minutes?

Mr. BENNETT. Mr. President, I yield 2 minutes to the Senator from Mississippi.

Mr. STENNIS. Mr. President, it might be unimportant as to what the President may recommend if the bill is passed as it is now written, or as has been suggested, but I think it is highly important how we regard the plain wording of the Constitution of the United States.

I refer to article II, section 3, to which the Senator from Colorado referred.

My time is limited, Mr. President, and I shall read only the most pertinent portion:

> He (the President) shall recommend to their Consideration—
>
> To the consideration of the Congress—
>
> such Measures as he shall judge necessary and expedient.

Under that language I cannot see how any Congress has the authority to pass mandatory legislation as to what any President shall recommend. That is a matter the Constitution leaves with the President. I think we are transgressing upon the President's power, and inviting abuse of our own, if we pass such a provision.

Of course we can require the President to report as to money he spends on legislative programs he is executing for the Congress. However, the choice as to what measures he shall recommend to be passed, for our consideration, and what he deems to be expedient, is left solely under the Constitution to the President of the United States, whomever he may be.

Mr. CAPEHART. Mr. President, will the Senator yield me 2 minutes?

Mr. BENNETT. Mr. President, I yield 2 minutes to the Senator from Indiana.

Mr. CAPEHART. Mr. President, I do not think the amendment is as bad as Senators who have been talking against it seem to think it is. Neither do I think the amendment is as good as Senators who have been talking for it seem to think it is.

After having studied the amendment in the committee, after having listened to the discussion, and after having discussed it with the able Senator from Alabama, who was the author of the amendment originally—I know the Senator's intentions, I know his thoughts, and I know he is sincere and conscientious about the matter—my best judgment is, everything taken into consideration, we would be better off to leave the language out of the bill. If it is desired to introduce the language later, as a separate bill, that is something else for consideration.

I happen to know how the able Senator from Alabama feels about the matter. I know what prompted the Senator to offer this language. The Senator is sincere and conscientious, but I honestly believe we will be much better off if we leave the language out of the bill at this time.

Mr. BENNETT. Mr. President, I am prepared to yield back the remainder of my time if the Senator from Alabama will do the same.

Mr. SPARKMAN. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back on the amendment.

Mr. SPARKMAN. Mr. President, I offer the perfecting amendment to which I referred.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On page 1, line 7, it is proposed to strike the language commencing with the word "program" down to and including the word "residential" on line 9, and to insert in lieu thereof the following: "President shall annually make recommendations to the Congress concerning a residential".

The PRESIDING OFFICER. The question is on agreeing to the perfecting amendment offered by the Senator from Alabama.

The amendment was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Utah. All time has been yielded back.

Mr. SPARKMAN. Mr. President, was the perfecting amendment agreed to?

The PRESIDING OFFICER. The perfecting amendment of the Senator from Alabama was agreed to.

The question is on agreeing to the amendment of the Senator from Utah.

On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from New Mexico [Mr. CHAVEZ], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Rhode Island [Mr. GREEN], the Senator from Arizona [Mr. HAYDEN], the Senator from Oregon [Mr. MORSE], the Senator from Montana [Mr. MURRAY], the Senator from Georgia [Mr. RUSSELL], the Senator from Missouri [Mr. SYMINGTON], the Senator from Texas [Mr. YARBOROUGH], are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS], is absent because of illness.

I further announce that the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Michigan [Mr. MCNAMARA], and the Senator from Wyoming [Mr. O'MAHONEY], are necessarily absent.

On this vote, the Senator from Rhode Island [Mr. GREEN] is paired with the Senator from Georgia [Mr. RUSSELL]. If present and voting, the Senator from Rhode Island would vote "nay" and the Senator from Georgia would vote "yea."

I further announce that, if present and voting, the Senator from New Mexico [Mr. CHAVEZ], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Arizona [Mr. HAYDEN], the Senator from Missouri [Mr. HENNINGS], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Michigan [Mr. MCNAMARA], the Senator from Oregon [Mr. MORSE], the Senator from Montana [Mr. MURRAY], the Senator from Wyoming [Mr. O'MAHONEY], the Senator from Missouri [Mr. SYMINGTON], and the Senator from Texas [Mr. YARBOROUGH] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Maryland [Mr. BUTLER] is absent because of illness.

The Senator from New Hampshire [Mr. COTTON] is necessarily absent.

The Senator from South Dakota [Mr. MUNDT] and the Senator from Kansas [Mr. SCHOEPPEL] are absent on official business.

The Senator from Arizona [Mr. GOLDWATER] is detained on official business.

If present and voting, the Senator from South Dakota [Mr. MUNDT] and the Senator from Kansas [Mr. SCHOEPPEL] would each vote "yea."

The result was announced—yeas 44, nays 37, as follows:

[No. 221]

YEAS—44

Goldwater	Morse	Yarborough
Green	Mundt	
Hayden	Murray	

So Mr. BENNETT's amendment was agreed to.

Mr. BENNETT. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. DIRKSEN. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. SPARKMAN. Mr. President, I offer two amendments of a technical nature which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The clerk will report the amendments of the Senator from Alabama.

The LEGISLATIVE CLERK. On page 12, line 21, it is proposed to strike out "estimate of cost" and insert in lieu thereof "value".

On page 13, line 15, it is proposed to strike out "project" and insert in lieu thereof "multifamily structure".

The amendments were agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

LEGISLATIVE PROGRAM—ORDER FOR ADJOURNMENT UNTIL 10:30 A.M. TOMORROW

Mr. DIRKSEN. Mr. President, I should like to ask the majority leader about the program for tomorrow and also for the rest of the night, as much as there is left of the night, and at what time the Senate shall convene tomorrow.

Mr. JOHNSON of Texas. If it is agreeable to the Senate, the Senate will convene at 10:30 tomorrow morning.

I ask unanimous consent that when the Senate concludes its deliberations today it stand in adjournment until 10:30 a.m. tomorrow.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. JOHNSON of Texas. It is my present intention to consult with the chairman of the Public Works Subcommittee which reported the public works authorization bill, to see if he is ready to bring up that bill at an early hour tomorrow. If he is not, I will move to make the Federal postal employees pay bill the unfinished business. I should like to ask consent that it be in order to consider the HEW appropriation bill.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

HOUSING ACT OF 1960

The Senate resumed the consideration of the bill (S. 3670) to extend and amend laws relating to the possession and improvement of housing and the renewal of urban communities, and for other purposes.

The PRESIDING OFFICER. All time has been yielded back. The question is on the passage of the bill. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD (when his name was called). On this vote I have a pair with the senior Senator from Georgia [Mr. RUSSELL]. If he were present and voting, he would vote "nay." If I were permitted to vote, I would vote "yea." I therefore withhold my vote.

The rollcall was concluded.

Mr. MANSFIELD. I announce that the Senator from New Mexico [Mr. CHAVEZ], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Rhode Island [Mr. GREEN], the Senator from Arizona [Mr. HAYDEN], the Senator from Oregon [Mr. MORSE], the Senator from Montana [Mr. MURRAY], the Senator from Georgia [Mr. RUSSELL], the Senator from Missouri [Mr. SYMINGTON], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] is absent because of illness.

I further announce that the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Michigan [Mr. MCNAMARA], and the Senator from Wyoming [Mr. O'MAHONEY] are necessarily absent.

I further announce that, if present and voting, the Senator from New Mexico [Mr. CHAVEZ], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Rhode Island [Mr. GREEN], the Senator from Arizona [Mr. HAYDEN], the Senator from Missouri [Mr. HENNINGS], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Michigan [Mr. MCNAMARA], the Senator from Oregon [Mr. MORSE], the Senator from Montana [Mr. MURRAY], the Senator from Wyoming [Mr. O'MAHONEY], the Senator from Missouri [Mr. SYMINGTON], and the Senator from Texas [Mr. YARBOROUGH] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Maryland [Mr. BUTLER] is absent because of illness.

The Senator from New Hampshire [Mr. COTTON] is necessarily absent.

The Senator from South Dakota [Mr. MUNDT] and the Senator from Kansas [Mr. SCHOEPPEL] are absent on official business.

The Senator from Arizona [Mr. GOLDWATER] is detained on official business.

If present and voting, the Senator from South Dakota [Mr. MUNDT] and the Senator from Kansas [Mr. SCHOEPPEL] would each vote "nay."

The result was announced—yeas 64, nays 16, as follows:

[No. 222]

So the bill (S. 3670) was passed, as follows:

S. 3670

An Act to extend and amend laws relating to the provision and improvement of housing and the renewal of urban communities, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Housing Act of 1960."

TITLE I—HOUSING RESEARCH AND ADVANCED CONSTRUCTION TECHNOLOGY

Housing research

SEC. 101. (a) It is the sense of the Congress that technological advance and increased efficiency in programing construction represent the best opportunities for improving the quality of residential construction or decreasing unit costs. In order that these opportunities may be fully exploited, the Housing and Home Finance Administrator is authorized and directed to undertake and carry out a research and study program (1) to identify problems in the residential building industry which are preventing improvements in the quality of construction or decreases in costs, and (2) to undertake research for the solution of such problems, including research in residential design and construction methods, the effects of land use and development on housing costs, overall and special housing needs and market demands, and financing.

(b) In performing the functions vested in him by this section, the Administrator may—

(1) carry out research and studies within the Housing and Home Finance Agency;

(2) enter into contracts with any Federal, State or local public agency or instrumentality, or educational institution, or other agency or organization, and for such purpose exercise any of the powers vested in him by section 502(c) of the Housing Act of 1948; and

(3) encourage research and studies which are not instituted by the Federal Government but which hold promise of results furthering the purposes of this section, and, when requested, provide technical advice and guidance in the conduct thereof.

(c) The Administrator may disseminate, without regard to section 306 of the Act of June 25, 1948, as amended (39 U.S.C. 321n), the results of the research and studies conducted under this section in such forms as may be most useful to industry and to the general public.

(d) The third sentence of section 301(a) of the Housing Act of 1948, as amended, shall apply to contracts and appropriations pursuant to this section.

(e) Nothing in this section shall limit any authority of the Administrator under title III of the Housing Act of 1948, as amended, or any other provision of law.

(f) There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this section.

Encouragement of improved design and technology in housing construction

SEC. 102. (a) The Congress hereby declares that the provisions of the National Housing Act should be administered to encourage the utilization of advanced design and technology in the construction of residential structures. In accordance with this policy, the Commissioner shall, in the processing of applications for mortgage insurance, give careful and sympathetic consideration to applications for the insurance of mortgages which are secured by residential properties designed and constructed in accordance with advanced techniques.

(b) Section 223 of the National Housing Act is amended by adding at the end thereof the following new subsection:

"(c) Notwithstanding any other provision of this title and in furtherance of the policy stated in section 103(a) of the Housing Act of 1960, the Commissioner shall also have authority to insure or make commitments to insure under this title, except under section 203, any mortgage without regard to any requirement that the property with respect to which a mortgage is executed must be economically sound and other limitations upon eligibility, if the Commissioner determines that the property is an acceptable risk, giving consideration to the need for testing advanced housing technology, and if the property involves the utilization and testing of such advanced technology in housing design, materials, or construction as will provide data which the Commissioner deems to be significant in improving housing standards, quality, livability or durability, or reducing housing costs. A mortgage insured pursuant to the provisions of this subsection shall not exceed 95 per centum of the Commissioner's estimate of the cost of replacing the property using comparable conventional design, materials, and construction. The aggregate amount of principal obligations of all mortgages insured in any one calendar year pursuant to the authority conferred by this subsection shall not exceed $300,000. The Commissioner shall give preference and priority to applications for insurance under the authority conferred by this subsection which he determines will result in the greatest accomplishment of its purposes. The Commissioner may enter into such contracts, agreements, and financial undertakings with the mortgagor and others as he deems necessary or desirable to carry out the purposes of this subsection, and may expend available funds for such purposes, including the correction, when he determines it necessary, at any time subsequent to insurance of the mortgage and occupancy of the housing, of major defects or failures, as defined by the Commissioner, in a dwelling covered by a mortgage insured pursuant to this subsection. The Commissioner may also make such investigations and analyses of data, and publish and distribute such reports as he determines to be necessary or desirable to assure the most beneficial use of the data and information to be acquired as a result of this subsection."

TITLE II—FHA INSURANCE PROGRAMS

Property improvement loans

SEC. 201. Section 2(a) of the National Housing Act is amended by—

(1) striking out "1960" and inserting in lieu thereof "1961"; and

(2) striking out the last sentence of the first paragraph thereof.

FHA insurance premiums

SEC. 202. The first sentence of section 203(c) of the National Housing Act is amended to read as follows: "The Commissioner is authorized to fix premium charges for the insurance of mortgages under the separate sections of this title but in the case of any mortgage such charge shall be not less than an amount equivalent to one-fourth of 1 per centum per annum nor more than an amount equivalent to 1 per centum per annum of the amount of the principal obligation of the mortgage outstanding at any time, without taking into account delinquent payments or prepayments: *Provided,* That any reduced premium charge so fixed and computed may, in the discretion of the Commissioner, also be made applicable in such manner as the Commissioner shall prescribe to each insured mortgage outstanding at the time the reduced premium charge is fixed: *Provided further,* That in the case of any mortgage described in section 203(b)(2)(B) and accepted for insurance prior to July 1, 1939, the premium charge shall be one-fourth of 1 per centum per annum on such outstanding principal obligation."

Cooperative housing insurance

SEC. 203. Section 213 of the National Housing Act is amended—

(1) by inserting in paragraph (2) of subsection (b) after the words "as may be attributable to dwelling use" the following: "(excluding exterior land improvements as defined by the Commissioner)";

(2) by inserting the following new sentence at the end of subsection (f): "The Commissioner shall appoint an Assistant Commissioner for Cooperative Housing (in lieu of the Special Assistant for Cooperative Housing) with such staff and authority as are necessary to administer the provisions of this section and effectuate its purposes."; and

(3) by striking out, in subsection (h), the words "such mortgagor shall not thereafter be eligible by reason of such paragraph (3) for insurance of any additional mortgage loan pursuant to this section" and inserting in lieu thereof the following: "the Commissioner is authorized to refuse, for such period of time as he shall deem appropriate under the circumstances, to insure under this section any additional investor-sponsor type mortgage loans made to such mortgagor or to any other investor-sponsor mortgagor where, in the determination of the Commissioner, any of its stockholders were identified with such mortgagor".

General mortgage insurance authorization

SEC. 204. Section 217 of the National Housing Act is amended by striking out "$15,000,000,000" and inserting in lieu thereof "$19,000,000,000."

Rehabilitation and neighborhood conservation housing insurance

SEC. 205. Section 220 of the National Housing Act is amended—

(1) by inserting after "rehabilitation" in subsection (a) the following: ", conservation, and prevention of deterioration"; and

(2) by striking out ": *Provided,* That" in subsection (d)(1)(A) and inserting in lieu thereof the following: ", or (iv) a neighborhood in a community respecting which the Housing and Home Finance Administrator has made the certification to the Commissioner provided for by section 101(c) of the Housing Act of 1949, as amended, and in which neighborhood the community is carrying out a code enforcement program in accordance with a workable program presented to the Housing and Home Finance Administrator and on the basis of which the Administrator had made the certification provided for under such section 101(c): *Provided,* That, in the case of a community coming within the purview of clause (iv) of this subparagraph, the Housing and Home Finance Administrator shall have determined that the assistance provided for under this section is needed in order for the community to carry out effectively its program for the

conservation of neighborhoods and the prevention of deterioration of residential properties: *Provided further,* That".

Condominium housing insurance

SEC. 206. Title II of the National Housing Act is amended by adding at the end thereof a new section as follows:

"SEC. 233. (a) PURPOSE.—The purpose of this section is to provide an additional means of increasing the supply of privately owned housing units where individual ownership of a one-family unit which is part of a multifamily structure is authorized under the laws of the State in which the property is located.

"(b) DEFINITIONS.—The terms 'mortgage', 'mortgagee', 'mortgagor', 'maturity date', and 'State' shall have the meanings respectively set forth in section 201, except that the term 'mortgage' for the purposes of this section may include a first mortgage given to secure the unpaid purchase price of a one-family unit in a multifamily structure where the mortgage is determined by the Commissioner to be eligible for insurance under this section. The term 'common areas and facilities' as used in this section shall be deemed to include such community facilities as are approved by the Commissioner.

"(c) GENERAL.—The Commissioner is authorized, upon application by the mortgagee, to insure as hereinafter provided any mortgage offered to him which is eligible for insurance as hereinafter provided, and, upon such terms as the Commissioner may prescribe, to make a commitment for the insuring of any such mortgage prior to the date of execution or disbursement thereon.

"(d) ELIGIBILITY CONDITIONS.—To be eligible for insurance under this section—

"(1) a mortgage shall involve a principal obligation in an amount not to exceed, for such part of the property as may be attributable to dwelling use $2,500 per room (or $9,000 per family unit if the number of rooms is less than four): *Provided,* That as to a family unit which is located in an elevator-type structure the Commissioner may, in his discretion, increase the dollar amount limitation of $2,500 per room to not to exceed $3,000 per room and the dollar amount limitation of $9,000 per family unit to not to exceed $9,400 per family unit, as the case may be, to compensate for the higher costs incident to the construction of elevator-type structures of sound standards of construction and design: *Provided further,* That the Commissioner may, by regulation, increase any of the foregoing dollar amount limitations by not to exceed $1,250 per room without regard to the number of rooms being less than four, or four or more, in any geographical area where he finds the cost levels so require;

"(2) a mortgage shall not exceed an amount equal to the sum of (i) 97 per centum (but in any case where the application for insurance is with respect to a mortgage covering a family unit in an existing structure, as provided in subsection (e) of this section, 90 per centum) of $13,500 of the amount which the Commissioner estimates will be the appraised value of the family unit including common areas and facilities as of the date the mortgage is accepted for insurance, (ii) 90 per centum of such value in excess of $13,500 but not in excess of $18,000, and (iii) 70 per centum of such value in excess of $18,000;

"(3) a mortgage shall have, in the case of a mortgagor who is not the occupant of the unit, a principal obligation not in excess of an amount equal to 85 per centum of the amount computed under the provisions of clause (2) of this subsection: *Provided,* That such 85 per centum limitation shall not be applicable if the mortgagor and mortgagee assume responsibility in a manner satisfactory to the Commissioner for the reduction of the mortgage by an amount not less than 15 per centum of the outstanding principal amount thereof in the event the unit is not, prior to the due date of the eighteenth amortization payment of the mortgage, sold to a purchaser acceptable to the Commissioner who is the occupant of the property and who assumes and agrees to pay the mortgage indebtedness;

"(4) the owner of a family unit covered by a mortgage insured under this section shall have exclusive right to his unit and, together with the owners of other units in the multifamily structure, shall have the right to common areas and facilities which serve the multifamily structure and the obligation of maintaining all such common areas and facilities: *Provided,* That the Commissioner may in his discretion require that such rights and obligations shall be subject to such controls as he deems adequate;

"(5) property covered by a mortgage insured under this section shall be found by the Commissioner to be economically sound and shall include the rights of the owner of the unit to such necessary common areas and facilities as the Commissioner deems adequate to serve the multifamily structure;

"(6) any mortgage insured under this section shall provide for complete amortization by periodic payments, and for the application of the mortgagor's periodic payments (exclusive of the amount allocated to interest and to the premium charge which is required for mortgage insurance as hereinafter provided) to amortization of the principal of the mortgage, within such terms as the Commissioner may prescribe but not to exceed thirty years from the date of the insurance of the mortgage or three-quarters of the Commissioner's estimate of the remaining economic life of the multifamily structure, whichever is the lesser, and shall bear interest (exclusive of premium charges for insurance and service charges) at not to exceed 5 per centum per annum on the amount of the principal obligation outstanding at any time, or not to exceed such per centum per annum not in excess of 6 per centum as the Commissioner finds necessary to meet the mortgage market;

"(7) the mortgage shall contain such terms and provisions with respect to insurance, repairs, alterations, maintenance of common areas and facilities, payment of taxes, default reserves, delinquency charges, foreclosure proceedings, anticipation of maturity, additional and secondary liens, and other matters as the Commissioner may in his discretion prescribe; and

"(8) the mortgage shall be executed by a mortgagor who shall have paid in cash or its equivalent at least 3 per centum, or such larger amount as the Commissioner may determine, of the Commissioner's estimate of acquisition cost or its equivalent of the unit.

"(e) MORTGAGES ON EXISTING UNITS.—Nothing in this Act shall be construed to prevent the insurance of a mortgage executed by a mortgagor covering a family unit and common areas and facilities constructed prior to the filing of the application for mortgage insurance hereunder, if the unit has previously been covered by a mortgage insured under this section or is in a multifamily structure where other units have been covered by a mortgage insured under this section, and the Commissioner determines that the mortgagor's interest and rights under this section are established and protected.

"(f) APPLICABILITY OF OTHER SECTIONS OF THIS TITLE.—(1) The provisions of subsections (a), (b), (e), (g), (h), (j), and (k) of section 204, and the provisions of subsections (d), (f), (i), (j), (l), (m), (o), and (p) of section 207 shall be applicable to mortgages insured under this section.

"(2) If the net amount realized from any property conveyed to the Commissioner under this section and the claims assigned therewith, after deducting all expenses incurred by the Commissioner in handling, dealing with, and disposing of such property and in collecting such claims, exceeds the face value of the debentures issued and the cash paid in exchange for such property plus all interest paid on such debentures, such excess shall be divided as follows:

"(i) if such excess is greater than the total amount payable under the certificate of claim issued in connection with such property, the Commissioner shall pay to the holder of such certificate the full amount so payable, and any excess remaining thereafter shall be retained by the Commissioner and credited to he Housing Insurance Fund; and

"(ii) if such excess is equal to or less than the total amount payable under such certificate of claim, the Commissioner shall pay to the holder of such certificate the full amount of such excess."

TITLE III—HOUSING FOR THE ELDERLY

Direct loan authorization

SEC. 301. Section 202(a)(4) of the Housing Act of 1959, is amended by striking out "$50,000,000" and inserting in lieu thereof "$75,000,000".

Health, social, and recreational facilities

SEC. 302. (a) Section 231(c)(7) of the National Housing Act is amended by inserting before the period a colon and the following: "*Provided,* That such special facilities as the Commissioner determines are necessary to provide adequately for the health, social, and recreational needs of elderly persons in any such property or project shall be included therein".

(b) Section 202(c) of the Housing Act of 1959 is amended by adding at the end thereof a new paragraph as follows:

"(4) No housing shall be constructed with a loan under this section unless such related facilities are provided in connection with such housing as the Administrator determines are neecssary to serve the health, social, and recreational needs of the occupants."

(c) Section 10(m) of the United States Housing Act of 1937 is amended by inserting after the first sentence a new sentence as follows: "Any such housing shall include such facilities as the Authority determines are necessary to provide adequately for the health, social, and recreational needs of such families."

TITLE IV—URBAN RENEWAL

Capital grant authorization

SEC. 401. Section 103(b) of the Housing Act of 1949 is amended by striking out "$300,000,000" and inserting in lieu thereof "$650,000,000".

State limitation

SEC. 402. Section 106(e) of the Housing Act of 1949 is amended by striking out "$100,000,000" and inserting in lieu thereof "$150,000,000".

Relocation payments

SEC. 403. Section 106(f) of the Housing Act of 1949 is amended—

(1) by striking out the matter following the semicolon in paragraph (1) and inserting in lieu thereof the following: "and such contract shall provide that the capital grant otherwise payable under this title shall be increased by an amount equal to such relocation payments and, except as otherwise hereinafter provided, that no part of the amount of any relocation payments shall be required to be contributed as part of the local grant-in-aid."; and

(2) by striking out the period at the end of the next to the last sentence in paragraph (2) and inserting in lieu thereof the following: ": *Provided,* That such amounts may be increased whenever the Administrator determines it to be necessary to compensate any individual, family, or business concern for reasonable and necessary moving expenses

and actual losses of property, but any sums paid hereunder in excess of the $200 and $3,000 maximums hereinabove specified shall be included in gross project cost."

Low-rent housing in urban renewal areas

SEC. 404. Section 107 of the Housing Act of 1949 is amended—

(1) by striking out "to be acquired" and inserting in lieu thereof "acquired or to be acquired"; and

(2) by striking out in the proviso "is incorporated" and inserting in lieu thereof "was incorporated on or after September 23, 1959".

Pilot rehabilitation program

SEC. 405. (a) The second sentence of section 110(c) of the Housing Act of 1949 is amended by (i) striking out "and" at the end of paragraph (5), (ii) striking out the period at the end of paragraph (6) and inserting in lieu thereof "; and", and (iii) adding after paragraph (6) a new paragraph as follows:

"(7) acquisition and repair or rehabilitation for guidance purposes, and resale by the local public agency, of dwelling units which are located in the urban renewal area and which, under the urban renewal plan, are to be repaired or rehabilitated: *Provided,* That not more than (i) fifty dwelling units in any urban renewal area, or (ii) 2 per centum of the total number of dwelling units in such area which, under the urban renewal plan, are to be rehabilitated, whichever is the lesser, shall be acquired by the local public agency for such purposes."

(b) The third sentence of section 110(c) of such Act is amended by inserting after "include" the following: "(except as provided in paragraph (7) above)".

Urban renewal areas involving colleges, universities, or hospitals

SEC. 406. Section 112 of the Housing Act of 1949 is amended to read as follows:

"Urban renewal areas involving colleges, universities, or hospitals

"SEC. 112. (a) In any case where an educational institution or a hospital is located in or near an urban renewal project area and the governing body of the locality determines that, in addition to the elimination of slums and blight from such area, the undertaking of an urban renewal project in such area will further promote the public welfare and the proper development of the community (1) by making land in such area available for disposition, for uses in accordance with the urban renewal plan, to such educational institution or hospital for redevelopment in accordance with the use or uses specified in the urban renewal plan, (2) by providing, through the redevelopment of the area in accordance with the urban renewal plan, a cohesive neighborhood environment compatible with the functions and needs of such educational institution or hospital, or (3) by any combination of the foregoing, the Administrator is authorized to extend financial assistance under this title for an urban renewal project in such area without regard to the requirements in section 110 hereof with respect to the predominantly residential character or predominantly residential reuse of urban renewal areas. The aggregate expenditures made by any such institution or hospital (directly or through a private redevelopment corporation) for the acquisition within, adjacent to, or in the immediate vicinity of the project area, of land, buildings, and structures to be redeveloped or rehabilitated by such institution for educational uses or by a hospital for hospital uses, in accordance with the urban renewal plan (or with a development plan proposed by such institution, hospital or corporation, found acceptable by the Administrator after considering the standards specified in section 110(b), and approved under State or local law after public hearing), and for the demolition of such buildings and structures (including expenditures to assist in relocating occupants from buildings or structures to be demolished or rehabilitated), if, pursuant to such urban renewal or development plan, the land is to be cleared and redeveloped, as certified by such institution or hospital to the local public agency and approved by the Administrator, shall be a local grant-in-aid in connection with such urban renewal project: *Provided,* That no such expenditure shall be eligible as a local grant-in-aid in any case where the property involved is acquired by such educational institution or hospital from a local public agency which, in connection with its acquisition or disposition of such property, has received, or contracted to receive, a capital grant pursuant to this title.

"(b) No expenditure made by any educational institution or hospital, as provided in subsection (a), shall be deemed ineligible as a local grant-in-aid in connection with any urban renewal project (1) if made not more than five years prior to the authorization by the Administrator of a contract for a loan or capital grant for such project, or (2) by reason of the fact that new construction or rehabilitation was initiated by such educational institution or hospital or private redevelopment corporation on, or in respect to, any such land, buildings, or structures prior to the approval of the urban renewal plan or the development plan.

"(c) The aggregate expenditures made by any public authority, established by any State, for acquisition, demolition, and relocation in connection with land, buildings, and structures acquired by such public authority and leased to an educational institution for educational uses or to a hospital for hospital uses shall be deemed a local grant-in-aid to the same extent as if such expenditures had been made directly by such educational institution or hospital.

"(d) As used in this section—

"(1) the term 'educational institution' means any educational institution of higher learning, including any public educational institution or any private educational institution, no part of the net earnings of which inure to the benefit of any private shareholder or individual; and

"(2) the term 'hospital' means any hospital licensed by the State in which such hospital is located, including any public hospital or any nonprofit hospital, no part of the net earnings of which inure to the benefit of any private shareholder or individual."

Historical site in urban renewal area

SEC. 407. (a) Notwithstanding section 110(c)(4) of the Housing Act of 1949, as amended, or any other provision of law, the urban renewal project in Knoxville, Tennessee, known as the Riverfront-Willow Street Redevelopment project, may include the donation by the Knoxville Housing Authority to the James White's Fort Association, by a suitable instrument of conveyance, of all right, title, and interest of the Authority in and to the following described tract of land, constituting a portion of tract T–2 of the said project and containing 0.985 acre more or less:

Beginning at an iron pin located at the intersection of the east property line of Collins Alley and the south property line of Rouser Alley; thence in a northerly direction, north 32 degrees 35 minutes west, 111.0 feet to an iron pin located in the east property line of Collins Alley; thence in a westerly direction, south 55 degrees 20 minutes west, 207.0 feet to an iron pin; thence in a southwesterly direction, south 35 degrees 05 minutes west, 80 feet to an iron pin; thence in a southerly direction south 27 degrees 25 minutes east, 193.40 feet to an iron pin located in the north property line of Hill Avenue; thence in an easterly direction, north 67 degrees 43 minutes east, 33.54 feet to an iron pin; thence in an easterly direction, north 60 degrees 02 minutes east, 31.64 feet to an iron pin; thence in an easterly direction, north 58 degrees 30 minutes 30 seconds east, 53 feet to an iron pin located in the north property line of Hill Avenue; thence in a northerly direction, north 30 degrees 22 minutes 30 seconds west, 134.03 feet to an iron pin; thence in an easterly direction, north 59 degrees 21 minutes 30 seconds east, 175.61 feet to the point of beginning.

(b) The conveyance authorized to be included in the Riverfront-Willow Street Redevelopment project under subsection (a) of this section shall be made only if the James White's Fort Association represents, and furnishes such assurances as may be required by the Knoxville Housing Authority, that such association (1) will undertake the reconstruction on the site conveyed of General James White's cabin and fort, and (2) will develop, preserve, and operate such property on a nonprofit basis as a historical site or monument.

TITLE V—MISCELLANEOUS

Federal National Mortgage Association

SEC. 501. (a) Clause (3) of section 302(b) of the National Housing Act is amended to read as follows: "(3) the Association may not purchase any mortgage, except a mortgage insured under section 220 or 803, or under section 213 where the project involved is located in an urban renewal area, or a mortgage covering property located in Alaska, Guam, or Hawaii, if the original principal obligation thereof exceeds or exceeded (i) in the case of multifamily housing projects, for such part of the project as may be attributable to dwelling use, $17,500 per family unit, or (ii) in the case of one-to-four-family residences, $17,500 per family residence: *Provided,* That with respect to mortgages purchased under section 304 the principal obligation shall not exceed $20,000".

(b) Section 305(c) of such Act is amended by striking out "$950,000,000" and inserting in lieu thereof "$1,100,000,000".

(c) Section 305(e) of such Act is amended by striking out "$200,000,000", "$20,000,000", and "$50,000,000" and inserting in lieu thereof "$215,000,000", "$25,000,000", and "$65,000,000", respectively.

Low rent public housing

SEC. 502. (a)(1) Section 10(b) of the United States Housing Act of 1937 is amended by inserting before the period at the end thereof a colon and the following: *"Provided further,* That, notwithstanding the foregoing proviso or any other provision of this Act, the annual contribution payable hereunder to any public housing agency may include, under regulations prescribed by the Authority, an amount equal to the number of elderly families residing in any project administered by such agency, multipled by a sum which shall not exceed $120, whenever the Authority determines that the inclusion of such amount in such annual contribution is necessary to enable such agency to (1) provide decent, safe, and sanitary housing to such elderly families at a rental which they can afford, and (2) operate such project on a fiscally solvent basis".

(2) Upon the request of any public housing agency the Public Housing Administration is authorized and directed to amend any of its contracts with such agency so as to bring such contracts into conformity with the amendment made by this subsection (a), and any regulations prescribed thereunder.

(b) Section 10(i) of such Act is amended by inserting after *"Provided,* That" the following: "the Authority may enter into new contracts for loans and annual contributions after the date of enactment of the Housing Act of 1960 for not more than twenty-five thousand additional dwelling units: *Provided further,* That".

(c) Section 15(8)(d) of such Act is amended by inserting before the period a colon and the following: *"Provided,* That the public housing agency may permit any such family whose income has increased beyond such maximum limits to continue in occupancy if (i) the public housing agency finds, after investigation (made not less often than once each year), that it is impossible for such family to obtain through rental or purchase a decent, safe, and sanitary private dwelling suitable for its use at a cost within its financial means, and (ii) such family pays a rental determined by the agency to be sufficient, without subsidy, to operate and maintain the dwelling unit occupied by such family".

College housing

SEC. 503. (a) Section 401(d) of the Housing Act of 1950 is amended by striking out "$1,175,000,000", "$125,000,000", and "$50,000,000" and inserting in lieu thereof "$1,675,000,000", "$175,000,000", and "$100,000,000", respectively.

(b) Section 403 of such Act is amended by striking out "10" and inserting in lieu thereof "12½".

Public facility loans

SEC. 504. (a) Section 203(a) of the Housing Amendments of 1955 is amended by striking out "$100,000,000" and inserting in lieu thereof "$150,000,000".

(b) Section 203(b) of the Housing Amendments of 1955 is amended by inserting "be" immediately after "may".

VA direct and insured home loans

SEC. 505. (a) Section 1803 of title 38, United States Code, is amended—

(1) by striking out in paragraph (1) of subsection (a) the following: "if made before July 26, 1960 (or, in the case of a veteran described in section 1801(a)(1)(B) of this title, before the expiration of thirteen years after World War II is deemed to have ended with respect to him),"; and

(2) by striking out paragraph (2) of subsection (a) and inserting in lieu thereof the following:

"(2) If a loan report or an application for loan guaranty relating to a loan under this chapter has been received by the Administrator before February 1, 1965, such loan may be guaranteed or insured after such date."

(b) Section 1811(h) of such title is amended by striking out "July 25, 1960" and inserting in lieu thereof "July 25, 1961".

(c) Section 1823(a) of such title is amended—

(i) by striking out "until June 30, 1960" and inserting in lieu thereof "prior to July 26, 1961"; and

(ii) by striking out "July 25, 1960" and inserting in lieu thereof "July 25, 1961".

(d) Section 1823(c) of such title is amended by striking out "June 30, 1961" and inserting in lieu thereof "July 25, 1962".

Farm housing

SEC. 506. (a) The second sentence of section 511 of the Housing Act of 1949 is amended by striking out "June 30, 1961," and inserting "June 30, 1963,".

(b) Section 512 of such Act is amended by striking out "June 30, 1961," and inserting "June 30, 1963,".

(c) Clause (b) of section 513 of such Act is amended by striking out "June 30, 1961," and inserting "June 30, 1963,".

Hospital construction

SEC. 507. (a) Section 605(b) of the Housing Act of 1956 is amended by striking out "1960" and inserting in lieu thereof "1962".

(b) Section 605(c) of such Act is amended to read as follows:

"(c) There is authorized to be appropriated the sum of $7,500,000 for the purposes of this section for each of the fiscal years ending June 30, 1961, and June 30, 1962."

Disposal of project

SEC. 508. Notwithstanding any other provision of law, the Housing and Home Finance Administrator shall, upon request of the Oakdale Residents Cooperative Housing Corporation, consent to such modifications, with respect to purchase price, repayment period, rate of interest, time of payment of any installment on principal or interest, security, or any other term, of any contract, mortgage, or other agreement entered into in connection with the sale of the housing project known as the Oakdale Residents Cooperative Housing Project of Royal Oak Township, Oakland County, Michigan, as he may determine are necessary or desirable in the public interest, and in the fulfillment of the purposes of title VI of the Act of October 14, 1940, as amended (42 U.S.C. 1587).

Mr. JOHNSON of Texas. Mr. President, I move that the Senate reconsider the vote by which the bill was passed.

Mr. SPARKMAN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a statement of the reasons why I voted against the bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SO-CALLED HOUSING ACT OF 1960 (S. 3670)

S. 3670, the so-called Housing Act of 1960, may be called a five and a half billion dollar housing bill, in terms of those authorizations which can be counted. There is neither lid nor limit on some items such as home improvement loan insurance.

The bill would provide new appropriation, debt, and insuring authority as follows:

Appropriations: $406 million (plus unspecified amounts for research).

Debt authority: $975 million.

Insuring authority: $4 billion (plus unlimited home improvement loans).

BRIEF ANALYSIS OF S. 3670

Policy—Title I

Title I language deals with the establishment of a broad overall "national housing goal," together with new emphasis on research and direct Federal activity and participation in the field of advanced housing design and construction technology.

Section 101 (p. 3 of report; p. 1 of bill), national housing goal, would direct the President to submit annual report on the housing program, including: (1) statement as to minimum housing starts which should be made during year; (2) implementation under existing law; and (3) recommendations for new legislation; and if such report is not submitted, the President would be required to give reasons why not.

Section 102 (p. 4 of report; p. 2 of bill), housing research, would declare it to be the sense of Congress that research in residential construction is necessary; direct HHFA to carry out research program into problems and solutions including design, construction methods, costs, special needs, financing, and so forth, through direct research, contracts with public agencies, private organizations, and so forth; provide technical assistance to outside research and dissemination of information. The bill authorizes appropriations for these purposes but gives no estimate of cost.

Section 103 (p. 6 of report; p. 4 of bill), advanced design, would encourage and "sympathize with" use of advanced design and techniques in construction; would provide $300,000 in FHA mortgage insurance for test housing of this type without regard to economic soundness; and would give FHA Commissioner broad powers in carrying out these purposes.

FHA insurance programs—Title II

Section 201 (p. 8 of report; p. 6 of bill) would extend home improvement program 1 year, and remove the present $1,750 million ceiling on loan insurance.

Section 202 (p. 9 of report; p. 7 of bill) would cut premium rate on FHA insurance in half to not less than ¼ of 1 percent, at discretion of Commissioner.

Section 203 (p. 9 of report; p. 8 of bill) would loosen up cooperative housing program, weaken "blacklist," and create new Assistant FHA Commissioner job for co-ops.

Section 204 (p. 10 of report; p. 9 of bill) would increase FHA general mortgage insurance authority by $4 billion to a total of approximately $41.8 billion.

Section 205 (p. 11 of report; p. 9 of bill) would extend rehabilitation housing insurance to projects outside of urban renewal areas.

Section 206 (p. 12 of report; p. 10 of bill) would create new FHA mortgage insurance program for purchase by individuals of single units in multifamily projects (not co-op). This, in effect, would allow project owners to sell off projects by units. The bill calls this "condominium housing insurance."

Housing for the elderly—Title III

Title III (p. 14 of report; p. 16 of bill) would increase appropriation authority for direct housing loans for elderly persons by $25 million to a total of $75 million; and allow inclusion of social, recreational, etc., facilities in direct loan projects and in public housing projects for elderly.

Urban renewal—Title IV

Title IV (p. 16 of report; p. 18 of bill) would increase urban renewal capital grants by $350 million to a total of $2,650 million; liberalize program as to State proportions, relocation payments, use for public housing and institutional purposes, etc.

Miscellaneous—Title V

Section 501 (p. 22 of report; p. 25 of bill) would increase FNMA special assistance debt authority by $150 million to total of $1.1 billion; liberalize special cooperative housing mortgage purchase authority and increase debt authority for this purpose by $25 million to a total of $87.5 million.

Section 502 (p. 23 of report; p. 26 of bill) would increase annual contributions to low-rent public housing projects by $120 per year for each elderly family tenant; and would permit continued occupancy by over income PHA tenants.

Section 503 (p. 25 of report; p. 27 of bill) would increase debt authority for direct loans for college housing by $500 million to $1,675 million.

Section 504 (p. 30 of report; p. 28 of bill) would increase debt authority for direct loans for public facilities by $100 million to a total of $200 million.

Section 505 (p. 33 of report; p. 28 of bill) would extend the veterans direct loan program 1 year and provide an additional $150 million in debt authority.

Section 506 (p. 34 of report; p. 29 of bill) would extend farm housing program 2 years

and authorize $50 million in debt authority for direct loans; authorize appropriation of $4 million for additional grants; extend improvement and repair program 2 years and authorize appropriations of $20 million for this purpose.

Section 507 (p. 37 of report; p. 30 of bill) would revive and extend hospital construction provisions of the Defense Housing and Community Facilities and Services Act of 1951, and authorize additional appropriations of $7.5 million for this purpose.

PUBLIC CREDIT AND MONEY FOR HOUSING

As of June 30, 1959, $105 billion (gross) of public credit and money had been used under Federal housing and related programs since 1933. Figures on the authority used during the current fiscal year 1960 are not yet available. Use of the $5½ billion of new authority provided in the pending bill would be in addition to the total as of June 30, 1960.

A summary of public credit and money (gross) used under Federal housing and related programs, 1933 through June 30, 1959, in tabular form, follows:

Summary of public credit and money (gross) used under Federal housing and related programs, 1933 to June 30, 1959

[In thousands of dollars]

[1] Includes expenditures from appropriated and Agency funds.
[2] Lending authority limited by corporate resources, including authority to expend from public debt receipts (col. 3). Generally, authority is equal to authority to expend from public debt receipts.
[3] Interest.
[4] Cumulative since transfer to Housing and Home Finance Agency; records while under Reconstruction Finance Corporation not available.
[5] Dividends.
[6] Capital.
[7] Represents allocations or reallocations to Public Housing Administration and predecessors on basis of best information available.
[8] Figures excluded; Federal home loan banks now privately owned.
[9] No monetary limitation; loans to prevent default of insured institutions.
[10] Unlimited, except by maximum to which individual loans may be guaranteed.
[11] Amount authorized by Congress for fiscal year 1959. Authority is granted annually.
[12] Not available.
[13] Annual limitation.
[14] Cumulative gross total of loans and grants, mortgages purchased, and loans insured, excludes repayments.

Mr. JOHNSON of Texas. Mr. President, I desire to pay a very special tribute to a man who is deserving of any and all of the nice things which can be said about a colleague. He is the very able junior Senator from Alabama [Mr. SPARKMAN].

I came to Congress shortly after he did, 23 years ago. I have observed his work with great respect and admiration. There is no Member of this body who is more attentive to his duties, more diligent in carrying them out, more faithful to the public trust, or more cooperative with the leadership.

I want him to know that the overwhelming vote which the bill has just received is a just tribute to the manner in which the bill was formulated, hearings were conducted, and the debate held on the floor of the Senate.

I salute him for it, and for the contribution he has made to his country's welfare.

Mr. SPARKMAN. Mr. President, I simply desire to say "Thank you" to the majority leader. The bill, as is true of all bills, is not perfect; but it will do much good over the period of time it is operative.

ADJUSTMENT OF COMPENSATION OF CERTAIN FEDERAL OFFICERS AND EMPLOYEES

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1655, H.R. 9883.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 9883) to adjust the rates of basic compensation of certain officers and employees of the Federal Government, and for other purposes.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that there be a limitation of 1 hour on any amendment and 3 hours on the bill, the time to be equally divided. I have discussed this proposal with the sponsors of the bill and the minority leader, and it is agreeable to them.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The unanimous-consent agreement, subsequently reduced to writing, is as follows:

UNANIMOUS-CONSENT AGREEMENT

Ordered, That during the further consideration of the bill H.R. 9883, an act to adjust the rates of basic compensation of certain officers and employees of the Federal Government, and for other purposes, debate on any amendment, motion, or appeal, except a motion to lay on the table, shall be limited to 1 hour, to be equally divided and controlled by the mover of any such amendment or motion and the majority leader: *Provided,* That in the event the majority leader is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the minority leader or some Senator designated by him: *Provided further,* That no amendment that is not germane to the provisions of the said bill shall be received.

Ordered further, That on the question of the final passage of the said bill debate shall be limited to 3 hours, to be equally divided and controlled, respectively, by the majority and minority leaders: *Provided,* That the said leaders, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, motion, or appeal.

ORDER OF BUSINESS

Mr. JOHNSON of Texas. Mr. President, I should like the Senate to know that tomorrow it is expected that we will take up the public works authorization bill, the Department of Health, Education, and Welfare appropriation bill, and perhaps some other bills, which I shall announce later, after the Senate has concluded action on the pay increase bill.

The PRESIDING OFFICER. What is the pleasure of the Senate?

DISARMAMENT PROPOSALS

Mr. HUMPHREY. Mr. President, on Tuesday, June 14, I placed in the RECORD a comparative analysis of several proposals in the field of disarmament which have been made in recent months by the Soviet Union. This analysis clearly points out that the most recent proposal of June 2 by Premier Khrushchev was substantially different in several respects from previous Soviet proposals.

Mr. William R. Fry, writer for the Christian Science Monitor, and one of the most respected analysts in the field of disarmament and foreign policy, recently discussed the new Soviet disarmament plan in an article of recent date.

This article is supporting evidence to the comparative analysis I placed in the RECORD this week. It merits thoughtful study and careful consideration. There are some bright spots in the Soviet proposal. There are also some blind spots. Without prejudging all aspects of it, we should carefully study the proposal and offer our own suggestions for negotiation or a revised counterproposal on the part of Western nations.

I ask unanimous consent that the article be placed in the body of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW SOVIET DISARMAMENT PLAN ISN'T WITHOUT ITS BRIGHT SPOTS

(By William R. Frye)

The new Soviet disarmament plan is one of those curious diplomatic packages which looks green from the top, blue from the bottom, and candy striped from the sides. It is all things to all men.

If Soviet delegate Valerian Zorin, who attempted to hawk it at the Geneva disarmament conference last week, intends it to be purchased as an indivisible whole, he is wasting his breath. The West has no intention of buying total disarmament.

But if the new plan is a diplomatic grab-bag, a separable package, it is quite a different story. Some of the candy stripes, experts say, could be put to excellent use.

The principal reason why the West rejects total disarmament is that no one has yet devised a solution for the "clandestine-weapon" problem—the possibility, indeed probability, that after a treaty had been signed, the Russians would hide between 50 and 500 nuclear bombs which neither an inspectorate nor a corps of Western spies could ever be sure of finding.

I have just spent 3 days in private with 110 of the United States top experts in the disarmament field. They were brought to-together at Arden House, Harriman, N.Y., by Tom Slick, multimillionaire Texas oilman and philanthropist, to plan a Western "strategy for peace."

The "clandestine-weapon" problem figured importantly in the discussions. One distinguished nuclear scientist thought it could be solved by offering, and persuading Russia to offer, with maximum publicity, rewards of a million dollars for anyone who would give the international control body information on hidden bombs.

Not many went along with this thesis. "If I were determined to save my country from the idiocy of its leaders, and be a hero when the crisis came," a man closely connected with the development of missile technology said, "I would simply get together 20 small groups of conspirators, 10 of them for real and 10 as decoys. No one group would know of the existence of the other, or of my real identity.

"The 20 groups would each steal or secretly manufacture 5 bombs. One by one, the 10 decoy groups would let themselves be caught, so as to give the impression that the game was up. Maybe one or two of the real groups would accidentally get caught.

"But 8 or 9 groups would escape, and we would have at least 40 bombs cached away. You could do plenty with 40 H-bombs if the enemy did not have any."

How to get them delivered on a target? Reconvert civilian planes and space-for-peace equipment. You could even smuggle bombs across borders in suitcases, planting them in key spots and then blackmailing the disarmed victim state.

Several of the conferees—no vote was taken—quickly concluded that for this and other reasons total disarmament was out of the question. A better solution, they felt, would be a negotiated condition of stabilized deterrence with minimum force levels.

Have East and West agree that each would keep, say 500 or 1,000 bombs—enough to do unacceptable damage to the other in retaliation, but not enough to knock out the enemy in a "first strike." Then "harden" the delivery systems, making them as nearly invulnerable to attack as possible.

A would-be aggressor would have to multiply his permissible forces at least 10 times over if he hoped to destroy a "hard" delivery system. Preparations on this scale could be detected by any reasonable efficient inspectorate, and the potential victim, by increasing his retaliatory force, could quickly make it prohibitively expensive for the aggressor to keep on matching it 10 times over.

The man who put this idea into most tangible shape for the conference was Col. Richard Leghorn, president of ITEK Corp. and a frequent Presidential adviser. Together with Dr. Jerome B. Wiesner of Massachusetts Institute of Technology, who was staff director of the Gaither report, Leghorn recently toured Russia, talking with high-ranking and influential scientists and military men. It is a reasonable presumption that the plan for stabilized deterrence is on many key desks in the Kremlin.

Experts, therefore, are tantalized by the fact that for the first time, Russia now has proposed that an arms-reduction process begin by dealing with delivery systems. What Russia wants to do about them—destroy them—is quite different from what the West wants to do; but if this part of the Soviet plan can be separated from the rest, then for the first time both sides are focussing on the same problem area.

Moreover, one essential part of a stabilized deterrent system would be inspection to curb the secret manufacture of new bombs, once most of the old ones had been converted. The new Russian plan proposed a joint East-West study of this together with the clandestine-weapon problem, as the West had urged earlier. Again, if separable, this candy stripe looks tasty.

What the Geneva negotiations amount to, therefore, and will amount to for a considerable time to come, is an effort by the West to find out to what extent, if any, the Russian package can be broken up and negotiated in its parts.

MEDICAL CARE FOR THE AGED

Mr. HUMPHREY. Mr. President, one of the outstanding experts on the development and operation of the social security system is the distinguished dean of the faculty at Princeton University.

Dean Brown was a member of the Emergency Committee for Employment in 1930 and 1931, and he served as an economist in 1934 and 1935 with the committee which developed the social security law. He also was chairman of the Advisory Council on Social Security, set up by the Senate Finance Committee, in 1938 and 1939. It was this committee which developed the principal features of the present social security legislation.

Dean Brown has also served as a member of the Social Security Advisory Councils set up by Congress in 1948–49 and again in 1958–59. Thus, his experience in the field of social security covers 30 years.

With this background, Dean Brown has opposed the needs test in the administration's proposal for financing medical care for elderly citizens.

Dean Brown calls the needs test "a Victorian relic" of paternalism in an atomic age, and urges enactment of medical care coverage through the social security mechanism, in a letter he wrote recently to the editor of the New York Times.

Mr. President, I ask unanimous consent that Dean Brown's letter in the Times of June 12, 1960, be printed at this point in the CONGRESSIONAL RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TO ASSURE CARE FOR AGED—AMENDING SOCIAL SECURITY ACT TO PROVIDE SICK BENEFITS SUPPORTED

To the EDITOR OF THE NEW YORK TIMES:

The unwillingness of the House Committee on Ways and Means to recommend an amendment to the Social Security Act to provide hospitalization coverage for aged beneficiaries is most difficult to understand, especially in the light of the long record of statesmanship which that committee has demonstrated in the development of social insurance legislation in this country. This committee, more than any other, must understand that:

Needs-test medical assistance for the aged will require ever-mounting appropriations, unless counterbalanced by contributory social insurance coverage.

The cost of needs-test medical assistance will create fiscal problems for many States, even if the Federal Government can find ways and means to meet its share of a steadily mounting cost.

There is widespread evidence that the contributors to the old-age insurance system are more willing to pay the costs of hospital benefits for the aged than the general taxpayer is willing to pay higher income taxes.

COOPERATIVE CONTRACT

Contributory social insurance embodies the concept of a continuing cooperative contract between the citizens and the Government, to the mutual advantage of both. Needs-test assistance retains the age-old concept of paternalism.

Paternalism, like colonialism, is a costly and outmoded expression of the desire for superiority over others less fortunate than ourselves. It is an unstable basis for social policy or international relations.

The majority of American citizens appear to want a means of paying their share of the cost, of health protection in old age. They need the help of the Federal Government to provide this means. A tested means is readily at hand. They want a cooperative contract, not paternalism, whether that paternalism is implemented by Government or by private individuals.

Should it be so difficult to combine sound economics with sound political philosophy after a quarter of a century of social insurance in this country and far longer experience throughout the world? Must we pay a mounting cost in dollars and human dignity to find out that paternalism is a Victorian relic in an atomic age?

J. DOUGLAS BROWN.

PRINCETON, N.J., *June 7, 1960.*

TRANSACTION OF ADDITIONAL ROUTINE BUSINESS

By unanimous consent, the following routine business was transacted:

ADDITIONAL BILL INTRODUCED

Mr. PROXMIRE (for himself, Mr. SPARKMAN, Mr. HART, Mr. FULBRIGHT, and Mr. CAPEHART), by unanimous consent, introduced a bill (S. 3689) to amend the Small Business Act, and for other purposes, which was read twice by its title,

and referred to the Committee on Banking and Currency.

(See the remarks of Mr. PROXMIRE when he introduced the above bill, which appear under a separate heading.)

NOTICE OF MOTION TO SUSPEND THE RULE—LEGISLATIVE APPROPRIATION BILL

Mr. WILLIAMS of Delaware (for himself and Mrs. SMITH) submitted the following notice in writing:

In accordance with rule XL of the Standing Rules of the Senate, I hereby give notice in writing that it is my intention to move to suspend paragraph 4 of rule XVI for the purpose of proposing to the bill (H.R. 12232) making appropriations for the legislative branch for the fiscal year ending June 30, 1961, and for other purposes, the following amendment; namely: At the proper place in the bill insert the following:

"SEC. . (a) The second sentence of section 502(b) of the Mutual Security Act of 1954, as amended, is amended to read as follows: "Within the first sixty days that Congress is in session in each calendar year, the chairman of each such committee shall prepare a consolidated report showing the total itemized expenditures during the preceding calendar year of the committee and each subcommittee thereof, and of each member and employee of such committee or subcommittee, and shall forward such consolidated report to the Committee on House Administration of the House of Representatives (if the committee be a committee of the House of Representatives or a joint committee whose funds are disbursed by the Clerk of the House) or to the Committee on Appropriations of the Senate (if the committee be a Senate committee or a joint committee whose funds are disbursed by the Secretary of the Senate).

"(b) Each member of the United States group or delegation to the Interparliamentary Union, the NATO Parliamentarian's Conference, the Canada-United States Interparliamentary Group, the Mexico-United States Interparliamentary Group, or any similar interparliamentary group of which the United States is a member, and each employee of the Senate or House of Representatives, by whom or on whose behalf expenditures are made from funds appropriated for the expenses of such group or delegation, shall file with the chairman of the Committee on Foreign Relations of the Senate in the case of Members or employees of the Senate, or with the Committee on Foreign Affairs of the House of Representatives in the case of Members or employees of the House, an itemized report showing all such expenditures made by or on behalf of each Member or employee together with the purposes of the expenditure, including lodging, meals, transportation, and other purposes. Within sixty days after the beginning of each regular session of Congress, the chairman of the Committee on Foreign Relations and the chairman of the Committee on Foreign Affairs shall prepare consolidated reports showing with respect to each such group or delegation, the total amount expended, the purposes of the expenditures, the amount expended for each such purpose, the names of the Members or employees by or on behalf of whom the expenditures were made and the amount expended by or on behalf of each Member or employee for each such purpose. The consolidated reports prepared by the chairman of the Committee on Foreign Relations of the Senate shall be filed with the Committee on Appropriations of the Senate and the consolidated reports prepared by the chairman of the Committee on Foreign Affairs of the House shall be filed with the Committee on House Administration of the House. Each such consolidated report shall be printed in the Congressional Record within ten days after receipt by the Committee on Appropriations of the Senate or the Committee on House Administration of the House.

"(c) Section 60 of the Revised Statutes (2 U.S.C. 102) is amended by adding at the end thereof a new paragraph as follows:

" 'Reports of the Secretary of the Senate and the Clerk of the House of Representatives under this section shall be printed as Senate and House documents, respectively.' "

Mr. WILLIAMS of Delaware (for himself and Mrs. SMITH) also submitted an amendment, intended to be proposed by them, jointly, to House bill 12232, making appropriations for the legislative branch for the fiscal year ending June 30, 1961, and for other purposes, which was ordered to lie on the table and to be printed.

ADJOURNMENT TO 10:30 A.M. TOMORROW

Mr. JOHNSON of Texas. Mr. President, in accordance with the order previously entered, I move that the Senate adjourn until 10:30 o'clock a.m. tomorrow.

The motion was agreed to; and (at 11 o'clock and 54 minutes p.m.) the Senate adjourned, under the order previously entered, until tomorrow, Friday, June 17, 1960, at 10:30 o'clock a.m.

HOUSE OF REPRESENTATIVES

THURSDAY, JUNE 16, 1960

The House met at 12 o'clock noon.

The Reverend William Coley Roeger, S.T.M., pastor of St. James' Evangelical Lutheran Church, Chalfont, Pa., offered the following prayer:

Almighty God, our Heavenly Father, Who art truly our mighty fortress and a bulwark that never faileth, we give thanks unto Thee for Thy goodness vouchsafed to Thy children in this fair land. We praise Thee for the precious heritage of liberty which is ours, and we beseech Thee that we may be found worthy of Thy trust in us. Give to the leaders of our Nation true love of liberty, a zeal for righteousness, and courage to choose the hard right rather than the easy wrong. Kindle in them a determination to lead our Nation and the world to peace with honor and justice, and in all their deliberations guide them by Thy most Gracious Spirit; through Jesus Christ Thy Son our Lord. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. McGown, one of its clerks, announced that the Senate had passed a joint resolution of the following title, in which concurrence of the House is requested:

S.J. Res. 170. Joint resolution to authorize the participation in an international convention of representative citizens from the North Atlantic Treaty nations to examine how greater political and economic cooperation among their peoples may be promoted, to provide for the appointment of U.S. delegates to such convention, and for other purposes.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 12117) entitled "An act making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes."

The message also announced that the Senate agrees to the amendments of the House to the amendments of the Senate numbered 4 and 6 to the foregoing bill.

COMMITTEE ON RULES

Mr. SMITH of Virginia. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

IMPORT DUTIES ON CERTAIN COARSE WOOL

Mr. MILLS submitted a conference report and statement on the bill (H.R. 9322) to make permanent the existing suspension of duties on certain coarse wool.

TEMPORARY SUSPENSION OF DUTY ON PERSONAL AND HOUSEHOLD EFFECTS BROUGHT INTO UNITED STATES UNDER GOVERNMENT ORDERS

Mr. MILLS submitted a conference report and statement on the bill (H.R. 9881) to extend for 2 years the existing provisions of law relating to the free importation of personal and household effects brought into the United States under Government orders.

SUSPENSION OF IMPORT DUTIES ON CERTAIN SHOE LATHES AND CASEIN

Mr. MILLS submitted a conference report and statement on the bill (H.R. 9862) to continue for 2 years the existing extension of duties on certain lathes used for shoe last roughing or for shoe last finishing.

COMMITTEE ON BANKING AND CURRENCY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the Committee on Banking and Currency may have until midnight Saturday night to file a report on the bill H.R. 12603.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

NATIONAL WOOL MONTH

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the joint resolution (H.J. Res. 696) to provide for the designation of the month of September 1960, as "National Wool Month."

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

The Clerk read the joint resolution, as follows:

Whereas September 1960 marks the two hundredth anniversary of the recognition of wool production and wool manufacture in the United States as an industry; and

Whereas from its humble beginning in the homes and on the farms of the colonists in the early 1600's, the American wool growing and textile industry has become an integral part of our national economy and one of our great industries with millions of citizens directly, or indirectly, dependent upon it, and representing more than $5,000,000,000 a year in the retail value of its products; and

Whereas its nationwide scope is evidenced in that over three thousand of the three thousand and sixty-eight counties in the United States are involved in one or more wool production or textile operations, with wool grown in every State of the Union, including Alaska and Hawaii; and

Whereas this great industry has been and is now facing severe competition from various sources, and is fighting in every way to preserve wool growing and wool manufacturing in the United States, it is most fitting that national recognition and support be given the wool industry: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized and requested to issue a proclamation designating the month of September 1960 as "National Wool Month", and calling upon the people of the United States to observe such month with appropriate activities and ceremonies.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, this year, 1960, we celebrate a landmark in the history of textiles, the 200th anniversary of the American wool textile industry. The story of textiles is the story of mankind. We do not know when wool was first spun and woven into cloth. But long before the time of recorded history, woolen fabrics were made by the Swiss lake dwellers. Garments made of wool fabrics were worn by the Babylonians as early as 4000 B.C. Joseph's "coat of many colors," mentioned in the Bible, was said to be made of wool.

Skipping many, many centuries of world history, we come to more modern times. During the years of lusty growth of the 13 American Colonies, England was the world's leading wool textile manufacturer. And that was the basis for much conflict. The mother country, pursuing a policy of industrialization on the home front, attempted to thwart any development of industry in the Colonies. Strict mercantilism was the rule; the Colonies were looked upon as sources of raw materials for the mother country, markets for goods of English manufacture. This two-way trade served to enrich the coffers of enterprising English industrialists, as well as the entire island economy.

Attempts at colonial manufacture of woolen textiles and other products sowed the seeds of ferment in young America. The manufacture of woolen cloth was literally one of the foundation stones of our American Nation.

As early as 1699, the English Parliament passed an act forbidding exportation of wool and woolen manufactures from any colony in which such goods were produced. Nevertheless, by 1760, the beginnings of woolen textile manufacture, centered in New England, were well under way. It was the attempt by England to stifle independent industry and commerce that led in large measure to sounding the tocsin for liberty.

Then, as now, the woolen industry was a right arm of American fighting forces. It was during the American Revolution that woolen manufacture received its first great impetus for expansion. Cut off from imports, the patriots were hard pressed for warm clothing.

A few years after the successful conclusion of the War for Independence, Arthur Scholfield introduced factory manufacture of woolen yarn at Byfield, Mass. The year was 1794. These endeavors formed the beginning of the industrial revolution in this country.

In 1801 Merino sheep, producers of some of the finest wool in the world, were imported into the United States from Spain and France. This strain helped to improve domestic sheep. By 1810, around 24 woolen mills were operating in New England and nearby States. About this time, the manufacture of wool carpets and rugs began. Since then, the fame of these American products has spread throughout the world.

After 1830, improvements in machinery, the development of transportation, and growth of cities stimulated further growth of wool manufacture.

Then came the Civil War. Once again the clash of arms brought in its wake a tremendous impetus for vast expansion of the industrial machine. Demand for uniforms, overcoats, woolen caps, mittens, and blankets stepped up woolen manufacture to previously unheard of heights.

Following the civil strife of the 1860's came the great push westward. The country was fairly dizzy with railroad building, construction of factories, and new cities. Woolen manufacture kept pace with the times, increasing to such an extent that before 1900 the industry was providing more than 90 percent of domestic requirements.

The horizons of history are dotted with wars. The 20th century has proved no exception, and during both world conflagrations which have occurred within the lifetime of many of us, the wool industry was a necessary adjunct to the war efforts. During World War II, the textile industry as a whole furnished 10,000 different items from uniforms to blankets and helmet liners.

We have seen the woolen textile industry grow to a giant among all American fields of enterprise. In recent years, like all branches of textile manufacture, woolens have been challenged by synthetic fibers.

But wool has met the competition from synthetics perhaps more successfully than most other natural fibers. There is an old maxim, "If you can't beat them, join them." Many wool textile manufacturers have done just that. Formerly utilizing natural fibers exclusively, they are now producing fabrics of mixtures of wool and dacron, wool and nylon, and other combinations. Fabrics of pure wool and wool used in combination with synthetics now have many consumer-desired properties, such as nonshrinkability, permanent pleating, crushproofing, mothproofing, and showerproofing. These are truly wonder materials.

Today the manufacture of woolen goods, including fabrics for clothing, blankets, upholstery, industrial materials, and carpets, is a multi-billion-dollar business. In 1957, the latest year for which data are available, the value of shipments of all woolen fabrics and carpeting amounted to nearly $1.2 billion and in 1958 the payroll of the woolen goods industry totaled almost $375 million.

We must not forget that the economic ramifications of woolen textile manufacture extends far beyond the borders of the industry itself. Large expenditures upon machinery are required. Such investments total hundreds of millions of dollars annually. The woolen textile industry has become a huge customer of the chemical industry, source of synthetic fiber materials. Woolen textile manufacture also requires hundreds of millions of dollars worth of fuel, power, transportation, paper products, electrical supplies, hardware, and packing materials.

Even as wool manufacture was a vital part of the economy during the early days of our Republic, so is it today. All industries today are characterized by constant technological changes. Woolen textile production has always kept pace with new developments. Excellence of manufacture, plus ingenious new materials of wool and wool in combination with other fibers, I know, will insure the continued importance of woolen textiles for the unforeseen future.

It is proper that the contributions of those engaged in the American wool textile industry, past and present, be recognized on the occasion of the 200th anniversary of the establishment in America and in our hemisphere of this important business, which has contributed so much to the building and progress of our country.

FORCED WITHDRAWAL OF INVITATION TO PRESIDENT EISENHOWER TO VISIT JAPAN

Mr. HERLONG. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. HERLONG. Mr. Speaker, the forced withdrawal of the invitation to President Eisenhower to Japan is another victory for the Communists. It points up more clearly than ever the ineptness of the free world in counteracting international Communist agitation. Both in the United States and in the rest of the free world we need to have dedicated, trained people who are knowledgeable and skilled in the art of counteraction to Communist propaganda. We needed them yesterday. If we get them tomorrow it will help. Who can say when it will be too late?

I again call the attention of the House to the fact that the gentleman from Minnesota [Mr. JUDD] and I have introduced a bill calling for the creation of a Freedom Commission which would establish a freedom academy. At this school would be taught the science of counteraction to Communist propaganda about which it has been shown that we know so little. Students would also be instructed in the best ways to sell democracy to the free world in this great battle for the minds of men.

Some people have said that we cannot afford the $2 million that it might take to establish this school. At the same time we are being asked to consider spending $12 million to build a freedom wall in nearby Virginia. I have no objection to our setting up monuments to commemorate great events to remind us of the heritage that is ours, but a wall is a dead thing. Would it not be so much better to spend just one-sixth of that amount to create a living monument in the form of a school which could do something constructive toward the preservation of our way of life?

FORCED WITHDRAWAL OF INVITATION TO PRESIDENT EISENHOWER TO VISIT JAPAN

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, apparently our great President has been stopped from going to Japan at the request of the Japanese Government. I hope at least that certain public officials will not take this as an opportunity to further make excuses and justification for Mr. Khrushchev's insulting, horrible, and vicious attacks on the President of the United States. To do so would certainly be lending added aid and comfort to the Communists. It is a disgrace to the people of this country who use those tactics and a sad commentary on their Americanism. The fact that they are not presenting them as they should constitutes not only an attack on our President but also an attack on the United States. I pray they will cease, and I am sure the Members of the House also pray that they will. This is the belief of the people of my district, who tell me they bitterly resent insults to the President and to the United States. They dearly love their country.

CALL OF THE HOUSE

Mr. DORN of South Carolina. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. McCORMACK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll and the following Members failed to answer to their names:

[Roll No. 135]

Barden	Flynt	McGinley
Blitch	Fountain	Morris, Okla.
Brown, Mo.	Hull	Moulder
Buckley	Jackson	Pfost
Burdick	Jensen	Rogers, Tex.
Carnahan	Kearns	Shelley
Celler	Kilburn	Steed
Durham	Loser	Taylor

The SPEAKER. On this rollcall 408 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

MUTUAL SECURITY AND RELATED AGENCIES APPROPRIATION BILL, 1961

Mr. PASSMAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 12619) making appropriations for mutual security and related agencies for the fiscal year ending June 30, 1961, and for other purposes; and pending that motion, Mr. Speaker, I ask unanimous consent that general debate be limited to not to exceed 4 hours, one-half to be controlled by the gentleman from New York [Mr. TABER] and one-half by myself.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

The SPEAKER. The question is on the motion offered by the gentleman from Louisiana.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 12619, with Mr. MILLS in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. PASSMAN. Mr. Chairman, on page 16 of the minority report we find this language: "This is no time to 'kowtow' to Khrushchev or be soft on communism."

That is a rather serious, and certainly an unfounded, insinuation against the members of the committee of both parties who voted to report this bill to the floor, based upon common sense and justifications, and not from yielding to pressure and propaganda.

I shall ask you this question at the outset: Are you willing to substitute propaganda from many sources and propaganda-inspired wires and letters for the diligent study and work of your committee?

Judging by what has happened recently in our foreign relations, it is even more evident now than previously that money alone will not get the job done.

The bill before you calls for new funds in the amount of $3,384,500,000; unobligated funds to be reappropriated, $52,514,000; and cash receipts anticipated, $56,200,000. This makes a total of new dollar funds in the amount of $3,493,214,000. This is the highest amount recommended for the mutual security program since I became chairman of the Foreign Operations Appropriations Subcommittee 6 years ago.

I heard earlier today over the radio that some of the liberal Republicans and some of the liberal Democrats have joined up to fatten the bill. They could have saved their trouble had they talked first with me or any other member of the committee, because the bill is already fattened. It calls for the highest amount recommended during the past 6 years.

Mr. HOFFMAN of Michigan. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. HOFFMAN of Michigan. Mr. Chairman, how often can one make a point of order that the House is not in order.

The CHAIRMAN. Any time that the House is not in order. Does the gentleman make the point of order that the House is not in order?

Mr. HOFFMAN of Michigan. I do, Mr. Chairman.

The CHAIRMAN. The Committee will be in order.

Mr. PASSMAN. Mr. Chairman, the funds now recommended for fiscal 1961 exceed the amount reported by the committee in 1956 by $854 million. It exceeds the 1957 recommendation by $680,940,000. It exceeds the 1958 report by $968,554,000. It exceeds the 1959 recommendation by $415,121,150, and the 1960 recommendation by $306,714,000.

So great has been our outpouring of dollars to foreign aid recipient countries that they now have dollars in excess of their needs, and they are using these dollars to buy U.S. bonds and securities. In reality, therefore, we are paying these recipient nations interest on the dollars that we have given to them.

I might appropriately state for the RECORD at this point that our gold reserves in the last 7 years have dropped from $23 billion to approximately $19 billion. During that same period foreign dollar holdings have gone up from $11.5 billion to about $19 billion. You know, and I know, that foreign governments have a direct claim on our gold reserves. It requires what amounts to

about $12 billion to support our own monetary system, and that only leaves $7 billion for other purposes. If there should be a run on our gold reserves you could not pay $19 billion with $7 billion. The holders of the gold, in addition to the foreign central governments, would have to transfer their holdings over to the government of their country in order to become eligible for a direct claim, but it could conceivably be done.

May I say also that the record is clear that we are pricing ourselves out of the world market for many items and in all probability this foreign aid program has been a major contributory factor.

I say to this House at this time that we had a trade deficit with Japan last year; we had a net trade deficit with all of Latin America last year. And if you exclude the shipment of surplus agricultural commodities last year we had a trade deficit with Europe.

I can say that we now can have steel delivered dockside at New Orleans, from foreign countries, at lower cost than we can get it from Philadelphia.

May I also remind that too many times we do not go as far as we should into the record. So, I say to you again that our public debt exceeds by $47,744 million the entire public debt of all the other nations of the world.

And I want to say, too, it happens that every year when we handle this foreign aid bill, at just about this time, there is some tense international incident. I recall that one year an unidentified submarine was reported lurking in the waters near New York Harbor. And we had that headline across the Nation. In another year the Chinese Reds were stepping up their bombardment of Quemoy and Matsu. That caused some excitement. Then, in another year the Russian sputnik was in orbit. And that caused a lot of excitement. Another year the U.S. Marines were landing in Lebanon, and again we had a fight on our hands. Another year the Nixons were being spat upon in Latin America. That, too, cost us some extra money.

Of course, in this year, there was the U–2 incident. And, as long as we are Members of this House, and I am sure long thereafter, there will be varying types of incidents. That fact in itself should convince us that money alone will not cure our ills.

There is more interference from more quarters and more pressure concerning this bill than in all of the other money requests that the Congress is asked to consider. With this bill, if the requests of the administration are justified, why do we get such pressures and propaganda as we do?

Why is this program so fouled up and uncontrollable? One part of the answer is a simple one. These are the different directors of the program since I have been chairman of the subcommittee: Mr. Stassen, Mr. Hollister, Mr. Smith—and we were told that 18 men refused the directorship before Mr. Smith finally accepted. Then we came to Mr. Saccio, who was Acting Director, and the Director at this time is Mr. Riddleberger. And he is there because they had to pull in a career man so that he would not quit the job.

I want to say that those people are told much of what to do. And when they find that they actually have little to do with managing the program, they usually resign and the subordinates let the program run wild. So, as a result, everybody's program is nobody's program.

I have been accused of being a party to ruining this program ever since I have been the subcommittee's chairman. That is a harsh indictment against one who has tried to live up to his responsibilities and to help put some sense into the program. This committee is entitled, I believe, to your commendation, not your condemnation.

Mr. Chairman, I want to say this—and I shall document this so that you may take it into account later in the day—that back in 1957, when we were considering the appropriation for the fiscal year 1958, they called a White House conference. I was invited. We had some very fine men there; Mr. Saltonstall, Mr. Knowland, the Speaker of the House of Representatives, and Joe Martin, and others. There were many dignitaries, along with the chairman of this committee.

After considerable deliberation they finally invited me to make a statement. I was shaky; I do not mind acknowledging that, because I knew I was going to tell the President the truth. I said, in effect, "Mr. President, your subordinates have misled you. They have not given you the facts. I can report to you, Mr. President, that just a few hours ago $538,800,000 in military funds were allowed to lapse because they had no justifications and they could not even reserve them." He turned to a secretary and verified that information. Immediately afterward, the meeting broke up, and I have not been back to the White House since. However, I have sought opportunity to discuss the program with the President so I could point out to him, as I did that year, something of the weaknesses and the hidden money which I do not believe the President knows about. Such an opportunity did not materialize. I asked my friend, the gentleman from New York [Mr. TABER] a few days ago to please get an appointment for me with the President. He said he would try. I have not heard about it from Mr. TABER, either.

Now, Mr. Chairman, let us face this matter realistically. It is not our personal money that we are giving away, but it belongs to the people we represent. Working conscientiously to do a good job, I can report to you that even though we have "ruined" the program every year since I became chairman of the subcommittee, we have reduced the President's request in 5 fiscal years by $4,071,003,750, only to have it acknowledged later that our action had helped to improve the program.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. PASSMAN. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. I might say in connection with my friend's statement that he tried to make an appointment that this is the eighth year of the present administration and the Democratic leadership in both branches has never been asked to meet before the fact. Any meeting we have ever had has been just a briefing or an after-the-fact disclosure.

Mr. PASSMAN. I thank the majority leader.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. PASSMAN. I yield to the gentleman from Minnesota.

Mr. JUDD. I happen to have been present a time or two when Mr. Dulles even came up to the House to ask our advice. I recall the Speaker was there on one occasion when he consulted us about the problem we faced, early 1955 when Formosa was being threatened. Mr. Dulles asked what policy we would suggest and what kind of language we would put into a resolution which was being considered as a possible policy statement. We went over a tentative draft sentence by sentence and gave suggestions. There were other times when I happened to be present at bipartisan consultations in the State Department, before policies were decided.

Mr. McCORMACK. If the gentleman will yield further, at any meeting I have ever attended, and as far as I know any Democratic leader has ever attended, we have been told certain things, we have been given a briefing. We have had the opportunity to ask questions, but in a meeting of that kind if you ask two questions you are asking one too many. So that there has never been any meeting I have ever attended and, as far as I know, the Democratic leadership, where we were asked to try to have a meeting of the minds and a frank discussion as to where we could get together on legislation, not only this but any legislation. It was just the difference between being there before the fact and being simply briefed.

Mr. PASSMAN. I thank the majority leader. I am not an orator, nor an attorney, but I am a conscientious Member of this House trying to do a creditable job for the American taxpayer. I am going to present our case based upon the testimony and the justifications. I will document our case accurately; and I say without fear of successful contradiction, you are not going to be able to tear my figures down—try as hard as you may.

Mr. Chairman, every year, as you are aware, this charge has been made—that the cut in the funds would destroy the program. But let us see what has really happened.

From page 189 of the hearings for the fiscal year 1958 appropriation, you find this question:

Mr. PASSMAN. Will you agree with me that we actually appropriated too much money for these agencies last year?

This is the answer by Director Hollister:

Mr. HOLLISTER. More than they were able to obligate.

From page 13 of the hearings on the fiscal year 1959 appropriation, there is the following question:

Mr. PASSMAN. Are all phases of the mutual security program financed and are commitments being met to a reasonable measure at this time?

The following is the answer by Secretary Dillon:

Mr. DILLON. They are sufficiently financed. Yes, Mr. Chairman.

In this colloquy, from page 251 and page 252 of the hearings for fiscal year 1959 appropriations, there is the following:

Mr. PASSMAN. Mr. Secretary, there has been a tremendous amount of publicity given to the foreign aid programs indicating that great damage has been done to this program in the past. However, would the evidence not indicate our commitments are being lived up to in a reasonable manner?

This was the answer by Secretary Sprague:

I feel that your statement is substantially correct. The reductions that Congress has effectuated in this program have assisted the executive branch in administering the program in a more efficient manner. There is no question about that.

May I say this, with reference to all the howling in the past about the committee ruining this program, that in addition to all the money that was obligated, and in this program with the military, if they cannot obligate they reserve—and after all the trouble they go to trying to obligate and trying to reserve, the actual figures for each fiscal year—1956, 1957, 1958, 1959, and 1960, the total amount of unobligated funds that would have lapsed if we had not reappropriated the money amounts to $818,653,000.

Do you not think we are entitled to your commendation, rather than your condemnation, for doing a creditable job for the Nation? From our hearings on the 1961 bill, I quote the following colloquy, from page 507:

Mr. PASSMAN. If we had given you the money you asked for, you would have used it in this program. You would have bought something whether you needed it or not, and it would have been, today, in excess.

General NORSTAD. If you had given us, every year, everything we had asked for, the total at the present time would indicate some overages that now make; that is correct.

Mr. Chairman, this is the sixth year that it has been my privilege to present for your consideration the mutual security appropriation bill. The bill before you calls for $300 million more than the bill presented last year for the military assistance program.

This year, the justifications are weaker, but the pressure is stronger. It is customary in almost every field of endeavor to talk most on the weaker points. Big guns will be fired today. But, in the end, if you will base your decision on the facts, rather than fancy, you will support the committee.

May I say now, as I have said in the past, without mental reservation and without fear of successful contradiction, and supported by the testimony of others, that a major trouble with the program is, indeed, too much money, and not too little. If you want to get the true picture of this situation, I invite you to read the GAO reports.

Mr. Chairman, I wish I had the strength of Samson, and of Johansson and Patterson—and it would require that kind of strength to combat many of those who have a downright selfish and personally profitable interest in the program, such as the 44,000 employees of the mutual security program, high-ranking military personnel, the prestige of the White House and the State Department, the many colleges and universities in 30 States and the District of Columbia which have contracts under this program, and numerous others.

I repeat, we have been on the receiving end of pressure from all phases of the program, the prestige of the White House and the State Department, the many colleges and universities in 30 States and the District of Columbia who have contracts under this program, and the others. Administration leaders at the top echelon are too busy and without sufficient time to hear the other side of the story. Their recommendations and beliefs are based practically entirely upon the presentation of only one side of the story.

However, for 6 years you have supported the committee's recommendations, and without exception have found that you had acted wisely, and that we had not misled you or misrepresented facts. Support the committee again and you will be on even firmer ground than you have ever been.

I have endeavored to face up to the tremendous responsibility assigned to me and have conducted during the past 10 months, studies, listened to briefings, and held hearings and made inspections in many nations of the world. More than 10,000 pages of transcript were taken in our hearings this year, and later condensed into more than 3,000 printed pages of hearings. I might add that the committee conducted closed-door hearings in the Republic of China, Denmark, the Netherlands, France, Norway, and Belgium, the latter two moving their witnesses to designated spots in order to accommodate the committee.

The hearings are most voluminous and more self-condemning than ever before—voluminous notwithstanding the fact that possibly 25,000 words have been deleted and not for security reasons alone, but to save downright embarrassment to many of those connected with the program. You may go to the committee room and read for yourselves what they deleted. Believe it or not, they even took out quotations from newspaper clippings.

So, I say that this program has developed into a monstrosity. It is indeed a mild characterization, considering the diversity, the broadness, and complexity of the program. The hearings will indicate that some of the witnesses implied that the program has become so complicated that they themselves do not understand it.

Past, present, and planned, we are in 77 nations of the world with this program, and in 60 of these nations they have received or soon will receive military assistance.

The total amount spent on all phases of foreign aid since the end of World War II through June 30, 1960, stands at $103,209 million.

The grants, gross credits, investments in international institutions and other assistance amount to $87,840,168,000.

The total cost of all phases of foreign aid to the American taxpayer is now averaging $10,841 million annually. This includes 4-percent interest only on the $87 billion of money we have borrowed to give away. The total cost, therefore, of all foreign aid to the American taxpayers is now approximately $30 million daily.

Mr. Chairman, it might be well to establish, and later it may well be established, that I am one of the best friends the foreign aid program ever had, because if its weaknesses, abuses, extravagances, and mismanagement are not checked and brought under control the entire program might eventually fall of its own weight, by the demands of the indignant American taxpayers.

The greatest abusers and manipulators in the program are the military. They cannot stand to be questioned or pinned down. They are infuriated when their lack of knowledge of the program is pointed out. They expect those stars to blind you, Mr. Chairman, and when you press your point in all but a few instances, they stare at you with what appears to be contempt. Clever as they may be, there are a lot of unanswered questions.

Apparently they want us to appropriate on fiction, and not on facts.

It would appear that when they need a dozen screwdrivers they buy a gross. There is abundant information concerning these conditions. Much of it is running in the Washington newspapers at this time, pointing up the waste and inefficiency of the military procurement system. They have used the mutual security military assistance program in many instances to unload billions of dollars on the program, representing their own overpurchases.

Mr. Chairman, the total amount of military assistance since the inception of the program stands at $25,252 million to all of the nations receiving equipment and services in the military category, a total of 60.

The belief that once the requirements had been filled the program would decrease prompted me to request a letter and a report and to make some on-the-spot inspections and studies.

On June 27, 1958, warehouses throughout the world bulged with military equipment the countries did not need.

Here is what a high official in the Defense Department said to me in a letter, the letter which I hold in my hand:

DEAR MR. CHAIRMAN: You may recall that I reported to you I had requested the military assistance advisory groups in the Near East to assist me in arriving at a percentage of equipment delivered since the beginning of the military assistance program that is currently available and serviceable for combat.

I now have the information from the military assistance advisory groups and have arrived at an estimate of 92 percent. This figure was derived as the weighted average on information I had in Iran, Greece, Turkey, and Pakistan.

Then they give the estimates as developed from separate data on ships,

aircraft, tanks, and combat vessels, motor transport vehicles, weapons, electronics and other equipment, and that information is available for any person's inspection.

I decided to follow this up with on-the-spot studies and hearings. The transcript of those hearings is here on the table. The information is classified, but any Member is privileged to come here and check my figures.

We found out that in Denmark 95 percent of the equipment we had given them was on hand and ready for use if needed; Norway, 87 percent; The Netherlands, 90 percent; Belgium, 90 percent, and China, 82 percent. The Comptroller General's report certainly points up these facts.

If there is any question in your mind about the accuracy of what I am detailing to you, please check the record:

Military assistance program, United States gave 421 jet planes to a Far Eastern country, the air force of which boasted only 186 qualified jet pilots.

The military shipped 255 tanks to a country that had an active tank force of only 30 men. This figures at over 8 tanks per man in the tank corps.

The Defense Department shipped to Germany more F–84 jet planes than there were pilots in that country. When caught, they had a vague excuse. They explained that storage charges are less in Germany than in the United States.

They shipped to another country 391 planes at a total cost of $70 million, and by the fall of that year 45 of the planes had been placed in permanent storage and 160 in temporary storage.

They delivered to Ethiopia three Army surgical hospitals. At the time of the program there was only one native doctor in the Ethiopian Army.

Examples of similar types are practically innumerable.

The Comptroller General warned the Congress that as a result of such excessive arms shipments many countries are building up a military force which the United States may be unable or unwilling to support indefinitely.

Commenting on the GAO criticism, Secretary Dillon stated, and I read you his remarks:

> The Comptroller General said also that certain of these deliveries are in amounts that the countries concerned will be unable to support themselves. That is certainly true, and in the case of these Far Eastern countries, we recognize that.

The Comptroller General's current criticism is based on a series of 10 GAO reports, all of them classified for security reasons, or so they say; the military, that is. The military program in these countries you will find in these reports here on the committee table. The Comptroller General's criticism appears to back up the charges that the Defense Department is using the highly secret military aid program to get rid of surplus military equipment.

Here is an article from the Wall Street Journal, dated November 2, 1959, and I quote:

> Treasury-State Department battle looms over foreign aid outlay in new budget. The State Department, which oversees joint economic and military aid, is pressing for a larger request, officials disclose, on the ground that Congressional paring may reduce the lowered request to dangerous levels.

In discussing this matter, the gentleman from New York [Mr. TABER] summed it up better than I can when he said, and I quote:

> Mr. TABER. I have been around here for a long time and I have never known of a time when there was not an asking price. You have to expect that and not get too much disturbed by the fact that there is an asking price.

I know Mr. TABER and I still agree, and that is why I understand the difficult position in which our distinguished senior colleague is placed today.

But, Mr. Chairman, I was so alarmed over this asking price, and Mr. TABER'S support that there is an asking price, that I suspended our subcommittee hearings and, accompanied by the gentleman from Arizona [Mr. RHODES] and committee staff members, from one Friday night to the following Friday night we examined the military assistance programs covering five countries. The conditions there in the military assistance programs ran true to form.

In countries A, B, C, and D we found military equipment on hand in excess of requirements and available for redistribution in the amount of $214,543,000, and country E had $100 million in excess. The total cost of excess military equipment in those five nations alone was more than $314 million.

On page 4 of the Comptroller General's report dated May 16, 1960, he said this:

> For example, in one country the MAAG was aware that consideration was being given to deactivation of certain country forces as early as 1957. However, MAP supported force goals in that country were not adjusted until January 1959 at which time the program was substantially advanced and over 90 percent of the conventional equipment programed had been delivered. In this country quantities of equipment, estimated to exceed $100 million, are now excess to the needs of the forces currently approved or contemplated for MAP support.
>
> Although certain of the excesses resulted from deliveries made before there was knowledge of the country's plans for reducing its forces, substantial quantities of unneeded equipment were programed and delivered after the country's plans for deactivation became known.

They kept rolling it in.

Overcharges to the military assistance program run into the hundreds of millions of dollars, even though the Defense Department will make no admissions of this fact. This is a "husband-and-wife" deal. The same people who overbuy have the right, at the same desk, to move it out and charge it to the military assistance program.

They told me, the first year that I served as chairman of the subcommittee, "Oh, what a charge you are making, that we have overcharged the military assistance program."

And while we were in conference, there was a check of $302 million that got so hot the Air Force could not handle it. It was so hot that the military assistance program could not catch it. But, in conference I said that the $302 million check must be explained. Then, they admitted the truth.

I think it possible that the Defense Department owes hundreds of millions of dollars in overcharges to the military assistance program.

Mr. Chairman, the defense support program, too, runs true to form. I think I should indicate that "defense support program" is a misnomer. It is, in fact, outright economic aid.

I respectfully urge you to turn to page 2206 of the hearings, where you will find several pages of projects. You may not agree with me, but I think the Chair might have to call you down when you possibly start laughing over some of the projects which they have set up under defense support. Let me give you just a couple of examples of how this program operates. I am referring now to page 2239 of the hearings:

> Mr. GARY. Page 89 indicates you are proposing to set aside up to ——— as a cushion for China's needs for foreign exchange.

The dollar amount is blank, but it runs into millions and millions. And what do they say about that? That it is as a cushion for that country's need for foreign exchange.

Then, referring further to the record:

> Mr. PASSMAN. We have to do this to indicate to them our earnestness? You made that statement, I believe.
>
> Mr. ROSEMAN. If I did, sir, I misspoke.
>
> Mr. PASSMAN. As a token of our earnestness.
>
> Mr. ROSEMAN. Yes.

So, they are setting aside so many millions of dollars—I cannot tell you how much—as a cushion in connection with this country, should they later need it.

Let us take another item under this untouchable and sacred defense support—economic aid in Vietnam. They started a highway system. They said it was going to cost $18,300,000. At a subsequent date they decided to enlarge upon this program, and they amended it by several million dollars more. So my friend, the gentleman from Georgia [Mr. PILCHER], and the gentlewoman from Illinois [Mrs. CHURCH], and others of a special study mission, wrote a report, one of the finest I have ever read, and I have never heard one word to discredit it. The agency gentleman came back and said that this highway was now costing $85 million, but the study mission said it would probably cost $100 million.

I talked to Mr. PILCHER and to the others and decided to do a little investigating, too. We started to interrogate the witness about this matter and he told us that it could not cost $100 million. We recessed the subcommittee, and we got our pencil and paper together and started to put the figures down. When we went back to the hearings he admitted that, with the local currencies involved, it was already up to $129,900,000, for that one highway project. Now, that is the record.

Consider the Johns Hopkins contract, just briefly. Do you realize that we are paying $800 a month for tuition, $4,000 each of tuition, for a class of 20, for about 5-month terms? We find that

some of the ICA people are instructing other ICA people. But we are paying $80,000 for each 5-month course, which is about the highest tuition cost that has ever come to my attention.

As to the new projects, I think there are few Members of this House who realize what we are up against except possibly those on the Foreign Affairs Committee. It is a great committee, and we are not interfering with their prerogatives. We are writing limitations in the bill because these people said, "We do not even read your report." So we wrote some limitations into the bill, to specifically deny the projects. They did not, before, pay any more attention to us than the man in the moon.

These people go out and they throw this money in behind an obligation. Then they come in for new funds. After we give them new funds, we go home, trying to get reelected, and they start deobligating. With the deobligated funds they can start just as many new projects as they want, without justifying them to any committee of Congress. When they come in to us with a continuing category of projects we do not know whether they are old or new ones. If you take the estimated cost and then project the cost to completion, it is evident that these projects can go into hundreds of millions of dollars.

You wonder why the colleges and universities have such a terrific interest in this proposition? We have in force at this time 676 contracts with 56 different colleges, universities, nonprofit institutions, and so forth. The cost is $347,636,700.

Now, a few words about the Development Loan Fund, if I may. You know, and I know, that this is not in fact, a loan. Calling it a loan is a misnomer. Most of us agree on that. This so-called loan is repaid in local currency. We cannot spend that currency in the country until the country agrees for us to spend it. You cannot bring anything out of that country, you cannot spend it in any other country. It is to the credit of that country. If you get any dollars back, the dollars do not go to the Treasury for some other program.

Let us look at the trap in which we have got caught. It simply means that if you give nation A $100 million and you get local currency back, you cannot spend that currency until you reach an agreement with that country. If they do not like it, that $100 million is completely gone.

Do you not think it might be better to give a direct grant than to call this a loan, when you cannot buy anything with it or pay debts with it?

There are going to be some big guns fired today. If you will read the report, I have every reason to believe you will support this committee. I did not ask for this job, but, having accepted the assignment, I have been, and am, determined to do as good a job as possible for the committee, the Congress, and the Nation. I have spent some 300 days this year trying to give you justifications and a report so that you could afford to support and possibly commend this committee, not condemn us.

The conditions involved in this program should be understood. The facts should be brought out into the open.

I trust that as we deliberate this bill later in the day there may be opportunity to detail for you some of the other information I have now on the military that I am not going to divulge until the proper time, but getting it was about as difficult as twisting a rabbit out of a hollow log. But I have it, and I will reveal it at the proper time.

Mr. MERROW. Mr. Chairman, will the gentleman yield?

Mr. PASSMAN. I yield briefly.

Mr. MERROW. I received, and I assume every member of the committee received, a letter from the very able gentleman yesterday including a table showing the available amount of money for expenditure in the fiscal year 1961. I ask the gentleman for information. At the bottom, in the recapitulation, the unexpended funds, including unobligated funds, amount to $4,713,665,000. I wonder if the gentleman would tell me what the unobligated funds would be?

Mr. PASSMAN. The estimated unobligated funds amount to $52,014,000. Those funds may not remain unobligated by the end of this fiscal year. They have until then to obligate those funds. But I might say that there will be hundreds of millions of dollars of those funds reobligated, if history means anything. I will have more to say later about that. But, I do want to say to the gentleman, there is more money at this time in the bill than the total amount after this bill had gone through conference last year. Make no mistake about it. All of us know that this bill is going over to the other body, and there will be some adjustments before it is finally completed. So, if you load this bill up here, you do not leave us any room to save any money. I trust that you will support your committee.

Mr. MERROW. Mr. Chairman, will the gentleman yield further?

Mr. PASSMAN. I yield to the gentleman from New Hampshire.

Mr. MERROW. Did the gentleman say that the unobligated funds amounted to $52 million?

Mr. PASSMAN. Yes; $52,214,000.

Mr. MERROW. Then, actually, according to this table, the new funds you have listed is what is included in this bill plus the unobligated funds and sales receipts, and that money then is the only money for new projects because the rest of this is obligated; am I correct?

Mr. PASSMAN. That is correct, but that is more money than has been provided in the past 6 years.

Mr. MERROW. In view of the fact that this is a procedure which is carried out by all departments of the Government and the Department of Defense itself has unexpended funds as of June 30, 1960, amounting to $31.3 billion and unobligated funds amounting to $7.5 billion, I cannot see how the conclusions in the gentleman's table are an argument against mutual security.

Mr. PASSMAN. I am not arguing against the bill. I am only asking you to support the committee's recommendations for the appropriation.

Mr. MERROW. Excuse me, I mean that the gentleman's table headed "Mutual security dollar funds available for expenditure in fiscal 1961," is not an argument against the mutual security program.

Mr. PASSMAN. I am not arguing against the mutual security program. I am trying to save the mutual security program. If we let this program get completely out from under control again, we will never be able to bring it back under control.

Mr. MERROW. What are the funds available for new projects?

Mr. PASSMAN. If I may point out again, there may be $3,493,204,000 for new projects, which is the greatest amount which has been available for new projects in the past 6 years, since I have been chairman of the subcommittee.

Mr. MERROW. But it is still a cut from what all the experts advise; is it not?

Mr. PASSMAN. What experts are you talking about?

Mr. MERROW. I am talking about the witnesses who testified before our committee.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. PASSMAN. I yield.

Mr. GARY. Will the gentleman name the experts he is talking about?

Mr. MERROW. You have asked me who the experts are. Well, in conducting a hearing, we ask the people from the Department of State and from the Department of Defense and those who have been living with the problems to testify before our committee. These are the people I refer to as being experts and from the advice of all of these people, the minimum we should appropriate is what the Congress has authorized.

Mr. PASSMAN. They say regularly that we are going to destroy the program if we reduce the appropriation, and then in subsequent years, after we have reduced the funds by a total of approximately $4 billion it is acknowledged that we helped to improve the program as a result of our actions; nevertheless, we continue to be accused of wrecking the program. They make many conflicting claims and statements which in many cases are not supported by the facts. Is that the kind of expert testimony to which you refer?

Mr. MERROW. Then the gentleman claims that it is useless to consult with the departments.

Mr. PASSMAN. I am asking you to listen to our committee. We have never misled you. We base our recommendations upon the facts, and certainly in the interest of our Nation.

Mr. MERROW. Mr. Chairman, on June 14, 1960, I received a communication from the chairman of the Foreign Operations Subcommittee on Appropriations discussing foreign aid. Attached to the letter was a table showing the mutual security funds by program and amount with the note "Available for expenditure" fiscal 1961 which begins July 1, 1960. It is my intention to present an explanation of these figures, and may I state that the conclusion one reaches in respect to the funds involved depends

on his definition of "available." The plain fact is that over 50 percent of these funds are not available for new programs during the new fiscal year as is obvious from an objective evaluation.

This table to which I have referred, by way of recapitulation, indicates that mutual security funds available for expenditure in fiscal year 1961 total $8,154,365,000. It is pointed out in this table that more than half of this amount—$4,713,665,000—is from unexpended funds as of June 30, 1960, from previous appropriations, another 40 percent of the amount is from new funds recommended for appropriation for fiscal year 1961 and the balance—$56,200,000—for fiscal year 1961 from such sources as sales of military materiel, loan repayments and reimbursements from special and technical assistance and ICA administrative accounts.

It will help to clarify this picture if we look to the next fiscal year. It is now estimated that the unexpended balance as of June 30, 1960, will be $4,713,665,000 and the amount of money unobligated as of June 30, 1960, $52,514,000. By subtracting $52,514,000 from the unexpended balance, we get $4,661,151,000. All of this is obligated for various programs and the only money available for new projects from previous appropriations is $52,514,000.

Now should the Congress appropriate $4,086,300,000, the amount we have authorized, the total funds available for the next fiscal year would be $8,799,965,000. This figure is arrived at by adding the assumed appropriation—$4,086,300,000, the obligations— $4,661,151,000, and $52,514,000 unobligated as of now, plus $56,200,000 of sales receipts. On superficial analysis, it would seem to be a large sum of money but actually since $4,661,151,000 is obligated, the only money available for new projects from previously appropriated money would be $52,514,000.

For the purpose of clarification, if the Congress refused to appropriate any new money, then by the end of the current fiscal year, there would be $52,514,000 of unobligated funds plus sales receipts of $56,200,000 to carry on the program and, in a short time, the mutual security effort would come to a halt because the pipeline would be cut. Therefore, by whatever figure the Congress reduces the authorization request, that figure is the amount by which the pipeline for foreign assistance is reduced. It would seem to me that, although if full appropriation were made over $8 million would be available for expenditure, we ought to make it perfectly plain that since considerably more than half of this amount is already obligated, then the only money available for the purpose of continuing the program is what the Congress appropriates plus the small amount of unobligated funds and sales receipts at the end of this fiscal year.

By whatever we cut appropriations, we cut the pipeline and do irreparable harm to the program.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. PASSMAN. I yield.

Mr. GARY. I gathered from the gentleman's statement that the experts referred to were the gentlemen who were spending these funds and were responsible for the very waste that is pointed out in the report.

What the gentleman is trying to do is not to wreck the program but to point out the waste.

Mr. PASSMAN. The gentleman is correct.

Mr. Chairman, now if I may continue with my remarks, let me say again that although we are dealing here with that portion of U.S. foreign aid which is known as the mutual security program—a name which, incidentally, is a misnomer—let me reiterate that it should be understood that many billions of dollars in foreign-aid funds are not carried in this so-called mutual security bill. The fact, I say to you again, is that the aggregate of foreign aid not carried in this particular bill actually exceeds the amount which is included in the bill. This other aid, apart from the mutual security funds, includes grants and loans under seven separate lending institutions, assistance through the operation of Public Law 480—involving the disposal of surplus agricultural commodities—oversea military construction, and billions of dollars in accumulated foreign currencies.

So, I say to you once more that, overall, the total of our foreign assistance programs since the end of World War II has exceeded the astronomical sum of $100 billion.

As chairman of the Appropriations Subcommittee handling the funds for the mutual security phase of foreign aid, I think I should again note that, year after year, our committee is forced to work against tremendous odds in endeavoring to write a reasonable bill. The pressures and propaganda exerted by and emanating from many quarters are of shocking proportions. The approximately 44,000 employees and 10,000 trainees of the mutual security program, scattered in 77 nations of the world; the White House and the State Department and their prestige; the Defense Department; hundreds of large manufacturers who profit from the program; many colleges and universities which also profit from the program; church organizations; much of the press and other information media—all of these, and literally hundreds of other organizations, inadequately informed or misinformed, or both, are constant and powerful proponents of more foreign aid.

But, as I have already said and documented, the truth of the matter, as consistently developed in the hearings of our subcommittee, in considering the annual requests for funds—and as also stated by the Comptroller General of the United States—is that a major weakness of the program is too much money, and not too little. I tell you again that this is so despite the fact that the actions of our committee and the Congress for the 5 years through fiscal 1960 cut approximately $4 billion from the mutual security budget. It will continue to be true for fiscal 1961, notwithstanding the reduction below the budget in the bill now before you.

In continuing to resist the unwarranted pressure and propaganda for an excessive amount of foreign-aid funds, let me reassert that our committee's efforts are aimed at bringing this grandiose, worldwide spending program under at least a semblance of control. It has been—and it is now—our purpose to provide adequate funds to meet the commitments, but with the decisions made more upon the basis of needs, rather than upon unfounded bureaucratic desires.

Permit me to repeat to you that during the period from July 1, 1945, to June 30, 1959, the United States had extended to foreign countries and international organizations—and this is exclusive of the total for oversea millitary construction and currencies generated through surplus commodity sales—gross aid amounting to $76,471,617,000.

In addition to this aid, the United States had extended foreign assistance in the form of capital investments in three international financial institutions—the International Bank for Reconstruction and Development, the International Finance Corporation, and the International Monetary Fund—through June 30, 1959, in the amount of $4,795,168,000.

A further form of foreign aid, I remind you once more, is the accumulated foreign currency balances resulting from transactions in connection with sales of agricultural surplus commodities and partial utilization of these funds. On June 30, 1959, such net assistance had amounted to $2,119,764,000.

Total gross foreign aid, including the phases enumerated—but exclusive of oversea military construction—from July 1, 1945, through June 30, 1960, amounts to $87,849,168,000. The amount for fiscal 1960 is estimated.

Then, add to that figure the expenditures for oversea military construction since July 1, 1945, and the aggregate soars to more than $100 billion.

Figures which I have previously presented have shown that as of July 1, 1959, a total of $14.9 billion of foreign aid money was available, under existing legislation, for utilization in the fiscal year 1960 and thereafter—and that sum did not even include the mutual security appropriation for fiscal 1960. A table which I prepared more recently, and distributed to the Members, showed that a total of $8,111,521,750 was available for expenditure in the mutual security program alone in fiscal 1960. This money included $4,837,708,750 in unexpended mutual security funds as of June 30, 1959; $3,225,813,000 in new mutual security funds appropriated for fiscal 1960, and other new funds for fiscal 1960 amounting to $48 million.

Despite all this spending on the part of the United States, it is clearly evident that our foreign aid has not accomplished the purposes for which it was intended. Nevertheless, many of our leaders remain eager to borrow vast sums of money to continue many unbelievably lavish and inexcusably wasteful programs.

However, it is my contention—based upon careful study of our own fiscal affairs and 8 years of close association with the vast and complex so-called mutual security program—that this Nation's financial position is such that this aid must be substantially curtailed.

The U.S. public debt is unprecedented. The Director of the Budget has put our debt and domestic commitments at $¾ trillion; and that does not take into account our commitments for the future through foreign aid. Our taxes are at the point of being confiscatory. Yet, during the past three decades only five times has our budget been balanced. Our gold reserves stand at about $19 billion; and foreign dollar credits stand at approximately the same figure. If foreigners should call this gold—which they could conceivably do with respect to most of it, if they should so elect—the value of our dollar would become all but worthless.

U.S. Government obligations held by foreigners have been stated at about $12 billion. Government interest payments on these obligations alone are said to amount to more than $500 million annually; and these interest payments themselves constitute another form of foreign aid.

The announced Communist objective is world domination. The prime requisite to block this sinister Red ambition is a sound American economy and, I believe, supremacy in our military power. It is elementary that without a sound economy we cannot defend ourselves. Without superior military might no national and free world strategy is likely to succeed.

But, realistically, what are our leaders doing—and particularly with relation to the mutual security program—toward achieving those goals? The answer must be, relatively little that is effective.

Despite conclusive evidence that, due to obvious uncorrected weaknesses—including inadequate planning and poor administration—the mutual security program has failed to achieve the results its proponents have anticipated toward the strengthening of our own security and the establishment of peace and security for the free world, the President requested a total of $4,175 million in new funds for the program in fiscal 1961. In addition to the mutual security funds, as such, it must be kept in mind that large sums of additional funds will be made available to the mutual security program under Public Law 480, as well as aid given through the numerous other sources.

And the wasteful, lavish spending continues.

Many nations, including some of those which are relatively newly independent, seek to build prestige by constructing huge dams, steel mills, and superhighways before there is need for such grandiose projects. As a result, the International Cooperation Administration, which administers the economic phases of the mutual security program has acceded to far too many requests for such projects; and there have been too many projects begun without proper planning, determination of need, or benefits to be derived. Entirely too much emphasis has been placed on meeting personal desires of the political leaders of the recipient governments; and too little emphasis has been given to commonsense thought and action.

In too many instances there have been a multiplicity of unjustified projects, and, further, inadequate planning has resulted in the undertaking of many impractical and unsuitable projects in numerous countries. Such conditions have led, of course, to more excessive spending and additional waste of U.S. funds.

Examples in documentation of these charges could be cited by the hundreds, and very many of them—some of which I have already reviewed—are illustrated in detail in the record of the hearings of the subcommittee which I have the honor to serve as chairman.

Yet, while the waste runs rampant, each year there has been further shrinkage in the degree of control exercised over the so-called mutual security program by the Congress, and it follows that progressive loss of control of funds inevitably leads to loss of administrative control. But, despite the fact that the American people are being asked to continue to pour vast sums of money into the program, the presidential request for funds in fiscal 1961 again made no suggestion for strengthening congressional control over the programing and expenditure of funds. Nor was any recognition seemingly given to the fact that very many of the projects do not have economic justification, let alone a defense requirement.

The foreign-aid program is administered by an increasingly large number of personnel without noticeable increase in efficiency. This has led to the establishment of an entrenched, self-perpetuating bureaucracy, still growing in size, power, and inefficiency—concerning which the figures speak for themselves. This year, as I have previously pointed out in this discussion, approximately 44,000 personnel are employed in the mutual security program.

Another important factor which should again be brought to attention is the danger inherent in the so-called Development Loan Fund. This Fund continues to be an adjunct of the mutual security program for the making of what are, actually, largely phony loans, rather than undisguised grants. When the Development Loan Fund—which receives most of its repayments in local, or soft, currencies of virtually no use to our own Government—was created, the executive branch sought to give the impression that the making of these so-called loans would result in a reduction of outright grant assistance. But that has not been the case.

Furthermore, testimony in our committee hearings has indicated conclusively that money in the Fund has been earmarked for certain countries without having received from those countries specifications and plans for particular economic projects.

Apart from these unorthodox and inefficient procedures, the Development Loan Fund contributes substantially to the vast amounts of local, or soft, currencies which the mutual security and other aid programs are generating throughout the world, which is a cause for very real concern. There are certain holdings of local currencies of such size that they could not possibly be spent in the foreseeable future.

In the following few paragraphs, I shall sum up some of the practically innumerable documented shortcomings of the program of economic foreign aid, as administered by the International Cooperation Administration.

First. The absence of adequate advance planning, in the form of firm technical and financial plans and reliable cost estimates, and the failure to reach definitive understandings with the recipient countries on essential project elements, is a condition which has led to overprograming, piecemeal financing, and premature obligations. It has also frequently resulted in delays in the execution of project aid and in increased costs.

Second. In several countries, the official exchange rates used by the U.S. Government have substantially overvalued the local currencies in relation to the dollar. The use of such rates has unduly increased the dollar cost of U.S. aid, particularly where its principal purpose was the generation of local currency. Also, the use of these unrealistic exchange rates has certainly provided incentives for speculation and irregular practices.

Third. ICA has not had, for several of its programs and activities, adequate information on the use of aid funds, through a satisfactory accounting from the recipient country and its agencies, and through effective end use investigations and field audits by the ICA oversea missions.

Fourth. In individual countries there has been (a) excessive staffing with local nationals, (b) insufficient pooling of common administrative support functions with other U.S. agencies operating in the same foreign countries, (c) dispersal of assistance efforts over too wide an area and too large a number of individual projects, (d) delays in recruitment of qualified technical and administrative personnel and (e) deficient property management.

Now let me summarize some of the military assistance phases of the foreign-aid program.

First. The programing objectives established by the Department of Defense for our allies, expressed in terms of divisions of troops, squadrons of aircraft, and so forth, have not been sufficiently refined to distinguish between those forces which are justifiable on the basis of military roles and missions and those which are equipped and maintained because of political or other considerations. Furthermore, revision of program objectives in line with the force objectives which participant countries themselves have agreed to support and commit for mutual defense purposes has been unduly delayed, and as a consequence substantial quantities of material have been delivered which are, and will be, in excess of the several countries' needs.

In the lack of adequate refinement for program criteria to establish which countries and which military units shall first receive equipment and supplies, items have been programed for high-priority units which could have been filled from excess equipment in the hands of low-priority units.

Second. Estimates have not been developed—and presented to the committees of the Congress—of the aggregate cost of equipping, maintaining, and modernizing allied military forces approved for support or for otherwise achieving U.S. objectives in the countries being supported. Without these data, it is, of course, extremely difficult to relate the annual appropriation request to the current and projected costs of the program in the recipient countries and the overall objectives of our own Nation, and it is equally as difficult to evaluate program accomplishments in relation to plans presented in earlier years.

Third. Lists of items of military equipment and supplies for recipient countries continue to be developed and used to support annual appropriation requests without sufficient knowledge, in many instances, of the real needs of the countries as determined by the gross requirements of the military units, the equipment assets on hand, or of the countries' capabilities to utilize the material planned for delivery.

Fourth. Military equipment continues to be programed, procured, and delivered to recipient countries without adequate regard for the degree of utilization achieved in those countries. Substantial quantities of material have been programed for delivery to recipient countries to be placed in storage, stockpiled, or otherwise not used in the manner intended.

Fifth. Stocks excess to the military services which should be transferred to the military assistance program without charge, stocks which should be transferred at reduced prices because of condition and market value, and other categories of military equipment have been transferred at prices which have resulted in overcharges to the mutual security program military assistance appropriations. The regulations, procedures, and controls have been ineffective in preventing unauthorized reimbursements to the military services.

Sixth. Funds provided by the United States to support the military budget of many countries have not been adequately controlled to insure that the funds are utilized for the purposes for which they were given.

There is abundant documentation in the more than 3,000 printed pages of the record of the hearings of our subcommittee with relation to the conditions which I have summarized.

Mr. Chairman, surely we must come to the understanding, without further delay, that we can no longer afford political extravagance here in Washington—while our country bleeds with a national debt of $290 billion—which is a greater amount by many billions of dollars than the combined debts of all the other countries of the world.

May I remind that we cannot spend ourselves rich.

We cannot make ourselves secure by giving ourselves away.

We cannot buy friends.

We are told that it is our duty to buy our way of life for countries all over the world. But we cannot, in fact, improve the living standards of most of them by as much as 1 percent, even if we should give away everything we own and treasure.

If we are to win this life-and-death struggle between the United States and Communist Russia, we must think of something else to do other than to spend money—for one reason, even if there were no others, that we are rapidly approaching the time when it is quite possible we shall not have any more money to spend.

I should like to point out also that even if we had no foreign aid spending at all, the United States would be investing—through private industry, charities, and foundations—considerably more abroad than the Soviet Union has been reported to be lending—at a profit—every year.

Mr. Chairman, the waste and the inefficiency of our global foreign aid, only a small part of which I have pointed out to you today, serve as a symbol for growing and uncontrolled extravagance throughout every department and agency of our Federal Establishment.

Foreign aid is now one of the largest items in our Federal budget. Foreign aid expenditures since the end of World War II have cost the American taxpayer, as I previously pointed out, more than $100 billion, an amount which is equivalent to more than one-third of our staggering national debt. The annual interest alone for this part of our debt is in excess of $3 billion.

If we do not want to stop the excessive spending for the Nation's taxpayers, surely we owe it to those who will come after us to assure them the same type of advantages and the same type of country that we inherited. We do not have the right to mortgage American babies still in their cribs or generations yet unborn.

With our national debt at $290 billion, the time has come to cut foreign aid to fit the needs.

I am convinced that we can never hope to hold our own, much less win the cold war, until we, first, stop the spending trend which is leading us toward national insolvency. Not only must our great deficits be reduced, but our staggering national debt must be cut down as well; second, that we stop inflation by practicing prudent economy throughout our Government, just as every individual American could be forced to do if faced with personal distress and possible disaster; third, that we stop the river of waste occasioned by the extravagance and inefficiency of our Government's insistence to perpetuate and enlarge our global aid programs.

I believe sincerely that only if we do these things can we hold our own, and eventually win the cold war.

Mr. TABER. Mr. Chairman, I yield myself 15 minutes.

The CHAIRMAN. The gentleman from New York is recognized.

Mr. TABER. Mr. Chairman, I am going to confine myself largely to items I know will be considered when the bill is read for amendment. I shall not spend too much time on things I feel will not be matters of controversy or matters in which I shall support the committee if amendments are offered. I am going to confine myself largely to the items of military assistance. I believe those items and defense support are the only ones involved in the whole bill that have any justification whatever. Those items I believe they absolutely need for the defense of the United States. I am going to spend my time largely on them because I want to see the United States military situation covered just as well as it can be in these times of stress.

The gentleman from Louisiana referred to a conversation with me about an interview with the President. At the time we were approaching the end of the hearings and the markup. The President had just returned from Europe, and it was impossible to arrange for anything in the days that followed that return. The President had been through a very considerable strain and there are a great many things he has been unable to do that some of us would like to have him do because of that situation.

Frankly, I do not think there is any reason why we should have any such bill as this except where it is needed and where it will do some good in the military situation throughout the world. The military situation, to my mind, is the key of the question. There are all sorts of things involved in connection with that. We have in Taiwan the Chinese situation. If we did not have Taiwan in there and have the things there that we have provided to take care of the threat of Red China, if they did not have an air force and with ammunition, guns, and implements of war, which we supplied them with, we would have trouble to keep the Red Chinese on the mainland from crowding down into Vietnam farther than they have.

We are going to have trouble of that kind, and it is not going to lessen. It will increase, if anything.

The gentleman from Louisiana has indicated that there is a very considerable reduction in the period that he has been chairman of the subcommittee. That is correct.

I am going to read to you from page 2327 of the hearings, the testimony of General Palmer, who is the military man directly in charge of military expenditures under this bill. For a long time he was chief of staff to the Commanding General of NATO. He has come back here with a great fund of experience. I will say for him he had more lucid answers to questions that we have put to him with reference to these particular subjects than any other man who appeared before the committee.

This statement appears on page 2327 as an incident under the heading "Financing Military Assistance":

For a 5-year period, 1955 to 1959, inclusive, the average annual expenditure on the military assistance program was $2.36 billion.

This rate of expenditure was sustained by an average annual grant of only $1.37 billion in new obligational authority, the remainder, an average annually of $1 billion having come each year from unexpended balances of still earlier appropriations.

Seven years ago, on June 30, 1953, these unexpended balances stood at almost $8.5 billion. By June 30, 1960, they will have shrunk below $2.1 billion.

Now, it is absolutely necessary that we have a pipeline of these implements of war to keep shipments rolling to those of our allies who are dependent for their military strength in this situation. It is absolutely necessary that we have money enough so that we can keep those things rolling. It takes from 6 months to 18 months for almost all of the material to go through from the time it is ordered to the time it is delivered. Sometimes, when you are dealing with these new missiles and modern equipment for the Armed Forces, it takes longer than that. Now, we must understand these things. We must think of those things and balance them up so that we understand them.

Now let me go back to General Palmer's statement:

The unexpended carryover will have fallen to approximately $2 billion by June 30, 1960, and the program is also falling. The forecast of expenditure during the current fiscal year, 1960, is $1,830 million, while it is forecast that the program in fiscal year 1961 will be marked by an expenditure of $1.79 billion. In these 2 years there is a drastic drop of $560 million below the rate of the preceding 5 years.

For that reason and because I want to see the situation of the United States and the people of the United States protected, I expect to offer an amendment when the time comes to increase the appropriation for military assistance from $1.6 billion to $1.8 billion. I shall do that because of a sincere sense of duty that to me demands that I do this. I shall do this because I believe it is necessary in these troublesome days, days when it is almost impossible to tell what is going to happen from one day to the next and because I want to uphold the hands of the President of the United States while he is over across the water trying to build up and steam up our allies all over the world. I do not think it is the right thing for this House or the Congress to let him down in view of the situation confronting us.

I do not think we have any business slipping up on our responsibilities. I think we must face them.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield.

Mr. ARENDS. The amount of the increase proposed by the gentleman is approximately one-half of the reduction that was made by the committee, is that true?

Mr. TABER. That is exactly correct.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield.

Mr. JUDD. Do I understand correctly that the reason the amount authorized for military assistance in the bill this year is larger than it was last year is because we have been living off the accumulated fat of those years immediately following the Korean war and the Vietnam war, when we appropriated huge sums of money for this purpose; we have eaten down that balance of $8 billion in the pipeline to about $2 billion. So now we have to replenish the pipeline, and that requires more new money.

Does the gentleman give an affirmative answer to that question?

Mr. TABER. Will the gentleman please repeat the question?

Mr. JUDD. Is it not true that we have to appropriate more money this year because we do not have the large pipeline of reserves that was built up in the first part of this decade? And is it not true that last year, when the amount was cut down by $300 million, we were warned that this year we would have to appropriate more money this year to make up for it?

Mr. TABER. That is correct, except this; that as a result of the drawing down of these unexpended balances which represent the pipeline, that item has shrunk year by year during all that period; and on top of the drawing down of those unexpended balances, there has been a very great reduction in the amount of expenditures and the amount of the delivery of the necessities of war to our allies.

Mr. JUDD. So a larger amount, appropriated this year, does not mean that a larger amount will actually be spent than in other years. It means that we have to appropriate more money this year just to keep the rate of expenditures at a reasonably even level.

Mr. TABER. I did not ask that question, but I expect that the figure of $1,790 million which General Farmer used to illustrate the amount that would be expended next year was based upon a $2 billion appropriation of funds in this bill. And with that cut down to $1.6 billion, that figure would be considerably lower. It could not help but be. I just want to be sure to give the right answer to that question.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield.

Mr. PASSMAN. Is it not true that at this point in our deliberations we already have $300 million more than we had last year? We gave them then $1.3 billion, and at this point in the deliberations we are already up to $1.6 billion.

Mr. TABER. This is an increase over last year, but it is not an increase actually because we have to prevent the dropping down of the balances that we need to maintain the Military Establishment. That is the picture.

Mr. RHODES of Arizona. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield to the gentleman.

Mr. RHODES of Arizona. Is it not also true that when the gentleman from New York submits his amendments, if the amendment is adopted, raising the amount to $1.8 billion, that would still represent a 10-percent cut from the budget estimate of the administration, which was supported in the committee by practically everybody who came up to testify?

Mr. TABER. That is correct.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield.

Mr. PASSMAN. It was expected they were all going to testify for the request. That was their purpose in appearing.

Mr. TABER. I think that General Farmer told us what he thought was the truth. He is the ablest gentleman I have seen down there representing anybody during the term I have been a member of that subcommittee, and that is from the beginning of the program right straight through to the present time. I believe he came down there prepared to tell us the truth. I think he is that type of gentleman.

Mr. ANDERSEN of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield.

Mr. ANDERSEN of Minnesota. I am in full agreement with the gentleman when he states that the military assistance and defense support is really the heart of this bill insofar as the United States is concerned. This has been my judgment from the very beginning of the foreign-aid program, despite the fact that I have often found it necessary to vote against the bill brought before us because it was too liberal in other respects.

I might add to that the point 4 type of assistance which I have long favored but which, unfortunately in my opinion, has been allowed to languish in favor of direct grants for public works and other purposes.

There is in the world today an urgent need for mutual assistance and mutual cooperation on the part of the nations alined on the side of freedom, but I personally believe there is a reasonable limit to the amount of dollar assistance the other nations should expect from us. The term "mutual" seems to be ignored in the planning of the proposals submitted to the Congress and most of what we have before us consists of one-way aid from the United States to others.

Recognizing our own immediate interest in the military part of the whole program, and consistent with our desire to maintain a reasonable ceiling on the entire appropriation devoted to mutual security, would it not be possible in the submission of the gentleman's amendment whereby he seeks to add $200 million to the military assistance item to accomplish that desirable increase by a comparable decrease elsewhere in the bill? In other words, could not this be in the form of a transfer between items and thus avoid increasing the total amount appropriated as recommended by the Committee on Appropriations?

Mr. TABER. The only thing I can say to that is that there are a great many items in the bill which have no strong reason back of them for support as the military assistance has. That is the heart of the proposal, to me.

Mr. ANDERSEN of Minnesota. I am in full agreement with the gentleman on this one point and intend to support his amendment for $200 million more for military assistance. At the same time, I want it clearly understood that I also intend to support reductions in other

items to keep the entire amount appropriated within the total recommended by the committee.

We must not lose sight of the fact that approval of the $3,384,500,000 total recommended by the committee will actually make available to the mutual security program on July 1, 1960, an amount $42,843,250 more than was available in fiscal year 1960. As the committee report shows, $8,154,365,000 will be available for expenditure in fiscal year 1961 if we hold the line on this bill and that is a tremendous sum of money. Any additions appropriated at this time would simply pyramid the program and the Congress would be faced with requests for just that much more money in succeeding years to keep the program going.

From my years of experience in the Congress and as a member of the Committee on Appropriations, precious few reductions in appropriations originate any place other than at the hands of the Congress. The mutual security program is no exception because I have found that the dedicated public servants administering all of our various governmental programs become convinced as to their necessity and the burden of making reductions almost invariably rests on our shoulders here in the Congress.

Economy is seldom a popular course for us to follow, but those of us who have the courage of our convictions are left no alternative and we must fight to hold the line in this constant battle for fiscal responsibility.

Mr. TABER. There are spots in there that could be cut out, especially such foolishness as they have in that technical assistance, where they rent schools at a cost of $34,400,000, where they have people taking courses that would make your heart sick to look at them. That is a very conservative statement. That is no exaggeration.

I think that is all I am going to say at this time. There will be a lot of other amendments offered. If there is occasion as they are offered for me to say something, I will be saying it.

Mr. Chairman, I yield such time as he may desire to the gentleman from Illinois [Mr. CHIPERFIELD].

Mr. CHIPERFIELD. Mr. Chairman, I strongly endorse the minority report to this bill when it states that the cuts proposed to the House "indicate a weakening in the determination and leadership of the United States to hold together the nations of the free world at the very time when the Communist bloc is engaged in a major drive to split it apart."

I, therefore, will support amendments to restore these drastic cuts, at least in part, especially in the military field which I believe is so essential for our own security and that of the free world.

In these last weeks since Premier Khrushchev scuttled the summit conference, the capitals of the free world have experienced a tense expectancy and apprehension as to possible further hostile moves by the Soviet bloc. We wonder where pressure will be exerted next—on exposed Berlin, along the uneasy truce lines in the Far East, or elsewhere along the periphery of the bloc. One conclusion at least seems justified as a result of the summit breakdown, that the United States and its allies are in for a prolonged period of stress, confronted by the full range of possible bloc moves from propaganda to military action. Never short of war itself, have there been such demands on the United States in its role as leader of the free world.

The spotlight is on this Government, and particularly this Congress, to test our strength and earnestness in the face of these increased, even awesome, cold war responsibilities. One of these responsibilities is helping to bolster the free world's military and economic strength, a responsibility we meet largely through our mutual security program.

Through this program we provide military assistance to some 40 countries, to enable our free world partners to maintain 5 million soldiers, 2,200 combatant ships and 30,000 aircraft. Approximately one-third of the economic assistance we provide is used to sustain these large forces abroad, and the remainder comprises loans, technical assistance and grants to underdeveloped countries. This aid for development frequently means the difference between economic stagnation and economic progress for hundreds of millions of people throughout the free world.

President Eisenhower has told us that America's security, and the common defense of the entire free world, depend in a substantial measure on this program of military and economic assistance. Vice President NIXON, the Secretaries of State and Defense, and all the other key members of the executive branch fully support this view. Defense Secretary Gates, for example, recently reaffirmed that military assistance is an essential element in the basic U.S. strategy of collective security. Stressing the mutuality of the defense efforts, he said that only 10 percent of the ground forces that will come under General Norstad's command in time of war are American; in Korea, General Magruder, as the U.N. commander, commands 21 divisions on the line, only 2 of which are American. Moreover, the Joint Chiefs of Staff have stated that they would not want one dollar added to the defense budget for 1961 if that dollar had to come out of the recommended budget for military assistance.

Support for the mutual security program has been, and remains, substantial. Support for the program is bipartisan—both Presidents Eisenhower and Truman have repeatedly urged its continuance, congressional leaders on both sides of the aisle have voted for it year after year, Mr. NIXON and every Democratic candidate for the presidency has endorsed it, and the national party platforms to be adopted next month will certainly approve the program once again.

Public support is widespread. Spokesmen for the United States Chamber of Commerce, the AFL–CIO, and many veterans, civic, church, and other organizations have repeatedly testified on behalf of the program. Opinion leaders in these organizations, in business, in the press, and elsewhere have consistently spoken out for the aid program.

Despite this wide understanding of the need for the mutual security program, there are those who favor major reductions in it. As reported by the Appropriations Committee, the bill which we are to vote on calls for cuts totaling $790.5 million below the amount the President requested for operations of the program in fiscal year 1961. But the President has warned us that such heavy cuts in the mutual security program would mean "a crushing defeat in today's struggle between communistic imperialism and a freedom founded in faith and justice" and "within a matter of months new international tensions and new international problems of the utmost gravity for every one of our citizens."

Now, as the President carries America's message of hope for peace through freedom to the Far East, the Congress must not let him down. By our action on this bill we will once again demonstrate, both to our friends and to our enemies, the strength of our purpose in pursuing our and the free world's security effort.

Mr. TABER. Mr. Chairman, I yield 20 minutes to the gentleman from Michigan [Mr. FORD].

Mr. FORD. Mr. Chairman, I, along with the gentleman from New York and the gentleman from Arizona [Mr. RHODES], and the gentleman from Massachusetts [Mr. CONTE], signed the minority report. As the report indicates, we strongly believe that in two areas the majority made reductions which will have a serious adverse impact on the military assistance and defense support parts of the program. The distinguished gentleman from New York [Mr. TABER] has outlined in several instances a point or two that I would like to reemphasize. It seems to me the best way to analyze the need and the necessity for at least a $1,800 million appropriation in military assistance is to look at the unexpended balances that have been available over the past few years; the annual appropriations that were made available, and the expenditures during the same period of time.

This chart here points up rather dramatically why we need in the fiscal year 1961 a larger appropriation for military assistance than we had during the current fiscal year.

The President requested in the fiscal year 1961, $2 billion for military assistance. The Subcommittee and the Committee on Appropriations have recommended $1,600 million. This is a $400 million reduction, or a 20-percent cut.

If you look at this chart, you will see in 1951 the unexpended balance was about $5¾ billion.

In the fiscal year 1952 and fiscal 1953, you see the unexpended balances raise substantially to a figure over $8 billion. In the interim it has been gradually reduced so that at the end of the fiscal year 1960, the unexpended balance will be slightly over $2 billion, which is, in effect, a pipeline of about 15 months under current procurement practices.

If you look at the green line, you will see that the trend in appropriations in military assistance only. It shows in fiscal 1951 the appropriation was slight-

ly over $5 billion. It raised somewhat in fiscal 1952. It dropped substantially down to slightly over $1 billion in fiscal 1955, and has followed since that time a relatively stable amount, averaging in the past 5 years $1.37 billion annually in new obligational authority.

In fiscal 1960 the current fiscal year, the figure was $1,300 million. This was $300 million less—I repeat, less than what the President requested for the current fiscal year.

Now, if you will look at the expenditure picture, you will find this to be the case. In fiscal 1951, at the beginning of the program, the expenditures were less than a billion dollars per annum. They rose to about $4 billion in 1953 and then leveled off in the last 5 or 6 years to the amount of approximately $2,300 million in each year.

The point, I think, is vividly demonstrated here that we have been living for the past few years off of previously appropriated funds. Our expenditures in the last few years have averaged about $2,300 million per annum. Our annual appropriations have an average approximately of $1,350 million. We have been supporting the military assistance program to the extent of about $1 billion annually for the last 4 or 5 years off of previously appropriated funds.

Frankly, it seems to me, from the testimony I have heard both in our Defense Department hearings and in these hearings is that we are finished living off of previously accumulated funds. The lead time, and I do not believe there is any question about these figures, is about 15 to 18 months for military hardware. If you agree to that, and I doubt if many disagree, then you need a pipeline of about $2 billion. This bill, reported by the full committee, provides new obligational authority for military assistance to the tune of $1,600 million.

That figure, if agreed to, will draw down further our pipeline and, in my opinion, have a serious impact on our military assistance program worldwide, including particularly NATO.

The estimated expenditures in the current fiscal year in this program will be $1,830 million. In fiscal 1961 the anticipated expenditure will be $1,790 million. So if we make available $1,800 million in new obligation authority, as the amendment of the gentleman from New York will provide, we will level off into what I think is a sound program.

The chairman today and on previous occasions has made serious charges about overcharges by the three military services to the military assistance program. In effect, he is saying that the Army, the Navy, and the Air Force in the transfer of military hardware to the military assistance program are making a fast buck. Even if those charges are correct—and I do not agree with that—even if those charges are correct, does it make one bit of difference to the U.S. Treasury? Of course, it does not. We pay the bill as taxpayers whether we finance it through our own Defense Department appropriation or through the military assistance program, the program before us today. So even if those charges are accurate, which I dispute, it does not make a bit of difference to the U.S. Treasury or to the taxpayers.

Now, are these charges accurate? And what difference does it make? In February of this year the General Accounting Office filed a report alleging there were serious overcharges by the Army, Navy, and Air Force to the military assistance program. These charges were predicated upon the field surveys which were made in 1957 and 1958. The allegation is that the overcharges amounted to approximately $450 million. So far the Army has agreed that only $45 million of the overcharges are justifiable. They completely and totally deny that any other overcharges exist. The Navy and the Air Force deny completely that they are guilty of any overcharges.

Gen. Williston B. Palmer, who is the military head of the military assistance program, in a statement to the subcommittee found on page 2387 through page 2391 expressed his department's view on the General Accounting Office allegation. General Palmer also volunteered to have technical witnesses from the three departments present the military viewpoint on these alleged overcharges. Those witnesses were not called by the committee, so we have to go by the statement of General Palmer.

It is a very technical field; it involves an interpretation of what the law is and what the regulations are. As I said before, the Army admits overcharges to the extent of $45 million; they deny the rest. The other two services deny there are any overcharges. But I repeat, from the point of view of the taxpayer, from the point of view of the Treasury Department, it makes no difference whether these allegations are accurate or not, because we either pay the bill through our own Defense Department appropriations or we pay the bill through the military assistance part of this appropriation bill. In my opinion these charges are of no consequence as far as this bill is concerned.

In reality it is a matter which the lawyers of the GAO and the Defense Department can argue over in the future. However, in the meantime let us not jeopardize our military security by slashing this budget request.

The distinguished chairman made the statement during debate today that somewhere between 90 and 95 percent of the equipment in various countries which we have supplied is serviceable today. This was testimony taken a year or two ago before the subcommittee. Apparently it was substantiated in some hearings that the gentleman from Louisiana and the gentleman from Arizona held this spring in Europe. That charge, in my judgment, should be construed as a compliment to the recipient countries that they over the years could accept this material, maintain and keep it serviceable for as long a period as they have.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Louisiana.

Mr. PASSMAN. How would the gentleman justify the $100 million in materiel shipped to X country which they requested should be held up? It is over there now awaiting redistribution.

Mr. FORD. I believe the gentleman is referring to alleged changes in force structure that were contemplated but at the time of shipment of equipment had not been effectuated.

NATO did set up certain force standards. There was some discussion of possible readjustment. In the meantime the equipment was shipped. I think the facts are that 97 percent was delivered before the force goals were actually reduced. But that is not on the point I was discussing at all at the time I yielded to the chairman.

The fact that a military organization has 95 percent of its equipment serviceable does not really refer to its competence in the military field to fight a war over a period of time. We do not fight a war—never have—simply with the military equipment that we have on hand in the field. We really rely on what we have on hand and the mobilization reserves. The mobilization reserves in our own Army, Navy, and Air Force is many times what we have with troops in the field and thank goodness that is true, because if you are called upon to engage in a shooting war you use what you have first but you call upon your mobilization reserves to continue the fighting. So the charge made by the chairman I do not think has any validity. His allegation that they have 90 percent plus of the equipment which we have supplied as serviceable does not prove a single thing as to their capability to fight a sustained war. This equipment which we are going to provide with the funds made available here will help to build up their mobilization reserves, it will help to maintain their existing forces, and it will provide for force improvement which is highly essential to the security of the United States and the free world.

The distinguished chairman has discussed the fact that certain countries received more than they were able to digest, so to speak. He alleges that about $450 million worth of this material over the years had to be or should be redistributed. It is true some of our military equipment which we have made available to allies after a period of time has become surplus to that country and, therefore, should have been and will be redistributed to other friendly allies. It seems to me that the actual redistribution of military equipment in this way is the best proof of good management.

For example, 5 years ago we gave country X certain equipment. As that country improved its military posture it was found that the country needed new and more modern equipment. Should we leave that old and obsolete equipment in country X in storage, equipment that is out of date, equipment that that country cannot effectively utilize? Should we not take that kind of equipment and transfer it to another country that has a current need for that hardware? That redistribution makes sense to me. I think that is proof of good military management. You redistribute your equipment so that all recipient countries get the best use from it. The country that can absorb and use the most modern equipment should get that, and other countries should receive that equipment which they can best utilize. And, this

process of redistribution simply carries out good management practices.

Now, Mr. Chairman, let me point one or two additional points. As I indicated earlier, the President asked for $2 billion in military assistance. The subcommittee and the full committee has recommended a cut of $400 million, a 20-percent reduction. What will this do to the program as submitted by the President? Four hundred and ninety-five million dollars of the $2 billion requested is for substantially fixed costs, such as infrastructure, headquarters, and administrative expenses. Twenty-five million dollars is for credit sales. Six hundred and fifteen million dollars is to maintain our allied forces at current levels. Now, to cut this request, in the opinion of the Defense Department and the President, means that we would lose ground that we have already made to maintain the forces of our allies at the required levels for their security and for ours. Now, this means that if this cut is sustained, the $865 million requested for force improvement, that is, the money that is requested to bolster up and make more modern our forces, would have to absorb about 80 percent of the cut submitted to you by the committee. It seems to me that this substantial reduction imposed on force improvement is much too great. I believe that the amendment to be offered by the gentleman from New York would be substantially helpful in reducing this adverse impact.

Now, the charge is often made that we are substantially paying for the maintenance of the military forces in NATO and in other areas of the free world. Let me point out that in 1953 the United States actually paid about 28 percent of the cost of maintaining the defense forces of NATO countries. Today, 7 years later, the United States, if this program is carried out, will pay approximately 8 percent of that cost. So, in an interval of 7 years our relative share of the contribution has gone down substantially, from 28 percent to 8 percent.

The charge is likewise frequently made that some of these countries are really cutting back rather than increasing their military expenditures. That is not true in NATO. For example, West German defense expenditures rose from $1.6 billion in 1958 to $2.7 billion in 1959. Great Britain is instituting a 7.6 increase for next year in their defense expenditure. Italy has a 4 percent annual increase in effect. The Netherlands is planning a substantial increase. European NATO countries as a whole spent $13.6 billion in defense in fiscal 1959, a 1-year increase of 11 percent over the $12.2 billion in 1958. The total for fiscal 1961 is now placed at $14.2 billion, again a sizable increase in their expenditures for their security and the security of the free world.

In conclusion I would like to say simply this. It has been said not once but many times that our top military leaders would not subscribe to a reduction in the military assistance program in order to bolster our own military expenditure. It is the opinion of the Joint Chiefs of Staff that the money we spend on this program gets for us and the free world the biggest return.

Consequently General Twining, Chairman of the Joint Chiefs, General Lemnitzer of the Army, General White of the Air Force, Admiral Burke of the Navy subscribe without hesitation or qualification to the figure recommended by the President for military assistance. I refer now to a release dated June 15 from the Secretary of Defense, Mr. Gates. He says:

> The Joint Chiefs of Staff all stated that they would not take one dollar away from the military assistance program in order to augment the funds for their own services. Military assistance is just as much a part of our own national defense as are the appropriations for the Army, the Navy, the Air Force, Central Intelligence Agency, and the Atomic Energy Commission.

Mrs. KELLY. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentlewoman.

Mrs. KELLY. I should like to try to clarify, if possible, the matter raised by my colleague from New Hampshire, Mr. MERROW, in a question to the chairman of the subcommittee. In speaking of the unexpended balance available, there was reference to $8.1 billion. However, I would like to emphasize—and it is in the report—that there is an unobligated balance of $52,514,000; is that correct?

Mr. FORD. That is an estimate of the unobligated balances at the end of this current fiscal year.

Mrs. KELLY. If you add that to the new money, then I think the Members of the House ought to know that that would be about $3.4 billion available for obligation.

Mr. FORD. For new obligation in fiscal 1961.

Mrs. KELLY. And not $8.1 billion as some might interpret it.

Mr. FORD. The gentlewoman from New York is correct. The difference between $3.4 billion in new money as recommended by this bill and $8.2 billion is a sum that is already obligated, already committed to specific programs and policies; orders on the books, so to speak.

Mrs. KELLY. With the exception of the $52 million. Therefore, in considering this bill we should look to $3.4 billion and not $8.1 billion.

Mr. FORD. The gentlewoman from New York is precisely correct.

Mr. LINDSAY. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from New York.

Mr. LINDSAY. I should like to commend the gentleman on his statement. I was particularly interested in his comment that the Joint Chiefs of Staff and the President had recommended even a higher figure than is urged by the minority. Is it not true that this is the minimum figure which they say will do the job, stripped down to the barest essentials?

Mr. FORD. The Joint Chiefs of Staff actually support the $2 billion requested by the President. However I firmly believe they endorse the views of the minority as expressed in the amendment the gentleman from New York [Mr. TABER] will offer. We are trying to recoup all but $200 million of that amount requested by the President.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Illinois.

Mr. YATES. As the gentleman knows, I supported him and the gentleman from New York in the committee. The gentleman has stated the military assistance program is a part of the program of the defense of the United States. In the event this cut stands or there is a larger cut, will not the Armed Forces of the United States have to be increased?

Mr. FORD. I believe we will have to increase our own military appropriation to a substantially larger degree, because it costs much more to do it that way than this way.

Mrs. KELLY. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentlewoman from New York.

Mrs. KELLY. I believe the gentleman may have stated this in his argument on this bill, but I should like to ask it in this way: Any reduction in the military assistance program would fall most heavily on NATO and that area; is that correct?

Mr. FORD. I believe that is correct, because that is where your principal force improvement expenditure will materialize.

Mrs. KELLY. That is the modernization, and so forth, of NATO?

Mr. FORD. That is my understanding. That is where the missiles and the remainder of the equipment in that category will fall.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Virginia.

Mr. GARY. When the gentleman says we have $2,044 million unexpended as of June 30, 1960, that is not available for new obligation, it is available for expenditures in fiscal year 1961, and as those expenditures are made the materiel which they purchase and the programs for which they are intended will be financed to that extent during 1961. Is not that correct?

Mr. FORD. Those obligations have already been made out of appropriations we made in previous years.

Mr. GARY. But the materiel has not been delivered. It will be delivered in the next fiscal year, as that money is expended during the next fiscal year for the materiel delivered during that year?

Mr. FORD. That is correct. That is for the delivery of hardware which is in the pipeline, this pipeline of 15 to 18 months. The money we put up for fiscal 1961 will be to maintain that pipeline for the following 15 to 18 months.

Mr. MERROW. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from New Hampshire.

Mr. MERROW. I commend the gentleman on the fine presentation he has been making. He has referred to the Joint Chiefs of Staff and others who

have recommended this program. Those were the experts to whom I referred a few moments ago.

Mr. FORD. I thank the gentleman.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Minnesota.

Mr. JUDD. I merely wanted to point out that we could probably cut out the whole military program assistance appropriation in this bill and the deliveries would still go on, but where would we be next year? One reason we have to provide more this year is because of the unwise cut of $300 million below the authorized amount last year. We now have to appropriate an additional amount to make up for the failure to put into the pipeline the necessary amount to keep the deliveries rolling. Is not that correct?

Mr. FORD. That is correct.

I should like to make one statement before ending my remarks. The Secretary of Defense said in this release, dated June 15, 1960:

> In spending military assistance funds, it is necessary first to maintain existing allied forces in good working order and conserve the investment already made. Therefore the proposed reduction must come from cutting down on force improvement, that is, postponing indefinitely the newer weapons. Eighty percent of any cut below the budget request must be absorbed in equipment for force improvement, which includes missiles, electronic equipment, modern aircraft and ships, modernized tanks and combat vehicles, and the like.

I subscribe to the views of the minority which more nearly reflect the recommendations of the President and hope appropriate amendments are approved by the House of Representatives.

Mr. PASSMAN. Mr. Chairman, I yield myself such time as I may require to clear up some misunderstanding.

We want you to consider this matter upon the basis of facts, and nothing else. You know that much of the information that comes down here, especially if it is of such nature as to be helpful to the subcommittee, is classified. I mentioned earlier about a certain nation where it had been suggested that we discontinue shipping materiel. You will find something of that situation on page 2269 of the hearings. And I say further, without fear of successful contradiction, because this letter is dated March 1, 1960, that notwithstanding the fact the military had been informed prior to the completion of the shipment, that the shipping continued to such a point that there is now in excess of $100 million worth of new equipment that has been shipped into that nation.

Again, I invite your attention to the fact that so great has been the dumping of surplus equipment on nations, including material such as modern electronic items and other equipment to five nations alone, that there is probably $2 billion worth of equipment that has been dumped on these nations that they cannot use. Let us face up to it. If you want to see secret testimony—if you want to see secret letters, come over to this side. I am going to make them available. I know that you are all cleared for security. I am not going to be placed at such a disadvantage when I know that this is a strawman being set up. I want to go a little further.

This is not PASSMAN'S idea. I have discussed this matter with the distinguished chairman of the great Committee on Armed Services of the other body. I met with him at NATO headquarters in Paris. I talked with him at length. Then, only a day or two ago, he said to me, in effect, "I want you to know, and you may quote me on the floor of the House, I am convinced that this program is adequately financed with what you are recommending."

I went to practically every great military leader on this side of the aisle. They are supporting this recommendation. This is not PASSMAN'S idea.

The total amount of advanced weapons in this bill, such as airplanes, electronics, missiles, and so on, is only $611 million. Some of it will not be used until 1961 or maybe 1962 or 1963, because we are facing programs where we have not even signed the agreements with the countries on a matching basis formula. So let us keep this in context. I will be very happy for you to see the secret—the so-called secret—it is stamped "Secret" and I will respect it, of course—but read page 2269 of the hearings. Then come over here and read this secret material. Let me say that instead of a reduction of 20 percent you actually have an increase of 23 percent over what we appropriated last year for the military. I have some more information that I am going to submit when we reach the amendment stage in these proceedings. I am sure you know that the majority of the committee has judged soundly and is on safe ground.

Mr. TABER. Mr. Chairman, will the gentleman yield?

Mr. PASSMAN. I yield to the gentleman from New York.

Mr. TABER. I wonder, should the gentleman be playing fair with the House in not reading this material to which he refers so we may know what there is to it? If there is anything there that ought to be read, he ought to read it now.

Mr. PASSMAN. It is a secret document. I cannot read it and the gentleman from New York knows that. This is a secret document and you are welcome to come over here and read it.

Mr. TABER. Mr. Chairman, I yield such time as he may require to the gentleman from New York [Mr. HALPERN].

Mr. HALPERN. Mr. Chairman, we have before us at this time the all-important, vital mutual security appropriations bill for fiscal 1961, H.R. 12619. Once more we are faced with what tragically has become something of a numbers game.

Each year we seem to go through the same procedure of emphasizing funds available for expenditure in the coming fiscal year while ignoring or shunting aside the far more important factor of new funds to maintain the program at a level adequate for the defense of the free world and adequate to help new, young nations help themselves within the accepted norms of independence and self-determination.

Mr. Chairman, each year we seem intent on approaching the bill with our eyes on the ground, searching for shortcomings with which to whip the program into reduced form, instead of lifting our gaze to the long-term policies and challenges that will be determinative of our fate in the years ahead. To publicize high expenses for maintaining technicians in Iran is essential and constitutes an integral part of our duty as legislators, but to stop there is catastrophic. To do so is to fail to appreciate fully the tremendous successes of the program and the necessity for its continuation on a high plane.

Nothing could illustrate this better than an article in the March 1959 issue of the National Geographic magazine entitled "Life Under Shell Fire in Quemoy":

> The important thing is—

The author states—

> that people are eating more and living better.
>
> It is satisfying to an American to know that our foreign-aid dollars have been responsible for this. But what, I wondered would happen now that Quemoy was under fire. Would the program be wasted?
>
> "Wasted? Certainly not," insisted Mr. Hsu. "Look at it this way. If a weak man receives a blow in the face, he may collapse. A strong man can take the same blow and stay on his feet. The strength this program has given the Quemoy farmer in the past 6 years has made it possible for him to survive."

Instead of discussing policy—because that is what we are actually formulating in appropriating for the mutual security program—in addition to considering the expenditure of funds, we tend to concentrate on the latter to the detriment of the former.

Opportunities slip by that can never be retrieved. We ignore the pleas of the President, decide that a halfhearted effort against the grim and total Communist threat will be sufficient, and hamstring the execution of the program by insisting upon more and more inflexible commands in the bill.

Somewhere in the process vision is lost and the chances for our expectations for the future to materialize, are reduced.

The committee report points out that there will be available for expenditure in fiscal 1961, $8,154,365,000. The inference is that we can thereby reduce the amount of new funds to be provided for the program.

Shunted aside, regrettably, is the obvious fact that far more than half of that total is already obligated for projects planned a year or 2 years ago. These projects cannot carry the program forward in 1962 nor meet coming contingencies. Only the moneys we appropriate now can do that, and if we slash them unmercifully we endanger not only the future of the program but the entire free world.

I want to commend the Members who signed the minority report in which is set forth with clarity the consequences of drastic cuts in the military assistance

and defense support aspects of the program.

When it has been estimated by experts that we need to appropriate about $2 billion a year to satisfactorily maintain the military assistance program, it is a serious matter that the bill provides for the appropriation of $1.6 billion. It is difficult to comprehend just exactly what we are saving when we so cut the military assistance program as to imperil the improvement of our allied forces overseas, an improvement deemed necessary by our defense authorities.

The same criticism is applicable to the provision for the Development Loan Fund. Apparently oblivious to the necessary administrative procedures of committing funds prior to their final obligation, the report declares that some $298,850,000 of these so-called committed funds are available for expenditure in fiscal 1961, and therefore, it is inferred, we can reduce the appropriation of new funds to $550 million. As in the case of military assistance, the real factors of long production lead time and careful prior planning which tend to make necessary the existence of sizable amounts of obligated or committed funds, are unfortunately not even discussed.

Mr. Chairman, the President has asked for $4,175 million in new funds to continue the program at a level deemed adequate for free world defense and development. Authorization bills have reduced this to $4,086,300,000. H.R. 12619 reduces the amount available by another $700 million. Most of the cut will come from military assistance, defense support, and the Development Loan Fund. Our foreign policy advisers have requested figures in these categories substantially higher than those provided in the bill. I believe this House should carefully weigh the consequences of ratifying these reductions, and should make every effort to restore the program to the authorized amounts.

Equally distressing as the monetary cuts are the restrictions placed on the use of funds for several important programs, particularly the Indus Basin development program, loans to small farmers, the special program for tropical Africa, and the Puerto Rican Hemispheric Center for Cultural and Technical Interchange.

Not only have we pledged ourselves to contribute to the Indus Basin project, but our failure to provide funds endangers its whole development. The long years of patient negotiation to create agreement on the development of a fertile bread basket out of the Indus deserts will have been for nought. U.S. participation, which would involve, over a 10-year period, the provision of $177 million of grant assistance and $103 million in loan assistance, plus some local currencies, is a prerequisite to the success of this program. The development of the agricultural potentialities of the basin is important not only for India and Pakistan but to the entire free world, since increase of yield in the area will strengthen the two nations and thus benefit the rest of the free countries as well.

The small farmer program is one of high vision designed to enable cooperatives to acquire equipment essential to the cultivation of large acreages which in time will help solve the most basic problem of most underdeveloped nations, provision of an adequate food supply.

The prohibition on the use of funds for the construction of buildings under the tropical Africa program immediately interdicts the raising of small schools and medical structures, two of the most serious needs in these countries.

The elimination of funds for the Puerto Rican Center is to drastically hinder one of the most useful ways of promoting technical skill and knowledge in the Latin America area. The contributions that Puerto Rico has made in the past in teaching skills and processes to our neighbors to the south have been invaluable. Now this admirable program is to receive no boost from us. One of the objectives of President Eisenhower's tour of Latin America in the late winter will be jeopardized.

I do not believe that these prohibitions, these policy determinations, can redound to the benefit of the United States. Instead, I fear that we are once again letting opportunities slip away that in the long run can mean the difference between success and failure in our demanding struggle with communism.

Expert after expert has testified that the intensity of the struggle will increase in Asia, Africa, and Latin America. The elimination of these programs will only cripple our efforts in the very areas where we should be dramatically increasing them.

Mr. Chairman, I hope that efforts will be made to restore much of the funds that have been cut by this bill. Statesmanship and concern for the future of our Nation and of the free world dictate that this is the only wise course. This does not mean that misfeasance is to be condoned. We must continue to root out such situations wherever they occur. It does mean, however, that our approach to the program should not be governed almost entirely by our reaction to these isolated occurrences. We have too much at stake. The Communist challenge to our civilization is too ominous.

Mr. TABER. Mr. Chairman, I yield 8 minutes to the gentleman from New York [Mr. DOOLEY].

Mr. DOOLEY. Mr. Chairman, I am not a member of this distinguished committee and I feel rather reluctant to speak on this bill. I have the most profound respect for the distinguished gentleman from Louisiana, as well as for the ranking Republican member on the committee, the gentleman from New York [Mr. TABER]. However, the circumstances surrounding the mutual security program remind me of a situation which developed a short time ago. It happened 2 years ago in California. The coach of a great team out there had lost six games in a row. The gentleman from New York asked him one day what had happened to his team, that it could not seem to win. He said: "Well, the boys have a mental block when they get down to the 10-yard line. When they get down to the 10-yard line, they disintegrate, lose their sense of rhythm and attack." He seemed to emphasize that the 10-yard line, was a psychological barrier or mental hazard. So the gentleman from New York said: "Well, that happens to a lot of teams when they get to the 10-yard line." He said: "I am talking about my own 10-yard line, not the opposition 10-yard line."

Mr. CANFIELD. Mr. Chairman, will the gentleman yield?

Mr. DOOLEY. I yield.

Mr. CANFIELD. I think the gentleman now addressing the House can qualify as an expert on the 10-yard line. In yesteryear he was Dartmouth's all-American quarterback. Football history shows he was a great scorer, and I believe he still holds an intercollegiate record for forward passes.

Mr. DOOLEY. I thank the gentleman from New Jersey. This was not prearranged, I assure you, Mr. Chairman.

Mr. Chairman, I rise in support of this most important appropriations measure. I deplore the decrease by the Appropriations Committee in the amount requested originally. If ever there was need of a mutual security program—and certainly there has been much need—it is now, now, when our posture in world affairs is critical, and the future status of a number of our allies stands in doubt.

Ever since the U–2 incident splashed itself in headlines across the country, and brought about a volley of vindictive threats from Khrushchev, Americans by and large have been more eager to see our mutual security program implemented effectively. They know, as we know, that without the supplemental support guaranteed to a host of Nations who participate in the program, we would resemble a solitary yet gallant soldier, standing alone in a field of despair.

We do not have to apologize for our military assistance program, for which the bill authorizes almost $1½ billion for carrying it forward.

In addition to the parts of the program included in the authorization, the Executive requested a total appropriation of $2,720 million against authorizations already in effect, of which $2 billion is for military assistance and $700 million for the Development Loan Fund.

We need not defend such a vast expenditure on the basis of generosity, morality, altruism, or responsible leadership in the free-world bloc. Rather can we say that stark reality and objective self-interest dictates that this is a major device to counter the threats of communism.

Because of our mutual security program, it is an established fact that in the event of hostilities only 10 percent of the ground forces that would come under the NATO leaders command would be American troops.

In the volatile Far East, the commander of the allied forces would have to rely largely on non-Americans, to sustain and maintain his forward strategy, in time of war.

Only a small force of U.S. soldiers, sailors, airmen, and marines form a nucleus of an allied force of almost 2 mil-

lion men, which in the event of war would provide a deterrent band of resistance in the Pacific area, rather than on our own western coast.

Of the 21 operational divisions in Korea, only 2 are made up of Americans.

In Spain, there is a close relationship to assure the maintenance of a retaliatory force.

There is no doubt in the mind of anyone who has given even a cursory examination to all segments of the mutual security program that there has been great and unpardonable waste in certain areas, particularly in the field of economic assistance. All too often in the past administrators of the mutual security program have overestimated the capacity of less developed countries to absorb and assimilate our opulent assistance. Then, too, projects have sometimes been initiated for which the United States was not in a position to give intelligent and pragmatic guidance and supervision.

However, it is generally believed by most knowledgeable adherents of the program that our national security and future peace depend in large part on improving the means by which this complex undertaking can be made to work more effectively, rather than to curtail drastically the aims and scope of the program.

One of the chief drawbacks has been the fact that some of the governments receiving military and economic assistance lack previous experience in administrative and technical fields, have little aptitude for mechanical contrivances and modern accounting methods, and sometimes their ethical standards are widely at variance with our own.

In such a program, well-conceived efforts are sometimes thrown into complete confusion by directives from Washington which show no understanding of the complexity of the problem on the local scene. In other words, we must realize that regardless of how painful it may be to our sense of economy there may be cases where there is waste despite all efforts to be meticulous in regulating and supervising expenditures.

Where are these so-called underdeveloped countries? They are Cambodia, Taiwan — Nationalist China — Greece, Iran, Korea, Laos, Pakistan, the Philippines, Spain, Thailand, Turkey, and Vietnam.

No less than 11 of these 12 are in the periphery of the Soviet bloc, and the twelfth is within easy striking range. Superior Communist forces are on the borders of Korea, Taiwan, and Vietnam. Yet, combined, these countries maintain forces of 1 million men. Bilateral treaties exist between the United States and the three countries I just mentioned.

Speaking of those nations we call underprivileged—there is one close to our national threshold that should be receiving aid from us, and if it does not it will surely fall prey to the blandishments of communism. That country is Haiti, and it is teetering on the verge of fiscal chaos and national panic. With Cuba lost to the western orbit, Haiti has increased political significance to us, and if we see it lost it will indeed be a tragic occurrence.

Let me say that the military assistance program is a vital and integral part of our defense. The four Chiefs of Staff make their strategic plans so that we can depend upon effective allied contributions generated by our military assistance program.

The assistance engendered by this program costs us far less than any alternative means of strengthening our defense in equal measure. Some reasons why this is possible are: It costs less to maintain allied forces than American forces. The cost of living in some of our allied countries is only one-tenth of what it is in the United States.

To those who feel we could afford a cut down on our military aid program, let me remind them that within our memory—within the memory of all of us, Russia has absorbed into its boundaries Latvia, Lithuania, Albania, Yugoslavia, Czechoslovakia, and a host of less noteworthy national entities.

Certainly now is not the time to weaken our assistance to our allies—to peoples who, proximate as they are to the Soviets, nevertheless stand up gallantly for their own sovereign rights. Turkey, under the guns of Russia and torn with internal strife, has not waivered in its allegiance to the Western World. Taiwan remains a bulwark of strength close to the shore of Communist China. Spain, regardless of what we might think of its form of government, is the most powerful deterrent force to Russian aggression in Europe today.

The whole trend of current events calls for a continuance of a maximum mutual security program—more so than ever. We cannot at this critical time withdraw the shield of protection for assistance to our allies.

As the well-known majority leader of the Senate said recently—America's one hope of victory lies in standing together with our allies.

Mr. PASSMAN. Mr. Chairman, I yield 10 minutes to the gentleman from Kentucky [Mr. NATCHER].

Mr. NATCHER. Mr. Chairman, I believe that the free world must remain defensively strong if we are to continue to keep the peace.

I know that following World War II some of the leading nations in the world were facing economic collapse. At that time, property damage amounted to billions of dollars and millions of people had lost their lives. The Marshall plan saved our friends in Western Europe.

For nearly 15 years, we carried the mutual security program burden alone. During this period, we appropriated and expended over $80 billion.

The bill before us today provides for $3,384,500,000, for mutual security appropriations for the fiscal year 1961. In addition, an estimated $52,514,000, in unobligated funds as of June 30, 1960, is reappropriated. The major items in this bill and our recommendations are as follows:

Item	Estimates	Recommended	Bill compared to estimates
Military assistance	$2,000,000,000	$1,600,000,000	−$400,000,000
Defense support	724,000,000	600,000,000	−124,000,000
Technical cooperation	206,500,000	184,500,000	−22,000,000
Special assistance	268,500,000	206,000,000	−62,500,000
Other programs	101,000,000	94,000,000	−7,000,000
Contingency fund	175,000,000	150,000,000	−25,000,000
Development Loan Fund	700,000,000	550,000,000	−150,000,000
Total	4,175,000,000	3,384,500,000	−790,500,000

Mr. Chairman, the amount recommended in this bill is fully adequate for the mutual security program for fiscal year 1961.

At the present time, we still have the economic power to win the cold war, but certain changes in our aid and trade programs must take place. Our fiscal integrity must be maintained and we should not jeopardize our economy.

Western Europe is prospering and it is back on its feet. It is busy setting up the Common Market countries' agreement and the Outer Seven trade bloc. Of course, this is right unusual treatment to receive from those who have received so much from us since the close of the war.

Beginning with the Marshall plan, it was to our interest to encourage foreign aid recipients to buy from countries other than our country. We sanctioned restrictions of imports on our own merchandise. We made every possible move to get our friends back on their feet.

Today the situation has changed. Instead of being the recipient of a surplus of balance-of-trade payments, the reverse is true.

Foreign trade is a part of our foreign policy, and certainly the time has arrived when we must talk quite frankly to our friends. With $19.5 billion in gold in this country, we have outstanding claims abroad against our gold amounting to approximately $9 billion. Certain individuals and foreign corporations also hold some 7 billion of our dollars. It requires $12 billion in gold to support the outstanding Federal Reserve notes and deposits in Federal Reserve banks in our country. If the foreign holders of claims demanded their gold, it would simply mean that we would have insufficient gold to back up our Federal Reserve notes and deposits in the Federal Reserve System.

Even though our exports exceed our imports in value, our export of dollars through mutual security, military aid, economic aid, and loans is such that we are permitting a loss in gold credits which has reached the danger point.

Development of nuclear weapons has brought us to the point where warfare can hardly bring victory. Our future course of action must meet present-day requirements. We are living in an age

which requires us to compete for men's minds and hearts.

Accepting the philosophy that our foreign aid program is an investment in strength and democracy still does not mean that the waste in this program should continue.

We know full well that millions of dollars have been squandered in the mutual security program, and in a number of instances our foreign aid dollars have not been used for the purposes for which they were given.

During our hearing, several matters were developed in detail which should now be receiving the attention of the Inspector General and Comptroller.

It was established that a nonprofit institution known as the Governmental Affairs Institute entered into a contract with the ICA on February 12, 1957. This contract was to expire on June 30, 1960. The total amount involved was $1,113,000, and the Governmental Affairs Institute was to advise and guide the plan of organization in Iran using 12 management specialists in various fields. This contract involved technical cooperation and the specialists were to be used in organization, personnel administration, accounting, auditing, budgeting, statistics, and general reports. Beginning on page 1131 of part I of the hearings and continuing through 1206, you will find this sad story.

Of the 12 technicans, 9 were former Government employees. Some received salaries of $18,000 per year, and others were paid by the week and by the day. In one instance, one of the officials of the Governmental Affairs Institute who by the way received a salary of $10,000 a year, also received some $6,025 which represented payments at $100 per day for time spent in Iran and for time spent on this program. Of the total amount involved, $228,530.43 is for overhead; $20,758.15 was for transportation of automobiles; $12,438 was for air freight for excess baggage; $24,605.41 for transportation of household effects; $90,909.85 was for travel of technicians; $20,158.15 was for international travel from here to Iran; $5,368 was for travel allowance in the United States; $12,000 was for out-of-pocket expenses; $39,000 was for a retirement system; insurance premiums totaled $4,653.04; social security taxes amounted to $5,958.98; educational allowances totaled $14,400.51; $18,191.77 was consumed in travel for the senior committee of this institute; and $596,-235, is for salaries.

A chart appears on page 1169 covering the period from February 12, 1957, through March 31, 1960. During this period, all of the 16 employees of the Governmental Affairs Institute received total base pay amounting to $408,616.33. One of the technicians received $32,-983.69; another received $30,083.33; another received $38,461.75; another received $58,794.91; another received $40,-992.26; another received $39,706.24; and so on down the list. You will note that the salaries range from $5,265 to $18,000.

On page 1200 you will find a chart which discloses the fact that the vice president, secretary, and acting treasurer of this nonprofit institute receives an annual salary of $17,000.

The technicians used in the Iran program under this Governmental Affairs Institute contract cost our Government $28,200 per man each year. Technicians employed by ICA under the technical cooperation program cost the Government approximately $17,000 per year. The amount provided for under the Governmental Affairs Institute contract as you can see is nearly double.

We must keep in mind that we have passed the point when the noncommunistic world is willing or forced to look only to us for economic aid. A number of countries assisted by us in the past now believe that we have a competitor in the Soviet Union. Some are now bargaining with Russia and with our country.

We now have problems in our own backyard.

Today, Russia is attempting to exert more influence in Latin America through trade and propaganda offenses than at any time in the past. We know that the 20 Republics of Latin America comprise an area of almost 8 million square miles and the total population is about 185 million, and Latin America is the fastest growing area in the world. While the rate of industrial progress in Latin America in the past several decades has been phenomenal, the economy of the region as a whole is still essentially agrarian and mineral. Too many countries are still dependent upon one native commodity, such as coffee, sugar, copper, or tin. As a consequence, fluctuations in world markets can raise havoc with national economies.

We know that economic progress is a very important factor in preventing the spread of communism in Latin America, but economic progress is not a cure-all. It will not guarantee peace and democracy. But it can provide jobs for the jobless and land for the landless. It can provide satisfactory outlets for restless intellectuals and it can reduce the tensions within, and the clamor for crusades against those outside. It can replace apathy and disaffection with hope and confidence. This should be the nationale for our foreign-aid program in Latin America.

Mr. Chairman, we must remain strong spiritually, economically, and militarily in order to preserve our freedom and the peace of the world. To justify the appropriation of funds for this particular program, it is imperative that we eliminate all waste and duplication. Total funds available for expenditure in fiscal year 1961 amount to $8,154,365,000. The unexpended funds total $4,713,665,000, and this amount together with the new money in this bill, and the reappropriated funds give us the total which I have just mentioned. The amount recommended in this bill is fully adequate for the mutual security program for fiscal year 1961.

Our committee recommends this bill to the Members of the House.

Mr. TABER. Mr. Chairman, I yield 19 minutes to the gentleman from Massachusetts [Mr. CONTE].

Mr. CONTE. Mr. Chairman, before proceeding with some of my objections to the cuts in this bill and the restrictive limitations I should like to discuss some of the remarks made by my chairman. I would like to quote from his speech on the floor here today:

> No one is going to tear my figures down, try as hard as you may.

Mr. Chairman, the gentleman sent to every Member of Congress a fact sheet, "Mutual Security Dollar Funds by Program and Amount," showing the total available for expenditure. Having great respect for my chairman, as I do, I took his word; but I thought I would tabulate these on the adding machine for human error. He has a total here of unexpended funds of $4,713,665,000.

In tabulating these figures on the adding machine, the total came to $4,715,-565,000.

I further investigated his figures, I became interested and intrigued, and I noticed that on defense support he had an unexpended figure of $758,601,000. I checked the committee report voted on by the majority of this committee and I found in that report the figure was different. Instead of $758,601,000 the committee report, which I understand is correct, is $758,001,000.

I then investigated further, Mr. Chairman, and I found the technical cooperation, bilateral figure in error. In the report that he sent to the Members of Congress he had a figure of $168,417,000. I then again checked the committee report and the committee had a figure of $167,617,000.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield.

Mr. PASSMAN. Those people will change their figures as frequently as the sun rises. All of my figures will stand up to the dollar. If the gentleman does not understand the facts of the matter it is not my fault.

Mr. CONTE. These are the figures he sent around to the Members of Congress. Here is the committee report. These do not come from downtown. Check them, compare the two. Put them on an adding machine.

He mentions the public debt of the United States and says that it is greater than the total debt of all countries we are giving aid to. Let us take his famous cuff-link formula which he used about a hundred times in committee, about the $36 cuff links he bought in Hong Kong. He stated he could sell them in a jewelry store for $165 here in the United States, a ratio of $36 to the $165. However, for the purposes of this analysis, the disparity needs to be flattened out by one-third since only two-thirds of the listed countries are underdeveloped. For general purposes, 25 to 100 or 1 to 4, we find, Mr. Chairman, the total debt of these countries is $236 billion. Using his formula, the cuff-link formula, times four, comes to $944 billion compared with $288 billion of the United States. This is not my formula, this cuff-link formula that we heard so much of in committee.

Mr. Chairman, I rise in support of the amendments that will be put forth here today in the military and defense support fields because I feel that these cuts are of a crippling nature to the pending bill. I am also concerned, Mr. Chairman, with many of the limitations inserted

by this subcommittee on point 4 program.

The chairman can laugh all he wants. He can try to take the prerogative away from the Committee on Foreign Affairs. That is what he is doing here today. There is limitation after limitation here. Only a few weeks ago this Congress endorsed the Indus Basin project in the authorization bill. The chairman says, "I will cut the pins from the Indus Basin project. I will put a limitation in there. They will not be able to spend a plugged nickel." He did that in program after program. He is going to establish the policy of the Nation.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I decline to yield to the gentleman from Louisiana.

Mr. Chairman, I support the mutual security program and am in opposition to a number of crippling features of the pending bill. The minority report stresses two of the significant deficiencies of the bill—the unwarranted heavy reductions in the military assistance program and in defense support—unwarranted on the evidence before the committee—unwarranted by the facts of the world situation—and contrary to the firm and convincing judgment of the President, the Joint Chiefs of Staff, and the Secretaries of State and Defense.

I believe the severe reduction in special assistance endangers both short-run security programs and long-range humanitarian and progressive objectives

I am also convinced that a number of provisions of the pending bill, other than on appropriation amounts, would seriously handicap the United States in the pursuit of our necessary responsible role as a leader in the move toward world peace. Specifically, I oppose the placing of shackles on technical cooperation, the gross delimiting of the contingency fund, the rejection of our necessary part in the solution of the troublesome Indus waters problem, and the illogical narrowing of the special program for tropical Africa.

MILITARY ASSISTANCE

I strongly support the statements by my colleagues from New York and Michigan in regard to the partial restoration of the Military Assistance Acts.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I am glad to yield to the gentleman from Virginia.

Mr. GARY. Is it not a fact that practically every one of these limitations was supported by the members of the committee on your side of the aisle?

Mr. CONTE. They certainly were not supported by me.

Mr. GARY. That is not an answer to my question. Were they not supported also by members on your side of the aisle?

Mr. CONTE. Mr. Chairman, I can only speak for myself. I oppose them and I took reservations because I knew I was going to speak on them here today.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Illinois.

Mr. YATES. I would like the gentleman to know, as he well knows, that I, too, took reservations on the restrictions and I stated specifically before the full committee that I was going to reserve on a number of the restrictions and limitations that were in the bill.

Mr. CONTE. The gentleman from Illinois and I were going to file additional views but, unfortunately, through a technicality, that was ruled out by the chairman.

Mr. PASSMAN. I beg the gentleman's pardon. I was not even consulted relative to such a proposal. What does the gentleman mean when he says that the chairman ruled it out?

Mr. CONTE. I did not say the chairman of the subcommittee. This is the chairman of the full committee.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Illinois.

Mr. YATES. If I may clarify that point, I think what the gentleman from Massachusetts meant by that was that he made an inquiry as to whether he could file separate views on the report, and it was the ruling of the chairman of the full committee, and not of the subcommittee, as to the filing of these separate views.

Mr. CONTE. Mr. Chairman, I cannot yield further.

In regard to defense support, the committee proposed $600 million. This is 47 percent below the program just 3 years ago. It is 23 percent below the program of the current year. The Executive has described to us plans for further progressive reduction in the immediate next years for many of the defense support countries. We should all take pleasure in the improvements of the conditions which have permitted these reductions and which promise more reductions in the future. However, make no mistake, Mr. Chairman and Members of the House, it is the improvements in the economic and administrative systems of these nations which makes this possible and not, I repeat, and not because of the aggressive intentions of the Soviet bloc being lessened.

TECHNICAL COOPERATION

In addition to a reduced appropriation, which with authorized carryover will be under the current year's level, this program would be shackled by a restrictive provision in the committee bill. The prohibition against starting technical cooperation projects which are not presented in the Executive's proposed program introduces unworkable rigidity into this bipartisan program.

SPECIAL ASSISTANCE

I also wish to call to the attention of the House the possible harm to our security interest in the serious reduction of $50 million below the authorization which is proposed for special assistance. I am concerned with the very difficult job which will face the President if he has to live with this reduction which is nearly 25 percent below the request, particularly in view of major requirements of vital security interest which must be met from special assistance—strategic airbases in Morocco and Libya, support to Jordan without which violence in the Middle East would almost certainly erupt—oil and communications, as well as the threat of world war involvement—maintenance of effective operations in Afghanistan on the Soviet border and recipent of vast Soviet aid.

These four critical programs with the malaria eradication program which the committee report leaves untouched come to 78 percent of the appropriation proposed. These figures cannot be reduced without hazard. Accordingly, the remaining requirements must be subject to very drastic reduction which the President may find impossible. Other proponents have urged the untouchability of other worthy elements of special assistance. The Committee on Foreign Affairs urged maintenance of the programed figure for the special program for tropical Africa and also in its report recommended a higher level for Israel than was programed by the Executive. The Senate Committee on Foreign Relations recommended retention in full of the African program and the health and related activities.

Consideration of a reduction of almost 25 percent in this appropriation poses a most difficult dilemma to the House, as it will to the Executive. The dilemma is that of the choice between the long-range good and the short-range imperative. The choice is between military bases and full support to the malaria eradication program, between staving off certain collapse of Jordan and aid to American-sponsored schools abroad, between maintenance of an operating toehold in Soviet-courted Afghanistan and the longer run education task in tropical Africa, between averting probable chaos in Bolivia and Haiti and international medical research.

I do not wish to thrust this type of cruel choice on the President. I recognize the clear and present dangers which dictate much of the special assistance program. I subscribe wholeheartedly to the enduring merits and cumulative values contained in its constructive forward-looking elements such as the malaria program. At the low figure in the committee bill, the long-range will inevitably suffer under the pressure of the immediate and urgent.

CONTINGENCY FUND

Mr. Chairman, I also am disturbed by the limitation on the ability of the President to meet security pressures which may occur—a limitation imposed by the restriction on use of contingency funds. The provision on contingency might preclude speeding up or increasing a vital security program as it is now worded. It states that contingency funds cannot be used for projects or activities for which an estimate has been submitted to Congress.

There have been estimates submitted for modernization of armies of a number of allies; for base construction in key areas, that is, the Philippines; for long-range economic stabilization programs essential to political and military posture, as in Turkey.

Activities of these types have had to be accelerated in the past to confront crises—in the Middle East and in the Far East.

Estimates have been submitted for these programs. I fear that the contingency limitation might be interpreted as limiting the ability of the President to accelerate deliveries, rush construction, or otherwise act rapidly and effectively. Reductions already made in the President's request for other categories will require programing below the estimates. Can we afford to prevent the President from using the contingency fund to restore the reductions? I submit that we cannot so handicap ourselves.

INDUS BASIN DEVELOPMENT

The bill reverses the recent action of both Houses of Congress and prohibits U.S. participation in the multination plan to assist in the resolution of the Indus waters question, which has plagued two major and friendly nations for some years. I strongly urge that this provision be stricken so that we may join with the other contributing nations to permit India and Pakistan—with nearly a quarter of the world's population—to address themselves even more fully to peaceful, constructive pursuits.

SPECIAL PROGRAM FOR TROPICAL AFRICA

The Executive has presented a strong case for a long-run program to assist the old and the many new, small nations of tropical Africa to begin to train leaders, administrators, engineers, doctors, and other technical personnel. Without these they will not be able to govern themselves or function in world society and would as a direct consequence sink into chaos—subject to infiltration or exploitation by African or other aggressors.

The bill permits this program of vital education and training to move ahead but refuses funds for construction of training institutes or facilities. This is almost like saying "hang your clothes on a hickory limb, but don't go near the water." To my mind this is absurd and dangerous. We must not allow the advantage—temporary I hope—which the Soviet bloc has gained by rapidly moving to build and staff a technical institute in Guinea to be duplicated elsewhere by imposing limitations on ourselves.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Illinois.

Mr. YATES. Is not the most critical thing that is needed in Africa facilities for the training of administrators, personnel, and so forth?

Mr. CONTE. Yes. We are not going to train them in the burning sun down there. We have to have buildings so that we can train them ably. This is the most ridiculous amendment.

CONCLUSION

These are times which call for confidence, in ourselves, in our friends and in the prospects for our form of society in a peaceful world. In this confident spirit—within our demonstrated great capacity—we must continue prudent mutual defensive programs as well as cooperative, constructive activities. The pending bill—in a number of its recommended amounts and in a number of its restrictive provisions—fails to measure up—confidently—to the tasks of security, peace and progress for the United States and the free world.

I hope this Congress in its wisdom will restore back in part, at least, the money in the military assistance program and in defense program which I will offer in an amendment later on today, and take away some of the shackles that now exist, take away some of this restrictive language which will tie the hands of the Administrator of the mutual security program.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Iowa.

Mr. GROSS. Can the gentleman give me any idea as to how much in the way of U.S. securities the recipient nations hold? It seems to me I have somewhere seen a figure of approximately $4.5 billion that the recipient nations of this foreign aid handout program hold in U.S. securities—foreign governments, banks, official institutions, and individuals.

Mr. CONTE. Is that the governments or individual holding the securities?

Mr. GROSS. Both.

Mr. CONTE. I think the gentleman will find that those are certain individuals in these countries who hold American securities.

Mr. GROSS. To the extent of $4.5 billion, approximately.

Mr. PASSMAN. Mr. Chairman, I yield myself 1 minute so that I may reply briefly to the able and congenial gentleman, my colleague from Massachusetts, Mr. CONTE.

After having served in the House, as I have, for 14 years—12 years on the Appropriations Committee, 8 years on the subcommittee, and 6 years as chairman—maybe the gentleman will come to have a little bit more faith in the committee. Let me say to the gentleman that I am not going to put out any erroneous figures. I stay in touch with the Department, and I hold in my hand a letter dated May 27, 1960, showing that $79.9 million will accrue to the mutual security program:

Military assistance, mutual security military sales collections, $40 million; Development Loan Fund, receipts from operations, $38 million; defense support, $600,000; bilateral technical cooperation $800,000; and administrative expenses, ICA, $500,000; making a total of $79.9 million.

So, if the gentleman from Massachusetts would like for me to have this letter mimeographed and to send him some copies, I will do so, and he will be in possession of the true facts.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

Mr. PASSMAN. Mr. Chairman, I yield 13 minutes to the gentleman from Alabama [Mr. ANDREWS].

Mr. ANDREWS. Mr. Chairman and members of the committee, I do not believe that if the members took the report of the Comptroller General—and it is in the hearings—and read it, you would have any fear about harm being done to the ICA program under the committee bill. As our chairman pointed out, on November 2, 1959, in the Wall Street Journal, we found this story:

> The State Department, the overseer of the economic and military aid, is pressing for a larger request, officials disclosed, on the ground that congressional paring may reduce the aid requested to dangerous levels.

Those of you who have been around here for a long time know that it is almost a uniform custom of bureaucrats coming to Congress and asking for more money than they need. And, I think that is exactly what happened in this case.

One of the finest Government officials that I have ever known is a member of your party, an appointee of your President, Mr. Joseph Campbell, the Comptroller General of the United States. He is a dedicated, conscientious public official. He came before our committee last year and said:

> If there were less money available, there would be a better job done.

He was speaking of this ICA program. He came back this year on May 16 and again told our committee, and I quote:

> I am still of the same opinion that if the program had more competent people in it, with the present amount of money, they could do a better job.

Now, as our chairman pointed out to you, this program over all will have more money in 1961 than in 1960. It is estimated that there will be approximately a $52 million unobligated balance on July 1.

Now, if you Members would take the time and read the RECORD and find out for yourselves how your tax money is wasted by these people in ICA, I do not think you would have any hesitancy about supporting the subcommittee and the full committee on the amount recommended in this bill. We do not have time to tell you about all the cases of waste, extravagance, and mismanagement. But, we spent 12 weeks checking into this program.

The Comptroller General spent 2 full days with our committee. He said that—

> Equipment has been furnished to many countries in excess of their capability to utilize it adequately, due in large part to the lack of trained personnel. For example, in one country, reports from using units indicate that there are only about 40 percent of the needed radio operators and that receipt of newer, more complex equipment would aggravate this problem.

In other words, in one country they had shipped in far more radio equipment than they had personnel to operate the equipment. He said further:

> In some countries, aircraft have been delivered in quantities in excess of the number of available qualified pilots. For example, in one country there were about two jet aircraft available for each pilot, including instructors.

He said further:

> Our examinations frequently disclose that the program submissions prepared by the MAAG's contain equipment to meet training requirements although like equipment is apparently available from quantities furnished units which are only partially staffed.

For example, 255 tanks were programed for 5 tank battalions having active strengths of only 6 people each, or a total of 30 men for the 255 tanks.

I repeat, this record is literally filled with examples of waste and mismanagement. I am sure you have heard of a very, very plush contract, shall I say, that ICA made with the Johns Hopkins Institute. The total amount involved was but $80,000, but that is not peanuts, as they say in my country. It is a good example to show what a reckless attitude these people have toward taxpayers' money. They made a contract with Johns Hopkins Institute for a lecture course. And that is what it amounted to; it was not a school in any sense of the word, just a series of lectures. And I will say this for them, they lectured those ICA employees to death. Under the terms of the contract they told us that the school was to operate 5 days a week, 8 hours a day, or 40 hours a week. We investigated and found that they did not have classes in the afternoon except once or twice a week. We sent an investigator down on an afternoon to see how the school was being operated. The program of lectures is set out in the record on page 1027 of volume I and I think you will find the subjects on which they were lectured very, very interesting.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. ANDREWS. I yield to the gentleman from Iowa.

Mr. GROSS. I went out to this same institution one afternoon about a year and a half ago, walked in, and there was not a wheel turning in the place.

Mr. ANDREWS. It is a little better now. When our staff investigator went there there was one student and one lecturer, however, there was no lecturing going on at the time.

Mr. GROSS. When I was there there was not a wheel turning.

Mr. CAHILL. Mr. Chairman, will the gentleman yield?

Mr. ANDREWS. I yield to the gentleman.

Mr. CAHILL. Will the gentleman explain to me this? I recognize that the gentleman is making a case on the abuses. I am wondering what the committee has done by way of removing from Government service the people who are responsible for these abuses, so that there will be no repetition of them in the future.

Mr. ANDREWS. Unfortunately, this committee has no jurisdiction in that area.

Mr. CAHILL. What recommendations have the committee made?

Mr. ANDREWS. The best way you can stop those abuses is to cut the amount requested, as the committee has done. We do not hire those people, and cannot fire them.

Mr. CAHILL. Has the committee made any specific recommendations in the report or anywhere else as to the responsibility?

Mr. ANDREWS. I think making recommendations to ICA would be like pouring water on a duck's back. They told us they overrode a recommendation we made in last year's report. They paid no attention to it.

Mr. CAHILL. Does not the gentleman feel that the publication of the names of the people who are responsible for these mistakes might accomplish some good?

Mr. ANDREWS. They are in the record.

Mr. CAHILL. The individuals that are responsible?

Mr. ANDREWS. Yes. You will find in the hearings the name of the man who said he was responsible for making the contract.

Mr. CAHILL. He is still connected with the Government?

Mr. ANDREWS. He is still connected with them.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. ANDREWS. I yield to the gentleman from Iowa.

Mr. GROSS. If I read the hearing record correctly, we are spending $100,000 in Israel to teach some of the people of that country how to run banks and lending institutions.

Mr. ANDREWS. I would not say that is a bad program, as bad as some of the others.

Mr. GROSS. I think the people of Israel could teach most of us a lot about banking. They have been in the business a long time. They know how to do it.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. ANDREWS. I yield to the gentleman from Virginia.

Mr. GARY. There is considerable money in this bill to improve the farming situation in various countries. It seems to me I have heard some rumors of the fact that our own farm situation is not altogether satisfactory. We might start at home in our farm improvements.

Mr. ANDREWS. In conclusion, let me say this. I want to tell you one other thing about the Johns Hopkins Institute contract, just to show you how your money is being spent. They gave the committee a list of lecturers. Bear in mind that all of the students were well-paid employees of ICA. They are on the payroll at a pretty good salary, if I remember correctly, upward of $8,000 each, some of them $14,000 and $15,000. They are men who have been with the program a long time. They were supposed to go to school 8 hours a day, 5 days a week, and they went only to morning sessions except for a few occasional afternoon sessions.

They gave the committee a list of the lecturers, one of whom was a staff member of a committee over on the Senate side. He heard about it, and he wrote a letter. You will find his letter on page 1327 of part II. In that letter he said he had never lectured at that school, he had never been consulted about lecturing there, and he knew nothing about it. A little thing, but, for that 5-month school, which was supposed to run 8 hours a day, 5 days a week, but which as a matter of fact operated only in the mornings except two afternoons a week, ICA paid Johns Hopkins Institute $4,000 per student. That was the tuition, $80,000 for 5 weeks. I will venture to say there is no institution in the world charging any such tuition fee as that. That is one of the ways in which your money is wasted.

I say to you in all sincerity that I think the amount of money in this bill recommended by your subcommittee and the full committee is ample to get a wonderful job done if they will just bear in mind what Mr. Joe Campbell said: "If there were less money available there would be a better job done."

Mr. PASSMAN. Mr. Chairman, I yield 10 minutes to the gentleman from North Carolina [Mr. ALEXANDER].

Mr. ALEXANDER. Mr. Chairman, we debate the mutual security appropriation bill today in an international atmosphere charged with great danger to the United States and the other nations of the free world. During the past several months we have seen a rapid decline in the prestige of the United States abroad and a grave increase in tensions between the free nations and the Communist bloc.

Certainly, we have seen a change in the Government in Korea, the situation in Japan, the agitation in Turkey and at no time in the history of our country have we had a period fraught with more danger to ourselves and our allies. At no time in the past have we been in greater need of strong, dependable allies overseas.

Mr. Chairman, it is a recognized fact that the United States cannot stand alone in the battle against communism. For this Nation to attempt to win the struggle alone that is taking place in the world for the minds of men would be to invite disaster. The great effort required to protect the free world and guarantee dignity for mankind depends not only upon the military and economic strength of the United States, but the good will and military resources of our allies in every part of the world.

Our military and defense support programs are essential if our allies are to have the means of resisting communism. It is imperative that we continue these programs, especially at this critical period in our international relations. The Communists fear only strength, and we would be taking a grave risk to the security of the free world if we did not continue to make available to those stanch allies of ours overseas, resources whereby they can join the common goal of the West in preserving freedom.

The mutual security bill, as reported by the House Committee on Appropriations, contains, I believe adequate funds for our military assistance and defense support programs. I believe the funds, as provided by the committee, are necessary to carry on these essential programs. There should be no further reductions in the funds provided, as I fear such action will only increase the tempo of the Communist bloc to intimidate our friends overseas.

I want to make myself abundantly clear. I believe the funds provided and made available in this bill are, in my opinion, much higher than I would have ever guessed several weeks ago. I believe the committee has been very responsive to the changing international

situation. The committee recommends an appropriation of $1,600 million plus the reappropriation of unobligated balances remaining available on June 30, estimated to be $35 million. The recommended amount is $400 million below the budget estimate, but this is important—it is $300 million more than was appropriated for the fiscal year 1960. The recommended amount of $1,600 million plus military sales receipts of $40 million and $2,079,246,000 in unexpended funds as of June 30 will provide a total of $3,719,246,000 for expenditures in fiscal 1961.

Funds are available. The committee recommended appropriations for 1961 of $3,384,500 plus other funds on hand. This will make available $8,154,365,000 for expenditure in the fiscal year 1961. The comparable figure for July 1, 1959, was $8,111,521,750.

In my opinion this will give us adequate funds.

The question has come up as to whether or not under the military assistance section of this bill there are sufficient funds to take care of us in the situation today. It is my candid opinion that there are ample funds and that the committee has taken the international situation under consideration and has made allowances certainly that will give to the State Department and the head of the ICA plenty of room in which to maneuver and to operate. Frankly, there are many instances in this program—I could cite instance after instance, but I am not going to take your time to do so—to show the weaknesses of this program. I certainly have grave doubts as to the accomplishments of this program through the years, because since 1953 it seems to me that our foreign relations are in worse shape, even after we have spent billions and billions of dollars, than they were many years ago when we were not using foreign aid as a basic plank of our foreign policy. I have been opposed to much of the mutual security program in years past but I want to be secure and I will go along with the Committee on Appropriations as far as the military assistance and defense support section of this bill is concerned. There are, however, many other sections in this program which I cannot support. In addition to military assistance and the defense support program, we have the Development Loan Fund, the development assistance, the special assistance, the President's Asian Fund, the President's Contingency Fund, Technical Cooperation, Technical Cooperation United Nations, Technical Cooperation to Organization of American States, Joint Control Areas, Atoms for Peace, the North Atlantic Treaty Organization, the Intergovernmental Committee for European Migration, the United Nations Contingency Fund, the Escapee Program, the UN Children's Fund, the UN Relief Agency, the NATO science program, together with administrative expenses for state and ICA programs. Certainly many of these program have merit, but I must say to you quite candidly I cannot support the entire program as a package. It is regrettable to me that I do not have the opportunity to vote for those programs which I think are worth while and have been of great benefit to the United States.

I have been alarmed at certain things which we have done in some of these programs. For instance, I have expressed my grave concern about the overall policy of our mutual security program, and particularly as to how it might apply under the Development Loan Fund. In many fields we have given out to foreign nations and tried to teach them, and to place in production in their countries the very things which we either grew or manufactured in excess in this country and which we exported to foreign markets.

I have felt very strongly that we should be promoting things which would not bring the chicken back home to roost in a way that would destroy our manufacturing concerns and take the jobs of our American workers. I live in a textile area and am very familiar with the grave problem which the textile manufacturers and the textile workers face with reference to imports of textile goods; all of which have been promoted, nurtured, and expanded with the American tax dollar.

I had intended to offer an amendment under the development loan program which would prohibit the agency from making a loan for a new textile industry in any of the underdeveloped countries. However, I was assured by Mr. Brand, on page 461 of our hearings, that—

> The record will stand to show that in the textile business we have not made a single loan to a textile industry since I have been Managing Director, which is since September, 1959. * * * Although we have had several applications, we felt at this particular time it was difficult to do that without having an impact upon our own economy.

I am glad to know that they are no longer making loans of this type to establish new textile plants which would have an adverse impact on our own economy.

Now I am sure there are many instances of waste in our military assistance program. I strongly feel they should be eliminated and I feel very strongly that we must keep our missile bases within striking distance of the Communists and that at this particular time we must remain strong.

The free nations of the world must remain united if the battle for survival against communism is to be won. Our United States is the last great hope of free men and we should not disappoint those friends of ours overseas who stand with us in the achievement of a just peace and the preservation of human dignity.

Mr. HALEY. Mr. Chairman, I rise in opposition to the proposition that we again appropriate more billions of dollars to continue the wasteful and bungling monstrosity we call a foreign aid program, or a mutual security program. The time has come for this House and this Government to face up to a reality that most of our constituents, the taxpayers of America, already have faced.

That reality is simply this—there may be a great deal of foreign aid in this program, but there is in it neither mutuality nor security. To the contrary, this program is operated in such a manner that it is destroying our own economic security. And once our economic security has been destroyed, so will be the security of our form of government, our way of life, and finally, our identity as a nation.

I prefer to call this a misappropriations bill. This is a program of using our own money to destroy our own economy—using a corporation's income taxes to set up plants in low-wage areas overseas to compete with the American corporation and perhaps force it to shut its plants—of using the dollars of the American wage earner in such a manner as to cost the wage earner his job.

Just last week I read an official announcement from the Labor Department which said the unemployment level in the United States must be expected to remain high for years to come. Of course, it will remain high, Mr. Chairman, if we continue to use our own tax income to destroy the productive capacity of our free enterprise system, then we obviously are destroying the jobs and guaranteeing a high level of unemployment.

I have come to the conclusion that this is a bill which calls for us to export our tax dollars and import unemployment.

I am an accountant by profession and not a lawyer. But I have dealt enough with the making of the law, as a member of the legislature in my own State of Florida and as a Member of this body, to know something about law. I do not think a man must be a lawyer, or must have any particular knowledge of the law, to know that there is no authority in the Constitution of the United States for the making of appropriations such as are called for in this bill, and have been called for in the foreign aid appropriations bills of past years.

The Constitution, Mr. Chairman, says very plainly and very explicitly that "the Congress shall have the power to levy and collect taxes, duties, imposts, and excises to pay the debts, and provide for the common defense and general welfare of the United States." I am quoting from section 8 of article 1.

That provision, in my opinion, prevents us from appropriating—appropriating legally, I mean—money for this type of foreign aid program. That section of the Constitution says that it is the "debts of the United States"—not the debts of foreign nations—that can be paid with the taxpayer's money. That section of the Constitution says that it is for the common defense and the general welfare of the United States, not the defense and welfare of foreign nations, that we have the power to tax and the power to spend.

Now it is the Constitution of the United States which is the supreme law of this land—and not, as some people seem to think, decisions of the Supreme Court. The Congress of the United States has no power to do anything except those things specifically enumerated in the Constitution. Yet we are preparing to exercise here today a power

which the Constitution does not give us. I wonder, Mr. Chairman, what it is that we are doing in the light of the oath we all have taken, to "preserve, protect, and defend the Constitution"?

I would not have my colleagues in the House who are preparing to vote for this bill to take the word of a mere accountant on a legal matter. I can cite numerous opinions of some of the Nation's most distinguished legal minds in support of the viewpoint I am advancing.

Many of you here today served in this House with the distinguished senior Member of the other body from the State of North Carolina. He was regarded in his brief service in the House as having one of its finest legal minds; he is so regarded in the other body. Between his service in this and the other body, SAM J. ERVIN served with brilliance and distinction as a member of the supreme court of his own State. And here is what he has to say on the matter I am discussing:

I believe that under the Constitution of the United States we have no right to take tax money and spend it for any purpose except that which is calculated to promote the general welfare of the United States. I do not think we are empowered to take tax money and give it to neutrals merely to advance their economic welfare. I do not believe we should take tax money to pay neutrals to remain neutral, because that does not advance the welfare of the United States as a government. If the United States were an institution operating charities instead of operating a government which depends on tax resources for its finances, then I would say it would be all right for the United States to act as a universal Santa Claus. Our Government is not a charitable institution and the Constitution does not authorize it to act as such.

That is what Judge ERVIN said. And to it, I say "amen."

But there are others. Clarence E. Manion is a distinguished constitutional lawyer known to all of us either in person or by reputation. He has served in high positions in our Government, he was for a quarter of a century professor of constitutional law at Notre Dame University, and he was for a decade the dean of the law school of that distinguished educational institution.

And what does Dean Manion have to say on this subject? He said this:

It is my considered opinion that foreign aid, as presently constituted, is not authorized by the Constitution of the United States.

He said Congress "may not do what it pleases, but merely what is authorized by the Constitution." And he challenged the administration and the Congress, or anybody in it, to "point out the constitutional justification" for what he called—and I may say properly called—"this unpopular and incalculably expensive waste of the taxpayers' money."

For myself, I would be pleased if some of the expert constitutional lawyers, among those who will support this program today, would accept Dean Manion's challenge. I doubt that the challenge will be accepted—because I doubt that the most skilled legal mind among this bill's advocates can find constitutional justification for this appropriation.

I say to you advocates of this bill, if there is one among you who can cite its constitutional support, you would be doing a favor to some of your colleagues who must wonder, as they vote for this misappropriation, what they are doing in the light of the oath they took, on becoming Members of this body, to "preserve, protect, and defend the Constitution."

I shall vote against this bill, because my conscience will neither permit me to take lightly the Constitution itself nor the oath I took to defend it.

Mr. TABER. Mr. Chairman, I yield 5 minutes to the gentleman from New York [Mr. LINDSAY].

Mr. LINDSAY. Mr. Chairman, I would like to express my appreciation to the ranking minority member of the Committee on Appropriations for giving me a few minutes to go on record in support of the minority position on this bill and in support of the amendments that will be offered later to restore funds that have been cut from the mutual security appropriation. Of course, the mutual security program is an expensive business, but is it not better to take care of our defense in dollars now than in lives later? I always wonder whether it will take a hot war in order to discover what we should be able to discover in a cold war. I wonder whether the Members who have argued against the program and who have stated that no damage would be caused by the deep cuts in the amounts requested realize that this whole thing has got to be examined in light of the requirements of foreign policy in the world as it exists today. As I see it, the mutual security program is a primary arm of our foreign policy. I believe that substantial damage would be caused to our foreign policy interest, and our own national security if we should allow this bill to go through with the cuts that have been made so far by the committee. For my own part I am not willing to risk the future of our country by withholding my support of amendments that will be offered to restore these amounts.

I listened with great interest to the points made by the distinguished gentleman from Michigan [Mr. FORD] on the military aspects of the program and I must say I am in entire agreement.

There is another aspect to this program, and that is economic aid. In this connection I should like to say a word about the Development Loan Fund. There has not been much said about the DLF in the general debate today, and in a moment I should like to discuss it in greater detail.

Mr. Chairman, only a few weeks have transpired since the House considered and approved by a substantial majority—about a two-thirds majority—the Mutual Security Act itself which authorized the continuation of the program. This was done after cutting $88,700,000 from the authorization request.

Now we have reached the question of how much to appropriate, as distinguished from how much to authorize. Again, as in past years, we run into a strange pattern. Many of the Members of this body who are willing to authorize sums recommended by our Foreign Affairs Committee, after extensive hearings and study, now seem willing to accept appropriations smaller by many, many millions—appropriations which can have no other effect but to make it impossible to carry out the authorities granted only a few weeks ago.

Now why is this the case? Do Members really believe that while the continuation of the program is important and while the appropriation of funds for the program is important, the amounts appropriated do not really make too much difference? Do Members believe that no damage would be caused by the deep cuts recommended in the amount requested? This should be examined in the light of the requirements of U.S. foreign policy in the world as it exists today, for as I stated at the outset, the mutual security program is a primary arm of our foreign policy.

At this very moment we and our allies are again subjected to renewed threats and aggressive behavior on the part of the Communist countries. Their actions are designed to dissuade us from our determination to prevent the aggrandizement of their power. Their actions are also designed to weaken the determination of free peoples on the borders of the Soviet sphere and elsewhere, to pursue their own goals without foreign domination. This mutual security program is one of our main instruments to show the Soviet leaders that our resolve is in no way diminished; it provides the demonstrable evidence to all peoples that we are prepared to persevere in our free world security efforts.

The mutual security program contains provisions addressed to both long-term and short-term foreign policy interests.

Through the military assistance component, which covers half of the requested funds, we are in a very great measure providing a shield behind which free peoples can pursue their livelihood and work toward improving their lot. This meets a short-term need for protection through a powerful deterrent and retaliatory power. It also provides assurance that our intention is to maintain our military strength and the strength of our allies to provide this deterrence over the long run. The plain fact is that without the support which the military program provides, certain key allied forces would simply not be able to play an important deterrent role and their own contribution to collective security would inevitably diminish. The plain fact is also that unless the cut made in military assistance is restored our allies will be weakened and our own defense impaired.

The economic programs also relate to both the short-term and long-term requirements. Under the Defense Support category, assistance is provided to countries which could not otherwise maintain armed forces of 3 million men alert to the dangers of Communist expansion on the periphery of the Soviet Empire. The heavy reduction of $124 million below the President's request will necessarily weaken the economies of these allies and reduce their ability

to support forces we believe are important to the common defense. These funds should be restored.

Assistance under the category labeled special assistance helps maintain the minimum needs for economic stability in highly volatile parts of the world, particularly in the Middle East and North Africa. Certainly the funds deeply slashed from this program should be restored.

But free world security will not be secure very long through defense measures alone and through programs which support only the economic status quo. If we have learned anything from the experiences of the postwar era, it is that the peoples of the less developed countries have come into their own and the satisfaction of their legitimate aspirations is important to us for many reasons. Embedded in these aspirations is a deep and pressing determination to make significant economic progress.

The Development Loan Fund is the principal means we have of assisting them to meet these aspirations since its aim is to promote the expansion of the productive capabilities of the people. The technical assistance program also assists forward progress. The Loan Fund helps them to help themselves because it is with borrowings from the DLF that the countries are building the powerplants, the roads, the manufacturing plants and other facilities which will improve their lot and increase their future self-reliance.

In about 2½ years of lending the DLF has made what I believe is a very significant contribution to vital U.S. interests by providing funds which are available from no other source. All of this financing has been on a loan basis, a method which places the main responsibility for development squarely where it belongs—on the developing country itself.

It has been sometimes stated that the loans by the DLF are not loans at all since repayments are largely in the currency of the borrowing country. It is true that most of the loans are repayable in foreign currency, but over 20 percent of the loans are repayable in dollars, and there is no doubt whatsoever about the commitment to repay on all loans. But this skirts the main point which I believe should have more recognition. That is that, inasmuch as the continuation of development assistance is widely approved by the American people and their representatives, should not this be in the form of loans to the maximum extent possible? Recognizing that there are many situations where grants are still necessary, isn't the loan technique a far better way than any other?

Psychologically, loans foster better relationships between this country and the recipient countries and encourages greater self-confidence and initiative on their part. Loans help remove suspicion about hidden motivations, but most of all, the loan methods utilized by the DLF helps provide a realism about development that has not always been present. The borrower, whether it is a private business firm or a government entity must submit well thought out and documented proposals; it must assess its own priorities and requirements; it must explore the whole range of financial and material resources available to it; it must take the means to establish sound management, sound engineering services and sound methods of accounting for its real requirements and for the operation of the facility when it is completed. All these together add up to a greater sense of direction and greater self-reliance on the part of the less developed country.

Up until now, the appropriations have not been made available to the Development Loan Fund sufficiently large to meet a great many of the important proposals which have come before it. I believe that the Congress should provide it with the $700 million necessary to meet the highest priority development needs, which I repeat, can be financed by no other source of funds since DLF loans are largely to countries with no current dollar repayment capacity. The cut made by the committee to the extent of $150 million to me is indefensible. The funds should be restored.

We are currently faced with a new twist in the unabated Communist effort to subvert the less developed countries in their association with the United States. No doubt they will continue to use all the means at their disposal to do this, because they recognize that the path to world domination is through the teeming cities and impoverished villages of Asia, of Latin America, of Africa, and the other parts of the world where aroused expectations of visible progress have become irresistible and irreversible.

In the appropriations bill now before us we have an opportunity, and indeed a responsibility, to vote for funds adequate enough to make possible growth in freedom and with dignity. I sincerely believe if we fail to support the restoration of funds in this Mutual Security Program and to delete the limitations which will so seriously hamstring it we will be tampering with our own future and that of future generations of Americans.

Mr. TABER. Mr. Chairman, I yield 5 minutes to the gentleman from Massachusetts [Mr. CURTIS].

Mr. CURTIS of Massachusetts. Mr. Chairman, I rise in support of the provisions passed by the Foreign Affairs Committee and accepted by the House. I oppose the cuts and other limitations made by the Appropriations Committee, and urge support of the amendments which will be offered to restore amounts and remove some of the limitations.

I take this time as a member of the Foreign Affairs Committee, which spent many months in detailed hearings on this legislation. It is a little discouraging to find that the bill passed by that committee is being so seriously cut down by the bill now before us. Some of the proposed limitations are just as disastrous as are the lack of funds which are provided.

It was a great privilege to travel on a study mission last year which examined the results and operations of the mutual security program in the Far East and elsewhere. I am sure that I can speak for others who took that trip in saying that we were impressed by what this program has accomplished.

So, I submit to the committee that we should view this program a little more broadly than by focusing on examples of waste here and there, some of which are so far-fetched that we are even told that Johns Hopkins University, one of the greatest educational institutions in the land, is apparently accused of dishonesty in connection with one of these programs. That, at least is the way I interpreted the remarks that have been made in this Chamber, and which I cannot accept.

So I suggest that we take a broader view, and let us look at the world picture. Is this any time to cut back on the military potential of the United States of America? I say no, Mr. Chairman. And, we have been told by the military authorities of our country that these expenditures for military foreign aid are just as important to the defense of our country as are expenditures for our own defense forces. So, how can we accept the proposal of this bill that military foreign aid be cut $400 million?

Second. With regard to these questions of mistakes and waste, I imagine that if we examined the programs of some of the other departments—say the Department of Agriculture, or even the Department of Defense—we could find examples where money had been improvidently spent. But, is that a reason, sir, for cutting down the necessary work of those departments?

Have we any assurance that the way to correct mistakes of judgment and waste is to limit the funds available? It seems to me, sir, that there are other ways of eliminating mistakes and waste; that those problems should be attacked directly, and that if we try to cure them by merely cutting down the amount of money available, we may find that some of this waste and mistakes will still continue but that the programs will be shackled because of lack of funds.

So, I say, let us not hamstring these programs because of these examples of mistakes. We all recognize the difficulties of dealing with these countries all over the world, many of them with different types of civilizations from our own. It is a tremendously difficult program to administer. We must rather bend our efforts to see that the administration of the program is improved.

One of the most important charges made against the present administration is that it has neglected the defenses of the United States; that the defense of our country has been sacrificed to the need for a balanced budget. Mr. Chairman, let those who are making that claim come in here today and make provision for that defense.

Instead of that, what do we see? They come in here and cut down the military assistance program which the Chiefs of Staff and all of our military experts tell us is just as necessary to the defense of our country as is our own defense program.

How can critics say with one breath that the administration has failed to

provide sufficient defense funds for our country and in the next breath come in here and cut down defense funds which are needed for the country?

Mr. Chairman, I want to quote from a speech that was made 2 days ago by a very leading contender for high public office in this country. He said that the summit conference was doomed to failure. Why? Because we had failed to provide adequately for the defense forces of our country and left ourselves in a position of weakness in dealing with the Communist nations.

All right; if that is true, are we going to come in here today and cut down further on the moneys available for our defense?

It is also said that we make insufficient provision for conventional types of troops to fight brush-fire wars. I would suggest, Mr. Chairman, that the forces that are made available through military assistance are in many cases conventional forces. They are the forces that would be needed in that type of war. And yet we are asked today to cut down on the sinews of war necessary for those forces.

Another passage in this speech to which I have referred recommended this:

> Third. We must rebuild NATO into a viable and consolidated military force capable of deterring any kind of attack.

The Draper Commission, Mr. Chairman, came before the Committee on Foreign Affairs last year, and told us that modernization of the weapons of those forces was absolutely necessary. Yet now we are asked to cut down on the fund essential for that purpose.

And finally, going into the economic field for just a moment, I quote from this same speech which received much acclaim, in which it was said:

> Seventh. We must greatly increase our efforts to encourage the newly emerging nations of the vast continent of Africa.
>
> And, as chairman of the Subcommittee on African Affairs of the Committee on Foreign Relations, let me remind the Senate that in a few years, the countries of Africa will control one-quarter of all the votes in the General Assembly of the United Nations.

And yet, here today we are asked to shackle the very programs which will be effective in that vast continent of Africa.

Finally, I remind the committee that the program before us is a nonpartisan program. It was started by the prior administration, and many of those sitting on this side of the aisle supported and commended the action then taken. In this country partisanship ends at the waterfront, and the bill before us is one concerned entirely with the foreign policy of the United States.

The President of the United States, who bears such awesome responsibility for our country's foreign policy, has repeatedly urged that these programs should be carried forward adequately. In his speech of May 2 on strengthening the frontiers of freedom, he said, referring to mutual security:

> No other investment has yielded greater dividends in terms of stability, security, and free world morale.

Let us then join together from both sides of the aisle and see to it that these essential programs are provided with the necessary funds and freed from shackling limitations.

Mr. PASSMAN. Mr. Chairman, I yield 10 minutes to the gentleman from New Mexico [Mr. MONTOYA].

Mr. MONTOYA. Mr. Chairman, initially I want to state that I am in favor of controlled foreign aid. I have voted for the authorization bill in the past and have voted for and supported the appropriations to implement the authorization. I have enjoyed working with the members of the subcommittee under the able direction of our very esteemed chairman, the gentleman from Louisiana. I have nothing but the most profound respect for both the Democratic and the Republican members of the committee who, I know, are dedicated public servants interested in the economical operation of our Government.

On occasion we encounter differences of opinion, but I would never question the motives that generate these differences. The bill which is before this committee at the present time is not the result of overnight gymnastics with figures. It represents months, weeks, days, and long hours of calculated deliberation and study by members who are desirous of promoting the global interstate of the United States and her domestic welfare. I also know that these considerations are the guidelines for any action taken today by any of my colleagues in this House.

Personally, I cannot help but express words of commendation to those public servants who are charged with the most difficult task of administering the program for which money under this bill is appropriated. On frequent occasion we find lack of direction, lack of proper planning, and this might be because of the nature and scope of the program.

The hard fact we must face is that as Members of Congress we must discharge our duties to the fullest extent by exercising fiscal control and responsibility without losing the primary objectives enunciated in the foreign policy pronouncements of the executive department. This is all that this committee has strived to accomplish, even though divergence of opinion may cast a shadow upon these goals.

This bill recommends for the mutual security program an appropriation of $3,384,500,000, which is divided as follows:

Military assistance	$1,600,000,000
Defense support	600,000,000
Technical cooperation	184,500,000
Special assistance	206,000,000
Contingency fund	150,000,000
Development Loan Fund	550,000,000
Other programs	94,000,000

This amount represents a reduction of $790,500,000 from the original budget estimate submitted by the President in the amount of $4,175 million. While the bill carries additional appropriations for other functions, I will try to direct my attention mainly to the aspects of mutual security covered by the above figures which I have cited.

The sum which the committee has recommended is certainly not trivial by any stretch of the imagination. It represents hard-earned taxpayers' dollars which we must make sure are spent with wisdom and fruition. Since the inception of the mutual security program we have heard charges and countercharges made concerning extravagant spending and irresponsible fiscal management. Part of these charges are true and while this should not detract from the advisability of having a mutual security program, we feel compelled to become ever more alert as to how this money is to be spent and what destiny it might nurture in furthering the security of our country. To put the entire mutual security program into discernible perspective we must ask ourselves how much money is available in the pipeline and through the medium of this appropriation for fiscal year 1961. According to figures which we have compiled in the committee there will be available to the executive department for expenditure in fiscal year 1961 the grand total of $8,154,365,000. This total is made up of new, unexpended, and unobligated funds under the present and previous appropriations.

In addition to this fund availability the American taxpayer must continue to bear the cost of U.S. garrisons abroad which total close to $3 billion and the numerous related aid and subsidy programs. Then we have interest payments which are accruing periodically on money that we have had to borrow because of the additional expense represented by the mutual security program. In spite of the fact that the basic appropriation recommended hereunder totals $3,384,500,000 we cannot run away from the inevitable conclusion that the foreign aid cost to our Government and the taxpayers now exceeds $10 billion annually. Can we call this a trivial sum? Is this a dark moment in our history when we can say if we do not appropriate more Russia will step in and take our friends away?

I am not about to admit that our international ties of friendship are bridged by a pipeline of hard-earned taxpayers' dollars. This argument is rejected by the fact that we have lost some of our friends in spite of our monetary overtures. I have no quarrel with the objectives that underlie foreign aid and the promotion of our global security, and I do not believe any single member of this committee does either, but we can certainly not surrender our responsibility to the American people amidst showers of accusations that we are endangering the future posture of our country.

Supporting our position is the record of all these hearings which have been conducted painstakingly. Instances of waste upon waste have been uncovered. I wish that I had the time to cite from the record examples of fiscal mismanagement, or to put it more mildly, misdirection. Citing the testimony of the Comptroller General, page 2269 of the hearings, there is an interesting revelation. I quote:

> For example in one country the MAAG was aware that consideration was being given to deactivation of certain country forces as early as 1957. However, MAP-supported force goals in that country were not adjusted until January 1959 at which time the program was substantially advanced and over

90 percent of the conventional equipment programed had been delivered. In this country quantities of equipment, estimated to exceed $100 million, are now excess to the needs of the forces currently approved or contemplated for MAP support. Although certain of the excesses resulted from deliveries made before there was knowledge of the country's plans for reducing its forces, substantial quantities of unneeded equipment were programed and delivered after the country's plans for deactivation became known.

In another country we were unable to determine how much equipment was delivered for units scheduled for deactivation because the Department of Defense denied us access to information regarding the recipient country's plans. However, at the time of our review, we observed that the MAAG had taken no action to cut back on funded programs although they had been aware for several months that the recipient country was planning to deactivate certain divisions. We were later advised by Department of Defense officials that after our review program revisions and deletions amounting to about $15 million had been made as the result of the reduction in the forces being supported.

Citing another instance again quoting the Comptroller General in his testimony which appears on page 2271 of the hearings:

Equipment has been furnished to many countries in excess of their capability to utilize it adequately, due in large part to the lack of trained personnel. For example, in one country, reports from using units indicate that there are only about 40 percent of the needed radio operators and that receipt of newer, more complex equipment would aggravate this problem. With respect to vehicles, shortages of mechanics in various shops were as high as 50 percent, which was one of the principal reasons for the excessive deadline rate of 30 to 40 percent for wheeled vehicles. In one field artillery battalion, 12 howitzers received in mid-1957 were not fired until the latter part of 1958. Also, we found that rocket launchers and recoilless rifles were fired only two to three rounds each year per weapon in one country.

In some countries, aircraft have been delivered in quantities in excess of the number of available qualified pilots. For example, in one country there were about two jet aircraft available for each pilot, including instructors. At the time of our review, additional aircraft had been programed and were being delivered. Although a number of undelivered aircraft were canceled and the country has agreed to return some of the previously delivered aircraft, the MAAG in this country estimated that there will be excess or only partially utilized aircraft through March 1961. We have recently learned of a cost-sharing plan under which the military assistance program will contribute $75 million toward the production of about 200 additional aircraft of a newer, more advanced design by a contractor in this country. Defense officials have assured us informally that the pilot training problem is receiving active consideration.

The record of the hearings demonstrates another patent difficulty which brings this program into ill repute, namely the need for improved programing at the recipient country level. This is more clearly brought out by the testimony of General Campbell, and I quote from page 2275 as follows:

Our review disclosed overprograming and excessive requisitioning of material resulting from (1) duplication of requirements, (2) failure to properly consider stocks on hand, (3) erroneous stock records, (4) overstatements of dues out to customers, and (5) inaccurate supply data for rebuild activities. For example, the quantity of torque rods on hand or being reclaimed by a machine shop was understated in computing the requirements and resulted in excess requisitioning of units valued at $332,000. Wire spray material was programed for use in 75 wire spray machines; although at the time of our review only 12 of the machines could be located. Requisitions amounting to $502,000 for wool tropical cloth were canceled after our review disclosed adequate quantities on hand or due in. The fiscal year 1960 refined program included a requirement for about 15,000 rolls of glassine paper; however, our inspection showed 18,000 rolls to be in warehouse stocks which apparently had not been considered. One hundred and twenty generators valued at $212,760 were requisitioned in 1958 and were duplicated again in 1959. The corrective action taken by the agency when these and numerous other cases were called to their attention resulted in program reductions of about $6 million and requisition cancellations of about $10 million.

Another glaring example fortifying the need for proper programing is the disclosure reflected in the record of hearings on page 2284 that a certain country was allocated in January 1958, 235 F–86 planes and 186 T–33 planes under the military assistance program and that the Air Force of that country only had 187 jet pilots including instructors, test pilots, and students. I repeat—a total of 421 planes and only 187 pilots, instructors, and students available to fly these planes. So what happened? I quote from the testimony of Mr. Gutmann which appears on page 2284 of the hearings:

In September 1958, 45 F–86 airplanes were in permanent storage. One hundred and thirteen were in temporary storage. At the same time there were also T–33 planes and 5 C–46 planes in permanent storage and 47 T–33 planes in temporary storage. The MAAG has estimated that there will be very little improvement in the situation through March 1961. At that time, after making allowances for tactical training and command support requirements, and after considering aircraft that will be required for inactive schoolwork and those which will be lost through attrition, the MAAG forecasts that ——— will have 101 F–86F planes excess to requirements and an additional 64 which will be only partially utilized. At the same time it is anticipated that there will be 50 excess T–33 planes.

Mr. Chairman, I cite these instances not to be critical in a manner that might indicate animosity toward the entire program; my purpose is constructive. It is designed to impress upon the membership here and the entire country that we must provide checks and balances by constricting spending and exacting thereby strict adherence to prudence and responsible administration by those charged with this responsibility. To give freely is but to encourage the continuation of carelessness. Are we to be called enemies of this program because we try to effectuate and bring about a better return for our dollar? Is our judgment to become subjugated to appeals in the name of national security when in truth and in fact our course of action is directed to the same goals except that our compass is geared to a road of cautious spending and rigid regard for the American taxpayer's dollar?

Mr. TABER. Mr. Chairman, I yield such time as he may desire to the gentleman from New York [Mr. BOSCH].

Mr. BOSCH. Mr. Chairman, I am opposed to H.R. 12619, the so-called mutual security and related agencies appropriation bill for 1961.

It may be well to review the total cost to the American taxpayers of this program from its inception in 1948 to 1959, inclusive. It is reliably reported that the foreign expenditures during these years reached the astronomical figure of $87,077 million. One begins to wonder how much longer the American taxpayers can be burdened with the tremendous cost of this program.

As recently as October 1959 the President of the United States remarked:

Now, any reasonable person will recognize that no nation, even with the legendary strength of an Atlas, could long support the world on its shoulders.

Is it not foolish indeed that 6 percent of the world population, even with all of our natural resources, can indefinitely support 94 percent of the world's population through this type of handout legislation? Yet today do we fully realize that the total foreign aid cost, including interest on what we have borrowed to give away, now exceeds $10 billion annually?

As I stated during the debate of this legislation's authorization bill, H.R. 11510, little good can be accomplished by restating the waste and extravagance experienced over the years in connection with the administration of this program. It is to be noted, however, that billions of dollars are being squandered on a global basis without adequate control and in areas where the American people do not have an opportunity to appraise any results.

Now what is the actual status of our mutual security program as of this time? It appears that the total funds expended and authorized by this legislation total $8,154,365,000. Said total is made up as follows:

Unexpended funds (including unobligated) as of June 30, 1960	$4,713,665,000
New funds recommended for fiscal year 1961	3,384,500,000
New funds (other) for fiscal year 1961	56,200,000
Grand total	8,154,365,000

Referring to the 1959 action by Congress on this mutual security program, we find the amount authorized for fiscal year 1960 was $8,111,521,750 as compared to this year's proposed appropriation for fiscal 1961 of $8,154,365,000. This represents an increase in available funds for fiscal year 1961 over fiscal year 1960 of $42,843,250. It seems to me, Mr. Chairman, to be axiomatic that when a government spends more than its income and mortgages the income of several generations, inflation, collapse of the economy, and a breakdown of the fiscal structure must necessarily follow.

Our esteemed President has stated:

Certainly I know we must find a substitute for the purely temporary business of bolstering the free nations through annual handouts that gets neither permanent results nor friends.

I believe in all sincerity that our foreign aid appropriations have served only to bring an overall progressive Federal extravagance that is destroying the value of our currency and adding impetus toward a collapse of our economy. In view of these convictions I cannot in good conscience support the appropriations provided for in this legislation.

Mr. PASSMAN. Mr. Chairman, I yield such time as he may desire to the gentleman from Minnesota [Mr. MARSHALL].

Mr. MARSHALL. Mr. Chairman, I want to call the attention of the House to the dangerous situation confronting the dairy industry as a result of the gross misuse being made of large quantities of surplus nonfat dry milk under our export subsidy and relief programs overseas.

In testimony before the Committee on Agriculture and in remarks before the House in the last session, I opposed the gift and subsidized sales of Commodity Credit Corporation stocks to be used in the manufacturing of filled milk.

It just does not make sense to have the Department of Agriculture subsidize the movement of one ingredient of filled milk which is being sold in direct competition with our regular commercial exports of natural dairy products.

The dairy producers of my State are directly involved in this question since it permits the removal of butterfat from our milk, contributing further to the surplus of butterfat while helping to create an adulterated product to be sold in competition with our milk.

Furthermore, the good reputation of the American dairy industry as a whole is jeopardized by creating a suspicion that other dairy products in export are filled. It gives competing countries an opportunity to label our products as fraudulent.

At the same time, it undermines the very purpose of our mutual assistance program by contributing to the kind of scandals I intend to bring to the attention of the House today.

Witness the startling article written by Staff Reporter Robert P. Dorang which was published on the first page of the Wall Street Journal on Monday, April 25, 1960:

U.S. FOOD GIVEAWAYS BRING ONLY ILL WILL IN SOME FOREIGN LANDS—FOOD GOES TO BLACK MARKETS, IS SOMETIMES FED TO CATTLE—AGENCIES ARGUE OVER BLAME

(By Robert P. Dorang)

WASHINGTON.—Completely contrary to the Government's purpose, the big program for giving away surplus farm products overseas through private welfare agencies is making Uncle Sam out to be something of an ugly American.

This project has gone sadly wrong in some places, according to reports just received by Congress. In many foreign lands, U.S. food marked "Donated by the People of the United States—Not To Be Sold or Exchanged," has gone into the black market. In others, the free food has been sold to the needy, or to ordinary commercial operators. There has been thievery, interference by foreign governments, and feeding of good food to animals.

Officials of the two Washington agencies concerned—the Agriculture Department and the International Cooperation Administration—readily admit that Federal management of the program has been poor. And yet each of the agencies, which in the past have proudly trumpeted the merits of this particular food-giving plan, is firmly denying responsibility for what has gone wrong.

ICA'S INVOLVEMENT

Though the Agriculture Department supplies the commodities and can demand payment if they go astray, Department officials close to the program profess to be only vaguely familiar with the deficiencies now reported. ICA officials contend their agency became involved quite innocently in something not really its responsibility. One ICA man comments unhappily: "If the situation doesn't change, we might gracefully wash our hands of the whole thing."

Federal men are careful to stress that they are not charging the private welfare agencies with any wrongdoing in connection with the program. Much of the trouble, they say, has stemmed from use of foreign nationals to help in distribution of the food. Few of the private groups are so fully staffed that they can handle the entire job themselves.

What has brought the food scandals somewhat belatedly to light is a report given in a closed hearing to a House Appropriations subcommittee by the ICA. Now made public, the document lists 18 countries where something went wrong in the past 33 months, despite the good intentions of the welfare groups. ICA says most of the sad stories have been verified, although in some instances investigations are not yet completed. Here's part of what the agency has told Congress:

"Israel: Pilferage and widespread diversions to commercial market through illegal sales and exchanges.

"Korea: Unauthorized exchanges of commodities; diversions to black market; and charges of diversions of commodities to other countries.

"Pakistan: Pilferage; and diversion to commercial market through illegal sales and exchanges.

"Philippines: Isolated charges of black marketing.

"Taiwan (Formosa): Charges of padded recipient lists, black marketing and diversions to animal feed.

"Colombia: Thefts of commodities; illegal diversions to commercial channels; and needy recipients required to pay small charges for commodities received."

DIVIDED RESPONSIBILITY

The troubles have stemmed partly from divided responsibility. While the Agriculture Department keeps auditors probing into its domestic donation schemes for wrongdoing, it had none overseas when donations began some 7 years ago. For the job, it tagged the ICA, a State Department agency with foreign aid missions around the world. But as one ICA official states of the auditing, "We did it on a 'when and if' basis."

As the program grew, the ICA complained and last year got four extra auditors on "loan" from the Agriculture Department. Finally the foreign aid agency rebelled and demanded a price for its work—$1 million for the fiscal year starting next July 1. Says Roger Stewart, ICA's man designated to work with the Agriculture Department:

"To a large extent, the operation has been one of trying 'to put out fires' as they occur. In many of our foreign posts, we have not been able to designate personnel * * * who would have the specific responsibility of riding herd on this program."

In newly free Ghana, Mr. Stewart explains, at least two voluntary aid groups were giving food to the same citizens—each unknown to the other. "It was because everything was so new," the ICA official maintains. "When the voluntary agency people began talking to each other, they cut it out."

In Algeria, the French army refused to permit a relief group to do its own distributing, apparently for fear food would "leak" to Algerian rebels. So this program had to be halted; a volunteer agency must maintain control of the food it's disposing, the Agriculture Department requires.

In Brazil, the government refused to let commodities enter duty free, a requirement if Uncle Sam has paid the ocean freight charges. Butter, cheese and dried milk were impounded at the ports and some spoiled.

Food donations through voluntary groups have reached formidable proportions. From the time the program really took hold 7 years ago through last December, it has put down on foreign shores 8.4 billion pounds of food worth $1.4 billion.

From only 24 million pounds in fiscal 1953, shipments rose to 1.9 billion pounds in the 12 months ended last June 30. From then to last December 31, they amounted to 923 million pounds and show signs of approaching 2 billion pounds for the year that will end June 30.

To remedy defects in the donation program, some efforts are now under way. Howard Davis, deputy director of the Agriculture Department's Food Distribution Division, reveals the Agriculture Department and the ICA have already agreed on a "memorandum of understanding" that supposedly would give the ICA much more responsibility for planning and checking into the donation work—not just auditing.

Then, with $1 million the Agriculture Department hopes to get from Congress and transfer to the ICA, about 30 auditing trouble-shooters would be employed to ferret out illegal practices.

May I say, parenthetically, as a member of the subcommittee on agricultural appropriations, it appears that ICA has ample funds to do its auditing without transfers from the Department of Agriculture.

Partial confirmation of the alarming article just referred to is a report that a considerable quantity of surplus nonfat dry milk from the CCC stockpiles—donated through a voluntary welfare group to the Republic of Ecuador for free distribution to the needy—was diverted to an Ecuadorian affiliate of an American firm. It was recombined with coconut oil and water to produce a "filled milk" sold in paper cartons under the American concern's label "Super Milk" at a price only slightly less than the high price charged for whole-cream milk produced in extremely limited quantity in Ecuador.

This scandalous practice was not ended by any positive policing on the part of our administrative agencies or the voluntary welfare group involved. It ceased only because the charitable donations of U.S. nonfat dry milk to Ecuador and other countries were cut off last fall, when the Commodity Credit Corporation suddenly and without advance warning found its inventory of this dairy commodity to be exhausted. This regrettable situation prompted the magazine Barron's National Business and Financial Weekly to publish the following article on page 7 of its February 15, 1960, issue:

The U.N.'s Food and Agriculture Organization is worrying about the world supply of skim milk powder. For 5 years, this country sustained feeding programs in many parts of the world out of "surplus" stocks. Last year, the U.S. supply of dairy products dwindled, thus jeopardizing the welfare

projects which have depended upon American donations. In 1958, U.S. surpluses supplied about 70 percent of the world's so-called exports. Naturally, such massive free shipments have kept low-cost milk producers from developing commercial markets. "Food for peace," the current euphemism for the dumping of farm surpluses, thus is threatening to end in a worldwide shortage for which no relief is in sight.

It is equally surprising to learn that 60 million pounds of surplus nonfat dry milk ordered by the White House last fall to be made urgently available under title II of Public Law 480 to the voluntary welfare groups for free distribution to needy persons in 69 countries overseas, were ordered by the International Cooperation Administration to be packaged in 4½-pound plastic bags labeled simply as "milk," rather than "nonfat dry milk." This raid on the Commodity Credit Corporation inventory prevented the Department of Agriculture from honoring legitimate commitments for nonfat dry milk for established and existing market development projects overseas under title I of Public Law 480.

My colleagues from Minnesota and the other major dairy producing States, and all of our citizens who are concerned over the health and welfare of our Armed Forces both at home and abroad, will join with me, I am sure, in expressing a real interest in the results of the investigation which the distinguished chairman of the House Armed Services Committee, the gentleman from Georgia [Mr. VINSON], has asked the Department of Defense to make. It involves charges of fraud in the sale of nonfat dry milk at the price of whole cream milk to Army, Navy, and Air Force bases, as reported in the following news item which appeared on page 7 of the April 20, 1960, issue of the Dairy Record:

DEFENSE ASKED TO PROBE MILK PROCUREMENT

WASHINGTON.—The Department of Defense has been asked to investigate charges of fraud in the sale of milk to Armed Forces camps by Representative CARL VINSON, Democrat of Georgia, chairman of the House Armed Services Committee.

The Georgia Department of Agriculture asked him to request the investigation.

Phil Campbell, Georgia agricultural commissioner, wrote Representative VINSON charging that powdered milk is being sold to the Army and Navy at the price of whole milk and that the butterfat content of other milk is below the specified level.

He urged an investigation of the entire milk procurement program by the Federal Government. Directly involved were three naval bases at Jacksonville, Fla., the Air Force station at Panama City, Fla., and the Army base at Fort Stewart, Ga.

Prior to his request to Representative VINSON, Campbell had levied fines against three Georgia firms for diluting milk with powdered milk and water (Dairy Record, April 13).

All Members of the Congress, whether directly or indirectly concerned with the problem, have the right to expect that such investigation by the Department of Defense will be thorough and cover the entire milk procurement program for all elements of the Armed Forces, stateside and overseas. Certainly, the Department of Defense should not be permitted any longer to sidetrack or dodge the issue of our armed services openly flaunting the clear intent of Congress by selling or delivering, or causing to be sold or delivered, to our servicemen and attached civilian personnel stationed overseas, the product defined by law as "filled" milk—that product being specifically declared by the U.S. Filled Milk Act of 1923, as amended, to be "an adulterated article of food, injurious to the public health, and its sale constitutes a fraud upon the public. It shall be unlawful for any person to manufacture within any Territory or possession, or within the District of Columbia, or to ship or deliver for shipment in interstate or foreign commerce, any filled milk"—March 4, 1923, chapter 262, No. 2, 42 Stat. 1487.

This indictment is based upon the following news item, the veracity of which has not been challenged, and which appeared on page 5 of the February 10, 1960, issue of the Dairy Record:

BORDEN SELLING FILLED MILK IN BERMUDA TO U.S. SERVICE BASES—DEVON CREAMERY, SUBSIDIARY CONCERN, SELLING TO AIR FORCE BASE THROUGH PX

WASHINGTON.—Two bombshells were dropped here by a Dairy Record representative on Monday of this week when he disclosed (1) that Borden's, through a 40-percent-owned subsidiary, Devon Creamery, is selling filled milk in Bermuda, and (2) that it is being sold to the U.S. Air Force base families through the PX in Bermuda.

The filled milk is being sold in paper containers, and it probably marks the first time that filled milk has ever been sold in other containers than metal cans.

The container bears the usual Borden name in large letters and displays prominently the trademarked "Elsie," the cow, such as used by Borden on their regular milk cartons.

Also appearing in large type is the following: "Homogenized, vitaminized, pasteurized filled milk." At the bottom of the carton, appearing in small letters, is the following: "Recombined by Devon Creameries, Ltd., under license as to manufacture and sales."

STARTED WITH AFFILIATION

It is understood that Devon Creameries had not been in the recombining milk business until its affiliation with Borden.

A chocolate-flavored filled milk is also being sold by the company.

The cartons do not give any information with reference to the ingredients being used, but it is understood that the vegetable oil used in recombining is being shipped from the United States, and reliable sources have indicated that at least some of the nonfat dry milk used is also being manufactured by one or more American firms for shipment to Bermuda. Whether or not it is surplus milk powder supplied by the Commodity Credit Corporation had not been determined at the time Dairy Record went to press on Monday of this week.

PROHIBITS FILLED MILK

Although Dairy Record was unable to confirm the information, it is understood that the Bermuda laws prohibit the sale of filled milk. However, Devon has been granted a special license to sell filled milk to the Air Force. The Navy base there does not sell filled milk.

The disclosure of Borden's activities in Bermuda is certain to create consternation among dairy interests in the United States. The fact that the filled milk is being produced by a Borden-affiliated company no doubt will be of particular concern because of Borden's standing in the industry, and also because of the fear that it will help open the door to filled-milk interests in the United States to knock out the filled-milk laws in this country.

Similarly, in this connection, there is no basis in fact upon which to dispute the sound conclusions reached in the "Behind the News" editorial on page 26 of the February 24, 1960, issue of the Dairy Record, reading as follows:

The Quartermaster Corps purchase description for filled milk states, among other things, "This product is intended for use, when authorized, in areas outside the limits of the continental United States, where a sufficient supply of fresh fluid milk from authorized sources is not available."

Bermuda is only a "whoop and a holler" from the east coast of Florida and it should not present any great problem for the Air Force or the Navy to ferry fresh milk from the continental United States to the U.S. Air Force base at Kindley Field and the U.S. naval base at Kings Point, Bermuda. If it did present an insurmountable problem to the two services, it certainly should be possible for them to transport non fat dry milk and anhydrous milk fat from the United States to those bases for recombination. Already something along this line is being done, for the Borden subsidiary, Devon Creamery, Ltd., at Bermuda, is producing and selling a full cream recombined milk through the commissary of the naval base. The company is also producing and selling a recombined filled milk to the commissary at Kindley Field.

If it is possible to transport nonfat dry milk and vegetable oil from the United States to reconstitute filled milk, why then is it not possible to transport enough nonfat dry milk and anhydrous milk fat to take care of all of the needs of the two services at their bases?

It is difficult to understand the Quartermaster Corps double talk with reference to its specifications concerning "where a sufficient supply of fresh fluid milk from authorized sources is not available."

* * * * *

As was mentioned in this publication (Dairy Record, February 7), filled milk has been sold to the services in Bermuda before Borden got into the picture. The United Dairy Equipment Co., West Chester, Pa., manufacturers of the "mechanical cow" which has been used since World War II on naval ships for recombining nonfat dry milk and anhydrous milk fat, has been in the chocolate-flavored filled milk business in Bermuda for use by the armed services for some time past. It has manufactured filled milk at Kindley Base with its own equipment, and the ingredients are being shipped from Pennsylvania.

Whereas the Borden carton displays the filled milk legend in large bold type, the United Dairy Equipment Co. carton displays the word "milk" in letters 1 inch high in boldface type. Beneath this in one-eighth-inch high letters is printed on the chocolate milk carton "filled milk recombined by," and then beneath that "United Dairy Equipment Co., West Chester, Pa." in large type. The trade name of the product is "Super," which also appears in large letters in reverse type. It also bears the legend that it is "pasteurized, homogenized, and vitaminized."

Incidentally, the paper cartons in which the United Dairy Equipment milk is sold are manufactured in Canada. Borden's are produced in the United States.

In view of the fact that there should be little or no problem in supplying commissaries in Bermuda with fresh fluid milk, or at least recombined whole milk, but which they are not getting, it is almost a safe bet that the Quartermaster Corps is supplying the Air Force bases in Spain, north Africa,

the Middle and Far East, and on the DEW line in northern Greenland and northern Canada with filled milk also.

* * * * *

Members of Congress, judging from press reports, are much disturbed about the contents of an Air Force manual titled "Open Mess Operating Manual," that gives instruction on seven different ways to make a martini, how to stage fashion shows, how and where to round up dates for bachelors, as well as why lollipops should be provided for officers' children. An admonition is also given to those who run the officers' clubs to feed employees, who frequently are enlisted men, cheaper cuts of meat.

Admittedly, Congress should be concerned when a branch of the armed services lays such stress on trivia of this kind. But this commentator maintains that Congress should be much more concerned over the matter of our armed services openly flaunting the intent of Congress with regard to the filled-milk bill.

The language of the bill clearly defines the product as "an adulterated article of food, injurious to the public health, and its sale constitutes a fraud upon the public. It shall be unlawful for any person to manufacture within any territory or possession or within the District of Columbia, or to ship or deliver for shipment in interstate commerce, any filled milk."

On May 11, 1959, in the 1st session of the 86th Congress, I introduced bill H.R. 7146 to amend the Agricultural Trade Development and Assistance Act of 1954, as amended—Public Law 480—for the very simple reasons which I specified at the hearing on that bill before the Subcommittee on Dairy and Poultry of the House Committee on Agriculture on August 3, 1959; namely, that, first, the manner in which the Public Law 480 program has been administered in respect to encouragement of exports of nonfat dry milk, particularly, is contrary to a basic principle of Public Law 480; second, the aggressive promotion of the production and marketing of filled-milk products, made from coconut oil mixed with subsidized nonfat dry milk from the United States, is wrecking normal commercial export markets for natural U.S. dairy products abroad; third, official reports indicate that a vigorous drive is in the making to expand filled-milk production throughout many of the non-dairy-producing nations of the world, which will inevitably redound to the disadvantage of ourselves and of friendly nations who depend upon dairy product exports for a large portion of their foreign trade; and, fourth, the aggressive production and marketing of filled dairy products abroad by our dairy industry, coupled with the encouragement given such operations by our own Government through payment of subsidies under Public Law 480 and other U.S. law, will, over a period of time, result in efforts being made in the United States to produce imitation fluid milk and fluid-milk products.

At that hearing, I further pointed out that H.R. 7146 would serve to accomplish or prevent, among other things, the following:

1. Prohibit sale or disposal, either under Public Law 480 or with the assistance of the Secretary of Agriculture under any other act, of dairy products for use outside the United States for manufacturing filled milk products.

2. Specify that the Secretary may pay subsidies on dairy products other than those purchased under price support. * * * This thought arises from the fact that our major commercial export markets for dairy products concentrate very heavily in evaporated milk and dry whole milk.

* * * it seems to be utterly silly to subsidize exports of one dairy commodity at the expense of normal commercial export marketings of other dairy commodities.

3. Publications of the U.S. Department of Agriculture which I have seen show clearly the subsidization of nonfat dry milk under Public Law 480 and currently under other provisions of the law, has wrecked the export market of the United States for evaporated milk in the Philippines.

Furthermore, it appears that plans are in progress to expand filled milk production and marketing to many other areas, particularly the southeastern Asian area. If this is done, any potential development of export markets for natural dairy products in these areas will have been destroyed.

4. * * *

5. The bill makes more specific that the powers and authorities of Public Law 480 or of any other act shall not be used in a manner so as to disrupt or displace any usual marketings of, or any normal patterns of commercial trade in, any dairy products produced in the United States.

In closing, I would like to state that I am not unmindful of the fact that there are those in the dairy industry who might oppose amending Public Law 480 as provided in H.R. 7146 because of possible loss of some export outlets for nonfat dry milk.

I want you gentlemen to know that I am fully cognizant of such arguments and I do not think they are compelling.

You may not know it, but the district which I represent is one of the heaviest dairy producing districts in Minnesota and in the United States. In the town of Browerville, Minn., there is located one of the largest and most modern nonfat dry milk manufacturing plants in the world. I am sure that the farmers in my area do not want any action undertaken to promote the production of filled milk products abroad nor do they want action taken abroad which may in time lead to serious competition with filled milk products in this country.

In its report No. 908 dated August 15, 1959, the House Committee on Agriculture, to whom was referred the bill (H.R. 8609) to amend Public Law 480 by extending the authorities of titles I and II, strengthening the program of disposals through barter, and for other purposes, having considered the same, reported favorably thereon without amendment, recommended that the bill do pass, and added the following:

During the course of its hearings, the committee received testimony on H.R. 7146 by Mr. MARSHALL which would add a new section to Public Law 480 prohibiting any dairy commodity produced in the United States being sold or disposed of under Public Law 480 for use outside the United States in the manufacture of filled milk or filled cheese.

Testimony indicated that nonfat dry milk exported under Public Law 480 has been used in the recipient country for the manufacture of filled milk, movement of which in interstate commerce is prohibited in the United States, which has in turn been manufactured into an evaporated filled milk product sold in the recipient country in competition with evaporated whole milk imported from the United States. The condition complained of exists particularly in the Philippines where, it was indicated, sales of an evaporated filled milk product have sharply reduced imports of evaporated milk from the United States.

While the operations complained of are not prohibited by law, it is repugnant to the whole intent and purpose of Public Law 480 that commodities exported to another country under the subsidies provided in title I should be used in such country in such a manner as to compete with and reduce exports from the United States to the same country of similar commodities on a commercial basis. The committee believes it is the clear intent of the law that the Department of Agriculture in making its "usual marketings" determinations (which are used as a guide in determining eligibility of a country to receive products under title I) not only of the particular products (in this case nonfat dry milk) but of similar or related products (such as evaporated whole milk) should be taken into consideration.

While the committee did not include this bill in its amendments to Public Law 480, it is in full accord with the objectives of the proposal and has omitted it because it believes this reminder to the Department will accomplish the purpose.

On August 19, 1959, during the floor debate on H.R. 8609, I asked and was given permission to extend my remarks, whereupon I had the following colloquy with my distinguished colleague, the gentleman from Texas [Mr. POAGE]:

Mr. MARSHALL. Mr. Chairman, you will recall that I introduced a bill, H.R. 7146, which would have added a new section to Public Law 480, which, among other things, would have prohibited any dairy commodity produced in the United States being sold or disposed of under Public Law 480 for use outside the United States for filled milk or filled cheese.

My bill also provided that export assistance under any other law could not be granted by the Secretary of Agriculture for the purpose of subsidizing the exportation of nonfat dry milk to be used in the manufacture of fluid milk products abroad.

First, I wish to commend the committee in its report in which it states that the operation which my bill sought to correct "is repugnant to the whole intent and purpose of Public Law 480 that commodities exported to another country under the subsidies provided in title I should be used in such country in such a manner as to compete with and reduce exports from the United States to the same country of similar commodities on a commercial basis."

Secondly, it is noted that the committee stated that while it did not include this bill, H.R. 7146, in its amendments to Public Law 480, "it is in full accord with the objectives of the proposal and has omitted it because it believes this reminder will accomplish the purpose."

Testimony before the House Committee on Agriculture and the Dairy Subcommittee of the House Committee on Agriculture showed that, while the Public Law 480 agreement under which the exportations of which we complained in our bill, is now concluded, yet exactly the same type of subsidization is being carried on under authority of other laws, such as the Agricultural Act of 1949, as amended, the Commodity Credit Corporation Charter Act, and the like.

I feel that the same considerations in expanding or maintaining export markets for U.S. agricultural products under Public Law 480, namely, that the authorities of such law should not be used to interfere with commercial export marketings of similar commodities, should also govern in respect to export subsidization carried out under other laws, even though such consideration is not specifically stated in the laws.

It makes no sense to subsidize one commodity at the expense of the regular export market of another commodity, irrespective of the authority used to accomplish such exportation.

Now to my question: Does your committee agree that the restrictions as to noninterference with regular commercial export markets by subsidies authorized pursuant to Public Law 480 should also guide the Department in respect to subsidization of exports carried out under authority of any other law?

Mr. POAGE. The committee agrees entirely. Certainly, we intended that our surplus commodities should be used to develop, not to destroy, American trade and we surely feel that the same goal should be applicable to all of our export subsidy programs.

When, during the past March, the Department of Agriculture appropriations for 1961 were the subject of consideration at hearings before the Subcommittee on the Department of Agriculture and Related Agencies Appropriations of the House Committee on Appropriations, I was permitted to ask the following question of Mr. Marvin L. McLain, Assistant Secretary of Agriculture. I received the following answer from him, as part 3 of the printed record of those hearings, under the heading "Prohibitions Against Aiding in Manufacture of Filled Milk Outside the United States," at pages 560–561, discloses:

Mr. MARSHALL. What, if any, steps have been taken by the U.S. Department of Agriculture either by internal directive, regulation, instruction, or otherwise, to assure compliance by all elements of said Department with the reminder to the Department contained in the Committee on Agriculture Report No. 908 to accompany the Cooley bill, H.R. 8609 of the 1st session of the 86th Congress and the colloquy which I had with Congressman POAGE, of Texas, on the floor of the House on August 19, 1959, when the Cooley bill was being debated, both of which were aimed at accomplishing the purpose of my bill, H.R. 7146; namely, to guarantee that no dairy product produced in the United States will be sold or disposed of pursuant to Public Law 480, or with the assistance of the Secretary of Agriculture under any other act for use outside of the United States for manufacturing, blending, or compounding of filled milk or filled cheese, or have the effect of disrupting or displacing any usual marketings of, or any normal patterns of commercial trade in, any dairy commodity produced in the United States?

Can you supply that for the record?

Mr. MCLAIN. We will do the best we can.

(The information referred to follows:)

"The Department has taken steps to assure that nonfat dry milk sold under Public Law 480 is not used in the manufacture of filled milk or cheese."

The assurance thus given by Mr. McLain that henceforth the Department of Agriculture will abide by the intent of Congress as regards its nonfat dry milk disposition activities under Public Law 480 is commendable, indeed. However, it fails to assure the Congress that no surplus nonfat dry milk produced in the United States will be sold or otherwise disposed of out of the Commodity Credit Corporation inventory with the assistance of the Secretary of Agriculture under any act other than Public Law 480 for use outside of the United States for manufacturing, blending, or compounding of filled milk or filled cheese, or have the effect of disrupting or displacing any usual marketings of, or any normal patterns of commercial trade in, any natural dairy commodity produced in the United States.

That this is a real and cogent problem, harboring the potential of grave harm to the dairy industry of the United States, is borne out by Mr. McLain's answer to my further question, put to him in the course of his testimony at the aforementioned Hearings on the Department of Agricultural Appropriations for 1961—part 3, hearing record, page 562—as follows:

Mr. MARSHALL. Aside from Public Law 480 is it not true that CCC can subsidize exports for nonfat for use in filled milk under its charter without reference to Public Law 480 or this could also be accomplished under other legislation?

"This would be possible."

Not only would this be possible, as Mr. McLain's answer suggests, but it is a fact that since the reminder to the Department there were effected, with the assistance of the Secretary of Agriculture and under the aegis of the International Cooperation Administration pursuant to section 402 of the Mutual Security Act of 1944, shipments of surplus nonfat dry milk out of the Commodity Credit Corporation inventory to the Philippine Islands for use in the manufacture of filled evaporated milk.

Since then, and on February 1, 1960, the Department of Agriculture, Commodity Stabilization Service, Livestock and Dairy Division, issued announcement LD–33, entitled "Sales of Dairy Products for Export," and setting forth the ground rules on "how to submit competitive bids to buy butter, Cheddar cheese—cheese—and nonfat dry milk—milk—from Commodity Credit Corporation—CCC—for export." Pursuant to this bid procedure, sizable quantities of CCC nonfat dry milk have been purchased by, among others, the American concerns which operate filled milk plants in the Philippine Islands or have been the regular suppliers thereto, and by the American concerns which, in the past, were the regular suppliers of the nonfat dry milk requirements for the filled milk plants servicing the PX operations of the U.S. Air Force at Kindley Field, Bermuda.

To determine if such CCC nonfat dry milk, so sold pursuant to announcement LD–33, has been or is being thus utilized, I put the following further question to Mr. McLain during his testimony at the aforementioned hearings on the Department of Agriculture Appropriations for 1961, and received the following answer—part 3, hearing record, page 559:

MANUFACTURE OF FILLED MILK OUTSIDE THE UNITED STATES

Mr. MARSHALL. Is subsidized U.S. surplus nonfat dry milk being used anywhere outside of the United States in the manufacture of "filled milk," as defined in the U.S. Filled Milk Act of 1923 as amended?

Mr. MCLAIN. We will consult with the Foreign Agriculture Service and furnish the answer.

(The information referred to follows:)

"It is not definitely known whether any of the nonfat dry milk sold recently by the CCC for unrestricted export is being used in the manufacture of filled milk. The Department believes, however, that some of the nonfat dry milk which has gone to Mexico and the Philippines has been used, in the first case in filled fluid milk, and, in the second case, in canned filled milk."

I respectfully suggest that the lack of definite knowledge of what disposition ultimately is being made of the current unrestricted exports of CCC nonfat dry milk, coupled with nothing more tangible than an unverified belief that CCC nonfat dry milk has been used in the manufacture of filled milk overseas, as the Foreign Agricultural Service answer to the question I put to Mr. McLain implies, is either a disgraceful admission of the inadequacy of the information being relayed to the Foreign Agricultural Service by its agricultural attachés stationed in recipient foreign countries, or a deliberate affront to the intelligence of the Congress.

Definite proof is readily obtainable substantiating the use or intended use of such CCC nonfat dry milk for the manufacture of filled milk in the Philippine Islands plants of the Darigold Milk Co., Paranaque, Rizal, Philippine Islands, an affiliate of Consolidated Dairy Products Co., Seattle, Wash., the marketing organization of United Dairy Farmers of the Pacific Northwest, and General Milk Co.—Philippines—Inc., Mandaluyong, Rizal, Philippine Islands, an affiliate of the Carnation Co., Los Angeles, Calif. There is no evidence of which I am aware of any intention on the part of either Borden's or United Dairy Equipment Co. to cease manufacturing filled milk from subsidized CCC nonfat dry milk at their plants in Bermuda for PX sale to the servicemen and attached civilian personnel of the U.S. Air Force at Kindley Field, Bermuda.

It obviously is necessary to conclude that the "reminder to the Department" contained in House Committee on Agriculture report No. 908 to accompany the Cooley bill—H.R. 8609—and the admonition to the Department contained in the colloquy I had with the gentleman from Texas [Mr. POAGE] have utterly failed to accomplish the purpose which my bill—H.R. 7146—was aimed at achieving—an objective with which both the Committee on Agriculture and the Committee of the Whole House were in full accord.

I, therefore, respectfully appeal to my colleagues in the Congress on behalf of the dairy farmers of the United States, who are the ones that will reap the bitter harvest of this folly, to assist in putting an immediate end to, first, this wholly unjustifiable and unwarranted frustration of the valid national policy expressed in the constitutional and unrepealed Filled Milk Act of March 4, 1923, as amended; and, second, the incomprehensible continuing practice of the Department of Agriculture of ignoring the congressional intent expressed or implicit in Public Law 480, the Agricultural Act of 1949, as amended, the Commodity Credit Charter Act, the Mutual Security Act of 1954, and the like, pursuant to one or a combination of which, export subsidization of CCC nonfat dry milk for use in the manufacture of filled milk overseas has been and is being carried out with the assistance of the Secretary of Agriculture.

None of the public funds which are appropriated to the Department of Agriculture for fiscal year 1961, or thereafter ought to be utilized either directly or indirectly to subsidize the sale or other disposition of CCC nonfat dry milk for use outside the United States for the manufacturing, blending, or compounding of filled milk or filled cheese, or have the effect of disrupting or displacing any historically usual marketings of, or any historically normal patterns of commercial trade in, any natural dairy commodity produced in the United States.

Mr. PASSMAN. Mr. Chairman, I yield such time as he may desire to the gentleman from Utah [Mr. KING].

Mr. KING of Utah. If the gentleman from Louisiana will yield, may I say that I have followed the work of the gentleman from Louisiana, and know the painstaking care which he has given to the problem of eliminating governmental waste in our mutual security program. I should like at this time to ask the gentleman to state for the record whether or not in his opinion the cuts which his subcommittee has proposed will endanger in any material way the security of this country, or whether they will retard the progress which this Nation has made in promoting the cause of democracy through extending legitimate aid to those who would benefit therefrom throughout the world.

Mr. PASSMAN. I may say to the gentleman that we are not cutting the funds. This military assistance recommendation is 23 percent more than the amount appropriated last year. This is the highest money request that has reached this floor in 6 years. We are increasing the military item by $300 million.

I might state further that a majority of the subcommittee, a majority of the full committee, and the leaders on my side of the aisle are of the opinion that the funds are adequate.

I should like to thank the gentleman for his interest, and I want to assure him that I am grateful for the information he gave to me that made it possible to find certain waste in this bill that the committee has eliminated. I have nothing but commendation for the gentleman from Utah.

Mr. KING of Utah. I thank the gentleman.

Mr. Chairman, I want to make it clear that I support the principle of foreign aid. I have advocated it in civilian life, before coming to Congress, and I voted for it last year, as a Member of Congress. I shall vote for it this year. I shall continue to support it as long as I feel that it makes a legitimate contribution to the security of this Nation, to the containment of communism, and to the extension of democracy and the advancement of human freedom and decency throughout the world.

I must make it equally clear, however, that any foreign aid program which I endorse must submit to the same rigorous tests of fiscal soundness, not only in its entirety, but in each particular thereof, as must any domestic program which elicits my support.

I have, in the past, voted for sewage disposal, airport construction, area redevelopment, reclamation, and many other insisted that all waste be first eliminated therefrom. To that end, I have not hesitated to vote for cuts where I felt that such cuts would effectuate justifiable economies. What I ask for domestic programs, I now ask for the proposed mutual security program.

I have read the record carefully, and am convinced that there are some aspects of this program that demand careful reexamination. When I hear of our sending the most advanced type of planes to a country who has no men to fly them, and no immediate prospects of obtaining them, when I hear of our sending tanks and other implements of death to a country whose government and all its equipment is threatened to be taken over by the very enemies against whom those armaments are intended as a protection, and when I hear of the vast and sometimes wasteful expenditures made in countries which admit openly that the very program which administers this largess is wasteful and inefficient, then I find it necessary to pause, to reevaluate our objectives and the means devised by which they may be attained.

The cuts of the subcommittee still leave our foreign aid budget larger than it was last year by over $140 million. I believe that $3,389,750,000, as recommended by the subcommittee, is enough.

I plead once again, as I have done before, to avoid waste, to consolidate duplicating programs, and to strengthen our domestic economy through following sound fiscal policies. It is only by so doing that we can fulfill our historic role as the strongest leader of a strong, free world.

Mr. TABER. Mr. Chairman, I yield such time as he may desire to the gentleman from North Carolina [Mr. JONAS].

Mr. JONAS. Mr. Chairman, may I ask the chairman of the subcommittee a question?

On page 1126 of the hearings the gentleman from Louisiana asked a question, as follows:

> I believe that earlier we requested information on the total cost of the 43,600 employees in the overall mutual security program.

That was a question directed to Mr. Murphy. Will the chairman of the subcommittee advise the committee today where these administrative costs appear in the bill? Do they run throughout the bill?

Mr. PASSMAN. They run throughout the bill. I may say to the gentleman that the figure now is approximately 44,000 employees in the mutual security program.

Mr. JONAS. The gentleman does not have it broken down?

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. JONAS. I yield to the gentleman from Virginia.

Mr. GARY. May I say to the gentleman if he will look at page 23 of the committee report, in the table on that page, he will see that there are general administrative expenses of $38 million for ICA. In the State Department [illegible] On page 2 of the bill $23 million are allowed for administrative expenses for the military assistance program.

In addition, in the Development Loan Fund there is a limitation of $1.8 million for administrative expenses. Then, in addition, the technical assistance program is practically all administrative expense, because it is to pay the expenses of the men in the field who are conducting these technical projects.

Mr. JONAS. If I may supplement my question, I was primarily interested in ascertaining how much administrative cost is attributable to military assistance.

Mr. PASSMAN. Twenty-three million dollars is for the administrative cost of the military assistance program in the bill before the committee.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

Mr. TABER. Mr. Chairman, I yield the balance of my time to the gentleman from Arizona [Mr. RHODES].

Mr. RHODES of Arizona. Mr. Chairman, this is near the end of a long trail for this particular piece of legislation, at least as far as the House is concerned, because when we get a look at this bill again it will have passed the other body and will come back for approval of the conference report. Sixteen weeks of hearings have gone into the preparation of this bill.

Mr. Chairman, I would like to say at the outset that I regret the necessity of being in a position to differ with some of my very good friends on the other side of the aisle as far as the amounts which are to be appropriated for the various activities under this bill are concerned. By and large, this subcommittee works in harmony, and I hope that it will always continue to be that way. I intend to address myself directly to the category of defense support.

The defense support figure recommended by the majority is $600 million. This is down from $724 million which was recommended by the President of the United States for this category. The great Committee on Foreign Affairs voted out a bill which was passed on the floor of the House and the other body and later became law providing for an authorization of $675 million. Thus, the amount in this bill, $600 million, is a cut of $124 million below the budget request, or a cut of just under 20 percent. In fact, this program has been cut rather drastically during the last few years. In 1959, $807 million was appropriated for this item.

In 1960 the figure for this program was $765 million. In 1961 we have a figure of $600 million. This is a reduction since 1959 of over 25 percent in this particular item.

What is it that we are reducing? What is defense support? I will answer this as clearly and as briefly as I can. Defense support is the program by which we keep certain nations which are allied with us in the business of defending themselves. Some of the beneficiary nations in this program are South Korea, Taiwan, South Vietnam, Pakistan, Turkey, and Greece. These are the small

nations along the perimeter of the Soviet world who have had the courage—and I say this with all the emphasis at my command—the great courage to aline themselves with the free world even though the Kremlin and Red China are looking right down their throats and pointing missiles at them every day.

This money goes to support their armed forces. It goes to support 600,000 troops on the island of Taiwan. It goes to support 600,000 troops in South Korea. It goes to support the army of some 280,000 in South Vietnam. It supports the armies of Turkey, Greece, and Pakistan. This money is spent about as follows: The money is used to import products. Incidentally, well over 60 percent of those products will come from the United States. The purpose is to put those products into the economy of these countries. The products are mainly in the category of capital expenditures which will have a long-time beneficial impact on the economy of these nations. Through the building of their economy, we make possible the dawning of that day when they may be able to support themselves and their armed forces without our help.

These nations are asked to pay for those products in the only way they can pay, and that is in their own currency. The agreement which we have with these nations varies somewhat in form, but substantially it is something like this. Whenever a unit is sold to the government of, or to a business within that country—Country A—Country A sets aside, or receives from the purchaser to set aside, the price of the product in the currency of Country A. That currency may be spent in accordance with the agreement between the United States and Country A. We do not own the money. We do not have a veto power over the way it is spent. Therefore, we retain just enough of a string on it to make sure that the original cost to the United States, which bought this machine tool, is used in a way which will represent a long-term beneficial effect. That, of course, is the only reason in the first place we would have spent the money.

Mainly these local currencies are used to support and maintain the armed forces budgets of these countries. With the military assistance program we buy the hardware, the sinews of war with which these armies, navies, and air forces must be armed. With the defense support program we, wherever it is necessary, support the budgets of these particular nations so that they will be able thereby to support armed forces which they could not possibly support with their own resources.

So this very briefly is defense support.

Now, is it necessary? Is it a good investment for the American taxpayer to keep these nations in the field and to keep them on our side; to keep their armed forces at their present level?

Take the case of Red China, a nation which certainly since its inception has shown all the predatory tendencies of a young lion cub. This is a nation which has marched into Korea, which has by indirection, perhaps, marched into Southeast Asia, and has shown signs of marching wherever it can probe a soft spot around the perimeter of the globe.

This is a nation which is growing in industry. Its industrial output is up some 300 percent in the last 5-year plan. It now is in about the same economic position, or it will be in 1965, as Soviet Russia was on the day World War II began. So this is a threat which no one dare take lightly. This then is a nation which is growing and which shows signs of spreading out wherever it can, by any means available.

What is the deterrent? The deterrent consists of 600,000 Chinese Nationalists and the 600,000 South Koreans on the flank of this nation, ready to strike if need be to defend that portion of the free world which is in Southeast Asia. The other deterrent is the armed forces of the nations of Southeast Asia, trained, armed, and ready to defend their liberties whenever required. These are the forces which are supported in that part of the world by defense support.

Then going over to the Middle East, also on the perimeter of the Iron Curtain, we find the nations of Turkey and Greece. No one needs to recount the valor of the Greeks during World War II. No one needs to recount the valor of the Turks who fought by our side in South Korea. No one I am sure will doubt for one single instance that if trouble begins those two brave little nations will be on the side of the free world.

We have heard the gentleman from Michigan [Mr. FORD] very eloquently plead for an increase in military assistance. This military assistance is necessary for modernization of the armies of Greece and Turkey and the other armies around the perimeter as well as those of Western Europe. If trouble came, and we had not modernized the forces of our allies, they would then be faced with some of the crack divisions of the Iron Curtain countries, and they would face them in the condition of having been armed and trained with weapons which are of the Korean war vintage.

It is absolutely necessary not only to keep faith with those people but also to keep faith with the taxpayers of the United States, who have thus far very nobly advanced this cause, that we make absolutely certain that if trouble begins these gallant allies of ours will be able to meet the threat with the very best weapons, the very best equipment, with which they can be provided. To do less would be to fail in the ultimate objective we seek—the deterrent capability to prevent war, and the ability to win one if it comes.

Do we provide all this? No, we certainly do not. The gentleman from Michigan has already related the fact that the military budgets of these nations have gone up very considerably. Since military assistance has begun, those nations have spent $6 of their own money for every dollar which we spend.

To me, this program, as far as its justification is concerned, is very much like any other program in this particular section of the Government known as mutual security. I have never had the reputation of being a person to give away money, and I do not certainly intend to stand before you and try to change my spots. If this program and all of these programs cannot meet the test of being good for the taxpayers of the United States, then you and I, as Members of this body, should not pass these bills. The fact that the program has met this test is borne out by the fact that not only this body but the other body has passed the authorization bills under which we now appropriate funds. Therefore, the House has already answered the question as to whether or not most of this is good for the taxpayers.

We have heard gentlemen from the other side speak about certain cases involving transactions by the ICA which I call horror cases because they are horrible cases. There is no doubt whatsoever in my mind that many of them would be difficult to justify if, indeed, they can be justified at all. But I submit to every Member of this body, that where you have a program which is spending from $3 to $4 billion a year, and I do not care whether that program is a global program or whether it is centered here in the District of Columbia, you will find cases in which the money has not been spent well and you will find cases in which there was rank stupidity, and you will find cases that you and I, as Members of the Congress, will not be very proud to mention.

I do not have any doubt but that there are instances in this program very similar to that. In fact, I know of a few which have not been mentioned by gentlemen from the other side. But the minority report, Mr. Chairman, provides for a cut in the request of the President. The military assistance program, if you accept the amendment of the gentleman from New York, will still be 10 percent below the request of the President of the United States. If you take the figure on defense support of $650 million, under the amendment which will be offered by the gentleman from Michigan, you will still have a cut of $74 million, which is a 10-percent cut of the budget request of the President of the United States.

I submit to anybody, and I do not think it can be proved to be false, that for every $10 that is spent on this program, at least $9 of it is well spent. If we are going to cut out the waste based upon a percentage figure, I submit to you that the amendments which will be offered by the minority do just exactly that.

Mrs. BLITCH. Mr. Chairman, will the gentleman yield?

Mr. RHODES of Arizona. I yield to the gentlewoman from Georgia.

Mrs. BLITCH. As the gentleman knows, the gentlewoman from Georgia has a great respect for his opinion. I have always enjoyed listening to the remarks of the gentleman in debate on the floor of the House on various issues. Is the gentlewoman from Georgia incorrect in her recollection that the gentleman voted against the authorization bill?

Mr. RHODES of Arizona. No; the gentlewoman is not incorrect in that assumption. The gentleman from Arizona

did vote against the authorization bill, but he did so because he felt the program, as it was set forth in the authorization, called for more money than was necessary. The money which is provided in the appropriation bill is, in my opinion, too little, so I am doing the best I can to get it to a program that I can support.

Mrs. BLITCH. Then the gentleman from Arizona did not vote against the authorization bill because he was against the program?

Mr. RHODES of Arizona. There are certain parts of the program, I will say to the gentlewoman from Georgia, to which I have not referred. I have kept my remarks, as the gentlewoman will recall, to the two categories, military assistance and defense support. I will continue to do so.

Mrs. BLITCH. I thank the gentleman. Will he yield further?

Mr. RHODES of Arizona. I cannot yield further, Mr. Chairman, although I have the highest respect for the gentlewoman from Georgia, as she well knows.

The gentleman, and the very distinguished gentleman, I might say, from Louisiana——

Mr. PASSMAN. I did not understand what you said.

Mr. RHODES of Arizona. I am saying that the distinguished gentleman from Louisiana, the distinguished chairman of this subcommittee, who is my very good friend, in the committee and also on the floor, made a remark about an item of $325 million of excess stocks. I have searched the record and tried to find where there are $325 million of excess military stocks.

On page 2362 of the record I find about the only reference to excess stocks that appears anywhere in the index. Here the chairman is questioning Mr. Forman.

The following colloquy took place:

Mr. PASSMAN. How do we reconcile that figure with the information furnished on page 45, where you state it will be $77,219,000?

Mr. FORMAN. That figure $77,219,000 is a composite figure. The word "excess" as used there is a misnomer. It consists of both excess stocks and redistributable property. The excess is $40,044,000 and there is $24,919,000 of redistributable property making a total of $64,963,000. In addition, as previously reported to the committee, the sum of $12,256,000 carried on the book as excess for one country was erroneous.

If there is anything further in regard to excess or redistributable property I would now ask the chairman to point it out.

Mr. PASSMAN. You just do not know how happy you have made the gentleman from Louisiana.

Mr. RHODES of Arizona. I am always glad to make the gentleman from Louisiana happy.

Mr. PASSMAN. It was the distinguished gentleman who is now in the well of the House who assisted the chairman in establishing these figures. I merely refer the gentleman to the hearings now available, to the testimony from Norway, Belgium, Denmark, the Netherlands; and that amounts to $314 million, properly documented, and the gentleman helped document that.

In addition to that, Mr. Campbell brought to us a few other facts indicating over $100 million in one country.

Now, the gentleman helped conduct these hearings. I wish he would go over and read his own interrogation, and if he does not find that I have given the right figures he can then supply them.

Mr. RHODES of Arizona. I asked the chairman to go to the record and pick out the place in the record where there is anything about $314 million.

Mr. PASSMAN. The gentleman can pick it out for himself. I stated my figures. They are correct, $314 million. Let the gentleman pick them out.

Mr. RHODES of Arizona. That figure is not in the testimony, and the gentleman from Louisiana knows it is not in the testimony.

Mr. PASSMAN. And I want to say that the gentleman from Arizona knows it is in the testimony.

Mr. RHODES of Arizona. Mr. Chairman, I do not yield further.

I do want to make one point clear. The chairman has also made some remarks concerning certain people thanking him for cutting this appropriation. He quoted from the record a sentence from General Norstad, but failed to read another following sentence bearing on the subject. I am sure it was because the gentleman did not see it. His motives are of the highest, I know.

Mr. PASSMAN made this statement:

If we had given you the money you asked for, you would have used it in this program. You would have bought something whether you needed it or not, and it would have been, today, in excess.

Then he read General Norstad's reply:

If you had given us, every year, everything we asked for, the total at the present time would indicate some overages that we now make, that is correct.

Then there was another sentence in General Norstad's statement which the chairman did not read:

Every year we must program in the light of the deficiencies which have been created by the failure to appropriate the year before as we are doing this year in Turkey.

The second sentence, if read, changes the context of the general's statement, and makes it say, as the general meant to say, that the cut in appropriations has hurt the program.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. RHODES of Arizona. I yield.

Mr. PASSMAN. What I said is in the hearings. If the gentleman wishes to take the time he can find it himself. He helped develop the facts. I have made my statement and I stand on every statement that I have made on the floor.

Mr. RHODES of Arizona. I do not yield further on that point. I merely am trying to help the chairman correct his own myopia as far as the Norstad statement is concerned, if he desires to do so.

Mr. PASSMAN. The gentleman will agree. If he will not agree that the figures I gave——

Mr. RHODES of Arizona. Mr. Chairman, I do not yield further on that particular point. I think maybe the chairman and I took different trips because some of the things which he says occurred I do not recognize and I do not remember.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. RHODES of Arizona. I yield to the gentleman from Iowa.

Mr. GROSS. Is there anything in this bill for what is known as the China Development Corp.?

Mr. RHODES of Arizona. I cannot tell the gentleman. Perhaps the chairman can enlighten him.

Mr. GROSS. And what is the China Development Corp.?

Mr. PASSMAN. If the gentleman will do a little research on that he will have the answer.

Mr. RHODES of Arizona. The chairman declines to give an answer to the gentleman from Iowa.

Mr. KYL. Mr. Chairman, will the gentleman yield?

Mr. RHODES of Arizona. I yield to the gentleman from Iowa.

Mr. KYL. If the recommendations of the minority in this report are accepted by the House, how much less, then, would the appropriation be below that requested in the budget?

Mr. RHODES of Arizona. If the recommendations of the minority are accepted, the bill will be increased by $250 million. It will be then a total of approximately $3.65 billion, which is some $400 million below the authorization and about $500-million-plus, below the budget request.

Mr. KYL. On page 14 of the report the statement in regard to the Development Loan Fund is to the effect the funds returned paid back do not go to the Treasury. Can the gentleman tell me what becomes of those funds?

Mr. RHODES of Arizona. The funds of the Development Loan Corporation?

Mr. KYL. Yes.

Mr. RHODES of Arizona. The gentleman's understanding is correct, the money which is paid back from loans of the Development Loan Fund is paid in currencies of the country involved. The currency stays in the Fund and is reloaned. It would take legislation to bring any of this money back to the Treasury.

The CHAIRMAN. The time of the gentleman from Arizona has expired.

Mr. PASSMAN. Mr. Chairman, I yield the remainder of the time on this side to the gentleman from Virginia [Mr. GARY].

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Illinois.

Mr. YATES. I voted in the committee for amendments to restore funds to the military assistance and the defense support program. I intend to do so again. However, time ran out in the committee before I had an opportunity to offer amendments to strike sections 107 and 109 of the bill which prohibit the use of funds for the Indus River Basin development and for the special assistance program for tropical Africa. In committee I reserved on those sections

of the bill and I intend to offer amendments to strike those sections at the appropriate time.

Mr. GALLAGHER. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from New Jersey.

Mr. GALLAGHER. Mr. Chairman, I believe that both sides of the aisle must unite in a real effort to restore the damaging cuts in the appropriation for the mutual security program.

We must act responsibly and maturely if we are to deserve the place we all so nobly refer to here on the House floor, that is, the leadership of the free world.

We cannot sit idly by and hope the Senate will restore these cuts. It is our responsibility to display a recognition of our international position and with it the attendant obligations that our position requires.

To do less and allow these cuts to remain is an irresponsibility that we can no longer afford.

Of equal, if not greater importance, is the rigid restrictions that are contained in this bill. A careful analysis of the rigidity contained in these restrictions leads one to the conclusion that there is no desire on the part of its proponents to see the program survive.

I do hope that the defects in this bill will be recognized and that when the amendments are submitted that we will vote to restore responsibility into this bill. We should act with a consciousness of our obligation to the less fortunate nations in this world who are lacking in every national resource except a great desire for freedom. We should act with a consciousness that this program is in our national interest.

Many charges and statements have been leveled against this program by the opponents and others who are merely seeking answers to questions. I have listened to the debates today and have heard some of them repeated. Certain charges left unanswered are used by the opponents to abandon the entire program.

I thought perhaps these charges should be answered in order to bring about a better comprehension for everyone concerned.

Accordingly, I am submitting a report prepared by the executive branch which documents with explanations those charges and statements which have appeared in one form or another during the past months including those that have appeared in the committee report and in today's debate. I do hope that it will in some way contribute to a better understanding. I hope that a better understanding will provide the enlightenment necessary to restore the damaging cuts in our mutual security program. To do less is to demonstrate an unworthiness of leadership in the fight for freedom and survival.

The report follows:

EXECUTIVE BRANCH COMMENTS ON CERTAIN STATEMENTS CONCERNING THE ADMINISTRATION OF THE MUTUAL SECURITY PROGRAM

MILITARY EQUIPMENT DELIVERED WITHOUT ASSURANCE OF PROPER USE

Statement

It has been charged the military equipment continues to be programed, procured, and delivered to recipient countries without adequate regard for the degree of utilization achieved in those countries.

Charge

Absolute safeguards have not been established nor is it practicable to do so. However, a concerted effort is being made to help insure that equipment is properly used. Significant in this regard are the following factors:

(a) All bilateral agreements contain a provision authorizing U.S. representatives to observe the progress of assistance furnished. DOD Directive 5132.3 assigns MAAG's the responsibility for observing and reporting on the utilization of MAP furnished equipment.

(b) MAAG field visits include the purpose of viewing end-item utilization, frequently as a corollary duty while on other official MAP business. The MAAG's report evidence of improper use of equipment to the host country. Followup visits are made by MAAG personnel, as appropriate, to determine whether corrective action has been taken. Unsatisfactory situations are reported to the unified command.

(c) In countries whose indigenous military reports afford the information, they are used by the MAAG's to determine the effectiveness of end-item utilization, particularly in the more advanced countries. Spot checks are made during MAAG field visits to assist in establishing the validity of such indigenous reports. Improved logistic and maintenance systems, training methods, and reporting procedures are producing dependable reporting.

MILITARY EQUIPMENT DELIVERED TO ABANDONED UNITS

Statement

The charge has been made that military assistance has been delivered to force units (divisions, aircraft squadrons, etc.) which have subsequently been deleted from MAP supported force goals and the equipment is now excess.

Comment

By no means all of the allied forces which are strategically important to the United States are supported by military assistance. In addition to strategic considerations, the decision as to which forces are to be eligible for MAP assistance must take into account the country's capability to maintain them without U.S. aid and the relative military importance (priority) of the unit in relation to the limited MAP resources available. These decisions are reexamined regularly and revised in the light of changing conditions. As a result, many units which were once assisted have been deleted from current MAP supported force goals.

Simply because the United States has made a decision not to support a certain unit in the future, it does not follow that the existence of the unit is no longer in the U.S. strategic interest, nor does it follow that the equipment previously programed for that unit is no longer needed and is now excess. For example, it has been some years since we have programed any military assistance for conventional ground, naval, or air forces in the United Kingdom. It would be patent nonsense to suggest, however, that it is no longer in the U.S. strategic interest to have the British Government maintain military forces and that we should, therefore, now take back the materiel which was used to help the British equip these forces in the early days of NATO.

On the other hand, a rapidly advancing technology and changes in the world situation do result in equipment becoming excess to the needs of forces previously supported by the MAP. In these cases, the equipment is offered back to the United States by the recipient countries. MAP supplied items having an acquisition value of approximately $1.2 billion have been offered back to the United States. Of this $1.2 billion, over $450 million worth have been transferred to other countries to meet MAP requirements. It was used by the original recipient, served its purpose and is now meeting a MAP requirement for at least the second time since it was delivered originally.

JET PLANES WITHOUT PILOTS

Statement

During congressional testimony, a news release was cited which asserted that the United States gave 421 jet planes to an unidentified Far Eastern ally whose air force had only 186 qualified jet pilots.

Comment

As of June 1, 1960, the number of jet-qualified pilots exceeded the number of jet aircraft delivered to this country. It is true that at time referred to in the news release, January 1958, the number of pilots qualified in one particular type of jet aircraft was not equal to the number of aircraft. However, the total pilot inventory was 488. A short training period qualified these pilots for this type aircraft, thus equalizing the situation. Aircraft production and pilot training both have long lead time requirements. The pilot training output for this one type of aircraft slipped due to stringent emphasis placed on other factors in the training program. A review of the training program has corrected this situation and appropriate steps have been taken to balance all aspects of the aircraft and pilot program.

TANKS WITHOUT DRIVERS

Statement

The statement has been made that 255 tanks were programed for five tank battalions in one country having actual strengths of only six people. Notwithstanding the ample supply of tanks available, an additional 125 tanks were programed to be used for training purposes.

Comment

1. The program action in question involved a total of 300 tanks and not 380 tanks.

2. All tanks programed for this country are valid requirements for NATO divisions and supporting units required on D-Day or a few days thereafter. The tanks provided were limited to unit equipment, i.e., minimum tanks required in the unit at all times. War reserve tanks were not programed for these units nor were tanks programed for the reserve units of this country.

3. Normally tanks are not provided for training purposes if available in war reserve or in reserve divisions. Since this was not the case in this country, 125 tanks were programed to meet a valid requirement for tanks in training centers and schools. All but a few of these tanks were for the armored training school. To have withdrawn any tanks from the first line NATO units would have reduced their D-Day capability below minimum acceptable levels. Furthermore, equipment used at training centers soon becomes valueless as combat equipment because of continual use in training inexperienced personnel.

The manning levels quoted by the Comptroller General predate the programing of the tanks in question. There are now 12 tank battalions in the country concerned, seven of which are being supported by the military assistance program. Five of the battalions are 65 percent to 75 percent manned. The manning levels for all seven MAP supported battalions have been and are being increased as tanks are delivered to the units. The military officials of the country concerned did not care to expand manpower and other resources for tank battalions until they were assured that tanks were available to the unit.

PAYMENTS FOR AIRCRAFT KNOW-HOW

Statement

It has been stated that through the military assistance program the United States agreed to assist Italy in building F–86 fighter planes. Included in this project was a $750,000 payment to North American Aviation Co. for rights and know-how pertaining to this airplane. Actually, the U.S. Government acquired rights to the plane when it was developed.

Comment

This project was initiated when the United States and Italian Governments decided to support production of the F–86 in Italy by Fiat. North American Aviation, Inc., developer of the plane, entered into agreement with the Italian Government and Fiat to provide to them, information, data, drawings, plans, specifications, and related material pertaining to the F–86. The agreement also stipulated that North American would furnish for a period of 5 years, assistance and cooperation in the manufacture or development of Fiat of these F–86-type planes. This agreement was not just a license for relieving the Italian Government or Fiat of claim of patent infringement. It was a commercial agreement with Italy and Fiat to furnish the experience and know-how North American had taken years to accumulate. In short, North American aided in the establishment of a competitor.

Even in those cases where the U.S. Government may transfer patent and reproduction rights to a second source, the establishment of a second source often requires more than a mere transfer of these rights. Generally, the active assistance of the first source is necessary to implement timely production of satisfactory equipment. Consequently, as in this case, the first source has basis for charging for specialized assistance furnished to other sources.

RAISING OF MAAG RECOMMENDATIONS

Statement

Programs recommended by the MAAG's are increased by the unified commands and by the Department of Defense in order to spend more money, giving the countries things they don't need and don't want.

Comment

This statement is basically incorrect. The dollar ceilings imposed on unified commands for planning purposes produce much smaller proposals than in the days when they made submissions for all militarily desirable and feasible projects eligible for grant aid.

The occasional instances in which MAAG recommendations are raised relate to projects the importance of which must be determined on a unified commandwide basis. For example, an early warning radar site might be of relatively low priority to the country in which it is situated but, when related to a network across a number of countries, it could be of the highest priority. The unified command judgments sometimes cannot be made until MAAG proposals for individual countries are seen and matched.

Increases in tentative MAAG proposals are made by the unified commands and by the Department of Defense only to meet such requirements and only with the concurrence of the MAAG concerned.

WE CONTINUE TO GIVE MILITARY AID EVEN THOUGH PAST EQUIPMENT IS STILL USABLE

Statement

MAAG Chiefs have stated that up to 95 percent of the billions of dollars worth of equipment previously furnished continues available and usable yet we continue to provide increasing amounts of aid.

Comment

To say that most of the equipment already furnished is still available and usable does not say that everything necessary to meet the military threat has been furnished.

The fiscal year 1961 request includes (in million dollars):

To replace wornout and obsolete equipment on hand (far less than 5 percent of that already supplied)	210
Conventional types of equipment needed all along but not supplied previously	157
Advanced type weapons needed to modernize forces	651
Plus: Repair parts, petroleum, oils, and lubricants and other supplies	405
Military construction, supply operations, training, multilaterally cost-shared programs such as NATO infrastructure and mutual weapons development	577
Total	2,000

AIDED COUNTRIES SELL OUR MILITARY AID AND KEEP THE PROCEEDS

Statement

The MAP has supplied more equipment than the recipient countries can use. The countries now are being told to sell this equipment and keep the proceeds in order that more equipment can be provided.

Comment

MAP-supplied items having an acquisition value of approximately $1.2 billion have been offered back to the United States by the recipient countries. These materials were determined by the country to be needed no longer in support of MAP objectives.

1. Of this $1.2 billion, over $450 million worth has been transferred to other countries to meet MAP requirements. It was used by the original recipient, served its purpose, and is now meeting a MAP requirement for at least the second time since it was delivered originally.

2. Approximately $266 million worth was taken back by U.S. authorities. In most cases, the materiel was sold, and the receipts from the sales deposited in miscellaneous receipts of the Treasury. Some was taken by the U.S. Military Departments for use.

3. About $340 million worth was released to the country for disposal. This materiel consisted primarily of items having only scrap value. The net proceeds from all sales approximated $6 million. The countries were allowed to keep the proceeds with the understanding that they would be used to further the countries' defense effort. These releases were made when it was determined that it would cost the United States more to recover and sell the materiels than could be realized from their sale. Appropriate safeguards were imposed to insure demilitarization of equipment and prohibit transfers to Soviet bloc countries.

4. Equipment having an acquisition value of about $3 million was released to the holding country for uses other than support of MAP objectives. These cases are rare and each case has resulted from a determination that such action was in the best interests of the United States.

5. The remaining $136 million represents materiel as to which the United States has not yet taken final action.

In summary: For a substantial part of the equipment involved, at least double usage is achieved. The United States has sold and made deposits to the Treasury where the sale value was greater than the cost to the United States of recovery and sale. Where recovery and sale has been uneconomical to the United States, the recipient countries have been authorized to sell and use proceeds to further their own defense funds.

MAN APPROPRIATION LEVELS

Statement

The MAP is increasing substantially. For fiscal year 1960 there was appropriated $1.3 billion and now for fiscal year 1961 there is requested $2 billion or an increase of $700 million.

Comment

Seven years ago, on June 30, 1953, the military assistance program had available unexpended balances of almost $8.5 billion. For the five fiscal years, fiscal year 1955 to fiscal year 1959, inclusive, the average annual expenditure on the military assistance program was $2.36 billion. This rate of expenditure was made despite an average annual grant of only $1.37 billion in new obligational authority (appropriations). The remainder, an average annually of $1 billion came each year from unexpended balances of the earlier appropriations. The forecast of expenditure during the current fiscal year (fiscal year 1960) is $1.83 billion, although the appropriation for fiscal year 1961 was only $1.3 billion. By June 30, 1960, the level of unexpended balances will have shrunk below $2.1 billion.

It is obvious under these circumstances that the MAP cannot be continued at anything like the present level without an increase in appropriations to replenish the greatly shrunken pipeline.

It is only when obligational authority is granted by the Congress that the executive department is able to place orders enabling suppliers to go ahead with production and, in due time, delivery. In view of the ever-increasing complexity of weapons, which tends to lengthen the production leadtime, and also in view of our desire to encourage cost-sharing arrangements with our allies, which usually involve lengthy negotiations, it is necessary to have a carryover of unexpended obligational authority amounting to the size of the program for 15 months. This means that to deliver and expend $2 billion in a given fiscal year we need to carry forward an unexpended balance of $2.5 billion at the end of the preceding fiscal year, in addition to the new appropriational authority of that year's bill.

Actually, the annual expenditure rate of the MAP, far from increasing, is radically decreasing. The expenditure rate for fiscal year 1961 is planned at $1.79 billion. This is $557 million less than the rate of the last 5 years.

COSTS OF NATO MAINTENANCE SUPPLY SERVICES AGENCY

Statement

The fiscal year 1961 request for $25 million for the NATO Maintenance Supply Services Agency is in conflict with last year's Defense testimony that no further funding requirements were foreseen.

Comment

Defense testimony in fiscal year 1960 was predicated on the limitation of the Agency's activities to the support of 5 selected aircraft and 15 Army vehicle weapons systems.

The range of the Agency's management activities has since increased to include the support of rockets and missiles (Nike-H.J.), the support of electronic communication systems (forward scatter-early warning radar) and the establishment of common stockage and repair facilities (NATO Supply Center). The Agency's revenue-producing activities such as consolidated procurement are only now coming into fuller play.

Additional funding requirements in fiscal year 1961 are attributable primarily to the establishment of the NATO Supply Center and the requirement for its initial stockage. This stock will be maintained and replenished by the Agency and the United States will retain its equity in the assets.

WEAPONS PRODUCTION PROGRAM

Statement

The weapons production program is another means of giving away our money to countries which are economically able to finance themselves.

Comment

The weapons production program is a means of getting countries who are able to finance themselves to do so. It is a reduction of 90 percent as compared to giving these countries the end-item of materiel. By furnishing technical assistance a source is established wherein the countries can use their local currencies, and will no longer have need to ask the United States for the item.

There are benefits to U.S. industry because the producer nations will procure from the United States a considerable portion of the total weapon system, as bits and pieces for a period of approximately 2 to 3 years, after which time they are able to produce the total weapon system.

This appears to be one of the cheapest ways to accomplish modernization of the allied forces with the constantly changing weapons technology.

THE MUTUAL WEAPONS DEVELOPMENT PROGRAM

Statement

The mutual weapons development program (MWDP) is a waste of money. Our allies are not paying their share and the program has largely been unproductive.

Comment

The purpose of the MWDP is to increase the defensive capability of the NATO alliance through U.S. assistance to selected research and development projects for weapons of advanced design and which lend themselves to coordinated European production cost sharing agreements.

MWDP aid is provided in accordance with a bilateral agreement with the participating country which specifies the responsibilities of the participants as well as the costs to be borne by each.

As of fiscal year 1959 NATO participants in this program have obligated $199 million for it. The U.S. contribution has been $195 million or 98 percent of the total. As new projects are diverted toward NATO multilateral financing, the U.S. share of the MWDP cost should fall substantially below 50 percent.

The current program includes approximately 200 active projects. The fields of military research and development covered include air defense, combat air support, land combat and antisubmarine warfare. More than 60 new weapons or components of military equipment have reached the production or field testing stage, and have been offered by the countries of origin to other countries through NATO.

Data exchange agreements are a new activity under MWDP. These agreements permit project directors from the United States and the NATO country concerned to communicate directly with each other regarding specified technical matters of mutual interest.

This program of participating in and thus having access to European research and development, provides important benefits to the United States by allowing us to draw upon the technical skills and scientific talents of some of the best minds in other free world countries.

INSTITUTE ON ICA DEVELOPMENT PROGRAMING

Statement

The House Appropriations Committee majority report is sharply critical of the high costs of the contract between ICA and the Johns Hopkins Institute.

Comment

The contract between ICA and the Johns Hopkins University School of Advanced International Studies calls for a highly specialized course in graduate-level economic development training. Such training is provided to carefully selected ICA personnel whose performance has demonstrated their capacity to assume higher levels of responsibility. The purpose of the training is to improve the caliber of economic program development, particularly in the underdeveloped areas where planning and programing techniques applicable to more highly developed areas are less pertinent. The course was developed to meet ICA's specific requirements; there was no comparable regular course in any institution of higher education.

The committee's basic criticism is that the cost of approximatley $4,000 per student is excessive for a 5-month course. During the hearings before the subcommittee, this figure was adversely compared with normal university tuition charges.

The critics overlook a most salient fact of university financing: tuition charges represent only a fraction of the real costs of instruction. Endowment, contributions and public funds for public supported institutions generally carry the major share of the cost. A university cannot undertake a special course on request and charge less than actual cost, since this would be an improper diversion of endowment. In this case the cost per student of the ICA course compares favorably with the real costs of instruction in the school of advanced international studies for its regular program. The estimated costs for their regular program average more than $4,600 per student for a comparable period, although the tuition charged is only $1,200.

Actual costs: In fact, earlier estimates for the first 2 years were based on budgeted maximum figures, with reimbursement to be only for actual costs. These are now recorded at a lower figure which yields an actual per trainee cost of $3,743 to date rather than $4,000.

Future costs: In part as a result of consideration of the concern expressed by the House Appropriations Subcommittee, ICA has decided to enlarge future classes to reduce costs per student. Based on planned average enrollment of 24 for the 2 classes to be held in the coming year, contract costs per student will be reduced by 12½ percent.

Comparison with costs of similar intensive, executive-level training: The House Appropriations Subcommittee was advised (pages 985, 986, and 1015 of the hearings) that:

1. Private business firms pay $950 per man-month to the American Management Association for its specialized training which is comparable to this programing course. The fee to Government agencies charged by AMA is $850 per man-month.

2. Brookings Institution fees are $860 per man-month for similar courses. These charges of $850 and $860 to Government agencies and the $950 charge willingly paid by American businesses compare with the figure of $700 which is the planned future level for ICA personnel at Johns Hopkins.

GOVERNMENT AFFAIRS INSTITUTE

Statement

The House Appropriations Committee majority report sharply criticizes as excessively costly the contract between ICA and the Governmental Affairs Institute under which this nonprofit organization provides technical advice to the Government of Iran. During the hearings, the charge was repeatedly made that the individual technicians were receiving salaries far higher than their previous earnings—allegedly, $90,000 per technician over the run of the contract.

Comment

The criticism is erroneous as to cost and does not take into account the high quality and successful performance of a difficult, important job. Specifically:

1. The average base salary of the high level technicians provided is about $12,980 a year, about that of a GS–15 in the Federal service. The total average dollar cost per man-year including salaries, transportation, all other direct costs for technicians, out-of-pocket expenses and contractor overhead will run about $26,290.

2. These costs are in line with those incurred by private businesses and foundations in conducting oversea operations at this professional level. These are the costs of getting results.

And finally, the criticism ignores the major contribution which this project has made toward the modernization of the Government of Iran in its effort to fulfill the needs of its people and its national interest. High Iranian officials, including the Shah and the Prime Minister, have placed priority on receiving continued assistance of this nature, and the Government of Iran has officially requested the extension of this contract.

Salary Comparisons

In view of comments on the high salaries provided under the Government Affairs Institute contract the following table is provided to demonstrate the reasonableness of actions taken:

Name	Highest prior annual salary	Initial base pay on contract
Harwood, Wilson F	$14,000	$16,000
Hemphill, T. Marl	9,635	10,850
Massen, John B	11,140	11,750
MacNealy, Charles E	13,370	14,500
Loring, Karl H	14,000	12,700
Woodruff, Richard V	12,500	13,125
Harberson, Cecil R	10,958	11,479
Cox, Thomas H	12,000	13,000
Deas, Harold M	14,520	15,000
Skowronski, Frank S	8,600	9,000
Georgion, Mabel	7,427	7,800
Carlson, Janice G	4,300	4,515
Gracey, Harry F	16,000	15,000
Myers, M. Scott	12,750	12,750
Banning, Paul D	12,400	15,000
Halse, Clifford C	11,610	12,200

OVEREMPHASIS ON COSTLY PROJECTS

A congressional study group visited 14 countries and criticized ICA projects in 5 of these countries. The study group report came in for subsequent attention in another committee, in which the three following specific charges were raised again:

Charge

1. A "gigantic" fertilizer plant in Korea is not operating and is not expected to be in full operation in the next few years.

2. A highway project in Vietnam is ending up costing several times the amount originally estimated. The total cost may exceed $100 million.

3. A radio project in Vietnam is in a state of confusion and ICA could not find a radio tower it had financed.

Comment

1. Satisfactory test runs have been completed subsequent to the visit of the study group, and the plant is now expected to be in sustained full-capacity operation during this year (1960).

2. The scope of the project has changed since its beginning in 1954, other roads being added to the original plan. Security conditions in Vietnam in 1954 were such that urgent action was required and exact peacetime engineering practices were not followed.

3. ICA has acknowledged that progress has not been satisfactory. Primary reason for delay was the lack of full agreement with Vietnam as to emphasis to be given to short versus longer range broadcastng. The "missing" tower was in a warehouse pending installation. A planned seventh tower in the Saigon area has now been constructed and is in use.

Urea Fertilizer Plant in Korea

This project provides for the construction of a fertilizer plant designed to produce 85,000 metric tons of urea annually, approximately 25–30 percent of Korea's import requirements for nitrogenous fertilizer.

1. Report comment

The study mission's report states that this plant is not operating and is not expected to be in full operation in the next few years.

ICA comment

Delays have been encountered in the implementation of this project. The plant is now physically completed in terms of construction, and test runs of individual units have been successful. Liquid ammonia already has been produced. Moreover, initial test runs during February and March of this year in one of the three reactors produced urea at a rate of 65 metric tons per day as against a designed capacity of 85 metric tons daily. ICA expects this plant to be in sustained full-capacity production within calendar year 1960.

2. Report comment

The study mission states "It is apparent that the processes in ammonia and urea production sections require water for cooling certain machines and steam for heating other machines, as well as driving of rotating equipment for pumping and compressing. All these requirements must be furnished from the power and water plant. Therefore, the process equipment or sections cannot be started or tested until the powerplant production is producing steam and pumping water.

"The fertilizer plant requires 14,500 kilowatts of electric power which must be supplied from the powerplant since the fertilizer plant is not connected to any electric supply system and would be a serious drain on such a system if it were so connected, in view of the shortage of electric power presently existing in Korea."

ICA comment

An adequate intake water system has been included as an integral part of the plant. Three 7,500-kilowatt generators have been provided to generate a total of 22,500 kilowatts, which will fully meet the requirements for power. Thus, there is no drain on Korea's overall power requirements. An adequate supply of the steam is provided by the thermal powerplant.

3. Report comment

The study mission states that "A project of this size should not be initiated in less-developed countries where technical know-how is limited."

ICA comment

When the decision was made to construct a urea fertilizer plant to meet one-third of Korea's nitrogenous fertilizer requirements, it was recognized that provision would have to be made for training Korean personnel to operate the plant. An important factor in building this plant was that locally produced fertilizer would supplant imports of the finished product, thereby effecting substantial and continuing savings of foreign exchange.

Under a separate contract, the American construction contractor is also to furnish up to 66 technical personnel to operate the fertilizer plant during the initial period and to train Korean personnel to the required degree of proficiency so as to insure successful and efficient operation of the plant. Over 50 of these technicians are now in Korea.

At the time of initiation of this project, it was considered that a project of this type would permit the greatest economic benefit to Korea for the least cost to the United States.

Vietnam—Highways and Bridges

Criticism

What has happened to the modest $18.3 million Vietnam highway project? The total cost of the project now is estimated to be $84 million and may exceed $100 million. (Appeared in numerous newspapers in March 1960.)

Comment

The figure of $18.3 million applies to the original scope of this project. Subsequent to the initial development of the project, other roads were added to the program, which increased the costs. However, the costs for the work initially contemplated have exceeded the original estimates for reasons indicated below.

The present estimate of the total costs of the enlarged project are:

	Million
Fiscal year 1959 and prior years	$48.4
Fiscal year 1960	13.4
Fiscal year 1961 (estimated)	6.9
Future years (ending fiscal year 1963), estimated	4.0
Total	72.7

Normally, detailed engineering plans would be available before a construction contract is entered into. At the time the highway rehabilitation program was undertaken, normal security conditions did not prevail in Vietnam. In 1956 it was still far from certain that free Vietnam would survive, and it was politically important that the United States demonstrate its confidence in the country's future by commencing visible work as rapidly as possible in the improvement of highway transport. In this context, the delay that would have resulted from completing the engineering work before calling for bids for construction was considered incompatible with the greater U.S. political and military interest. Consequently, the construction contract was awarded before engineering drawings and specifications were completed. It should be noted that this type of procedure has been precluded by law since July 1, 1958.

The cost estimates available at the time the contract was let were based on an admittedly brief reconnaissance survey made by the Capital Engineering Corp., the main purpose of which was to determine quickly the general status of all existing highways and bridges in Vietnam and to prepare a priority list of required improvements.

Therefore, the increases in cost estimates reflect: (1) Subsequent development of detailed information and engineering data; (2) price increases on equipment and materials; and (3) increased quantities of materials required, due to extension of the system originally proposed.

Vietnam—Radio Towers

Criticism

The project to assist the Government of Vietnam to develop a national radio network has been unjustifiably delayed and is in a state of confusion. (Appeared in several newspapers during March 1960.)

Comment

This project has not progressed satisfactorily. The underlying difficulty has been the lack of clear and firm agreement between the Vietnamese authorities and the American representatives concerning the relative emphasis to be given to short-wave and to medium-wave radio broadcasting and concerning the exact types of equipment required. Another problem has been ICA's past inability to provide adequate American technical supervision of the project.

There is now basic agreement between Vietnamese and American representatives concerning the relationship between short- and medium-wave broadcasting facilities. Since the arrival in April 1960 of an outstandingly qualified American radio expert, Mr. Frank H. McIntosh, this project has been progressing satisfactorily.

The radio broadcasting projects contemplated erection of 24 towers, financed from both dollars and local currency. Seven have been erected in Saigon, and four in other locations. The balance have not been erected. Determinations as to use and location are now being worked out by Mr. McIntosh in collaboration with the Vietnamese Government.

PROGRAM IMPACT

A congressional study mission criticized ICA program impact in the two following respects:

I. Statement

Ultimate failure is inherent in the program unless we can somehow develop plans and operations that will reach down to the people themselves of each country.

Comment

1. We should not underrate the degree to which we have reached the people; witness the overwhelming popular reception of the President on his trip through Asia, a reception obviously not contrived, but rather warmed by widespread knowledge of our purposes and of our acts.

2. Project operations are reaching the people—on many fronts—and generally in the most effective and lasting way which is through the creation, improvement, or expansion of institutions to be directed by local personnel and to be sustained as soon as possible by local resources.

II. Statement

Grandiose dams and multi-million-dollar plants might bring ultimate benefits, but there is danger in concentrating at the top level, from which no benefits would dribble down to the people within their lifetime.

Comment

1. The great majority of ICA projects are aimed at institutions which directly provide services to major population segments in education, agriculture, health, rural life, labor, and so forth.

2. Large capital facilities, including dams, fertilizer plants, powerplants, and roads are also required for balanced development and do provide a measurable and reasonably early benfit to the people generally. Although such capital projects are now generally financed by DLF, there are a considerable number of such projects which were financed under earlier ICA programs which are already providing or will shortly provide a direct benefit to many people.

Impact of ICA Programs

I. A few out of hundreds of available examples of program operations which have reached the people follow:

(a) Thirty-two new national agricultural extension services established with ICA assistance, with a broad and broadening farm population being reached.

(b) Over 200,000 copies of U.S. industrial technical and reference books made available for use of many times that number of engineers, technicians, and entrepreneurs abroad.

(c) Some 18,000 rural youth clubs (adapted from the 4–H plan), with over 900,000 boys and girls enrolled, are operating pursuant to ICA guidance and help.

(d) Land tenure systems improved and put into action with ICA help in many nations—for example, on Taiwan, the great majority of farmers now own their land, about 600,000 farm families have acquired title to their own land for the first time under an ICA-assisted program.

(e) Twenty-two American land-grant colleges or universities are helping 18 countries

interested in adapting the American land-grant college concept of research, education, and service to the farm population.

(f) Thousands of new teachers—elementary, secondary, and vocational—are trained each year in schools established or expanded with ICA assistance, and more thousands given inservice training—for example, in Ethiopia, the fewer than 500 qualified teachers of 1953 have grown to more than 4,000, and the teacher training output has increased from 18 a year to 500.

(g) More than 400 million people live in areas in which protection against malaria has begun to be effective under the ICA program. The number of people protected and the degree of protection is increasing constantly.

(h) Training for hundreds of doctors, nurses, and sanitarians each year is made possible by ICA assistance.

(i) Community development workers trained and supported with ICA assistance are reaching millions of people and helping them organize to help themselves—one example of many being the 25,000 schools constructed in India through local voluntary self-help programs.

(j) ICA programs in labor have and are reaching thousands of workers through programs of labor education.

(k) More than 50,000 participants have received ICA financed training in the United States, each participant returning to his homeland to bring to many others the benefits of his observations and study.

II. A few examples which demonstrate that major projects can and do yield wide benefits within a few years follow:

(a) The Pak-American Fertilizer Factory in Pakistan began production in 1958 and operated at near capacity throughout 1959, producing fertilizer needed by farmers to expand production in this food-short country, with an important saving in scarce foreign exchange. This was the first heavy chemical process undertaking of its kind in Pakistan, but the not unexpected difficulties have been overcome successfully.

(b) The major urea fertilizer plants in Korea and Taiwan will be in full operation this year, each producing a significant share of the fertilizer needs of the farmers of the two nations.

(c) The Shen Ao Power Plant in Taiwan, begun in June 1957, was placed in operation at its rated capacity of 75,000 kilowatts in January of 1960, within 2 weeks of schedule. This needed power will contribute to the growth of small industry and employment in Taiwan.

(d) Large and small irrigation projects have been completed to increase fertility or make new land available for settlement of landless people. Examples include: Cambodia—112,000 acres watered or reclaimed; Israel—irrigated area tripled in decade; Philippines—over 365,000 acres capable of supplying food for 3,500,000 people, rehabilitated by 3 ICA projects.

(e) Extensive assistance to the highway development of Turkey was a significant factor in a remarkable upsurge in Turkish production. Internal travel and transport of goods was achieved at reduced costs. Vehicles increased fourfold (incidentally engendering expansion of manufacturing in other countries including the United States). Following table illustrates results:

	1948	1956
All-weather roads (miles)	5,260	11,800
Paved roads (miles)	580	2,100
Number motor vehicles	20,231	81,382
Annual ton-miles	230,000,000	1,505,000,000
Annual passenger-miles	752,000,000	7,280,000,000
Freight cost per ton-mile (cents)	15.1	5.6

The beginnings of a similar pattern of upsurges in traffic and a downward drop in rates is already evident in Vietnam under the much more recent highway program in that country.

OREGON STATE COLLEGE CONTRACT

Statements during congressional committee proceedings were made to the effect that: (a) Oregon State College performance in Thailand did not produce results, (b) the ICA mission recommended termination of the contract, and (c) that ICA headquarters overruled its field mission for questionable reasons.

The facts are: 1. Oregon State College has done a creditable job in assisting the Kasetsart University in Thailand to become a first-rate school of agriculture with an increased, American-trained faculty, revised curriculum, well-equipped laboratories, and a reputation which is attracting quality students. The beneficial impact of this project—to the United States and to Thailand—will be felt for generations.

2. The ICA mission, for reasons which were partially administrative, recommended that the Oregon State College contract be allowed to expire in April 1960. The ICA headquarters suggested, and the mission agreed, that a team of two agricultural experts review the progress under the contract and recommend the course of future action. ICA plans to review this matter objectively when this report is received.

Further comment: 3. As an illustration of the "high cost" of ICA university contracts, this example (which is the only one the committee examined in detailed, orderly fashion) disproves the case. The cost of study of Thai professors at Oregon and the cost of sending Oregon professors to Thailand were both moderate (average of about $3,000 and $17,000, respectively) and in line with going rates, salaries and costs at American universities. The overhead payment to Oregon State College, covering a pro rata share of college administrative costs, averaged just over $500 a month. These overhead costs, which were spoken of as if they were profit, are valid costs, handled in generally accepted accounting procedures and subject to U.S. audit.

4. The stress in the proceedings on the "overruling" of the mission, in addition to being overstated, represents a strange view of the role of a headquarters, which would be derelict if it did not exercise its responsibilities of review and decision.

WASTE IN KOREA

The Acting President of Korea has been quoted during congressional hearings as having said that there was waste and mismanagement of the U.S. assistance program for Korea in excess of $200 million.

First, this was a misquotation. The Acting President did in fact state that there had been waste and mismanagement in the program. The newspaper story, not quoting, added that the program had been at a level of $200 million.

There is evidence of manipulation of ICA-financed imports into Korea to produce political benefit to certain Koreans. This is mismanagement in the sense that democratic and impartial standards of conduct were not always applied by Koreans. There is no evidence or allegation of American connivance in such transactions.

Knowing of such mismanagement, why was assistance continued? The answer lies in a review of the alternatives, of the likely results of termination of aid. American blood and money has kept Korea alive—on a hostile frontier—and withdrawal would result in certain collapse. Constant efforts were made to improve on an unfortunate situation and some successes such as a more favorable exchange rate were scored. An "either-or" approach would not have worked, since the United States holds no nation as a satellite.

Constructive steps on these matters are being accelerated in cooperation with the present Government of Korea.

BOLIVIA

A Senate Government Operations Committee report directed attention to a number of program and administrative weaknesses of the ICA program in Bolivia. These problems have been critically commented on in other congressional hearings.

The Senate report was properly critical of certain aspects of the Bolivia program. This report acknowledged, as other congressional critics have not, that the program was initiated after a violent revolution, in chaotic circumstances and in an area in which difficult operations are more difficult because of altitude and climatic conditions.

The Senate report made four recommendations all of which are being carried out.

Pertinent to this matter also is the following excerpt from the February 2, 1960, report by Senator GEORGE D. AIKEN:

"Although hindsight may reveal how the aid program could have been carried on more effectively, it also reveals no alternative to that program except utter chaos."

Statement

ADVANCE COMMITMENTS

The DLF has made commitments to borrowing countries in advance of approval of specific projects and then projects were developed to carry out the commitments. This is improper since the executive branch had made representations that advance commitments would not be made. The effect of the advance commitments has been to tie up substantial funds which could be used for loans, while Congress has been asked for the appropriation of additional funds.

Comment

The Congress has imposed no prohibition on advance commitments, nor has the executive branch in fact stated to the Congress that it would never make commitments prior to the approval of specific projects or programs. Executive branch witnesses have testified that the DLF would not make advance annual allocations of assistance, that is, it would not parcel out assistance to countries on an annual basis. The latter has, in fact, been avoided.

On the limited occasions when commitments were made in advance of approving specific projects or programs, special and compelling circumstances led to the employment of this technique. In each case where an advance commitment has been made, the DLF acted in accordance with the foreign policy guidance of the Secretary of State which is provided for in section 205 of the Mutual Security Act of 1954, as amended. In most cases, the DLF had on hand applications from the countries involved, in excess of the amount committed. All of the commitments were made subject to the approval of specific projects or programs. In addition, no funds have been disbursed under the commitments until the DLF approved sound activities for financing. All such cases have been reported in full to the Congress. No advance commitments have been made since December 1958.

With respect to the charge that substantial funds have been tied up by the use of this technique, the table below shows when the DLF appeared before Congress to request additional funds, the amounts outstanding against advance commitments were small, both in relation to the additional funds requested and to the total of specific loan approvals at the time.

Relationship of advance commitments to additional requests for funds

Dates	Appropriations requested for subsequent periods	Charges against available funds	
		For advance commitments or earmarkings	For specific projects or programs
As of June 30, 1958	$625,000,000	$39,300,000	$228,086,000
As of Feb. 26, 1959	225,000,000	46,250,000	637,556,000
As of June 30, 1959	700,000,000	23,450,000	812,106,000
As of May 19, 1960	700,000,000	18,150,000	1,184,406,000

USE OF LOAN REPAYMENTS IN A REVOLVING FUND

Statement

The repayments on loans made by the DLF go directly to augment the DLF's capitalization and the U.S. Treasury does not receive the benefit from these repayments. "For the first time" it is "revealed" that it has become a revolving fund since part of its resources are not subject to Congressional appropriation.

Comment

There is nothing new about the "revolving fund" nature of the DLF's capital. Nor was it ever conceded to be now "revealed." It was clearly provided for in the initial legislation which authorized the establishment of the Fund. It was also discussed in executive branch presentations to the Congress. Section 204(a) of the Mutual Security Act of 1954, as amended in 1957 states:

"SEC. 204. FISCAL PROVISIONS.—(a) All receipts from activities or transactions under this title shall be credited to the Fund, and, notwithstanding section 1415 of the Supplemental Appropriation Act, 1953, or any other provision of law relating to the use of foreign currencies or other receipts accruing to the United States, shall be available for use for purposes of this title."

This was spelled out in the section-by-section analysis of the 1957 authorizing bill prepared by the executive branch which stated that section 204(a) establishes the revolving character of the Fund by providing that all receipts under title II shall be credited to the Fund and be available for use for purposes of that title.

In addition, the Report of the House Foreign Affairs Committee, July 9, 1957, stated the following in reporting out the bill which included provisions for the establishment of DLF:

"It is contemplated that the Fund will operate on a revolving basis with the payments of interest and principal on loans being reloaned as they become available. Repayment of loans in foreign currencies will be accepted when necessary to meet the requirements of the program. Such currencies could be reloaned; or might be sold for dollars to U.S. Government agencies needing such currencies, thus providing dollars for use by the Fund."

Over 20 percent of DLF loans are repayable in dollars. When the interest on these loans and the dollar repayments are received, they are credited to an account in the U.S. Treasury for use by the DLF in the manner of a revolving fund. This is the way the Export-Import Bank and other Federal lending agencies have functioned over the years. When dollar returns to the DLF revolving fund become sizable, they can be taken into account in considering requests for additional appropriations.

Repayments in local currency similarly are deposited in the Treasury account and are available for relending as the need for such currencies arise. Usually this need is for local currency loans in the country making repayment; however, some sales are made by the Treasury to other agencies of the U.S. Government. The dollars derived from these sales are added to the capitalization of the DLF.

ARE DLF LOANS "PHONY"?

Statement

DLF loans are really disguised grants. They are "as phony as a $3 bill."

Comment

Each of the 135 loans approved thus far by the Development Loan Fund has been soundly conceived and transacted.

Through individually tailored loan agreements each borrower undertakes a solemn obligation to repay and agrees to follow specific practices designed to insure the efficient use of funds. The loans must be repaid according to a predetermined fixed interest rate and amortization schedule. Each loan is the culmination of an intensive economic and technical review. None of the loans is in default and over 20 percent are repayable in dollars.

In establishing the Development Loan Fund the Congress supported the position of the executive branch that loans have distinct advantages as a method of providing needed capital to the less developed countries. Because they impose an obligation to repay, they establish a businesslike relationship between lender and borrower. Regular payments require the borrower to pursue efficient economic and financial practices and otherwise to discipline the management of his operations.

Moreover, DLF loan agreements impose a continuing burden and requirement on the borrower separate and apart from the need to repay. Borrowers are required, for example, to retain consulting engineers, to report regularly on financial and technical progress, to secure managerial assistance where necessary and to establish and maintain businesslike records.

A substantial portion of DLF loans have been made directly to private enterprises for manufacturing plants of various kinds, or to independent, government-owned instrumentalities, such as railroads, power systems or port authorities which must live on their own revenues. The burden of repayment on such borrowers is the same whether they are required to repay in local currency or in dollars. Their earnings are in the currency of the country in which they are located. If required to pay in dollars, they can obtain them only through purchase with local currency earnings. Consequently, neither of these two types of borrower is affected by the currency of repayment.

As for governments which have the power to issue currency, they recognize increasingly that it would be adverse to their own interests to flout the precepts of sound financial and monetary policy in making repayment. There is no evidence that such precepts are being ignored. In addition, the DLF requires on all loans repayable in local currencies that payments be at a constant value in relation to the dollar.

EMPLOYMENT GENERATED BY MSP

The current mutual security program appropriation request of approximately $4.1 billion would generate direct and indirect employment in the United States of from 500,000 to 550,000 full-time persons for the year.

Direct and indirect employment created in the United States in 1957 by the 1957 foreign aid expenditures was estimated at 530,000 people by the NPA. The foreign aid program for 1957, as defined by the NPA, totaled $4,226 million of which about $4 billion was for mutual security grants and credits. Technical staff responsible for the National Planning Association (NPA) study in 1957 believe that employment created per dollar of foreign aid funds remains the same as in 1957 when the intensive NPA study was conducted.

The above estimates consider that procurement in the United States in fiscal year 1961 will be higher than in 1957 for the military assistance program and will recover toward 1957 levels for the ICA program. The trend of MSP procurement in the United States is as follows:

	Percentage procurement in United States		
	Fiscal years 1949–59	Fiscal year 1958	Fiscal year 1959
Military equipment and supplies	85.7	89.1	93.0
ICA commodities	67.0	51.7	47.4
Total [1]	76.4	75.4	77.6

[1] Excludes DLF and other MSP expenditures such as shipping which are used in the employment estimates and which, if included, would bring the percentage up further.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Louisiana.

Mr. PASSMAN. I still do not know to what the gentleman from Arizona is referring. At page 507 of the hearings I said:

If we had given you the money you asked for, you would have used it in this program. You would have bought something whether you needed it or not, and it would have been, today, in excess.

General Norstad stated:

Only if we needed it.

Then General O'Meara came in and broke into General Norstad's reply. General Norstad continued and said:

If you had given us every year everything we asked for, the total at the present time would indicate some overages that we now make; that is correct.

That is the way I had it on the card, and that is the way I read it. Is that the point the gentleman was making?

Mr. RHODES of Arizona. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Arizona.

Mr. RHODES of Arizona. The point I was making was that the chairman did not read the whole quotation. He did not read the second sentence.

Mr. PASSMAN. It was not necessary. I read General Norstad's reply, not General O'Meara's.

Mr. RHODES of Arizona. The second sentence was by General Norstad.

Mr. PASSMAN. Here is what I read:

If you had given us, every year, everything we asked for, the total at the present time would indicate some overages that we now make; that is correct.

Mr. RHODES of Arizona. Very well. If the gentleman will yield further, I will read again. The entire answer is as follows:

If you had given us, every year, everything we asked for, the total at the present time would indicate some overages that we now make; that is correct.

Then the second sentence reads:

Every year we must program in the light of the deficiencies which have been created by the failure to appropriate the year before as we are doing this year in Turkey.

Now, the chairman says this indicated that General Norstad agreed that by cutting the appropriation he had made this a better program. I submit that if he had read the second sentence he would have known that the general meant nothing of the kind.

Mr. PASSMAN. That second sentence does not relate to the question, and the distinguished and able attorney knows that to be a fact.

Mr. BROWN of Missouri. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. BROWN of Missouri. Mr. Chairman, 4 years ago when I came to the Congress, I was an admirer of the Marshall plan and a stanch advocate of the principle of mutual security.

I have never been a selfish, shortsighted isolationist. I know that peace and progress depend on the willingness of America to help bolster the economies of the uncommitted nations, to maintain strong alliances with free peoples, and to create new and better programs of good works all over the world.

I am a firm believer in the United Nations, in the many great international lending institutions that have been created by America's leadership, in the peoples-to-peoples exchange programs, and other fine programs for peace among nations.

I recognize fully that the country needs a well-planned long-range international program for economic development and mutual security.

But for 3 years I have voted a protest vote against the half-baked facsimile that comes to us each session about this time under the title of a mutual security program, because I want to quit piddling around with this U.S. Government to patchwork improvisations poorly administered and come up with a good program commensurate with the needs of our times.

I have spent many hours reading pro and con testimony about mutual security or so-called foreign aid. Those who say the idea of aid to lesser nations is foolish waste are wrong and are being dangerously shortsighted, in my opinion.

But, conversely, those who say that the present program as it is now being handled is essential to peace are also wrong. For these day-to-day improvisations by the ICA create about as many problems as they solve.

For example, 4 years ago, when I asked a distinguished Assistant Secretary of State to give me a post-Korea success story for mutual security, he pointed with pride to Iraq; said the Iraqi army was a strong new ally for freedom, right on the perimeter of Russia.

It is now a matter of history that our efforts in Iraq were the opposite of a success story. We armed an immature nation that was not ready for such arms, created a Frankenstein monster in an explosive area. The total end result is yet to be calculated; but few would predict that it will be good for the United States or the world.

And Iraq is not the only example. In instance after instance, we have furnished arms to prop up unpopular rulers, making enemies of the electorates.

Yet the administration is asking for $2 billion more military aid for the next fiscal year; and their requests are bolstered by respected military leaders who insist that such funds are essential as a part of America's own defenses. Well, my question is: If some items in this bill are so essential for America's own defenses, why are they not included in the regular defense appropriation request? Why not include the NATO appropriation needs in the Pentagon's budget where it belongs?

If the truth were known, some of the Pentagon budgeteers have a nice little bookkeeping gimmick going for them in mutual security.

They dump some of their obsolete military equipment to foreign aid recipients, and are compensated for it out of the mutual security budget.

It all may come out to the same end result, but why must anyone kid anybody about what is going on. Let us separate military appropriations from bonafide assistance to lesser nations.

Also, let us formulate a long-range, well-managed development loan and technical cooperation program. Senator FULBRIGHT says it must be set up on a 5- to 10-year basis. I agree. We should strive to prevent trouble rather than wait until trouble is fomented and then try to bribe our way out.

But with due respect to the men in the State Department and the ICA, I have many misgivings about the ability of the present administration to handle even $550 million worth of development loans efficiently. Until I see better evidence of long-range planning and better management, I hate to vote another $550 million to be misused.

In short, the Nation needs a good long-range mutual security program, encompassing, first, food for peace; second, development loans; third, more interchange of peoples; fourth, technical cooperation; and fifth, a big-scale health program for undeveloped countries.

Military assistance should be included in regular defense appropriations.

Any bill that comes close to such a program administered by dedicated people who plan their work and work their plan will get my vote. But this bill is just like the three others that I have voted against. It is not a program. It is not even a reasonable facsimile. And I intend to vote against it in the hope that my protest will prompt someone to take some kind of action toward getting a good forward-looking mutual security program commensurate with the mounting dangers and gaping needs of our time.

Mr. CURTIN. Mr. Chairman, I ask unanimous consent that the gentleman from New Jersey [Mr. WALLHAUSER] may extend his remarks at this point in the RECORD?

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. WALLHAUSER. Mr. Chairman, today the Members of this body face a most important decision in their consideration of the mutual security appropriations bill as reported by the committee.

Reduced to simple terms the question before us is:

Do we, through cutting the appropriations requested by the President, want to pull the rug out from under a program of military and economic assistance to needy nations that has been a key in our resistance and blockade of Communist attempts to dominate and enslave the entire globe?

The answer, I believe, should be "No."

But this, in my opinion, is precisely what will occur if we pass legislation providing for the cuts recommended by the committee.

I am convinced that the mutual security program, over a long period of time, has proved itself as a bulwark against communism and its tyrannical leaders.

In casting our votes on this bill, we must face the fact that the defense of the United States, and the rest of the free world, depends in large measure on the mutual security program—both in its military and economic aspects. To approve reductions in the amounts recommended by the President for carrying out the program, in my judgment, will jeopardize and weaken the security of our own Nation and the defense of the entire free world.

That there has been waste and inefficiency in certain areas of the mutual security program seems to be reasonably well established, and it is to this failure that knowledgeable officials are directing their efforts. I suggest that it is more constructive to direct our efforts toward the correction and improvement of the management of the complex program, rather than the reduction of valuable items.

It must be realized, by Members of Congress and the people as a whole, that the mutual security program has become a permanent and important part of our foreign and defense policies. I will always support steps for a constant review and reappraisal of the program, on a solid basis, so that the funds of our taxpayers are not misspent, but I believe that the overall result of the program is, and has been, worth the time, money, and effort we have put into it.

Unless and until communism ceases to be a threat to our national security, and the rest of the free world, I do not believe it just to arbitrarily condemn the program, or the amount that is required to administer it, because of the relatively

few human failures that accompany its administration.

Mr. GARY. Mr. Chairman, I do not believe that any Member of this House would attempt to contradict the fact that I am a friend of the foreign aid program. I have been a supporter of the program since its beginning. I well remember 12 years ago, in 1948, to be exact, when I sat here on the floor and the chairman of the full committee called me over and said, "VAUGHAN, I am planning to appoint a special committee to handle the foreign aid program and I would like for you to take the chairmanship of that committee." I told him that I already had the chairmanship at that time of the Treasury and Post Office Subcommittee, but if he wanted me to I would try to handle them both. I accepted the chairmanship of the committee and remained its chairman for 6 years, and I have been on the committee ever since. Therefore, I have been a member of the committee during the entire length of the program.

Mr. Chairman, I have consistently voted for the program, but I do not know of a single year during that entire time that we have not cut the President's request for funds. I consider foreign aid a very vital part of the national defense of the United States. I believe that we have got to help our allies. We have got to help them with their military programs, and they also need some economic help in the maintenance of the necessary forces to aid in the defense of the free world. But, I cannot bring myself to believe that it is necessary to spend all of the money that we have been requested to appropriate.

I had the privilege in 1952 of visiting Europe with the then so-called Richards committee. That was a committee composed of representatives of the Committee on Foreign Affairs of the House, representatives of the Committee on Armed Services, and representatives of the Committee on Appropriations. We were sent over there for the purpose of conferring with then General Eisenhower, who was at that time the supreme allied commander in Europe, with reference to this program. I well remember that the General then urged us "Gentlemen," he said, "whatever you do, do not cut the program this year." Some of our members on the committee called his attention to the fact that the program was becoming a drain on the resources of America and that the American people were getting tired of it and they wanted to know when there could be an end to the program. General Eisenhower said:

> Now, gentlemen, I believe that the Europeans should defend Europe.

And that—

> The Asiatics should defend Asia, but at the present time they are not in a position to defend themselves, and, therefore, we must help them. But we will soon begin to turn the program over to them. After we provide them with military equipment, we will begin gradually to phase out the program and leave their defense to them.

We pressed him for a limit of time. I must confess, he did not set a definite time; but he said, "Probably we can begin to phase out by 1954." We have been phasing out of this program for the last 3 or 4 years. But what happens this year? Now we start up again. Confidently, expecting that we would be able to reduce the program each year and finally phase it out, we are now faced in the request for this year with a very substantial increase over last year.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman.

Mr. JUDD. I was privileged to be on that same Richards committee on its visit to Western Europe.

Mr. GARY. I remember that the gentleman was. He attended the conference to which I refer, and no doubt remembers the general's remarks.

Mr. JUDD. The gentleman has been correct in reporting what was said. The gentleman will recall that that was at the end of May or the first part of June 1951.

Mr. GARY. I thought it was 1952. I know it was in June.

Mr. JUDD. I am sure it was in June of 1951. The general did not come home until a year later to run for President in 1952, so it must have been 1951. At that time the situation in Europe was improving and there was promise that the war in Korea was going to quiet down. The Communists were offering a truce. Instead of a real change, they merely withdrew for a time their pressure in Europe where they could not make headway, in order to increase their pressure in the Far East, then South Asia, and then the Middle East. So as far as Europe is concerned, as the gentleman has stated, we were able to taper off our aid. But explosions continued around the world, and now we have them in the Western Hemisphere and in Africa, too. So I do not imagine that either the general or we could have been expected to foresee that.

Mr. GARY. Mr. Chairman, I cannot yield further at this time. I will say to the gentleman that every year there have been explosions. And yet, every year we have reduced the requests for this program. In 1956 we reduced the overall program $584 million. We were told that would wreck the program. What happened? At the end of that year, they finished with an unobligated balance—I am not now talking about unexpended funds—they ended with unobligated funds of $33,900,000 in the military assistance program alone. The next year, fiscal year 1957, we cut the request $1,064 million. What happened that year? They ended with a surplus, with unobligated funds, of $195,500,000 in the military assistance program.

We cut it again for the fiscal year 1958 $565,650,000. What happened that year? They ended with unobligated military assistance funds of $538,800,000.

In 1959 we cut it $652 million. What happened then? They ended that year with a similar surplus of $15,453,000.

Last year we cut the request $1,204 million. We were told then that we had absolutely wrecked the program. And yet they estimate that they will finish this year with a surplus of $35 million. The cuts which I have mentioned relate to the entire program while the surpluses relate only to the military assistance phase of the program. The total surpluses were much larger.

Let me say this further. The Comptroller General, appearing before our committee last year, made the statement unqualifiedly that he thought we had given the program too much money, not too little. This year I asked him if he was of the same opinion and he stated unequivocally that he was. He thought by giving them less money they would spend it more carefully, we would have less waste, we would have more economical and better planned programs and get better results than if we just give them money to throw away.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to my chairman.

Mr. PASSMAN. Mr. Chairman, I want to assure my distinguished friend the gentleman from Arizona [Mr. RHODES], of whom I am very fond, that I think he is a very able Member and very fair, but he had reason to be confused, because we have 517 pages of testimony covering five nations. We did not put the testimony in the RECORD because so much of it was classified, and they did not have an opportunity to review the transcript.

I assure the gentleman that if he will go through the hearings, and if he does not find in these hearings, and also with regard to the one country referred to in this secret letter, that there is over $300 million excess equipment in these five countries, I will support the amendment to be offered by the gentleman from New York.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Iowa.

Mr. GROSS. Do I correctly understand that we are presently giving Japan some $100 million in the form of military assistance and technical aid?

Mr. GARY. The amounts given to individual countries are classified. I personally would not like to give away any classified information.

Mr. GROSS. One further question, if the gentleman will indulge me: In reading these hearings, I find the terms "less-developed countries" and "underdeveloped countries" used interchangeably. Is there any difference between a less-developed country and an underdeveloped country?

Mr. GARY. So far as I know, none. What is an underdeveloped country just depends upon the thinking of some bureaucrat downtown.

Mr. GROSS. That is what I thought.

Mr. GARY. Mr. Chairman, in the minority report filed with this body is the following sentence:

> This is no time to "kowtow" to Khrushchev or be soft on communism.

I resent that statement. I do not know whom they are aiming at. I do know it is not I. But there is certainly an insinuation that it is aimed at those of us who favor this bill. I have never kowtowed to Khrushchev and I never

intend to. I was not in favor of extending Khrushchev an invitation to visit this country, and I think when we did we increased his prestige tremendously throughout the world. I think it was a tremendous mistake. I purposely timed my departure from this city so that I would not be here when he arrived.

I was not in favor of President Eisenhower's proposed visit to Russia. I was not in favor of the summit conference because I do not believe that you can deal with people without principle, and certainly the Soviet hierarchy have shown that they have absolutely no principles whatever. We have made agreements with them time and time again, and what has been the result? We have merely tied our own hands because we try to live up to our agreements. They have never lived up to a single agreement we have made with them. They have violated every single agreement they have ever made with this country. How are you going to deal with people of that kind? If you should work out an agreement with them, it would be absolutely worthless because they would not respect it.

We thought just prior to World War II that we might be able to do business with Hitler. We found out we could not. Neither can we do business with Khrushchev.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Illinois.

Mr. YATES. Let me say to the gentleman that I agree with him in regard to the statement inserted in the minority views. I do not think the fact that the program was cut means that any of those who voted for it are soft on communism or favor Khrushchev. If Members are to be criticized as being soft on communism because they voted to cut appropriations, I think the gentlemen on that side might well look at some of the Members of their own administration.

Mr. GARY. When a person lacks arguments to support his position he frequently begins to call names. I think that is the situation in this minority report. They lack arguments to support their position. Therefore, they throw in these statements about kowtowing to Khrushchev or being soft on communism. It does not frighten me one bit because I am certain no one would ever accuse me of either kowtowing to Khrushchev or being soft on communism. But I do not like it. In fact, it is unworthy of the gentlemen who signed the report, for each of whom I have the very highest regard.

I am convinced, Mr. Chairman, that we have appropriated every dollar of the funds that are necessary for this program. If I may paraphrase the language of a great statesman of the past: "Let us appropriate billions for defense, if necessary, but not one penny for waste."

The CHAIRMAN. The time of the gentleman from Virginia has expired. All time for general debate has expired.

The Clerk will read.

The Clerk read as follows:

MILITARY ASSISTANCE

For expenses as authorized by section 103 (a) of the Mutual Security Act of 1954, as amended, necessary to enable the President to carry out the purposes of chapter I of such Act (including administrative expenses as authorized by section 103(b) of such Act, which shall not exceed $23,000,000 for the current fiscal year, and purchase for replacement only of passenger motor vehicles for use outside the United States), $1,600,000,000.

Mr. TABER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. TABER: On page 2, line 15, strike out "$1,600,000,000" and insert in lieu thereof "$1,800,000,000."

Mr. PASSMAN. Mr. Chairman, I assume a number of Members will want to speak for and against the amendment, therefore, I move that the Committee do now arise.

The motion was agreed to.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. MILLS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 12619) making appropriations for mutual security and related agencies for the fiscal year ending June 30, 1961, and for other purposes, had come to no resolution thereon.

HOUR OF MEETING

Mr. PASSMAN. Mr. Speaker, I ask unanimous consent that when the House adjourns today, it adjourn to meet tomorrow at 11 o'clock a.m. to continue the consideration of the mutual security bill.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

INCREASING COMMUNISTIC ACTIVITY IN THE WESTERN HEMISPHERE

Mr. SELDEN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

Mr. SELDEN. Mr. Speaker, we in the United States, as well as all of the people in our sister Republics of Latin America, have cause for concern over the growing evidence of increasing communistic activity in the Western Hemisphere.

One of the principal goals of international communism is to divide the American Republics and to weaken the U.S. position of leadership. Its ultimate aim, as proved in Guatemala, is complete control and domination of the individual countries of the Western Hemisphere.

In an effort to destroy U.S. leadership and to impose the Communist philosophy and way of life upon the peoples of the Americas, the forces of international communism have subjected the United States to an unprecedented campaign of vilification and abuse. Aiding and abetting these efforts are certain officials of the present Government of Cuba. Outright slander and deliberate distortion of the truth have become characteristic of efforts by the Castro regime to undermine our relations with our Latin American neighbors and to build up a false impression of the United States and its policies in the minds of the people of Cuba.

Our Government to date has been extremely patient with the fanatic little band which has imposed its ruthless and despotic will on the people of Cuba. However, this country can ill afford to ignore mounting evidence that the present Cuban Government is being used to further the international communistic conspiracy.

Realizing the seriousness of the situation, I have called a meeting of the Foreign Affairs Subcommittee on Inter-American Affairs, of which I am chairman, to examine the Communist threat in the Western Hemisphere and with particular reference to the situation in Cuba. Hearings will begin tomorrow, during which Members of Congress who have introduced resolutions on this subject are being invited to appear and give the subcommittee the benefit of their knowledge and views. The subcommittee will resume its hearings on Monday with officials of the executive branch appearing at that time. It is my hope that this subcommittee examination will focus attention on what appears clearly to be the latest move of Communist forces to take full advantage of the opportunities manufactured for them by Castro and his followers.

WILL PEIPING SOON JOIN NUCLEAR CLUB?

Mr. WOLF. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. WOLF. Mr. Speaker, on June 3 on the floor of the House I stated for the RECORD that I am not, and never have been, in favor of diplomatic recognition of Red China. I stated, however, that we simply cannot close our eyes and pretend it is not there, for it is an accomplished fact, whether we like it or not.

I stated further that facts have recently been made available to me which prove conclusively that the Russians are transferring much of their research and development equipment into northwest China. I was told that within 1 year it is very likely that Red China will explode her own atom bomb and, so, the nuclear club grows even larger.

Marquis Childs contributed some very illuminating thoughts on this whole general subject in his column which appeared in the Washington Post, this morning, June 16.

It is significant that newsmen are more and more frequently admitting to the existence of the threat to world

peace from Red China. I hope that our State Department gives full consideration to these thoughts presented by this eminent editorial writer.

The danger inherent in a nuclear explosion by Red China is brought out in Mr. Childs' statement that the leftists in Japan would certainly steer a neutral course and deny bases in Japan to American bombers and American troops. A nuclear explosion by Red China would undoubtedly result in increased rioting in Japan and increased pressure on the Japanese Government to do just that. I think the U.S. Government must give sober consideration to such an eventuality.

Mr. Childs' editorial follows:

[From the Washington Post, June 16, 1960]

WILL PEKING SOON JOIN NUCLEAR CLUB?

(By Marquis Childs)

Communist China is so far advanced in the development of nuclear fission that a nuclear device could be set off by Peking during President Eisenhower's visit to Chiang Kai-shek's island bastion of Formosa this week.

This is the belief of highly informed sources in the Government here. In making a careful and detailed intelligence appraisal recently of Red China's progress in the nuclear field majority opinion is not so pessimistic.

The majority view is that within a year and a half to 3 years Peking can explode a device equivalent to that set off by the French in the Sahara last winter. But at the same time it was acknowledged that past estimates of Communist capability in the nuclear field have always erred on the hopeful side.

The United States detonated its first atomic device at Alamagordo, N. Mex., on July 16, 1945. The Soviets set off their first explosion on August 29, 1949. Detected by America's monitoring system, it was announced by President Truman on September 23.

But some of America's most-knowledgeable experts in the atomic field had said that it would take Russia 20 years to come up with the first device. Others said 10 years. Only a few scientists, such as Prof. Harrison Brown of the California Institute of Technology, put the figure as low as 3 to 4 years.

No imagination is required to appreciate the shock that would result if the Chinese could achieve an atomic explosion, verifiable by the world monitoring system, at this time. It would be aimed primarily at Japan. The effect of the shock wave created in the febrile, highly emotional Japanese people, stirred by Communist and extreme leftist propaganda, would be incalculable, in the view of those who are most familiar with the situation.

Red China could count on a great increase in the neutralist-pacifist sentiment in Japan. If China, so the arguments of Japan's leftists would run, is about to get a nuclear weapons capability, then Japan must certainly steer a neutral course and deny bases in Japan to American bombers and American troops. This is a major objective of Communist propaganda and it finds all too ready a response in a nation deeply divided and with the destruction of Hiroshima and Nagasaki an ever-present reality.

The effect of an atomic explosion would be far greater than what is much more likely to happen. That is the shelling of Quemoy and Matsu and the Formosa Straits at the time that the President is on his way to visit Chiang.

While the odds are against its happening, one piece of evidence has caused sober second thoughts. These are the remarks made privately in Moscow not long ago by Prof. V. S. Emelyanov whose latest title, according to a Tass announcement of June 3, is Chairman of the Soviet Government Atomic Energy Committee. Emelyanov is reported to have said that the Chinese had made much more progress than the outside world suspected, even though the Soviets had given them comparatively little help.

Soviet experts are said to have assisted the Peking regime with advanced nuclear reactors of a sophisticated type. But this was presumably in connection with the peacetime uses of atomic energy. Most of the evidence points to a real concern on the part of the Soviet Union lest the Chinese get nuclear weapons and then proceed to carry out their more or less openly avowed intentions of using them.

Exploding a nuclear device, as the French have done, is a long way short of having a weapons capability. But even if the Chinese achievement is a year and a half to 3 years away it points up the fearful danger in the proliferation of nuclear weapons and the greatly increased chances of all-out nuclear war.

As the latest editorial in Pravda indicates, the Soviet are concerned over the left-wing extremists in China who insist that communism and "capitalist imperialism" must inevitably war to the death with coexistence ruled out. Mao Tse-tung has said that China could absorb 200 million casualties and emerge with its vast land mass as the only victor, or survivor, in a nuclear war. And appalling as it may seem to the West, the fanatical, Western-hating Chinese could view this as a reasonable sacrifice.

WE MUST UNDERSTAND RECENT EVENTS IN JAPAN

Mr. JOHNSON of Colorado. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and include a statement.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. JOHNSON of Colorado. Mr. Speaker, the distressing events now occurring in Japan prompt me to call to the attention of the Members a statement signed by 400 clergymen in the United States, from all parts of this great Nation. I think it deserves a thoughtful study by every American, and especially the thoughtful attention of the U.S. Senate.

We need to understand events in Japan in more historical terms than simply declaring that those who disagree are Communists. Much damage has already been done. Before it is too late to make amends, I trust Americans will reexamine this proposed mutual security pact. The opportunities to encourage democracy will not be enhanced by rushing approval of a basic course of action which is fundamentally opposed by a significant part of the whole community. Great national purposes such as justify international treaties should have widespread popular support throughout the countries which are party to them. Otherwise, with the first change in administration, the treaty will be renounced. We should not assume that so fragile a reed represents a powerful sword or a strong shield. The statement follows:

The undersigned, as a result of our deep desire for total world disarmament and our respect for the Japanese Constitution's renunciation of war and military preparations, join in issuing this statement to our fellow citizens:

The United States and Japan have concluded a little publicized series of negotiations that will become a treaty of military alliance if it is signed and ratified by both countries. The draft of this "Mutual Cooperation and Security Treaty" will extend for another 10 years the stationing of United States forces in Japan. It obligates Japan to resist and to retaliate against any attack on U.S. bases. It requires Japan to have sufficient military capability for modern war, a standard provision of all countries having mutual aid treaties with the United States. It also sanctions the use of Japanese forces outside of Japan. Moreover, there is no provision againt the introduction of nuclear weapons into Japan and presumably it opens the way to Japan's becoming a nuclear power.

This treaty is a clear violation of article 9 of the Japanese Constitution which contains the following:

"Aspiring sincerely to an international peace based on justice and order, the Japanese people forever renounce war as a sovereign right of the nation and the threat or use of force as means of settling international disputes.

"In order to accomplish the aim of the preceding paragraph, land, sea, and air forces, as well as other war potential, will never be maintained. The right of belligerency of the state will not be recognized."
